**RESULTS FOR THE HALF YEAR ENDED 31 DECEMBER 2006**

**Commentary on the Group Results**

**Record half year results**

Our profit attributable to members of BHP Billiton of US\$6.2 billion represents an increase of 41.3 per cent over the corresponding period. The quality of our portfolio and the strong product demand are evident with seven of our nine Customer Sector Groups (CSGs) recording increases in profit from operations (EBIT) over the comparative period.

Revenue was US\$18.5 billion, up 21.7 per cent from US\$15.2 billion in the corresponding period. Revenue from third party products increased 25.6 per cent to US\$3.1 billion for the six months ended 31 December 2006 from US\$2.4 billion for the six months to 31 December 2005. Revenue, together with our share of jointly controlled entities' revenue, was US\$22.1 billion, up 22.3 per cent from US\$18.1 billion in the corresponding period.

We achieved production records (from continuing operations) for five major and one minor commodity during the half year and ten of our assets set production records. This reflects our key operating objective of delivering consistent, predictable and sustainable operating performance across all of our businesses.

The environment in which we operate continues to be challenging. However, our recruitment and procurement strategies that leverage off our scale and geographic diversity and our Business Excellence program, which is sourcing and replicating best practice from our extensive asset base, are contributing to a continued reduction in the rate of cost increase. Our activities are becoming more geographically diverse and our Business Excellence program has graduated to its next level of maturity.

**Investing in the future**

Our project pipeline continues to grow with a number of organic growth options progressing to the feasibility phase and the acquisition of the Genghis Khan oil field in the Gulf of Mexico. We now have 29 projects in either execution or feasibility with an expected budget of US\$17.5 billion. The majority of our major projects under development continue to track to schedule. Cost pressures resulting from the shortage of labour, equipment and other input costs remain, but recently reassessed projects remain on cost and schedule. During the period; production from the Spence copper cathode project in Chile commenced ahead of schedule while the Escondida Sulphide Leach (copper), Worsley DCP (alumina) and Rapid Growth 2 (iron ore) projects continued to ramp up to full capacity.

We are committed to creating value added options in our portfolio to provide the next generation of growth opportunities beyond our current project pipeline. During the period we have opened corporate offices in Guinea and the Democratic Republic of Congo, building on our already significant exploration and project assessment activities in these countries. We also entered into an exclusive agreement with Global Alumina relating to the development of an alumina refinery in Guinea and we announced the acquisition of the Genghis Khan oil field, which is adjacent to our Shenzi development.

The quality of our assets and the diversity of our portfolio underpin the strength of our cash flow and continues to support our ability to both identify and invest in growth opportunities while continuing to deliver outstanding returns to shareholders.

**Table of Contents**

**Dividend and Capital Management**

On 7 February 2007, the Board declared an interim dividend of 20.0 US cents per share. This represents a 14.3 per cent increase over last year's interim dividend of 17.5 US cents per share. We also announced on 7 February 2007 an increase of US\$10 billion to the US\$1.3 billion remaining from the capital initiative announced in August 2006. This amount will be returned to shareholders over the next 18 months through a series of share buy-backs. From August 2006 to 2 February 2007, US\$1.7 billion has been returned to shareholders through on-market purchases of 92,285,000 BHP Billiton Plc (Plc) shares (at an approximate price of US\$18.23, being a 8.9 per cent discount to the price of our Limited stock).

We are commencing the first stage in this return immediately with an off-market buy-back of BHP Billiton Limited (Ltd) stock. This program will begin immediately with a targeted maximum size of around A\$3.25 billion (US\$2.5 billion). We expect the on-market buy-back of Plc shares will continue during the off-market process.

This announcement brings the total capital management programs announced since August 2004 to US\$17 billion. Up until 2 February 2007, 388 million shares have been repurchased, representing approximately 6.6 per cent of the total shares on issue at an approximate price of US\$14.11 (A\$18.68 / GBP 7.56).

On completion of this announced program BHP Billiton will have repurchased approximately 16.9 per cent of the shares on issue since November 2004 (based upon closing price as at 2 February 2007 of A\$26.59 and GBP9.76) and will have returned US\$26.6 billion in total to shareholders through capital initiatives and dividends since June 2001.

**The Income Statement**

In discussing the operating results of our business, we focus on a non-GAAP (US or IFRS) financial measure we refer to as Underlying EBIT. Underlying EBIT is the key measure that management uses internally to assess the performance of our business, make decisions on the allocation of resources and assess operational management. Management uses this measure because financing structures and tax regimes differ across our assets, and substantial components of our tax and interest charges are levied at a Group, rather than an operational, level. Underlying EBIT is calculated as earnings before interest and taxation (EBIT), which is referred to as profit from operations on the face of the income statement, and excludes the effects of:

net financing costs and taxation of jointly controlled entities; and

exceptional items

Under IFRS, we equity account all jointly controlled entities, resulting in the earnings (net of financing costs and taxation) of jointly controlled entities being included in our income statement under the single-line item share of profits from jointly controlled entities. In order to provide our management and shareholders with a consistent picture of the operational performance of our business, we exclude the financing costs and taxation of jointly controlled entities from the profit from operations line to arrive at Underlying EBIT.

We exclude exceptional items from Underlying EBIT in order to enhance the comparability of the measure from period to period. Our management monitors exceptional items, net finance costs and taxation separately.

You should be aware that Underlying EBIT is not a measure that is recognised under IFRS. In addition, it may be different from the measure EBIT or earnings before interest and taxation that are reported by other companies, in particular because we exclude the effect of net finance costs and taxation of equity accounted entities and exceptional items. As noted above, the line item from our income statement prepared in accordance with IFRS that most closely relates to Underlying EBIT is profit from operations, which is referred to as EBIT. The following table reconciles Underlying EBIT to profit from operations for the half years ended 31 December 2006 and 2005:

<b>Half Year ended 31 December</b>	<b>2006</b>	<b>2005</b>
	<b>US\$M</b>	<b>US\$M</b>
Underlying EBIT	<b>9,134</b>	<b>6,671</b>

## Edgar Filing: BHP BILLITON LTD - Form 6-K

Impact of equity accounting for statutory purposes:	(79)	(60)
Share of jointly controlled entities net finance costs		
Share of jointly controlled entities total taxation expense	(536)	(352)
Total adjustments in arriving at Underlying EBIT	(615)	(412)
Profit from operations (EBIT)	8,519	6,259

**Table of Contents**

*Consolidated results*

Profit from operations (EBIT) for the half year ended 31 December 2006 was US\$8.5 billion compared with US\$6.3 billion in the corresponding period, an increase of 36.1 per cent. Underlying EBIT for the half year ended 31 December 2006 was US\$9.1 billion compared with US\$6.7 billion, an increase of 36.9 per cent.

The increase in EBIT and Underlying EBIT was due primarily to higher commodity prices. Nickel, copper, aluminium, iron ore, and petroleum product prices contributed significantly to the increase in revenue and Underlying EBIT.

**Table of Contents**

The following table and commentary describes the approximate impact of the principal factors that affected EBIT and Underlying EBIT for the half year ended 31 December 2006 compared with the corresponding half year period:

	US\$ Million
<b>Profit from operations (EBIT) for the half year ended 31 December 2005</b>	<b>6,259</b>
Add: adjustments in arriving at Underlying EBIT	412
<b>Underlying EBIT for the half year ended 31 December 2005</b>	<b>6,671</b>
Change in volumes:	
Increase in volumes	385
Decrease in volumes	(330)
	55
Net price impact	
Change in sales prices	3,940
Price-linked costs	(515)
	3,425
Change in costs:	
Costs (rate and usage)	(530)
Exchange rates	(175)
Inflation on costs	(200)
	(905)
Asset sales	(40)
Ceased and sold operations	(45)
Exploration	(50)
Other	23
<b>Underlying EBIT for the half year ended 31 December 2006</b>	<b>9,134</b>
Less: adjustments in arriving at Underlying EBIT	(615)
<b>Profit from operations (EBIT) for the half year ended 31 December 2006</b>	<b>8,519</b>

*Volumes*

Strong demand drove increased sales volumes of metallurgical coal, manganese ore, petroleum products, iron ore, nickel, alumina, molybdenum, energy coal and, from some operations, copper and contributed approximately US\$385 million more to Underlying EBIT (measured at the corresponding period's average margins) than for the corresponding period. Overall sales volumes of base metals were lower than the prior year, due largely to the industrial disruptions at Escondida (Chile), a smelter shutdown at Olympic Dam (Australia) and the temporary closure of the southern zone at Cannington (Australia). We experienced lower grade diamond production at Ekati (Canada) as it transitions from an open-cut to an underground operation which led to a decrease in diamond sales for the period. The comparative period also included diamond sales from inventory.

*Prices*

Stronger commodity prices for most products increased Underlying EBIT by US\$3,940 million. Higher prices for nickel, copper, aluminium, iron ore, petroleum products, zinc, alumina, energy coal, silver, lead, manganese alloy and diamonds contributed approximately US\$4,208 million, which was partially offset by lower prices for metallurgical coal and manganese ore.

**Table of Contents**

Higher price-linked costs reduced Underlying EBIT by US\$515 million, arising largely from higher charges for third party ore in Stainless Steel Materials, royalties for nickel, oil and gas and iron ore, increased copper treatment and refining charges (TCRCs), price participation, higher earnings linked costs at Antamina (Peru) and higher LME linked power charges in Aluminium.

*Costs*

Strong demand for resources globally has continued, leading to increased costs across the industry for labour, contractors, raw materials, fuel, energy and other input costs. In this environment, costs for the Group have increased by US\$530 million. Excluding non cash costs, this represents an increase on our December 2005 half year total cost base of 5.1 per cent.

Specific areas of cost increases include changed mining conditions particularly at Ekati where we are mining a lower grade zone and higher strip ratios at Queensland Coal (Australia). Labour and contractor charges, consumables and fuels, business development expenditure, maintenance and other operating costs have also increased.

The rate of increase in costs across our business has slowed. Although this is a positive sign, the current environment continues to be challenging and the pressure on access to labour and other inputs to our business has not lessened.

*Exchange rates*

Exchange rate movements had a negative impact on Underlying EBIT of US\$175 million. A stronger Australian dollar had a negative impact on both operating costs and also the translation of monetary items into US dollars. This was only partially offset by the favourable impact of a weaker South African rand on operating costs for our South African businesses.

The following exchange rates against the US dollar have been applied:

	Half year ended 31 Dec 2006	Half year ended 31 Dec 2005	31 Dec 2006	30 June 2006	31 Dec 2005
	average	average	closing	closing	closing
Australian dollar <sup>(a)</sup>	<b>0.76</b>	0.75	<b>0.79</b>	0.74	0.73
South African rand	<b>7.23</b>	6.52	<b>7.00</b>	7.12	6.33

(a) Displayed as US\$ to A\$1 based on common convention.

*Inflation on costs*

Inflationary pressures on input costs across all of our businesses had an unfavourable impact on Underlying EBIT of US\$200 million.

*Asset Sales*

The impact from the sale of assets and interests on Underlying EBIT was US\$40 million lower than the corresponding period. The impact amounted to US\$70 million for the current period, principally related to the sale of our Moranbah Coal Bed Methane assets (Australia), our interest in Eyesizwe (South Africa) and Alliance Copper (Chile). This compared to higher profits in the corresponding period arising largely from the divestment of our interest in the Wonderkop chrome joint venture (South Africa) and the Green Canyon oil fields (US).

## **Table of Contents**

### *Ceased and sold operations*

Ceased and sold operations had a US\$45 million unfavourable impact on Underlying EBIT. The current period was negatively impacted by the loss of US\$134 million of earnings from Tintaya (Peru) (divested in June 2006) and the Southern Cross Fertiliser operations (Australia) (divested in August 2006). This was partly offset by the US\$96 million favourable impact due to investigation and salvage costs for Typhoon/Boris (US) that were included in the corresponding period.

### *Exploration*

Exploration expense was US\$50 million higher than the corresponding period and relates mainly to a US\$43 million current period write-off of Petroleum expenditure that had previously been capitalised and increased expenditure at Maruwai (Indonesia).

### *Other*

Other items increased Underlying EBIT by US\$23 million. These included higher insurance recoveries than the corresponding period partially offset by a lower contribution from freight activities.

### *Net finance costs*

Net finance costs increased to US\$222 million, from US\$215 million in the corresponding period. This was driven predominantly by a higher average interest rate but was partially offset by higher capitalised interest and lower average debt levels.

### *Taxation expense*

The total taxation expense on profit before tax was US\$2,097 million, representing an effective rate of 25.3 per cent (calculated as total taxation expense divided by profit before taxation). When compared to the UK and Australian statutory tax rate (30 per cent), the effective tax rate included a benefit of 1.7 per cent due to the recognition of prior year US tax benefits (US\$140 million). Royalty-related taxation represents an effective rate of 2.4 per cent for the current period.

## **Cash Flows**

Net operating cash flow after interest and tax increased by 62.9 per cent to US\$7,018 million. Higher profits increased cash generated from operating activities, offset by an increase in working capital (principally due to higher prices) and increased taxation payments.

Capital and exploration expenditure totalled US\$3,396 million for the period. Expenditure on major growth projects was US\$2,476 million, including US\$706 million on petroleum projects and US\$1,770 million on minerals projects. Other capital expenditure on maintenance, sustaining and minor capital items was US\$616 million. Financing cash flows include US\$2,455 million in relation to the capital management program and increased dividend payments.

Net debt, comprising cash and cash equivalents and interest-bearing liabilities, was US\$7,206 million, a decrease of US\$1,034 million, or 12.5 per cent, compared to 30 June 2006. Gearing, which is the ratio of net debt to net debt plus net assets, was 20.3 per cent at 31 December 2006, compared with 25.2 per cent at 30 June 2006.

## **Portfolio Management**

Portfolio activities continued during the period with proceeds amounting to US\$326 million. We disposed of a number of assets and interests including the Southern Cross Fertiliser operations, the Moranbah Coal Bed Methane assets, the Cascade and Chinook oil prospects (US), the interest in the Valesul aluminium smelter (Brazil) and the interest in Eyesizwe. Proceeds realised from the sale or distribution of our assets and interests over the last five and a half years now totals approximately US\$6 billion.

## **Table of Contents**

At 31 December 2006 we had announced the sale of our Koornfontein energy coal mine (South Africa).

We also announced the acquisition of an interest in the Genghis Khan oil field for US\$583 million during the period. The transaction closed on 1 February 2007.

## **Liquidity**

In October 2006 the Group signed a new US\$3.0 billion multi-currency revolving credit facility. This new credit facility, which expires in October 2011, replaces the previous US\$3.0 billion credit facility that was due to expire in 2009. The finance facility that was put in place for the acquisition of WMC Resources Ltd has been fully repaid.

## **Corporate Governance**

The following Board changes occurred during the period:

Mr Marius Kloppers (Group President Non-Ferrous Materials) and Mr Chris Lynch (Group President Carbon Steel Materials) were appointed Executive Directors from 1 January 2006 and elected to the Board at the Plc and Ltd Annual General Meetings in October and November 2006 respectively; and

Mr Paul Anderson and Mr Jacques Nasser were appointed Non-executive Directors from 6 June 2006 and elected to the Board at the Plc and Ltd Annual General Meetings.

On 1 August 2006, Mr Miklos Salamon announced his intention to retire from the Board and Company effective from 26 October 2006. He retired from the Boards of Ltd and Plc at the Annual General Meeting of Plc. During January 2007, 67,285,000 Plc shares which were purchased by Ltd, were cancelled and 2,400,862,002 Plc shares remained on issue (including Treasury shares and shares purchased by Ltd in Plc).

**Table of Contents****CUSTOMER SECTOR GROUP SUMMARY**

The following table provides a summary of the Customer Sector Group revenues and results for the six months ended 31 December 2006 and the corresponding period.

**Revenues:**

Half year ended 31 December US\$M	2006			2005		
	Revenue	Our share of jointly controlled entities revenue	Revenue together with share of jointly controlled entities revenues <sup>(1)</sup>	Revenue	Our share of jointly controlled entities revenue	Revenue together with share of jointly controlled entities revenues <sup>(1)</sup>

(1) Revenue together with share of jointly controlled entities revenues, and Underlying EBIT include trading activities comprising the sale of third party product.

(2)

## Edgar Filing: BHP BILLITON LTD - Form 6-K

Includes consolidation adjustments, exploration and technology activities, unallocated items and external sales from the Group's freight, transport and logistics operations.

### **Petroleum**

Revenue and revenue together with our share of jointly controlled entities' revenues increased by US\$290 million, or 10.9 per cent over the corresponding period. This was mainly due to higher average realised prices for most petroleum products.

Total production for the six months ended 31 December 2006 was 58.0 million barrels of oil equivalent (boe), compared with total production in the corresponding period of 60.0 million boe.

---

## **Table of Contents**

Both EBIT and Underlying EBIT were US\$1,612 million, an increase of US\$176 million or 12.3 per cent compared with the corresponding period. There were no exceptional items in the current or prior period. This was due mainly to higher average realised prices for most petroleum products, with higher average realised oil prices per barrel of US\$63.77 (compared with US\$58.25), higher average realised natural gas prices of US\$3.27 per thousand standard cubic feet (compared with US\$3.13) and higher average realised liquefied natural gas prices of US\$7.44 per thousand standard cubic feet (compared to US\$6.81). Higher sales volumes due to timing of liftings more than offset slightly lower overall production volumes due to natural field decline and the September 2005 hurricane-related loss of the Typhoon (US) platform. Royalty and excise taxes were higher in line with higher revenue.

Exploration expenditure charged to profit of US\$154 million (corresponding period: US\$123 million) included the additional write-off of US\$43 million of previously capitalised expenditure. Gross expenditure on exploration of US\$159 million was US\$92 million lower than the corresponding period as a result of the timing of spending on exploration and appraisal drilling activity in the Gulf of Mexico.

### **Non Ferrous Materials**

#### ***Aluminium***

Revenue was US\$2,828 million for the six months ended 31 December 2006, an increase of US\$622 million or 28.2 per cent from US\$2,206 million in the corresponding period. Our share of jointly controlled entities' revenue was US\$ nil, compared to US\$46 million in the corresponding period due to the sale of Valesul Aluminio SA in July 2006.

Aluminium smelter production decreased slightly from 678,000 tonnes in the six months to 31 December 2005, to 675,000 tonnes in the six months to 31 December 2006, while alumina production increased to 2.2 million tonnes in the current period, from 2.0 million tonnes.

EBIT was US\$822 million, an increase of US\$437 million or 113.5 per cent compared with the corresponding period. There were no exceptional items in the current or corresponding period.

Underlying EBIT was US\$840 million, an increase of US\$434 million or 106.9 per cent compared with the same period last year. Higher prices for aluminium and alumina had a favourable impact, with the average LME aluminium price increasing to US\$2,602 per tonne (compared with US\$1,952 per tonne). Half year production records at Worsley (Australia), Paranam (Suriname), Hillside, Bayside and Mozal (all Southern Africa) also contributed to this result. Exchange rate movements during the period also had a favourable impact on EBIT.

Earnings were adversely impacted by higher charges for price linked costs, largely LME linked power. Raw materials and labour costs were also higher, as were depreciation charges associated with new mines in Suriname and the commissioning of the Worsley expansion.

#### ***Base Metals***

Revenue was US\$2,757 million for the six months ended 31 December 2006, an increase of US\$788 million or 40.0 per cent from the corresponding period. Revenue, together with our share of jointly controlled entities' revenues, was US\$5,644 million, an increase of US\$1,613 million, or 40.0 per cent, compared with US\$4,031 million in the corresponding period. Our share of jointly controlled entities revenue increased to US\$2,887 million. These revenue increases were mainly attributable to higher average LME prices for copper.

Payable copper production decreased by 13.7 per cent to 550 million tonnes compared with 637 million tonnes in the corresponding period. Zinc production was 43,787 tonnes, a decrease of 17.5 per cent compared with the corresponding period. Attributable uranium production at Olympic Dam (Australia) was 1,615 tonnes for the period, compared with 2,158 tonnes for the corresponding period.

---

**Table of Contents**

Silver production was 13.9 million ounces, a decrease of 43.8 per cent compared with 25.2 million ounces in the corresponding period. Lead production was 85,431 tonnes, a decrease of 39.8 per cent compared with the corresponding period.

Record copper cathode production was achieved due to the ramp up of the Sulphide Leach Project (Chile) and a higher production level at Cerro Colorado (Chile) following successful recovery from the earthquake interruption in the corresponding period. This was offset by reduced copper concentrate volumes due to the industrial disruption at Escondida, lower volumes at Olympic Dam because of a scheduled smelter shutdown and lower volumes at Cannington as the rehabilitation of ground support progressed.

EBIT was US\$2,417 million, an increase of US\$813 million or 50.7 per cent compared with the corresponding period. There were no exceptional items in the current or corresponding periods.

Underlying EBIT was US\$2,905 million, an increase of US\$1,012 million or 53.5 per cent, over the same period last year. This increase was predominantly attributable to higher average LME prices for copper of US\$3.34/lb (compared to US\$1.84/lb) as well as higher prices for silver, zinc, lead and gold. Record copper cathode production was achieved due to the ramp up of the Sulphide Leach Project (Chile) and a higher production level at Cerro Colorado (Chile) following successful recovery from the earthquake interruption in the corresponding period. This was offset by reduced copper concentrate volumes due to the industrial disruption at Escondida, lower volumes at Olympic Dam because of a scheduled smelter shutdown and lower volumes at Cannington as the rehabilitation of ground support progressed.

Higher price-linked TCRCs (mainly price participation), labour and contractor costs (due largely to one-off bonuses at Escondida from the recent union negotiations), Cannington rehabilitation expenditure, the effect of inflation and a stronger A\$/US\$ exchange rate on costs for Australian operations had a negative impact. These higher costs were mitigated to some extent by cost savings achieved through improvement projects. The cessation of earnings following the sale of Tintaya (Peru) in June 2006 also reduced EBIT.

Provisional pricing of copper shipments impacted finalised and outstanding average copper revenues resulting in the calculated average realised price being US\$0.18/lb below the LME average. The negative finalisation adjustment and provisional pricing impact for the period was US\$220 million. Average copper revenue for the half year ended December 2006 was US\$3.13/lb versus US\$2.06/lb for the same period last year. Outstanding copper volumes, subject to the fair value measurement, amounted to 205,129 tonnes at 31 December 2006. These were revalued at a weighted average price of US\$2.87/lb.

***Diamonds and Specialty Products***

Revenue was US\$226 million for the six months ended 31 December 2006, a decrease of US\$252 million, or 52.7 per cent, compared with the corresponding period. Our share of jointly controlled entities' revenue decreased from US\$201 million to US\$167 million.

EKATI diamond production decreased by 2.9 per cent to 1,424,000 carats compared with the corresponding period, mainly reflecting the processing of lower grade ore.

EBIT was US\$63 million, a decrease of US\$160 million or 71.7 per cent compared with the corresponding period. There were no exceptional items in the current or corresponding periods.

Underlying EBIT was US\$105 million, a decrease of US\$156 million or 59.8 per cent from the same period last year. This was due to higher sales volumes of diamonds in the corresponding period from inventory sales and higher unit costs in relation to the processing of lower grade material and moving to underground mining areas at Ekati. In addition, the corresponding period included earnings

## **Table of Contents**

from Southern Cross Fertiliser operations which was sold effective 1 August 2006. This was partially offset by higher value per carat diamonds and a reduced depreciation charge, primarily because of an extension of mine life following approval of the Koala Underground project.

At Ekati, the 2007 financial year will continue to be negatively impacted by lower value diamond production. Over the next few years, increasing underground production will help reverse this trend.

### ***Stainless Steel Materials***

Revenue, and revenue together with share of jointly controlled entities' revenues was US\$2,805 million in the six months ended 31 December 2006, an increase of US\$1,447 million, or 106.6 per cent, compared with US\$1,358 million in the corresponding period.

Nickel production was 92,800 tonnes in the current period, a slight decrease from 93,100 tonnes in the corresponding period.

EBIT and Underlying EBIT were a record US\$1,436 million, an increase of US\$1,062 million or 284.0 per cent compared with the same period last year. Higher nickel and cobalt prices were the main contributors with an average LME nickel price of US\$13.81/lb compared with US\$6.17/lb in the corresponding period. The higher prices (net of price linked costs) added US\$1,217 million to underlying EBIT. Additionally, Yabulu (Australia) and Cerro Matoso (Colombia) benefited from higher volumes in the current period.

This was partially offset by higher mining costs at Mount Keith and Leinster (both Australia). The corresponding period also included a US\$61 million profit on the sale of BHP Billiton's interest in the Wonderkop joint venture.

### **Carbon Steel Materials**

Iron Ore, Manganese and Metallurgical Coal, which were previously reported as the Carbon Steel Materials CSG are now reported as separate CSGs.

### ***Iron Ore***

Revenue for the six months ended 31 December 2006 was US\$2,431 million, an increase of 21.9 per cent from US\$1,994 million in the corresponding period. Revenue, together with our share of jointly controlled entities' revenues, was US\$2,749 million, an increase of US\$426 million, or 18.3 per cent, compared with US\$2,323 million in the corresponding period.

Attributable Western Australia iron ore production was 46.5 million wet tonnes, a slight increase compared 44.7 million wet tonnes in the corresponding period. Production of Samarco (Brazil) pellets and pellet feed was 3,933 tonnes, an increase of 5.0 per cent from 3,746 in the corresponding period.

EBIT was US\$1,367 million, an increase of US\$163 million or 13.5 per cent. There were no exceptional items in the current or prior periods. Underlying EBIT was US\$1,406 million up US\$163 million or 13.1 per cent from the same period last year. This was driven mainly by increased prices (which were approximately 17 per cent higher across the total product range, net of a lower negotiated price for iron pellets).

Sales volumes were also six per cent higher reflecting record production levels at Western Australia Iron Ore (Australia) (WAIO) and a number of business improvement initiatives implemented to promote increased shipping efficiency. Production was also higher at Samarco (Brazil).

## **Table of Contents**

Higher operating costs had an adverse impact during the period and were largely attributable to higher contractor and labour costs, price-linked royalties and fuel costs. A stronger A\$/US\$ exchange rate had an unfavourable impact, as did inflationary pressures on the Australian operations.

Depreciation was also higher due to the commissioning of expanded capacity at WAIO.

### ***Manganese***

Revenue for the six months ended 31 December 2006 was US\$575 million, an increase of US\$92 million, or 19.0 per cent from US\$483 million in the corresponding period. Revenue, together with our share of jointly controlled entities' revenues, was US\$575 million, an increase of US\$76 million, or 15.2 per cent, compared with the corresponding period.

Manganese alloy production was 0.345 million tonnes, an increase of 13.5 per cent, compared with the corresponding period of 0.304 million tonnes. Manganese ore production was 3.0 million tonnes, an increase of 0.373 million tonnes or 14.0 per cent compared with the corresponding period.

EBIT and Underlying EBIT were US\$105 million, an increase of US\$20 million or 23.5 per cent compared to the same period last year. Stronger demand for manganese ore drove increased sales volumes and consequently record volumes of ore and higher volumes of alloy were produced for the half year. The favourable movement of the rand against the US dollar also contributed to this positive result.

Lower prices for ore had an unfavourable impact but were partially offset by improved alloy prices.

### ***Metallurgical Coal***

Revenue, and revenue together with share of jointly controlled entities' revenues, decreased by US\$73 million to US\$1,833 million during the six months ended 31 December 2006.

Production was 18.2 million tonnes in the current period, a slight increase compared with 18.0 million tonnes in the corresponding period.

EBIT and Underlying EBIT were US\$659 million, a decrease of US\$288 million or 30.4 per cent from the same period last year. This was attributable mostly to lower prices for all products at Queensland Coal where benchmark prices will again decrease for the 12 months commencing April 2007. Operating costs rose due to the first longwall change out at the Broadmeadow mine (Australia), which was commissioned during 2006 and higher strip ratios at open cut mines. A stronger A\$/US\$ exchange rate had an unfavourable impact as did Australian inflationary pressures. This was offset partially by increased production and sales at both Queensland Coal and Illawarra Coal (Australia). The ramp up of expanded capacity supported by increased throughput at our Hay Point Coal terminal contributed to the higher sales at Queensland Coal.

As new projects ramped up depreciation and amortisation charges increased, as did exploration expenditure to support a higher level of activity at Maruwai (Indonesia).

### ***Energy Coal***

Revenue for the six months ended 31 December 2006 was US\$2,086 million, an increase of US\$247 million, or 13.4 per cent, over the corresponding period. Our share of jointly controlled entities' revenue was US\$235 million in the current period, compared with US\$222 million in the corresponding period.

Production was 43.8 million tonnes in the current period, a decrease of 3.3 per cent compared with 45.3 million tonnes in the corresponding period.

## **Table of Contents**

EBIT was US\$215 million, an increase of US\$35 million, or 19.4 per cent, compared with the corresponding period. There were no exceptional items in the current or corresponding periods.

Underlying EBIT was US\$243 million, an increase of US\$38 million or 18.5 per cent, from the same period last year. The increase was mainly because of higher export prices for product from our South African coal operations as a result of continued strong demand. The favourable movement of the rand against the US dollar also contributed to this positive result. Higher production volumes and cost efficiencies at Hunter Valley Coal (Australia) and Cerrejon Coal (Colombia) had a favourable impact.

Operating unit costs were higher at New Mexico (US) due to difficult mining conditions and equipment outages that impacted production. At our South African coal operations unit costs were adversely affected by inflationary pressure and lower production because of safety interventions.

The cessation of earnings from the Zululand Anthracite Colliery (South Africa) following its divestment during the prior year had a negative impact, while a profit on the divestment of Eyesizwe during the period had a favourable impact.

## **Group and Unallocated Items**

This category represents corporate activities, including Group Treasury, Freight, Transport and Logistics operations and our Exploration and Technology activities. These corporate activities produced a loss before net finance costs and taxation of US\$177 million in the half year ended 31 December 2006, compared to a loss of US\$179 million in the corresponding period.

Corporate operating costs, excluding exchange impacts, were US\$80 million compared to US\$108 million in the corresponding period, a decrease of US\$28 million.

The current period benefited from lower insurance claims, offset by higher costs for corporate projects, sponsorships, and regulatory compliance.

One-off costs in relation to the acquisition of WMC were incurred in the prior period. There were no similar costs in this period.

Minerals exploration expenditure has increased from US\$43 million to US\$57 million in the current period, mainly due to increased exploration activity in Angola and Mongolia.

## **Comparison to results under US GAAP**

The financial statements of the BHP Billiton Group are prepared in accordance with International Financial Reporting Standards (IFRS) which differ in certain aspects from US Generally Accepted Accounting Principles (GAAP). A detailed description of the significant differences between IFRS and US GAAP is contained in the 2006 Annual Report (refer note 39 US Generally Accepted Accounting Principles Disclosures to the financial statements).

### *Impact of new accounting standards*

Emerging Issues Task Force Issue No. 04-6 Accounting for Stripping Costs incurred During Production in the Mining Industry (EITF 04-6) is applicable to BHP Billiton for the first time for the financial year ending 30 June 2007, and creates an additional difference between IFRS and US GAAP.

Costs incurred through the removal of overburden and other waste materials once saleable materials have begun to be extracted from a mine are referred to as production stripping costs. Under IFRS, production stripping costs are charged to the income statement as operating costs when the ratio of waste material to ore extracted for an area of interest is expected to be constant throughout its

**Table of Contents**

estimated life. When the current ratio of waste to ore is greater than the estimated life-of-mine ratio, a portion of the production stripping costs is capitalised. In subsequent years, when the ratio of waste to ore is less than the estimated life-of-mine ratio, a portion of capitalised stripping costs is charged to the income statement as operating costs. The amount capitalised or charged in a year is determined so that the stripping expense for the financial year reflects the estimated life-of-mine ratio.

Under US GAAP, EITF 04-6 requires that stripping costs incurred during the production phase of a mine are treated as variable production costs and included in the cost of inventory produced during the period in which the costs are incurred. The change in accounting policy has been applied retrospectively in accordance with SFAS 154 Accounting Changes and Error Corrections .

The adoption of EITF 04-6 does not have a material impact on Net income or Shareholders' equity for the years ended 30 June 2006 and 30 June 2005.

**Forward-looking statements** Certain statements contained in this review of results for the half year ended 31 December 2006, may constitute forward-looking statements within the meaning of the US Private Securities Litigation Reform Act of 1995. We undertake no obligation to revise the forward-looking statements included in this review of results to reflect any future events or circumstances. Our actual results, performance or achievements could differ materially from the results expressed in, or implied by, these forward-looking statements. Factors that could cause or contribute to such differences are discussed in the sections entitled Key Information Risk Factors ; Operating and Financial Review and Prospects Our Business External Factors Affecting Our Results and Trends and Uncertainties included in our annual report on Form 20-F as amended by our Form 20-F/A for the fiscal year ended 30 June 2006, which we filed with the US Securities and Exchange Commission (SEC) on 25 September 2006 and 18 December 2006, respectively, and are available on the SEC's website at [www.sec.gov](http://www.sec.gov). Further information on BHP Billiton can be found on our Internet site: [www.bhpbilliton.com](http://www.bhpbilliton.com)

### Notes to the Interim Financial Statements (Unaudited)

#### 1 Accounting policies

This general purpose condensed financial report for the six months ended 31 December 2006 is an unaudited report which has been prepared in accordance with IAS 34/AASB 134 Interim Financial Reporting and with the requirements of the Listing Rules of the Financial Services Authority in the United Kingdom and the Australian Corporations Act 2001 as applicable to interim financial reporting.

The interim financial report has been prepared on the basis of accounting policies consistent with those applied in the 30 June 2006 Annual financial statements contained within the Annual Report of the BHP Billiton Group, except for IFRIC 4 / UIG Interpretation 4 Determining whether an arrangement contains a lease which is first applicable for the Group's annual reporting period ending 30 June 2007 and has been applied in this interim report. IFRIC 4 / UIG 4 provides interpretive guidance for determining whether arrangements (such as service delivery and take-or-pay purchase contracts) contain a lease which needs to be accounted for in accordance with IAS 17 / AASB 117 Leases. The application of IFRIC 4 / UIG 4 did not have a material impact on the current or comparative periods.

The interim financial report does not include all of the information required for a full annual financial report and is to be read in conjunction with the most recent annual financial report. The comparative figures for the financial year ended 30 June 2006 are not the statutory accounts of BHP Billiton Plc for that financial year. Those accounts, which were prepared under IFRS, have been reported on by the company's auditors and delivered to the registrar of companies. The report of the auditors was unqualified and did not contain statements under Section 237(2) or (3) of the UK Companies Act 1985.

Comparative information for the six months ended 31 December 2005 has been restated in accordance with IFRS 3 / AASB 3 Business Combinations to reflect the final allocation of fair values on acquisition of WMC Resources Ltd as outlined in note 36 to the BHP Billiton Annual Report 2006. There was no impact on profit or net assets of this restatement.

#### Rounding of amounts

Amounts in this financial report have, unless otherwise indicated, been rounded to the nearest million dollars.

#### Exchange rates

The following exchange rates against the US dollar have been applied in the financial report:

	Average	Average	Average	As at	As at	As at
	Half year ended	Half year ended	Year ended	As at	As at	As at
	31 December	31 December	30 June	31 December	31 December	30 June
	2006	2005	2006	2006	2005	2006
Australian dollar (a)	0.76	0.75	0.75	0.79	0.73	0.74
Brazilian real	2.16	2.30	2.24	2.14	2.33	2.18

(a) Displayed as US\$ to A\$1 based on common convention.

#### 2 Business segments

The BHP Billiton Group has grouped its major operating assets into the following Customer Sector Groups (CSGs):

## Edgar Filing: BHP BILLITON LTD - Form 6-K

Petroleum (exploration for and production, processing and marketing of hydrocarbons including oil, gas and LNG)

Aluminium (exploration for and mining of bauxite, processing and marketing of aluminium and alumina)

Base Metals (exploration for and mining, processing and marketing of copper, silver, zinc, lead, uranium and copper by-products including gold)

Diamonds and Specialty Products (exploration for and mining of diamonds and titanium minerals, and prior to divestment in August 2006, fertiliser operations)

Stainless Steel Materials (exploration for and mining, processing and marketing of nickel)

Iron Ore (exploration for and mining, processing and marketing of iron ore)

Manganese (exploration for and mining, processing and marketing of manganese)

Metallurgical Coal (exploration for and mining, processing and marketing of metallurgical coal)

Energy Coal (exploration for and mining, processing and marketing of energy coal)

Iron Ore, Manganese and Metallurgical Coal, which were previously reported as the Carbon Steel Materials CSG are now reported as separate CSGs.

Group and unallocated items represent Group centre functions and certain comparative data for divested assets and investments and exploration and technology activities.

It is the Group's policy that inter-segment sales are made on a commercial basis.

**Table of Contents****Notes to the Interim Financial Statements (Unaudited) continued**
