

ENVIRO VORAXIAL TECHNOLOGY INC  
Form 10-K  
March 28, 2014

U.S. SECURITIES AND EXCHANGE COMMISSION  
Washington, D.C. 20549

FORM 10-K

ANNUAL REPORT UNDER SECTION 13 OR 15 (d) OF THE  
SECURITIES EXCHANGE ACT OF 1934

For the fiscal year ended December 31, 2013

Commission file number 0-30454

ENVIRO VORAXIAL TECHNOLOGY, INC.  
(Name of Small Business Issuer in its Charter)

Idaho	83-0266517
(State or Other Jurisdiction of Incorporation or Organization)	(I.R.S. Employer Identification No.)

821 NW 57th Place, Fort Lauderdale, Florida 33309  
(Address of Principal Executive Offices) (Zip Code)

(954) 958-9968  
(Issuer's Telephone Number)

Securities registered under Section 12(b) of the Act:

Title of Each Class Name of Each Exchange on Which Registered  
None

Securities registered under Section 12(g) of the Exchange Act:

Common Stock, \$.001 par value  
(Title of Class)

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined by Rule 405 of the Securities Act. Yes  No

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or 15(d) of the Act. Yes  No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes  No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Website, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232-405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and

post such files.) Yes  No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of the registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K.

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of "large accelerated filer," "accelerated filer" and "smaller reporting company" in Rule 12b-2 of the Exchange Act.

Large accelerated filer  Accelerated filer

Non-accelerated filer  Smaller reporting company   
(Do not check if a smaller reporting company)

Indicate by check mark whether the registrant is a shell company (as defined by Rule 12b-2 of the Exchange Act) Yes  No

The aggregate market value of the Company's voting stock held by non-affiliates as of June 28, 2013 was approximately \$3,398,989.60 based on the average closing bid and asked prices of such stock on that date as quoted on the Over the-Counter Bulletin Board (\$0.1188).

There were 33,464,497 shares of common stock outstanding as of March 28, 2014.

## PART

### I.

#### Item Business

##### 1.

#### Our History

Enviro Voraxial Technology, Inc. (the “Company”) was incorporated in Idaho on October 19, 1964, under the name Idaho Silver, Inc. In May of 1996, we entered into an agreement and plan of reorganization with Florida Precision Aerospace, Inc., a privately held Florida corporation (“FPA”), and its shareholders. FPA was incorporated on February 26, 1993.

#### General

We believe we are emerging as a potential leader in the rapidly growing environmental and industrial separation industries. The Company has developed, patented and manufactures the Voraxial® Separator (“Voraxial Separator” or “Voraxial”), a proprietary technology that efficiently separates large volumes of liquid/liquid, liquid/solids or liquid/liquid/solids fluid mixtures with distinct specific gravities. Management believes this superior separation quality is achieved in real-time, and in much greater volumes, with a more compact, cost effective and energy efficient machine than any comparable product on the market today. Management believes the Voraxial fills a void in the market; specifically a real-time separation device that separates a large volume of liquids with a small footprint and without the need of a pressure drop. We believe the need for such a separation device overlaps many markets. These benefits result in significant cost savings to the customer, both acquisition and operating cost.

The Voraxial is capable of processing volumes as low as 3 gallons per minute as well as volumes over 5,000 gallons per minute with only one moving part. The Company believes that the Voraxial technology can help protect the environment and its natural resources while simultaneously making numerous industries more productive and cost effective.

The size and efficiency advantages provided by the Voraxial Separator to the end-user have provided us with a variety of market opportunities. We believe separation of contaminants from water is needed in virtually every industry, either in the manufacturing or production side of the business or in purifying the wastewater prior to discharge. Because of the advantages the Voraxial Separator offers the end user, the Voraxial can be used in many different markets. This allows the Company to pursue its core market, oil and gas exploration and production, while responding and selling product to customers in other markets, such as oil spill, mining, and municipal wastewater, among others.. The Company is focusing its sales activity in the oil & gas exploration and production market, which also includes the tar sands, Frac water, oil refineries and production facilities, both offshore and onshore applications.

We have generated limited revenues to date partially due to the time required to educate the market of our separation technology, partially because of insufficient funds to adequately market our product; and the time needed to secure and complete initial projects. However with the dissemination of the data from our initial projects, demand for the Voraxial has increased. Our revenues increased by approximately 54% in 2013 as compared to 2012 and we believe that our revenue growth will continue in 2014 and 2015. We are in various stages of negotiations with multiple customers interested in our Voraxial Separators and Voraxial Separator Systems. While we cannot provide any reasonable assurances, we believe a percentage of these negotiations will be consummated, resulting in increasing revenues to the Company.

We are receiving inquiries from customers in various industries. Even though customers from various industries can utilize the Voraxial, we are currently focused on developing market channels to penetrate the oil and gas exploration and production market and more specifically, the produced water market. The Company believes that revenues from this industry will continue to increase in 2014 and beyond. We have completed multiple projects to date with the Voraxial Separators (both offshore platforms and onshore production facilities) including units to PDVSA, Occidental, Transocean, Tetra Technologies, ConocoPhillips, Sinopec, and the US Navy. We are in dialogue with other companies to conduct similar projects in 2014 and 2015.

We also believe that our technology could have a significant impact on oil spill recovery. Following the 2010 Deepwater Horizon oil spill in the Gulf of Mexico we were included in British Petroleum RAT (Rapid Attack

Team) Pack program. The “RAT Pack” program is a fleet of local commercial, shallow draft, nimble and fast moving vessels operating under the Vessels of Opportunity program.

During 2010, we finalized the development of the Submersible Voraxial Separator for oil spill recovery, which enables the operator to separate oil from water in the ocean. By conducting the separation in the ocean, management believes that vessels can skim ten times more oil since the amount of water collected in a vessel’s holding tank is reduced by up to 90%. The collected oil will be discharged into a holding tank while the clean water remains in the ocean. This differs substantially from the current methods of skimming large volumes of oil/water mixture and then conducting the separation on vessel. Implementing this new method enables the vessels to process significantly more volume of skimmed oil/water mixture, collect more oil, capture a higher concentration of oil and remain in operation longer. We filed 3 patents related to oil spill recovery.

Due to the exposure from the various petroleum industry related trade shows and the initial sales, trials and demonstrations conducted over the past several years, the Company continues discussions with various oil companies for purchase of units and to conduct additional trials. The Company is also in discussion with several oil service companies interested in developing a relationship with the company to market the Voraxial Separator within the industry. We anticipate that some of these opportunities will materialize in 2014 and 2015.

We have also developed a turnkey system can be utilized in multiple niche applications in the oil industry including produced water, deck water drainage, slopwater, FPSO and refinery markets. The system integrates the Voraxial Separator as a bulk separator, coalescers to increase the droplet size of the dispersed oil and filters for the secondary process for polishing. The system can also include other equipment such as flow meters, turbidity meters, oil monitors and chemical injection ports. We believe the turnkey system will provide the oil industry with a compact and effective separation system. The Voraxial’s small footprint, low energy requirements and separation quality coupled with unique filtration equipment for secondary treatment provides the customer with a complete turnkey package that meets the most stringent discharge levels such as OSPAR (North Sea countries <30mg/ltr) and United States 40 CFR435 (<29 mg/ltr). We have shipped various models of this system.

Voraxial® Separator

The Voraxial Separator is a continuous flow turbo machine that generates a strong centrifugal force, a vortex, capable of separating light and heavy liquids, such as oil and water, or any other combination of liquids and solids at extremely high flow rates. As the fluid passes through the machine, the Voraxial Separator accomplishes this separation through the creation of a vortex. In liquid/liquid and liquid/solid mixtures, this vortex causes the heavier compounds to gravitate to the outside of the flow and the lighter elements to move to the center where an inner core is formed. The liquid stream processed by the machine is divided into separate streams of heavier and lighter liquids and solids. As a result of this process, separation is achieved.

The advantages of the Voraxial include:

- High volume / small footprint
- No Pressure Drop requirement – acts as a pump
- High G force
- Treats a wide range of flows, even slugging flows
- Handles fluctuation in flow rates without any adjustments
- Handles fluctuation in contaminates without any adjustments
- Separation of 2 or 3 components simultaneously
- Non-clogging - open impeller
- Low maintenance
- Can operate dry

- Since there is no pressure drop, there is very little wear caused by sand
- Ease of operation and installation

The Voraxial Separator is a self-contained, non-clogging device that can be powered by an electric motor, diesel engine or by hydraulic power generation. Further, the Voraxial Separator's scalability allows it to be utilized in a variety of industries and to process various amounts of liquid. The following are the various sizes and the corresponding capacity range:

## Product and Capacity Range

Model Number	Diameter Size	Capacity Range Gallons Per Minute
Voraxial®1000	1 inch	3 - 5
Voraxial®2000	2 inches	20 - 70
Voraxial®4000	4 inches	100 - 500
Voraxial®8000	8 inches	1,000 - 3,500

The Voraxial Separator can transfer various liquids in either direction by reversing the machine's rotation. We currently maintain an inventory of various models of the Voraxial Separator.

Management believes that our Voraxial Separator offers substantial applications on a cost-effective basis, including: oil exploration & production, oil remediation services, municipal wastewater treatment, bilge water purification, food processing waste treatment and numerous other industrial production and environmental remediation processes. We also believe that the quality of the water separated from the contaminant is good enough to recycle back into the process stream (back into the plant) or discharge to the environment. As clean water becomes less available to the ever-increasing world population, this technology may become more valuable.

## The Market

The need for effective and cost efficient wastewater treatment and separation technology is global in scale. Moreover, virtually every industry requires some type of separation process either during the manufacturing process, prior to treatment or discharge of wastewater into the environment, for general clean up, or emergency response capability. Separation processes, however, are largely unknown to the average consumer. These processes are deeply integrated in almost all industrial processes from oil to wastewater to manufacturing. Management believes that the Voraxial technology has applications in most, if not all major separation industries. The unique characteristics of the Voraxial allow it to be utilized either as a stand-alone unit or within an existing system to provide a more efficient and cost effective way to handle the separation needs of the customer. We believe the Voraxial Separator can result in a cost savings and other benefits to the customer. These benefits result in and include:

- A reduction in water and energy usage,
- Requires no pressure drop to perform separation,
- Less space needed to implement the Voraxial Separator; the Voraxial Separator weighs less than existing systems,
- A reduction in time to process and separate the fluids, allowing the customer to be more efficient,
- Creation of a more efficient and faster process to treat water to increase the overall productivity of the end-user,
- A reduction in the amount of disposable liquids,
- Fewer employees needed to operate the system, and
- Reduction of ongoing maintenance and servicing costs.

We believe that we are the only front-end solution for the separation industry that can offer increased productivity while reducing the physical space and energy required to operate the unit. These advantages translate into the potential for substantial operating cost efficiencies that would increase the profitability of the solution's end user. The Voraxial's unique characteristic to conduct separation without a pressure loss allows the unit to be installed in locations other technologies cannot. For instance another separation technology in the oil industry called a hydrocyclone requires a significant pressure loss to perform separation. This characteristic gives the customer a more economical way to achieve separation.

If, as we expect, environmental regulations, both domestically and internationally, become more stringent, companies will be required to more effectively treat their wastewater prior to discharge. We believe this offers a great opportunity for the Company as the Voraxial Separator can be utilized in most separation applications to significantly increase the

efficiency of the separation processes while simultaneously reduce the cost to the end-user.

Management believes that the oil industry, and more specifically the produced water market within this industry, represents a great opportunity for significant sales growth for the Voraxial Separator. The produced water market is worldwide and the need for effective produced water (oil/water) separation is a major issue for both offshore and land-based oil production facilities. The ability to efficiently separate produced water waste streams (oil and water) has enormous economical and environmental consequences for the oil production industry. Produced water comprises over 98% of the total waste volume generated by the oil and gas industry, making it the largest volume waste stream associated with oil and gas production.

Oil reservoirs frequently contain large volumes of water and as oil wells mature (the oil field becomes depleted), the amount of produced water increases. In the continental US, it is estimated that 7-10 barrels of water is produced for each barrel of recovered oil. According to the Argonne National Laboratory 2007 White Paper, “approximately 15 to 20 billion bbl (barrels; 1 bbl = 42 U.S. gallons) of produced water are generated each year in the United States. This is equivalent to a volume of 1.7 to 2.3 billion gallons per day.” Worldwide, the total amount of produced water generated, excluding the United States, is approximately 50 billion barrels (approximately 6 billion gallons per day). Produced water volumes will continue to increase as oil wells mature.

The necessity to process and efficiently separate high volumes of liquids coupled with the more stringent environmental regulations worldwide is increasing the demand for the Voraxial Separator. The Voraxial Separator provides a cost effective way to separate large volumes of produced or re-injection water for both on-land and offshore production facilities. The Voraxial provides superior separation while decreasing the amount of space, energy and weight to conduct the separation. In addition to oil separation, the Voraxial can also perform solid (sand and grit) extraction, which prevents production damage by increasing the life of the well.

The Company also expects market opportunities to present themselves because of increased governmental regulation and standards enforcement by the U.S. Environmental Protection Agency (“EPA”), and the European Union Commission on the Environment. Additionally, emerging markets worldwide are opening as growing nations recognize the need and benefit of addressing the environmental issues faced by population growth and industrialization, such as China, Mexico, and South America.

#### Manufacturing

The Voraxial Separator is currently manufactured and assembled at our Fort Lauderdale, Florida facilities. The Company subcontracts some parts of the Voraxial Separator to local manufacturers.

#### Sources and availability of raw materials

The materials needed to manufacture our Voraxial Separator have been provided by leading companies in the precision equipment industry including Motion Industries, MSC, and Baldor Electric Co., among other suppliers. We do not have any long term contracts with these entities. We do not anticipate any shortage of component parts.

#### Inventory

Other than our Voraxial® Separators, we maintain a limited inventory of finished parts until we receive a customer order. We currently have various models of the Voraxial Separator in inventory, which may include certain models located at third party facilities on a trial basis.

#### Marketing

Management continues to implement a sales and marketing program to stimulate awareness of the Voraxial Separator. Management is developing relationships with oil service companies and representatives to promote the Voraxial to oil

industry customers. We have presented the Voraxial Separator at several prominent trade shows in the past fiscal year and have been recognized by various organizations. The Company plans to exhibit the Voraxial Separator at additional tradeshow in 2014.

Intellectual property

We currently hold several patents pertaining to the Voraxial® Separator and are continually working on developing other patents. The Company owns United States Patent #6,248,231 and #5,904,840. Patent #6,248,231

was registered in 2001 for Apparatus with Voraxial® Separator and Analyzer. Patent #5,904,840 is for Apparatus for Accurate Centrifugal Separation of Miscible and Immiscible Media, which is for technology invented by our former president, Alberto DiBella, and registered in 1999. The Company filed for additional patents in 2007 to reflect the upgrades to the Voraxial Separator and in 2010 for oil spill recovery. A provisional patent was also filed in 2013. These patents are still pending. We also hold the trademark for Voraxial®.

#### Product liability

Our business exposes us to possible claims of personal injury, death or property damage, which may result from the failure, or malfunction of any component or subassembly manufactured or assembled by us. We have product liability insurance. However, any product liability claim made against us may have a material adverse effect on our business, financial condition or results of operations in light of our poor financial condition, losses and limited revenues. We have also obtained directors and officers, and general insurance coverage.

#### Research and development

We have spent approximately \$22,421 and \$75,009, respectively, during years ended December 31, 2013 and 2012, on product research and development. The Company has finalized the development of the Voraxial Separator. However, we continue to improve the Voraxial Separator and test the products for new applications.

#### Competition

We are subject to competition from a number of companies who have greater experience, research abilities, engineering capability and financial resources than we have. Although we believe our Voraxial Separator offers applications which accomplish better or similar results on a more cost-effective basis than existing products, other products have, in some instances, attained greater market and regulatory acceptance. These competitors include, but are not limited to Westfalia and AlfaLaval.

#### Employees

We currently have six full time employees. All of our employees work full-time. None of our employees are members of a union. We believe that our relationship with our employees is favorable. We intend to add additional employees in the upcoming year, including managers, sales representatives and field technical engineers.

#### Item Risk Factors

1A.

Not applicable to smaller reporting companies. However, our principal risk factors are described under “Item 7. Management’s Discussion and Analysis of Financial Condition and Results of Operations.”

#### Item Unresolved Staff Comments

1B.

None.

#### Item Properties

2.

In October 2012, the Company entered into a three (3) year lease for an office and manufacturing facility located at 821 NW 57th Place, Fort Lauderdale, FL 33309. The lease is approximately \$6,721 per month.

Item Legal Proceedings

3.

On or about November 17, 2011, a claim was filed in the Broward County Circuit Court in Fort Lauderdale, Florida against the company by Raw Energy Tech, LLC. The plaintiff alleges oral contract between the parties for the alleged design, fabrication and construction of a prototype power pack. Amount of damages sought are approximately \$58,000. We have moved to dismiss the complaint and intend to vigorously defend this action as we believe this claim is without merit.

## Item Mine Safety Disclosures

4.

Not applicable.

## PART

II.

## Item Market for Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities

5.

Our common stock is traded on the OTC Markets under the symbol "EVTN". The range of high and low bid quotations below are provided by the OTC Markets. On March 18, 2014, the closing price for our common stock was \$0.10. The quotations reflect inter-dealer prices, without retail mark-up, markdown or commission, and may not represent actual transactions.

Quarter Ended	High	Low
March 31, 2012	\$0.299	\$0.090
June 30, 2012	\$0.270	\$0.140
September 30, 2012	\$0.185	\$0.106
December 31, 2012	\$0.235	\$0.150
March 31, 2013	\$0.195	\$0.145
June 30, 2013	\$0.173	\$0.110
September 30, 2013	\$0.199	\$0.100
December 31, 2013	\$0.190	\$0.119

## Holders

As of December 31, 2013, there were approximately 800 holders of record of our common stock outstanding. Our transfer agent is Jersey Transfer & Trust Company, Inc., Post Office Box 36, Verona, New Jersey 07044.

## Dividends

We have not paid a cash dividend on the common stock since current management joined our company in 1996. The payment of dividends may be made at the discretion of our board of directors and will depend upon, among other things, our operations, our capital requirements and our overall financial condition. As of the date of this report, we have no intention to declare dividends.

## Recent Sales of Unregistered Securities

Except for those unregistered securities disclosed below or previously disclosed in reports filed with the Securities and Exchange Commission, during the period covered by this report, we have not sold any securities without registration under the Securities Act of 1933, as amended, during the period covered by this report.

On December 20, 2013, the Company issued options to purchase 500,000 shares of common stock to a consultant in consideration for services to be performed. The options are exercisable at \$0.18 per share. The options vest 100,000 shares annually and expire five years after the vesting date.

Issuer Purchase of Equity Securities

None.

ItemSelected Financial Data

6.

Information not required by small reporting company.

8

Item Management's Discussion and Analysis of Financial Condition and Results of Operations

7.

General

Management's discussion and analysis contains various forward-looking statements. These statements consist of any statement other than a recitation of historical fact and can be identified by the use of forward-looking terminology such as "may," "expect," "anticipate," "estimate" or "continue" or use of negative or other variations or comparable terminology.

We caution that these statements are further qualified by important factors that could cause actual results to differ materially from those contained in the forward-looking statements that these forward-looking statements are necessarily speculative, and there are certain risks and uncertainties that could cause actual events or results to differ materially from those referred to in such forward-looking statements.

Year ended December 31, 2013 compared to year ended December 31, 2012

Revenue

We continued to focus our efforts and resources to the manufacturing, assembling, marketing and selling of the Voraxial Separator. Revenues for the year ended December 31, 2013 increased by \$418,191 to \$1,191,559 or approximately 54% from \$773,368 for the year ended December 31, 2012. We believe the increase in revenues corresponds to the increase customer interests and market awareness for the Voraxial. In the past year we have been recognized by various oil and gas industry organizations and have participated in conferences and tradeshow. With the increased exposure and awareness of the Voraxial, we are completing more projects and are reviewing more inquiries and projects over the past 2 years than at any other time in our history. We believe the dissemination of data from previously installed Voraxials is also creating an increase awareness and demand for the Voraxial. We continue to build relationships with oil services companies, representatives and oil exploration and production companies and believe these relationships will increase revenues in the near and long term. The majority of revenues in 2013 and 2012 were a result of sales of the Voraxial Separator and auxiliary equipment and parts, and the remaining revenues were from lease orders and trials for customers interested in buying the Voraxial Separator. The increase in revenues in 2013 was the result of additional sales. Management believes the interest for the Voraxial Separator for liquid/liquid, liquid/solid and liquid/liquid/solid separation is increasing in the oil exploration and production industry. We believe that the relationships we are building will lead to increase Voraxial shipments. We believe we have increased the exposure and awareness of the Voraxial Separator through our marketing programs and expect to increase revenues from the sale and lease of the Voraxial Separator in 2014.

Cost of goods sold increased to \$484,541 for the year ended December 31, 2013 from \$389,754 during the year ended December 31, 2012 or an increase of \$94,787 or approximately 24%. The majority increase in cost of goods sold was directly related to our increase in revenues.

Costs and expenses

Costs and expenses decreased by approximately 44% or \$817,346 to \$1,054,018 for the year ended December 31, 2013 as compared to \$1,871,364 for the year ended December 31, 2012. Our cost and expenses decreased primarily due to a decrease in consulting expense and to a lesser extent due to a decrease in payroll expense and research and development. The decreases were partially offset by increases in general and administrative expenses. As we continue to build our network of representatives we were able to reallocate our expenses to reduce costs while expanding our customer penetration.

General and administrative expenses

General and Administrative expenses increased by approximately 29% or \$128,314 to \$565,963 for the year ended December 31, 2013 from \$437,649 for the year ended December 31, 2012. The increase was primarily due to an increase in legal and professional fees and an increase in marketing and sales expenses.

### Consulting and Payroll Expenses

Consulting expenses decreased by approximately 95% or \$829,582 to \$39,986 for the year ended December 31, 2013 from \$869,568 for the year ended December 31, 2012. The decrease was primarily due to non-cash expenses associated with the issuance of options to employees and consultants in 2012. Payroll expense decreased by 16% or \$63,490 to \$425,648 for the year ended December 31, 2013 as compared to \$489,138 for the year ended December 31, 2012. The decrease reflects the fluctuations in employee overtime.

### Research and development expenses

Research and Development (R&D) expenses decreased to \$22,421 for the year ended December 31, 2013 from \$75,009 for the year ended December 31, 2012. As the development of the Voraxial is complete, specific R&D projects has decreased and is predominantly for activities in the oil and gas industry. The Company filed a provisional patent during 2013.

### Liquidity and capital resources

At December 31, 2013, we had working capital deficiency of \$749,565, cash of \$135,954 and an accumulated deficit of \$15,513,116. For the year ended December 31, 2013, we had a net loss of \$357,148. Operating at a loss for the year negatively impacted our cash position. We believe that including our current cash resources and anticipated revenue to be generated by sales and/or leases of our Voraxial Separators, we will have sufficient resources to continue business operations for the next twelve months. To the extent that these resources are not sufficient to sustain current operating activities, we may need to seek additional capital, or adjust our operating plan accordingly.

### Continuing losses

We may be unable to continue as a going concern, given our limited operations and revenues and our significant losses to date. Consequently, our working capital may not be sufficient and our operating costs may exceed those experienced in our prior years. In light of these recent developments, we may be unable to continue as a going concern.

The Company has experienced net losses, has a working capital and stockholders' deficit. There is no assurance that the Company's developmental and marketing efforts will be successful, that the Company will ever have commercially accepted products, or that the Company will achieve significant revenues. If the Company is unable to successfully commercialize its Voraxial Separator, it is unlikely that the Company could continue its business. Therefore, substantial doubt exists about the ability of the Company to continue as a going concern. The Company may require the infusion of capital until operations become profitable. During 2014, the Company may seek additional capital in the event it is unable to increase sales of the Voraxial Separator or continue to restrict expenses.

### Critical Accounting Policies

Our financial statements have been prepared in accordance with accounting principles generally accepted in the United States of America. The preparation of these financial statements requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses. Note C of the Notes to Financial Statements describes the significant accounting policies used in the preparation of the consolidated financial statements. Certain of these significant accounting policies are considered to be critical accounting policies, as defined below.

A critical accounting policy is defined as one that is both material to the presentation of our financial statements and requires management to make difficult, subjective or complex judgments that could have a material effect on our

financial condition and results of operations. Specifically, critical accounting estimates have the following attributes: 1) we are required to make assumptions about matters that are highly uncertain at the time of the estimate; and 2) different estimates we could reasonably have used, or changes in the estimate that are reasonably likely to occur, would have a material effect on our financial condition or results of operations.

Estimates and assumptions about future events and their effects cannot be determined with certainty. We base our estimates on historical experience and on various other assumptions believed to be applicable and reasonable under the circumstances. These estimates may change as new events occur, as additional information is obtained and as our operating environment changes. These changes have historically been minor and have been included in the consolidated financial statements as soon as they became known. Based on a critical assessment of our accounting policies and the underlying judgments and uncertainties affecting the application of those policies, management believes that our consolidated financial statements are fairly stated in accordance with accounting principles generally accepted in the United States, and present a meaningful presentation of our financial condition and results of operations. We believe the following critical accounting policies reflect our more significant estimates and assumptions used in the preparation of our consolidated financial statements:

#### Revenue Recognition

The Company derives its revenue from the sale and short-term rental of the Voraxial Separator. The Company presents revenue in accordance with Financial Accounting Standards Board (FASB) Accounting Standard Codification (ASC) 605 "Revenue Recognition in Financial Statements". Under Revenue Recognition in Financial Statements, revenue is realized when persuasive evidence of an arrangement exists, delivery has occurred, the price is fixed or determinable and collectability is reasonably assured.

#### Estimates

The preparation of consolidated financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosures of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenue and expenses during the reporting period. Actual results may differ.

#### Recent Accounting Pronouncements

Recent accounting pronouncements issued by the FASB (including its Emerging Issues Task Force), the AICPA, and the SEC, did not, or are not believed by management, to have a material impact on the Company's present or future financial statements.

#### Risk Factors

Our independent auditors have raised substantial doubt about our ability to continue as a going concern.

Our independent auditors have included in their audit report an explanatory paragraph that states that our continuing losses from operations raises substantial doubt about our ability to continue as a going concern.

We have not yet generated significant revenues from the Voraxial Separator. The revenues and income potential of our business and the markets of our separation technology are unproven. We have incurred operating losses since our inception, and we will continue to incur net losses until we can produce sufficient revenues to cover our costs. At December 31, 2013, we had an accumulated deficit of \$15,513,116, including a net loss of \$357,148 for the year ended December 31, 2013. Even if we achieve profitability, we may not be able to sustain or increase our profitability on a quarterly or annual basis.

Our ability to generate future revenues will depend on a number of factors, many of which are beyond our control. These factors include the rate of market acceptance of our products, competitive efforts, and general economic trends. Due to these factors, we cannot anticipate with any degree of certainty what our revenues will be in future periods. You have limited historical financial data and operating results with which to evaluate our business and our prospects.

We have been limited by insufficient capital, and we may continue to be so limited.

In the past, we have lacked the required capital to market the Voraxial Separator. Our inability to raise the funding or to otherwise finance our capital needs could adversely affect our financial condition and our results of operations, and could prevent us from implementing our business plan.

We may seek to raise capital through public and private equity offerings, debt financing or collaboration, and strategic alliances. Such financing may not be available when we need it or may not be available on terms that are favorable to us. If we raise additional capital through the sale of our equity securities, your ownership interest will be diluted and the terms of the financing may adversely affect your holdings or rights as a stockholder.

We currently rely on a limited number of customers for our revenues.

Revenues from three customers accounted for approximately 85% of total revenues during 2013 and 2012. We do not have any contracts with these customers. If these customers fail to order additional products or we are unable to attract new customers, it could have an adverse effect on our financial condition and results of operations.

If our products do not achieve and maintain market acceptance, our business will not be successful.

Even though our product is successfully developed, our success and growth will depend upon its acceptance by various potential users of our product. Acceptance will be a function of our product being more cost effective as compared to currently existing or future technologies. If our product does not achieve market acceptance, our business will not be successful. In addition, even if our product achieves market acceptance, we may not be able to maintain that market acceptance over time if new products or technologies are introduced that are more favorably received than our product or render our products obsolete.

If we do not develop sales and marketing capabilities or arrangements successfully, we will not be able to commercialize our product successfully.

We have limited sales and marketing experience. We may market and sell our product through a direct sales force or through other arrangements with third parties, including co-promotion arrangements. Since we may market and sell any product we successfully develop through a direct sales force, we will need to hire and train qualified sales personnel.

Our market is subject to intense competition. If we are unable to compete effectively, our product may be rendered non-competitive or obsolete.

We are engaged in a segment of the water filtration industry that is highly competitive and rapidly changing. Many large companies, academic institutions, governmental agencies, and other public and private research organizations are pursuing the development of technology that can be used for the same purposes as our product. We face, and expect to continue to face, intense and increasing competition, as new products enter the market and advanced technologies become available. We believe that a significant number of products are currently under development and will become available in the future that may address the water filtration segment of the market. If other products are successfully developed, it may be marketed before our product.

Our competitors' products may be more effective, or more effectively marketed and sold, than any of our products. Many of our competitors have:

- significantly greater financial, technical and human resources than we have and may be better equipped to discover, develop,
- manufacture and commercialize products; and
- more extensive experience in marketing water treatment products.

Competitive products may render our products obsolete or noncompetitive before we can recover the expenses of developing and commercializing our product. Furthermore, the development of new technologies and products could

render our product noncompetitive, obsolete, or uneconomical.

As we evolve from a company primarily involved in design and development to one also involved in commercialization, we may encounter difficulties in managing our growth and expanding our operations successfully.

We may experience a period of rapid and substantial growth that may place a strain on our administrative and operational infrastructure, and we anticipate that continued growth could have a similar impact. As our product continues to enter and advance in the market, we will need to expand our development, regulatory, manufacturing,

marketing and sales capabilities or contract with third parties to provide these capabilities for us. As our operations expand, we expect that we will need to manage additional relationships with various collaborative partners, suppliers, and other third parties.

If we are unable to adequately protect our technology, or if we infringe the rights of others, we may not be able to defend our markets or to sell our product.

Our success may depend in part on our ability to continue and expand our patent protection both in the United States and in other countries for our product. Due to evolving legal standards relating to the patentability, validity, and enforceability of patents covering our product and the scope of claims made under these patents, our ability to obtain and enforce patents is uncertain and involves complex legal and factual questions. Accordingly, rights under any issued patents may not provide us with sufficient protection for our product or provide sufficient protection to afford us a commercial advantage against competitive products or processes.

Our success may also depend in part on our ability to operate without infringing the proprietary rights of third parties. The manufacture, use, or sale of our product may infringe on the patent rights of others. Likewise, third parties may challenge or infringe upon our existing or future patents. Proceedings involving our patents or patent applications or those of others could result in adverse decisions regarding:

the patentability of our inventions relating to our product; and/or  
the enforceability, validity, or scope of protection offered by our patents relating to our product.

Litigation may be necessary to enforce the patents we own and have applied for (if they are awarded), copyrights, or other intellectual property rights, to protect our trade secrets, to determine the validity and scope of the proprietary rights of others, or to defend against claims of infringement. This type of litigation could result in the expenditure of significant financial and managerial resources and could result in injunctions preventing us from distributing certain products. Such claims could materially adversely affect our business, financial condition, and results of operations.

We are dependent on key personnel.

We are dependent upon the availability and the continued performance of the services of John A. DiBella. The loss of the services of John A. DiBella could have a material adverse effect on us. In addition, the availability of skilled personnel is extremely important to our growth strategy and our failure to attract and retain such personnel could have a material, adverse effect on us. We do not currently maintain any key man life insurance covering Mr. DiBella or any of our employees.

Our operations are subject to governmental approvals and regulations and environmental compliance.

Our operations are subject to extensive and frequently changing federal, state, and local laws and substantial regulation by government agencies, including the United States Environmental Protection Agency (EPA), the United States Occupational Safety and Health administration (OSHA) and the Federal Aviation Administration (FAA). Among other matters, these agencies regulate the operation, handling, transportation and disposal of hazardous materials used by us during the normal course of our operations, govern the health and safety of our employees and certain standards and licensing requirements for our aerospace components that we contract manufacture. We are subject to significant compliance burden from this extensive regulatory framework, which may substantially increase our operational costs.

We believe that we have been and are in compliance with environmental requirements and believe that we have no liabilities under environmental requirements. Further, we have not spent any funds specifically on compliance with environmental laws. However, some risk of environmental liability is inherent in the nature of our business, and we

might incur substantial costs to meet current or more stringent compliance, cleanup, or other obligations pursuant to environmental requirements in the future. This could result in a material adverse effect to our results of operations and financial condition.

Our business has a substantial risk of product liability claims. If we are unable to obtain appropriate levels of insurance, a product liability claim against us could adversely affect our business.

Our business exposes us to possible claims of personal injury, death, or property damage, which may result from the failure, or malfunction of any component or subassembly manufactured or assembled by us. While we have product liability insurance, any product liability claim made against us may have a material adverse effect on our business, financial condition, or results of operations in light of our poor financial condition, losses and limited revenues.

We currently have limited authorized, but unissued shares of capital stock.

As of December 31, 2013, the Company has approximately 9,285,503 shares of authorized, but unissued Common Stock. In addition, the Company has reserved approximately 13,465,000 shares for outstanding options. Therefore the Company has limited shares of common stock which otherwise could be sold to meet future financing needs and does not have a sufficient number of shares reserved in the event of the exercise of all of the Company's outstanding options.

The financial statements required by this report are included, commencing on F-1.

Item Changes in and Disagreements With Accountants on Accounting and Financial Disclosure

9.

None.

Item Controls and Procedures

9A.

Evaluation of Disclosure Controls and Procedures

We maintain disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) of the Securities Exchange Act of 1934, as amended (the "Exchange Act") that are designed to be effective in providing reasonable assurance that information required to be disclosed in our reports under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in the rules and forms of the SEC, and that such information is accumulated and communicated to our management to allow timely decisions regarding required disclosure.

The Company's management, under the supervision and with the participation of the Company's Chief Executive Officer and Chief Financial (and principal accounting) Officer, carried out an evaluation of the effectiveness of the design and operation of the Company's disclosure controls and procedures (as defined in Rule 13a-15(e) and 15d-15(e) of the Exchange Act) as of December 31, 2013. Based upon that evaluation and the identification of the material weakness in the Company's internal control over financial reporting as described below under "Management's Report on Internal Control over Financial Reporting," the Chief Executive Officer and Chief Financial Officer concluded that the Company's disclosure controls and procedures were ineffective as of the end of the period covered by this report.

## Management's Report on Internal Control over Financial Reporting

Management is responsible for establishing and maintaining adequate internal control over financial reporting of the Company. Management, with the participation of our principal executive officer and principal financial officer, has evaluated the effectiveness of our internal control over financial reporting as of December 31, 2013 based on the criteria established in Internal Control - Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on this evaluation, the Chief Executive Officer and Chief Financial Officer concluded that, as of December 31, 2013, our internal control over financial reporting is not effective in providing reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with U.S. generally accepted accounting principles because of the Company's limited resources and limited number of employees.

To mitigate the current limited resources and limited employees, we rely heavily on direct management oversight of transactions, along with the use of legal and accounting professionals. As we grow, we expect to increase our number of employees, which will enable us to implement adequate segregation of duties within the internal control framework.

This annual report does not include an attestation report of the Company's registered public accounting firm regarding internal control over financial reporting. Management's report was not subject to attestation by the company's registered public accounting firm pursuant to temporary rules of the SEC that permit the company to provide only management's report in this annual report.

#### Limitations on Effectiveness of Controls and Procedures

Our management, including our Chief Executive Officer and Chief Financial Officer, does not expect that our disclosure controls and procedures or our internal controls will prevent all errors and all fraud. A control system, no matter how well conceived and operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are met. Further, the design of a control system must reflect the fact that there are resource constraints and the benefits of controls must be considered relative to their costs. Because of the inherent limitations in all control systems, no evaluation of controls can provide absolute assurance that all control issues and instances of fraud, if any, within the Company have been detected. These inherent limitations include, but are not limited to, the realities that judgments in decision-making can be faulty and that breakdowns can occur because of simple error or mistake. Additionally, controls can be circumvented by the individual acts of some persons, by collusion of two or more people, or by management override of the control. The design of any system of controls also is based in part upon certain assumptions about the likelihood of future events and there can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions. Over time, controls may become inadequate because of changes in conditions, or the degree of compliance with the policies or procedures may deteriorate. Because of the inherent limitations in a cost-effective control system, misstatements due to error or fraud may occur and not be detected.

#### Changes in Internal Control over Financial Reporting

There were no changes to our internal control over financial reporting (as defined in Rules 13a-15(f) and 15d-15(f) under the Exchange Act) that occurred during the period covered by this report that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

Item 9B.

Other Information

None.

PART  
III.

Item Directors, Executive Officers and Corporate Governance  
10.

Directors and executive officers

The following sets forth the names and ages of our officers and directors. Our directors are elected annually by our shareholders, and the officers are appointed annually by our board of directors.

Name	Age	Position
John A. DiBella	42	Chief Executive Officer, Chief Financial Officer and Director

John A. DiBella has served as an employee of our Company since January 2002 and a member of the Board of Directors since August 2006. Since November 2011 he has served as chief executive officer and chief financial officer. From 2000 through January 2002 Mr. DiBella provided consulting services to our Company. Mr. DiBella was promoted from Chief Operating Officer to President in November 2011. Mr. DiBella co-founded and served as President of PBCM, a financial management company located in New Jersey from 1997 to 1999. Prior to co-founding PBCM, Mr. DiBella worked for Donaldson, Lufkin and Jenrette, a NYSE member firm.

## Board of Directors and Committees

During the year ended December 31, 2013, our board of directors held 4 meetings.

To date, we have not established an audit committee. Due to our financial position, we have been unable to attract qualified independent directors to serve on our board. Our board of directors, consisting solely of John A. DiBella, reviews the professional services provided by our independent auditors, the independence of our auditors from our management, our annual financial statements and our system of internal accounting controls. None of the board members are considered a “financial expert.”

Because the board of directors consists of only one member, the board has not delegated any of its functions to committees. The entire board of directors acts as our audit committee as permitted under Section 3(a)(58)(B) of the Exchange Act. We do not have any independent directors who would qualify as an audit committee financial expert. We believe that it has been, and may continue to be, impractical to recruit such a director unless and until we are significantly larger.

## Code of Ethics

During the year ended December 31, 2003 we adopted a code of ethics. The code of ethics was filed with the Company’s Form 10-KSB annual report for the year ended December 31, 2003. The code of ethics may be obtained by contacting the Company’s executive offices. The code applies to our officers and directors. The code provides written standards that are designed to deter wrongdoing and promote: (i) honest and ethical conduct; (ii) full, fair, accurate, timely and understandable disclosure; (iii) compliance with applicable laws and regulations; (iv) promote reporting of internal violations of the code; and (v) accountability for the adherence to the code.

## Shareholder Communications

Although we do not have a formal policy regarding communications with our board of directors, shareholders may communicate with the board by writing to us at Enviro Voraxial Technology, Inc., 821 N.W. 57th Place, Fort Lauderdale, Florida 33309, Attention: Mr. John A. DiBella. Shareholders who would like their submission directed to a member of the Board may so specify, and the communication will be forwarded, as appropriate.

## Section 16(a) of the Exchange Act

Section 16(a) of the Securities Exchange Act of 1934 requires our directors and executive officers, and persons who own more than ten percent of our outstanding common stock to file with the SEC initial reports of ownership and reports of changes in ownership of common stock. These persons are required by SEC regulation to furnish us with copies of these reports they file. To our knowledge, based solely on a review of the copies of reports furnished to us, Section 16(a) filing requirements applicable to our officers, directors and greater than ten percent beneficial owners were complied with on a timely basis for the period which this report relates.

## Item Executive compensation

11.

The table below sets forth compensation for the past two years awarded to, earned by or paid to our chief executive officer and each executive officer whose compensation exceeded \$100,000 for the years ended December 31, 2013 and December 31, 2012 (the “Named Executives”).

### Summary Compensation Table

Edgar Filing: ENVIRO VORAXIAL TECHNOLOGY INC - Form 10-K

Name and Principal Position	Year	Salary (\$)	Bonus (\$)	Stock Awards (\$)	Option Awards (\$)(1)	Non-Equity Incentive Plan Compensation (\$)	Change in Pension Value and Nonqualified Deferred Compensation Earnings (\$)	All Other Compensation (\$)	Total (\$)
John A. DiBella	2013	\$305,000(2)	--	--	--	--	--	--	\$305,000
President, Chief Executive Officer and Chief Financial Officer	2012	\$305,000(3)	--	--	\$615,668(4)	--	--	--	\$920,668

- (1) The amounts in these columns represent the fair value of the award as of the grant date as computed in accordance with FASB ASC Topic 718 and the SEC disclosure rules. These amounts represent awards that are paid in shares of common stock or options to purchase shares of our common stock and do not reflect the actual amounts that may be realized by the Named Executives.
- (2) \$88,000 paid and the remaining amount accrued.
- (3) \$80,000 paid and remaining amount accrued.
- (4) On January 1, 2012, the Company extended the expiration date of an aggregate of 5,800,000 options held by Mr. DiBella to various dates in 2017 and 2018. In addition, the exercise price of options to purchase 1,000,000 shares was reduced from \$0.40 per share to \$0.18 per share and the exercise price of options to purchase 2,800,000 shares was reduced from \$0.68 per share to \$0.18 per share.

Outstanding Equity Awards At December 31, 2013

Listed below is information with respect to unexercised options for each Named Executive as of December 31, 2013.

Name	Option Awards				Stock Awards			
	Number of Securities Underlying Unexercised Options (#) Exercisable	Number of Securities Underlying Unexercised Options (#) Unexercisable	Option Exercise Price (\$)	Option Expiration Date	Number of Shares or Units of Stock That Have Not Vested (#)	Market Value of Shares or Units of Stock That Have Not Vested (\$)	Equity Incentive Plan Awards: Number of Unearned Shares, Units or Other rights That Have Not Vested (#)	Stock Awards: Market or Payout Value of Unearned Shares, Units or Other rights That Have Not Vested (\$)
John A. DiBella	2,000,000	--	\$0.15	1/31/2017(1)	--	--	--	--
	1,000,000	--	\$0.18(2)	6/30/2017(2)	--	--	--	--
	2,800,000	--	\$0.18(3)	6/2/2018(3)	--	--	--	--
	1,900,000	--	\$0.15	11/14/2021	--	--	--	--

- (1) Effective January 1, 2012, the expiration date of the options was extended to January 31, 2017.
- (2) Effective January 1, 2012, the expiration date of the options was extended to June 30, 2017 and the exercise price was reduced from \$0.40 to \$0.18.
- (3) Effective January 1, 2012, the expiration date of the options was extended to June 2, 2018 and the exercise price was reduced from \$0.68 to \$0.18.

Employment agreements

Our executive officer does not currently have a written employment agreement with the Company. For the years ended December 31, 2013 and 2012, the Company incurred salary expenses from the Chief Executive Officer of the Company of \$305,000. For the year ended December 31, 2013, \$88,000 has been paid. The unpaid balance has been accrued and as of December 31, 2013 and 2012, the accrued salary is \$693,107 and \$476,107, respectively. As of December 31, 2013 and 2012, the Company owes its former chief executive officer \$158,898.

#### Director Compensation

Directors are not compensated by our Company.

#### Item Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters 12.

#### Beneficial Ownership

The table below sets forth information with respect to the beneficial ownership of our securities as of March 28, 2014 by: (1) each person known by us to be the beneficial owner of five percent or more of our

outstanding securities, and (2) executive officers and directors, individually and as a group. Unless otherwise indicated, we believe that the beneficial owner has sole voting and investment power over such shares. As of March 28, 2014, we had 33,464,497 shares of common stock issued and outstanding. Unless otherwise noted below, the address for each shareholder is 821 NW 57th Place, Fort Lauderdale, Florida 33309.

Name and Address of Beneficial Owner	Number of Shares Beneficially Owned	Percentage of Ownership
Estate of Alberto DiBella (1)	6,095,500(1)	16.4%
John A. DiBella	10,064,000(2)	24.4%
All officers and directors as a group (1 person)	10,064,000(2)	24.4%

(1) Voting and dispositive control held by Adele DiBella. Includes 2,295,500 shares of common stock. Includes 1,900,000 shares of common stock underlying options exercisable at \$0.18 that expire June 12, 2015. Also includes options to purchase 1,900,000 shares of common stock, exercisable at \$0.15 per share, on a cashless basis that expire on November 16, 2016.

(2) Includes 2,364,000 shares of common stock. Includes options to purchase (i) 2,000,000 shares of common stock at \$0.15 per share that expire on January 1, 2017; (ii) 1,000,000 shares of common stock at \$0.18 per share that expire on June 30, 2017; (iii) 1,900,000 shares of common stock, exercisable at \$0.15 per share on a cashless basis that expire on November 14, 2021; and (iv) 2,800,000 shares of common stock underlying options exercisable at \$0.18 per share that expire on June 2, 2018. Excludes 100,000 shares held in trust for the benefit of his minor children.

#### Securities Authorized for Issuance Under Equity Compensation Plans

The table below provides information pertaining to all compensation plans under which equity securities of our company are authorized for issuance as of the end of the most recent fiscal year.

Number of securities

Number of securities
