(1)

In July 1998, the Utility reached an agreement with the City and County of San Francisco regarding the Hunters Point fossil-fuel power plant, which the Independent System Operator (ISO) has designated as a "must run" facility. The agreement expresses the Utility's intention to retire the plant when it is no longer needed by the ISO.

(2)

Listed to show capability; subject to relocation within the system as required.

(3)

One mobile turbine (15MW) is not currently connected to the system. Hunters Point units 2 and 3 (214 MW) were converted to synchronous condenser operations during 2001.

Pacific Gas and Electric Company's electric transmission system consists of approximately 18,605 circuit miles of interconnected transmission lines of 60 kilovolt (kV) to 500 kV and transmission substations having a capacity of approximately 47,596 megawatt-amperes (MVA), including spares, and excluding power plant interconnection facilities. Electricity is distributed to customers through approximately 118,033 circuit miles of distribution system and distribution substations having a capacity of approximately 24,020 MVA.

In 1998, Pacific Gas and Electric Company relinquished control, but not ownership, of its transmission facilities to the ISO. The operation of the transmission system in California, including facilities owned by Pacific Gas and Electric Company, is under the control of the ISO in connection with the electric industry restructuring.

Pacific Gas and Electric Company owns and operates an integrated gas transmission, storage, and distribution system in California. The Utility's system consisted of approximately 6,300 miles of transmission pipelines, three gas storage facilities, and approximately 38,944 miles of gas distribution lines.

3. The following information for the year ending December 31, 2002 with respect to claimant and each of its subsidiary public utility companies:

Edgar Filing: PG&E CORP - Form U-3A-2/A
