THE FIRST OF LONG ISLAND CORPORATION AND SUBSIDIARY
 SEPTEMBER 30, 2010
 NOTES TO UNAUDITED CONSOLIDATED FINANCIAL STATEMENTS

1. Basis of Presentation

The accounting and reporting policies of the Corporation reflect banking industry practice and conform to generally accepted accounting principles in the United States. In preparing the consolidated financial statements, management is required to make estimates and assumptions that affect the reported asset and liability balances and revenue and expense amounts and the disclosure of contingent assets and liabilities. Actual results could differ significantly from those estimates.

The consolidated financial statements include the accounts of The First of Long Island Corporation and its wholly-owned subsidiary, The First National Bank of Long Island, and subsidiaries wholly-owned by the Bank, either directly or indirectly, The First of Long Island Agency, Inc., FNY Service Corp., and The First of Long Island REIT, Inc. The consolidated entity is referred to as the Corporation and the Bank and its direct and indirect subsidiaries are collectively referred to as the Bank. The Corporation's financial condition and operating results principally reflect those of the Bank. All intercompany balances and amounts have been eliminated. For further information refer to the consolidated financial statements and notes thereto included in the Corporation's Annual Report on Form 10-K for the year ended December 31, 2009.

The consolidated financial information included herein as of and for the periods ended September 30, 2010 and 2009 is unaudited. However, such information reflects all adjustments which are, in the opinion of management, necessary for a fair statement of results for the interim periods. The December 31, 2009 consolidated balance sheet was derived from the Corporation's December 31, 2009 audited consolidated financial statements. When appropriate, items in the prior year financial statements are reclassified to conform to the current period presentation.

2. Investment Securities

The following tables set forth the amortized cost and fair value of the Bank's investment securities at September 30, 2010 and December 31, 2009.

	Amortized Cost	September 30, 2010 Gross Unrealized Gains	Gross Unrealized Losses	Fair Value

	\$627,189	\$13,185	\$(1,580)	\$638,794

All of the Corporation's municipal securities are rated A or better, except for \$1,658,000 of non-rated bonds of local municipalities. The Corporation's pass-through mortgage security portfolio at September 30, 2010 is comprised of \$82,536,000, \$14,539,000 and \$1,022,000 issued by the Government National Mortgage Association ("GNMA"), the Federal National Mortgage Association ("FNMA"), and the Federal Home Loan Mortgage Corporation ("FHLMC"), respectively. Each issuer's pass-through securities are backed by residential mortgages conforming to its underwriting guidelines and each issuer guarantees the timely payment of principal and interest on its securities. All of the Corporation's collateralized mortgage obligations ("CMOs") were issued by GNMA and such securities are backed by GNMA residential pass-through mortgage securities. GNMA guarantees the timely payment of principal and interest on its CMOs and the underlying pass-through mortgage securities. Obligations of GNMA represent full faith and credit obligations of the U.S. government (the "Government"), while obligations of FNMA, which is a corporate instrumentality of the Government, and FHLMC, which is a Government sponsored corporation, do not. FNMA and FHLMC have been placed into conservatorship by their primary regulator, the Federal Housing Finance Agency ("FHFA") who also acts as conservator. In conjunction with the conservatorship, the U.S. Department of the Treasury entered into Preferred Stock Purchase Agreements with FNMA and FHLMC to ensure that each of these entities maintains positive net worth, and established new borrowing facilities for these entities intended to serve as an ultimate liquidity backstop. The Preferred Stock Purchase Agreements and borrowing facilities serve to protect the existing and future holders of FNMA and FHLMC mortgage securities and other debt instruments.

At September 30, 2010 and December 31, 2009, investment securities with a carrying value of \$263,412,000 and \$299,152,000, respectively, were pledged as collateral to secure public deposits and borrowed funds.

Collateralized mortgage obligations	107,781	(1,093)	-	-	107,781	(1,093)
Total temporarily impaired	\$146,316	\$(1,626)	\$113	\$(2)	\$146,429	\$(1,628)

Unrealized losses reflected in the preceding tables have not been included in results of operations because the affected securities are of high credit quality, the Company does not intend to sell them, nor is it more likely than not that it will be required to sell them before recovery of their amortized cost basis, and the decline in fair value is largely due to an increase in interest rates since the time the securities were purchased. The losses on these securities are expected to dissipate as they approach their maturity dates and/or if interest rates decline.

Other-than-temporary Impairment. Management evaluates investment securities for other-than-temporary impairment (“OTTI”) at least on a quarterly basis, and more frequently when economic or market conditions warrant such an evaluation. In determining OTTI, management considers many factors, including: (1) the length of time and the extent to which the fair value has been less than cost; (2) the financial condition and near-term prospects of the issuer; (3) whether the market decline was affected by macroeconomic conditions; and (4) whether management has the intent to sell the debt security or more likely than not will be required to sell the debt security before its anticipated recovery. The assessment of whether an other-than-temporary decline exists involves a high degree of subjectivity and judgment and is based on the information available to management at a point in time.

When OTTI occurs, management considers whether it intends to sell, or, more likely than not, will be required to sell a security in an unrealized loss position before recovery of its amortized cost basis. If either of these criteria is met, the entire difference between amortized cost and fair value is recognized in earnings. For securities that do not meet the aforementioned criteria, the amount of impairment recognized in earnings is limited to the amount related to credit losses, while impairment related to other factors is recognized in other comprehensive income.

Index

Sales of Available-for-Sale Securities. Sales of available-for-sale securities were as follows:

	Nine Months Ended September 30,		Three Months Ended September 30,	
	2010	2009	2010	2009
	(in thousands)			
Proceeds	\$78,504	\$43,996	\$-	\$10,087
Gross gains	1,885	1,264	-	317
Gross losses	(166)	-	-	-
Net gains	\$1,719	\$1,264	\$-	\$317

The tax provisions related to these net realized gains were \$682,000 and \$502,000 for the nine months ended September 30, 2010 and 2009, respectively, and \$126,000 for the three months ended September 30, 2009.

Maturities. The following table sets forth the amortized cost and fair value of the Bank's investment securities at September 30, 2010 by expected maturity.

	Principal Maturing (1)							
	Within One Year		After One But Within Five Years		After Five But Within Ten Years		After Ten Years	
	Amortized Cost	Fair Value	Amortized Cost	Fair Value	Amortized Cost	Fair Value	Amortized Cost	Fair Value
	(in thousands)							
Held-to-Maturity Securities:								
State and municipals	\$ 3,787	\$ 3,821	\$ 12,484	\$ 13,097	\$ 27,291	\$ 29,207	\$ 8,905	\$ 9,323
Pass-through mortgage securities	6	6	6,241	6,462	1,268	1,372	4,731	5,077
Collateralized mortgage obligations	-	-	-	-	-	-	31,634	32,819
	\$ 3,793	\$ 3,827	\$ 18,725	\$ 19,559	\$ 28,559	\$ 30,579	\$ 45,270	\$ 47,219

	Principal Maturing (1)							
	Within One Year		After One But Within Five Years		After Five But Within Ten Years		After Ten Years	
	Amortized Cost	Fair Value	Amortized Cost	Fair Value	Amortized Cost	Fair Value	Amortized Cost	Fair Value
	(in thousands)							
Available-for-Sale Securities:								
U.S. government agencies	\$ -	\$ -	\$ -	\$ -	\$ 5,000	\$ 5,295	\$ -	\$ -
State and municipals	2,099	2,144	13,273	13,941	15,878	16,887	175,404	184,081
Pass-through mortgage securities	-	-	49	50	3,263	3,559	78,199	82,242
Collateralized mortgage obligations	-	-	-	-	-	-	315,633	324,148
	\$ 2,099	\$ 2,144	\$ 13,322	\$ 13,991	\$ 24,141	\$ 25,741	\$ 569,236	\$ 590,471

(1) Maturities shown are stated maturities, except in the case of municipal securities which are shown at the earlier of their stated maturity or pre-refunded dates. Securities backed by mortgages, which include the pass-through mortgage securities and collateralized mortgage obligations shown above, are expected to have substantial periodic repayments resulting in weighted average lives considerably shorter than would be surmised from the above table.

3. Loans Held for Sale

Loans held for sale is comprised of one nonaccruing commercial mortgage loan that is being carried at the lower of cost or fair value. Any subsequent decline in fair value below the initial carrying value will be recorded as a valuation allowance.

Index

4. Stock-based Compensation

The Corporation has two share-based compensation plans which are described below. The Corporation's 2006 Stock Compensation Plan (the "2006 Plan") was approved by its shareholders on April 18, 2006 as a successor to the 1996 Stock Option and Appreciation Rights Plan (the "1996 Plan"). The 2006 Plan permits the granting of stock options, stock appreciation rights, restricted stock, and restricted stock units ("RSUs") to employees and non-employee directors for up to 600,000 shares of common stock of which 205,158 shares remain available for grant as of September 30, 2010. The number of awards that can be granted under the 2006 Plan to any one person in any one fiscal year is limited to 70,000 shares. Under the terms of the 2006 Plan, stock options and stock appreciation rights can not have an exercise price that is less than 100% of the fair market value of one share of the underlying common stock on the date of grant. The term and/or vesting of awards made under the 2006 Plan will be determined from time to time in accordance with rules adopted by the Corporation's Compensation Committee and be in compliance with the applicable provisions, if any, of the Internal Revenue Code. The Compensation Committee has used a five year vesting period and a ten year term for stock options granted under the 2006 Plan and has made the ability to convert RSUs into shares of common stock and the related conversion ratio contingent upon the financial performance of the Corporation in the third year of the three calendar year period beginning in the year in which the RSUs were awarded. Notwithstanding anything to the contrary in any award agreement, awards under the 2006 Plan will become immediately exercisable or will immediately vest, as the case may be, in the event of a change in control. In addition, in accordance with the terms of the related award agreements, all awards granted to date under the 2006 Plan will become immediately exercisable or will immediately vest, as applicable, in the event of retirement or total and permanent disability, as defined, or death.

The Corporation's 1996 Plan permitted the granting of stock options, with or without stock appreciation rights attached, and stand alone stock appreciation rights to employees and non-employee directors for up to 1,080,000 shares of common stock. The number of stock options and stock appreciation rights that could have been granted under the 1996 Plan to any one person in any one fiscal year was limited to 50,000. Each option granted under the 1996 Plan was granted at a price equal to the fair market value of one share of the Corporation's stock on the date of grant. Options granted under the 1996 Plan on or before December 31, 2000 became exercisable in whole or in part commencing six months from the date of grant and ending ten years after the date of grant. Options granted under the 1996 Plan in January 2005 became exercisable in whole or in part commencing ninety days from the date of grant and ending ten years after the date of grant. By the terms of their grant, all other options under the 1996 Plan were granted with a three year vesting period and a ten year expiration date. However, vesting was subject to acceleration in the event of a change in control, retirement, death, disability, and certain other limited circumstances.

Fair Value of Stock Option Awards. The grant date fair value of option awards is estimated on the date of grant using the Black-Scholes option pricing model. The values of awards made in 2010 and 2009, as well as the assumptions utilized in determining such values, are presented below.

	2010	2009
	\$	\$
Grant date fair value	9.13	7.79
Expected volatility	47.68 %	47.08 %
Expected dividends	3.19 %	3.21 %
Expected term (in years)	6.82	6.82
Risk-free interest rate	2.34 %	1.52 %

Expected volatility was based on historical volatility for the expected term of the options. The Corporation used historical data to estimate the expected term of options granted. The risk-free interest rate is the monthly average yield on U.S. Treasury issues adjusted to constant maturities with a term equal to the expected term of the options.

Index

Fair Value of Restricted Stock Units. The fair value of restricted stock units is based on the market price of the shares underlying the awards on the grant date, discounted for dividends which are not paid on restricted stock units.

Compensation Expense. Compensation expense for stock options is recognized ratably over the five-year vesting period or the period from the grant date to the participant's eligible retirement date, whichever is shorter. Compensation expense for RSUs is recognized over the three-year performance period and, if necessary, adjusted periodically throughout the period to reflect the estimated number of shares of the Corporation's common stock into which the RSUs will ultimately be convertible. However, if the period between the grant date and the grantee's eligible retirement date is less than three years, compensation expense is recognized ratably over this shorter period. In determining compensation expense for options and RSUs outstanding and not yet vested, the Corporation assumes, based on prior experience, that no forfeitures will occur. The Corporation recorded compensation expense for share-based payments of \$551,000 and \$529,000 and recognized related income tax benefits of \$219,000 and \$210,000 in the first nine months of 2010 and 2009, respectively.

Option Activity. On January 19, 2010, the Corporation's Board of Directors granted 50,649 nonqualified stock options under the 2006 Plan. The options were granted at a price equal to the fair market value of one share of the Corporation's stock on the date of grant.

A summary of stock options outstanding under the Corporation's stock compensation plans as of September 30, 2010 and changes during the nine month period then ended is presented below.

	Number of Options	Weighted- Average Exercise Price	Weighted- Average Remaining Contractual Term (yrs.)	Aggregate Intrinsic Value (in thousands)
Outstanding at January 1, 2010	496,719	\$ 19.71		
Granted	50,649	25.07		
Exercised	(31,024)	14.73		
Forfeited or expired	(8,360)	22.45		
Outstanding at September 30, 2010	507,984	\$ 20.50	5.52	\$ 2,278
Exercisable at September 30, 2010	334,135	\$ 19.70	4.27	\$ 1,764

The total intrinsic value of options exercised during the first nine months of 2010 and 2009 was \$317,000 and \$469,000, respectively.

Restricted Stock Activity. On January 19, 2010, the Corporation's Board of Directors granted 15,985 RSUs under the 2006 Plan. The Corporation's financial performance for 2012 will determine the number of shares of common stock, if any, into which the RSUs will ultimately be converted. In the table that follows, the number of shares granted represents the maximum number of shares into which the RSUs can be converted. A summary of the status of the Corporation's nonvested shares as of September 30, 2010 and changes during the nine month period then ended is presented below.

	Number of Shares	Weighted- Average Grant-Date Fair Value
Nonvested at January 1, 2010	42,360	\$ 18.49

Edgar Filing: FIRST OF LONG ISLAND CORP - Form 10-Q

Granted	15,985	22.69
Vested	(1,665)	19.54
Forfeited	-	-
Nonvested at September 30, 2010	56,680	\$ 19.53

10

Index

Unrecognized Compensation Cost. As of September 30, 2010, there was \$1,420,000 of total unrecognized compensation cost related to nonvested equity awards. The cost is expected to be recognized over a weighted-average period of 1.38 years.

Cash Received and Tax Benefits Realized. Cash received from option exercises for the nine months ended September 30, 2010 and 2009 was \$457,000 and \$802,000, respectively. The actual tax benefits realized for the tax deductions from option exercises for the first nine months of 2010 and 2009 was \$39,000 and \$66,000, respectively.

Other. No cash was used to settle stock options during the first nine months of 2010 or 2009. The Corporation uses newly issued shares to settle stock option exercises and for the conversion of RSUs.

5. Stockholders' Equity

On July 20, 2010 the Corporation sold 1,437,500 shares of its common stock in an underwritten public offering at a price of \$24 per share. The net proceeds of the offering, after the underwriting discount and offering expenses payable by the Corporation, were \$32,362,000.

Earnings Per Share. There were 110,514 and 64,192 shares of common stock underlying equity awards outstanding at September 30, 2010 and 2009, respectively, and for the quarterly periods then ended, that were not included in the computation of diluted earnings per share because to do so would have been antidilutive for those periods.

Shares Withheld Upon the Vesting of RSUs. The line captioned repurchase of common stock in the Consolidated Statement of Changes in Stockholders' Equity for the nine months ended September 30, 2010 is comprised of 3,581 shares of common stock with a value of \$91,000 withheld upon the conversion of RSUs. The value of the shares withheld was used to satisfy the personal tax liabilities of the RSU holders.

6. Defined Benefit Pension Plan

The following table sets forth the components of net periodic pension cost for accounting purposes.

	Nine Months Ended September 30,		Three Months Ended September 30,	
	2010	2009	2010	2009
	(in thousands)			
Service cost, net of plan participant contributions	\$ 900	\$ 806	\$ 300	\$ 269
Interest cost	893	827	298	275
Expected return on plan assets	(1,345)	(914)	(448)	(305)
Amortization of prior service cost	17	17	5	5
Amortization of net actuarial loss	242	477	81	160
Net pension cost	\$ 707	\$ 1,213	\$ 236	\$ 404

The Bank makes cash contributions to the pension plan (the "Plan") which comply with the funding requirements of applicable Federal laws and regulations. For funding purposes, the laws and regulations set forth both minimum required and maximum tax deductible contributions. The Bank's cash contributions are usually made once a year just prior to the Plan's year end of September 30. The Bank contributed \$3,741,984 and \$5,500,000 to the Plan for the plan years ended September 30, 2010 and 2009, respectively.

Index

7. Fair Value of Financial Instruments

Financial Instruments Recorded at Fair Value. When measuring fair value, the Corporation uses a fair value hierarchy which is designed to maximize the use of observable inputs and minimize the use of unobservable inputs. The hierarchy involves three levels of inputs that may be used to measure fair value:

Level 1: Quoted prices (unadjusted) in active markets for identical assets or liabilities that the Corporation has the ability to access at the measurement date.

Level 2: Significant other observable inputs other than Level 1 prices such as quoted prices for similar assets or liabilities in active markets; quoted prices for identical or similar assets or liabilities in markets that are not active; or inputs other than quoted prices that are observable or can be corroborated by observable market data.

Level 3: Significant unobservable inputs that reflect the Corporation's own assumptions about the assumptions that market participants would use in pricing an asset or liability.

The fair values of the Corporation's investment securities designated as available-for-sale are currently determined on a recurring basis using matrix pricing (Level 2 inputs). Matrix pricing, which is a mathematical technique widely used in the industry to value debt securities, does not rely exclusively on quoted prices for the specific securities but rather on the relationship of such securities to other benchmark quoted securities.

The fair values of the Corporation's available-for-sale securities are summarized below.

	Total	Fair Value Measurements at September 30, 2010 Using:		
		Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Available-for-Sale Securities:				
U.S. government agencies	\$5,295	\$-	\$5,295	\$ -
State and municipals	217,053	-	217,053	-
Pass-through mortgage securities	85,851	-	85,851	-
Collateralized mortgage obligations	324,148	-	324,148	-
	\$632,347	\$-	\$632,347	\$ -

	Total	Fair Value Measurements at December 31, 2009 Using:		
		Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Available-for-Sale Securities:				

Edgar Filing: FIRST OF LONG ISLAND CORP - Form 10-Q

U.S. government agencies	\$5,008	\$-	\$5,008	\$ -
State and municipals	154,513	-	154,513	-
Pass-through mortgage securities	126,422	-	126,422	-
Collateralized mortgage obligations	352,851	-	352,851	-
	\$638,794	\$-	\$638,794	\$ -

12

Index

From time to time, the fair values of some of the Corporation's impaired loans are determined using real estate appraisals. These appraisals may utilize a single valuation approach or a combination of approaches including comparable sales and the income approach. Adjustments are sometimes made in the appraisal process by the appraisers to adjust for differences between the comparable sales and income data available.

The Corporation's loans held for sale recorded at fair value are summarized below.

	Total	Fair Value Measurements Using:		
		Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
(in thousands)				
September 30, 2010	\$ 1,300	\$ -	\$ 1,300	\$ -
December 31, 2009	-	-	-	-

Loans held for sale is comprised of one nonaccruing commercial mortgage loan that is being carried at the lower of cost or fair value. Currently there is no valuation allowance for this loan. Other than this loan held for sale, the Corporation does not have any impaired loans that are recorded at fair value.

Financial Instruments Not Recorded at Fair Value. Fair value estimates are made at a specific point in time. Such estimates are generally subjective in nature and dependent upon a number of significant assumptions associated with each financial instrument or group of similar financial instruments, including estimates of discount rates, risks associated with specific financial instruments, estimates of future cash flows, and relevant available market information. Changes in assumptions could significantly affect the estimates. In addition, fair value estimates do not reflect the value of anticipated future business, premiums or discounts that could result from offering for sale at one time the Corporation's entire holdings of a particular financial instrument, or the tax consequences of realizing gains or losses on the sale of financial instruments. The following table sets forth the carrying amounts and estimated fair values of financial instruments that are not recorded at fair value in the Corporation's financial statements.

	September 30, 2010		December 31, 2009	
	Carrying Amount	Fair Value	Carrying Amount	Fair Value
(in thousands)				
Financial Assets:				
Cash and cash equivalents	\$26,400	\$26,400	\$33,342	\$33,342
Held-to-maturity securities	96,347	101,184	128,979	133,233
Loans	869,234	878,697	817,320	814,465
Federal Home Loan Bank stock	5,101	5,101	7,882	7,882
Restricted stocks (included in other assets)	467	467	467	467
Accrued interest receivable	7,923	7,923	7,584	7,584
Financial Liabilities:				
Checking deposits	369,180	369,180	333,853	333,853
Savings and money market deposits	663,219	663,219	634,913	634,913
Time deposits	275,476	282,785	308,784	315,073

Edgar Filing: FIRST OF LONG ISLAND CORP - Form 10-Q

Short-term borrowings	34,262	34,262	111,407	111,407
Long-term debt	162,000	179,835	162,000	173,981
Accrued interest payable	2,945	2,945	2,019	2,019

The following methods and assumptions are used by the Corporation in measuring the fair value of financial instruments disclosed in the preceding table.

Cash and cash equivalents. The recorded book value of cash and cash equivalents is their fair value.

Index

Held-to-maturity securities. Fair values are based on quoted prices for similar assets in active markets or derived principally from observable market data.

Loans. Fair values are estimated for portfolios of loans with similar financial characteristics. The total loan portfolio is first divided into adjustable and fixed rate interest terms. For adjustable rate loans that are subject to immediate repricing, the recorded book value less the related allowance for loan losses is a reasonable estimate of fair value. For adjustable rate loans that are subject to repricing over time and fixed rate loans, fair value is calculated by discounting anticipated future repricing amounts or cash flows using discount rates equivalent to the rates at which the Bank would currently make loans which are similar with regard to collateral, maturity, and the type of borrower. The discounted value of the repricing amounts and cash flows is reduced by the related allowance for loan losses to arrive at an estimate of fair value.

Federal Home Loan Bank stock. The recorded book value of Federal Home Loan Bank stock is its fair value because Federal Home Loan Bank of New York stock is redeemable at cost.

Deposit liabilities. The fair value of deposits with no stated maturity, such as checking deposits, money market deposits, and savings deposits, is equal to their recorded book value. The fair value of time deposits is based on the discounted value of contractual cash flows. The discount rate is equivalent to the rate currently offered by the Bank for deposits of similar size, type and maturity.

Borrowed funds. For short-term borrowings maturing within ninety days, the recorded book value is a reasonable estimate of fair value. The fair value of long-term debt, including repurchase agreements with embedded derivative instruments, is based on quoted prices for similar instruments in active markets or the discounted value of contractual cash flows. The discount rate is equivalent to the rate currently charged for borrowings of similar type and maturity.

Accrued interest receivable and payable. For these short-term instruments, the recorded book value is a reasonable estimate of fair value.

Off-balance-sheet Items. The fair value of off-balance sheet items is not considered to be material.

8. Adoption of New Accounting Pronouncements

The pronouncements discussed in this section are not intended to be an all inclusive list, but rather only those pronouncements that could potentially have an impact on the Corporation's results of operations, financial position or disclosures.

In June 2009, the Financial Accounting Standards Board ("FASB") issued Statement of Financial Accounting Standards ("SFAS") No. 166 "Accounting for Transfers of Financial Assets – an amendment of FASB Statement No. 140", which was reissued in December 2009 as Accounting Standards Update ("ASU") 2009-16 and is now part of FASB Accounting Standards Codification ("ASC") 860 "Transfers and Servicing." The objective of this Statement is to improve the relevance, representational faithfulness, and comparability of the information that a reporting entity provides in its financial reports about: (1) a transfer of financial assets; (2) the effects of a transfer on its financial position, financial performance, and cash flows; and (3) a transferor's continuing involvement, if any, in transferred financial assets. SFAS No. 166 is effective for financial statements issued for fiscal years and interim periods beginning after November 15, 2009. The recognition and measurement provisions of this statement shall be applied to transfers that occur on or after the effective date. The adoption of SFAS No. 166 on January 1, 2010 has not impacted the Corporation's consolidated financial statements.

In January 2010, the FASB issued ASU 2010-06 “Improving Disclosures about Fair Value Measurements.” This ASU requires more robust disclosures about the different classes of assets and liabilities measured at fair value, the valuation techniques and inputs used, the activity in Level 3 fair value measurements, and the transfers between Levels 1, 2 and 3. This ASU is effective for interim and annual periods beginning after December 15, 2009, except for disclosures regarding the roll forward of activity in Level 3 fair value measurements. Those disclosures are effective for interim and annual periods beginning after December 15, 2010. The adoption of ASU 2010-06 on January 1, 2010 has not impacted the Corporation’s disclosures.

Index

In February 2010, the FASB issued ASU 2010-09 “Subsequent Events.” This ASU addresses certain implementation issues related to an entity’s requirement to perform and disclose subsequent events procedures. It clarifies that an entity that is an SEC filer is not required to disclose the date through which subsequent events have been evaluated. This change alleviates potential conflicts with SEC requirements.

9. Impact of Not Yet Effective Authoritative Accounting Pronouncements

In July 2010, the FASB issued ASU 2010-20 “Disclosures about the Credit Quality of Financing Receivables and the Allowance for Credit Losses.” This ASU requires significantly more disclosure about credit quality in a financial institution’s portfolio and the allowance for credit losses. The required disclosures as of the end of a reporting period are effective for interim and annual reporting periods ending on or after December 15, 2010. The required disclosures about activity that occurs during a reporting period are effective for interim and annual reporting periods beginning on or after December 15, 2010. Management is currently evaluating the impact of ASU 2010-20 on the Corporation’s disclosures.

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF
- OPERATIONS

The following is management's discussion and analysis of certain significant factors that have affected the Corporation's financial condition and operating results during the periods included in the accompanying consolidated financial statements, and should be read in conjunction with such financial statements. The Corporation's financial condition and operating results principally reflect those of its wholly-owned subsidiary, The First National Bank of Long Island, and subsidiaries wholly-owned by the Bank, either directly or indirectly, The First of Long Island Agency, Inc., FNY Service Corp. ("FNY"), and The First of Long Island REIT, Inc. ("REIT"). The consolidated entity is referred to as the "Corporation" and the Bank and its subsidiaries are collectively referred to as the "Bank." The Bank's primary service area is Nassau and Suffolk Counties, Long Island, although the Bank has three commercial banking branches in Manhattan and may open additional New York City branches in the future.

Overview

The Corporation earned \$1.85 per share for the first nine months of 2010, an increase of \$.31, or 20.1%, over \$1.54 per share earned in the same period last year. Net income increased by \$3,087,000, or 27.5%, from \$11,241,000 for the first nine months of 2009 to \$14,328,000 for the current nine month period. The percentage increase in net income outpaced the percentage increase in earnings per share primarily because of the sale of common stock described hereinafter. Returns on average assets (ROA) and equity (ROE) were 1.17% and 14.29%, respectively, for the first nine months of 2010 as compared to 1.11% and 13.88% for the same period last year.

Earnings for the third quarter of 2010 were \$.55 per share versus \$.68 per share for the preceding quarter. The decrease is primarily attributable to the dilutive impact of the sale of common stock in July of this year and a \$1,153,000 decrease in gains on sales of securities. These items reduced quarterly earnings per share by approximately \$.07 and \$.08, respectively.

During the first six months of 2010, management moderated the Bank's loan growth, scaled back the Bank's efforts to attract new deposits and reduced the overall size of the Bank's balance sheet by approximately \$77 million, or 5%, through the sale of securities and use of the resulting proceeds to repay short-term debt. Furthermore, in July of this year, the Corporation completed an underwritten public offering in which it sold 1,437,500 shares of common stock. The net proceeds of the offering, which amounted to approximately \$32.4 million, were contributed to the capital of the Corporation's wholly-owned bank subsidiary. All of these actions were undertaken to strengthen the Bank's Tier 1 leverage capital ratio in light of management's future growth plans, the unfavorable economic climate, and current regulatory expectations as to what constitutes an appropriate level of capital. In the future, management may employ other tactics to maintain or grow the Bank's capital position which could include deviating from the Corporation's historical dividend trend. Management invested the proceeds of the common stock offering mostly in short-duration mortgage securities and municipal securities and then began to build the size of the Bank's balance sheet with a combination of loans and securities. By the end of the third quarter total assets were roughly back to their year end 2009 level and the Bank's Tier 1 leverage capital ratio was 9.54%. This compares favorably to a ratio of 7.06% at year-end 2009.

Index

Despite the measures taken by management during the first half of this year to moderate the Bank's loan growth and reduce the overall size of the Bank's balance sheet, the average balances of loans and tax-exempt securities grew significantly when comparing the first nine months of 2010 to 2009, largely because of strong growth in these asset categories throughout most of 2009. The average balance of loans was up by 24.1%, or \$165.9 million, and the average balance of tax-exempt securities was up by 35.5%, or \$61.3 million. Growth in these asset categories, which was funded primarily by an increase in average total deposits of \$256 million, or 24.5%, is the key driver of the earnings growth experienced thus far this year. Also contributing to this year's earnings growth is a \$455,000 increase in gains on sales of available-for-sale securities and the fact that 2009 was burdened with an FDIC special assessment of \$647,000.

The loan growth principally occurred in what management considers to be lower risk loan categories, including multifamily commercial mortgages, owner occupied commercial mortgages, and first lien residential mortgages having terms generally between ten and fifteen years. By contrast, management considers construction and land development loans and unsecured loans to individuals to be high risk and has purposely not grown these categories. With respect to deposit growth, significant contributing factors were new branch openings and expansion of existing branches, deposit rate promotions, development of new commercial banking relationships, competitively priced deposit products and what management believes to be a high level of customer service.

The positive impact on earnings of the factors previously described was partially offset by a \$1.8 million increase in the provision for loan losses. The elevated provision for the first nine months of this year is primarily attributable to management's current assessment of national and local economic conditions which have been weak for an extended period of time. The provision for the first nine months of last year was reduced by the reversal of previously established impairment reserves amounting to \$300,000. The Bank's allowance for loan losses at September 30, 2010 was \$12.5 million, or 1.41% of total loans, compared to \$10.3 million, or 1.25% of total loans, at year-end 2009. Management will continue to carefully assess the adequacy of the Bank's allowance for loan losses in light of a variety of factors including national and local economic conditions and the specific composition and characteristics of the Bank's loan portfolio. Depending on this assessment, and even if there is no significant increase in identified problem loans, management may continue to increase the Bank's allowance for loan losses relative to total loans.

The credit quality of the Bank's loan portfolio remains excellent as evidenced by, among other things, a very low level of delinquent loans. Total delinquent loans amounted to \$3.1 million at September 30, 2010, comprised of loans past due 30 to 89 days of \$1.2 million and nonaccrual loans of \$1.9 million. The credit quality of the Bank's securities portfolio also remains excellent. All of the Bank's mortgage securities are backed by mortgages underwritten on conventional terms, and almost all of these securities are full faith and credit obligations of the U.S. government. The remainder of the Bank's securities portfolio consists principally of municipal securities rated A or better by major rating agencies.

Key strategic initiatives to improve the Bank's earnings prospects will continue to include loan growth and expansion of the Bank's branch distribution system both on Long Island and in New York City. Thus far this year, the Bank opened four full service branches on Long Island in the towns of Sea Cliff, Cold Spring Harbor, East Meadow and Bellmore. In 2011, the Bank plans to open full service branches in Point Lookout and Massapequa, Long Island.

Net interest spread (1)			3.44	%		3.36
Net interest margin (1)			3.86	%		3.93

(1) Tax-equivalent basis. Interest income on a tax-equivalent basis includes the additional amount of interest income that would have been earned if the Corporation's investment in tax-exempt loans and investment securities had been made in loans and investment securities subject to Federal income taxes yielding the same after-tax income. The tax-equivalent amount of \$1.00 of nontaxable income was \$1.52 in each period presented based on a Federal income tax rate of 34%.

(2)For the purpose of these computations, nonaccruing loans are included in the daily average loan amounts outstanding.

Index

Rate/Volume Analysis. The following table sets forth the effect of changes in volumes, rates, and rate/volume on tax-equivalent interest income, interest expense and net interest income.

	Nine Months Ended September 30, 2010 Versus 2009			
	Increase (decrease) due to changes in:			
	Volume	Rate	Rate/ Volume (1)	Net Change
	(in thousands)			
Interest Income:				
Investment securities:				
Taxable	\$1,789	\$(2,505)	\$(322)	\$(1,038)
Nontaxable	2,939	(261)	(92)	2,586
Loans	6,950	(1,381)	(333)	5,236
Total interest income	11,678	(4,147)	(747)	6,784
Interest Expense:				
Savings and money market deposits	1,458	(1,531)	(584)	(657)
Time deposits	696	(751)	(111)	(166)
Short-term borrowings	(52)	(65)	18	(99)
Long-term debt	355	(110)	(8)	237
Total interest expense	2,457	(2,457)	(685)	(685)
Increase in net interest income	\$9,221	\$(1,690)	\$(62)	\$7,469

(1)Represents the change not solely attributable to change in rate or change in volume but a combination of these two factors. The rate/volume variance shown in the table could be allocated between the volume and rate variances shown in the table based on the absolute value of each to the total for both.

Net interest income on a tax-equivalent basis increased by \$7,469,000 when comparing the first nine months of 2010 to the same period last year. The most significant reason for the increase in net interest income was growth in the Bank's loan and tax-exempt securities portfolios. On an average balance basis, total loans grew by \$165.9 million, or 24.1%, and tax-exempt securities grew by \$61.3 million, or 35.5%. Growth in these asset categories was funded by an increase in interest-bearing deposits, which, on an average balance basis grew by \$216.1 million, or 30.0%, and an increase in checking deposits, which on an average balance basis grew by \$39.9 million, or 12.2%. Deposit growth in excess of that needed to grow loans was largely used to purchase short duration mortgage securities.

Net interest spread increased by 8 basis points for the first nine months of 2010 when compared to the same period last year because the overall cost of interest-bearing liabilities declined by 46 basis points and was accompanied by a lesser decline in the overall yield on interest-earning assets of 38 basis points. For those interest-earning assets funded by interest-bearing liabilities, the small change in spread had little impact on net interest income. For those interest-earning assets funded by checking deposits and capital, the 38 basis point decline in yield on interest-earning assets had no offsetting reduction in interest cost and therefore negatively impacted net interest income, caused net interest margin to decline and partially offset the positive impact on net interest income of the growth in loans and tax-exempt securities previously discussed. Average noninterest-bearing checking deposits and capital were \$366.2 million and \$134.1 million, respectively, for the first nine months of 2010.

Index

The 38 basis point decline in yield on interest-earning assets occurred because rates available for investments in loans and taxable securities were relatively low and management shortened the average duration of the securities portfolio as a prudent measure to increase liquidity and protect the Bank's net interest income in the event of an increase in interest rates. The 46 basis point decline in the cost of interest-bearing liabilities resulted from reductions in the Bank's deposit rates throughout 2009 and thus far in 2010 in response to the low level of general market interest rates.

Application of Critical Accounting Policies

In preparing the consolidated financial statements, management is required to make estimates and assumptions that affect the reported asset and liability balances and revenue and expense amounts. Our determination of the allowance for loan losses is a critical accounting estimate because it is based on our subjective evaluation of a variety of factors at a specific point in time and involves difficult and complex judgments about matters that are inherently uncertain. In the event that management's estimate needs to be adjusted based on, among other things, additional information that comes to light after the estimate is made or changes in circumstances, such adjustment could result in the need for a significantly different allowance for loan losses and thereby materially impact, either positively or negatively, the Bank's results of operations.

The Bank's Reserve Committee, which is chaired by the Senior Lending Officer, meets on a quarterly basis and is responsible for determining the allowance for loan losses after considering, among other things, the results of credit reviews performed by the Bank's loan review officer. In addition, and in consultation with the Bank's Chief Financial Officer, the Reserve Committee is responsible for implementing and maintaining policies and procedures surrounding the calculation of the required allowance. The Bank's allowance for loan losses is subject to periodic examination by the Office of the Comptroller of the Currency, the Bank's primary federal banking regulator, whose safety and soundness examination includes a determination as to its adequacy to absorb probable incurred losses.

The first step in determining the allowance for loan losses is to identify loans in the Bank's portfolio that are individually deemed to be impaired. In doing so, subjective judgments need to be made regarding whether or not it is probable that a borrower will be unable to pay all principal and interest due according to contractual terms. Once a loan is identified as being impaired, management uses the fair value of the underlying collateral and/or the discounted value of expected future cash flows to determine the amount of the impairment loss, if any, that needs to be included in the overall allowance for loan losses. In estimating the fair value of real estate collateral management utilizes appraisals and also makes qualitative judgments based on, among other things, its knowledge of the local real estate market and analyses of current economic conditions and trends. Estimating the fair value of collateral other than real estate is also subjective in nature and sometimes requires difficult and complex judgments. Determining expected future cash flows can be more subjective than determining fair values. Expected future cash flows could differ significantly, both in timing and amount, from the cash flows actually received over the loan's remaining life.

In addition to estimating losses for loans individually deemed to be impaired, management also estimates collective impairment losses for pools of loans that are not specifically reviewed. Statistical information regarding the Bank's historical loss experience over a period of time is the starting point in making such estimates. However, future losses could vary significantly from those experienced in the past and accordingly management periodically adjusts its historical loss experience to reflect current conditions. In doing so, management considers a variety of general qualitative factors and then subjectively determines the weight to assign to each in estimating losses. The factors include, among others, national and local economic conditions and trends, environmental risks, trends in volume and terms of loans, concentrations of credit, changes in lending policies and procedures, and experience, ability, and depth of the Bank's lending staff. Because of the nature of the factors and the difficulty in assessing their impact, management's resulting estimate of losses may not accurately reflect actual losses in the portfolio.

Index

Although the allowance for loan losses has two separate components, one for impairment losses on individual loans and one for collective impairment losses on pools of loans, the entire allowance for loan losses is available to absorb realized losses as they occur whether they relate to individual loans or pools of loans.

Asset Quality

The Corporation has identified certain assets as risk elements. These assets include nonaccruing loans, foreclosed real estate, loans that are contractually past due 90 days or more as to principal or interest payments and still accruing and troubled debt restructurings. These assets present more than the normal risk that the Corporation will be unable to eventually collect or realize their full carrying value. The Corporation's risk elements at September 30, 2010 and December 31, 2009 are as follows:

	September 30, 2010	December 31, 2009		
	(dollars in thousands)			
Nonaccrual loans:				
In portfolio	\$630	\$432		
Held for sale	1,300	-		
Loans past due 90 days or more and still accruing	-	-		
Foreclosed real estate	-	-		
Total nonperforming assets	1,930	432		
Troubled debt restructurings	2,603	200		
Total risk elements	\$4,533	\$632		
Nonaccrual loans as a percentage of total loans	.22	%	.05	%
Nonperforming assets as a percentage of total loans and foreclosed real estate	.22	%	.05	%
Risk elements as a percentage of total loans and foreclosed real estate	.51	%	.08	%

Allowance and Provision for Loan Losses

The allowance for loan losses grew by \$2,104,000 during the first nine months of 2010, amounting to \$12,450,000, or 1.41% of total loans, at September 30, 2010, as compared to \$10,346,000, or 1.25% of total loans, at December 31, 2009. During the first nine months of 2010 the Bank had loan chargeoffs and recoveries of \$348,000 and \$29,000, respectively, and recorded a \$2,423,000 provision for loan losses. The provision for loan losses increased by \$1,787,000 when comparing the first nine months of 2010 to the same period last year. The increase is primarily the result of management's current assessment of national and local economic conditions which have been weak for an extended period of time. In addition, the provision for the first nine months of last year was reduced by the reversal of previously established impairment reserves amounting to \$300,000. The allowance for loan losses is an amount that management currently believes will be adequate to absorb probable incurred losses in the Bank's loan portfolio. In determining the allowance for loan losses, there is not an exact amount but rather a range for what constitutes an appropriate allowance. As more fully discussed in the "Application of Critical Accounting Policies" section of this discussion and analysis of financial condition and results of operations, the process for estimating credit losses and determining the allowance for loan losses as of any balance sheet date is subjective in nature and requires material estimates. Actual results could differ significantly from those estimates.

Index

The amount of future chargeoffs and provisions for loan losses will be affected by, among other things, economic conditions on Long Island and in New York City. Such conditions could affect the financial strength of the Bank's borrowers and will affect the value of real estate collateral securing the Bank's mortgage loans. Loans secured by real estate represent approximately 95% of the Bank's total loans outstanding at September 30, 2010. Most of these loans were made to borrowers domiciled on Long Island and in New York City. In the last few years general economic conditions on Long Island have been unfavorable and residential real estate values have declined. More recently, commercial real estate values have also declined and commercial real estate vacancies have trended up. This could cause some of the Bank's borrowers to be unable to make the required contractual payments on their loans and the Bank to be unable to realize the full carrying value of such loans through foreclosure. However, management believes that the Bank's underwriting policies are relatively conservative and, as a result, the Bank should be less affected than the overall market.

Future provisions and chargeoffs could also be affected by environmental impairment of properties securing the Bank's mortgage loans. At the present time, management is not aware of any environmental pollution originating on or near properties securing the Bank's loans that would materially affect the carrying value of such loans.

Noninterest Income, Noninterest Expense, and Income Taxes

Noninterest income includes service charges on deposit accounts, Investment Management Division income, gains or losses on sales of securities, and all other items of income, other than interest, resulting from the business activities of the Corporation. Noninterest income increased \$698,000, or 11.7%, when comparing the first nine months of 2010 to the same period last year. The increase is principally due to a \$455,000 increase in net gains on sales of available-for-sale securities and a \$154,000 gain recognized on the sale of real estate that had formerly served as a branch site.

Noninterest expense is comprised of salaries, employee benefits, occupancy and equipment expense and other operating expenses incurred in supporting the various business activities of the Corporation. Noninterest expense increased \$1,142,000, or 4.4%, from \$25,735,000 for the first nine months of 2009 to \$26,877,000 for the current nine-month period. The increase is primarily comprised of increases in salaries of \$882,000, or 8.2%, and occupancy and equipment expense of \$511,000, or 11.6%, as partially offset by decreases in employee benefits expense of \$164,000, or 3.8% and other operating expenses of \$87,000, or 1.4%.

The increase in salaries expense is primarily due to normal annual salary adjustments and additions to staff mostly related to branch expansion. Occupancy and equipment expense increased primarily due to branch expansion and technology upgrades. The decrease in employee benefits expense is primarily the result of a decrease in retirement plan expense, as partially offset by increases in group health insurance and payroll taxes. Retirement plan expense decreased due to additional funding of the Bank's defined benefit pension plan and improved market performance of plan assets in 2009. The decrease in other operating expenses is largely attributable to a \$330,000 decrease in FDIC deposit insurance expense as partially offset by a \$190,000 increase in data processing expense. FDIC deposit insurance expense decreased because 2009 was burdened with a \$647,000 FDIC special assessment. Management believes that continuing bank failures could possibly result in future increases in the FDIC's base assessment rate and/or the imposition of additional special assessments. Please refer to the section titled "Legislation and Regulatory Matters" for a further discussion of this topic.

Index

Income tax expense as a percentage of pre-tax income (“effective tax rate”) was 23.9% for the first nine months of 2010 as compared to 22.3% for the same period last year. The effective tax rate for the first nine months of 2009 would have been 23.2% had it not been for a \$129,000 reversal of taxes previously accrued.

Results of Operations – Three Months Ended September 30, 2010 versus September 30, 2009

Net income for the third quarter of 2010 was \$4,705,000, or \$.55 per share, as compared to \$3,905,000, or \$.53 per share, for the same quarter last year. The largest contributors to the increase in net income are a \$1,787,000 increase in net interest income, a \$171,000 increase in other noninterest income, and a \$127,000 decrease in employee benefits. The positive impact of these items was partially offset by a \$317,000 decrease in net gains on sales of available-for-sale securities, a \$295,000 increase in the provision for loan losses, a \$248,000 increase in salaries, and a \$213,000 increase in occupancy and equipment expense. The reasons for these variances are substantially the same as those discussed with respect to the nine-month periods.

Capital

The Corporation’s capital management policy is designed to build and maintain capital levels that exceed regulatory requirements. Under current regulatory capital standards, banks are classified as well capitalized, adequately capitalized or undercapitalized. Under such standards, a well-capitalized bank is one that has a total risk-based capital ratio equal to or greater than 10%, a Tier 1 risk-based capital ratio equal to or greater than 6%, and a Tier 1 leverage capital ratio equal to or greater than 5%. The Bank’s total risk-based capital, Tier 1 risk-based capital and Tier 1 leverage capital ratios of 21.28%, 20.03% and 9.54%, respectively, at September 30, 2010 exceed the regulatory criteria for a well-capitalized bank. The Corporation (on a consolidated basis) is subject to minimum risk-based and leverage capital requirements, which the Corporation exceeds at September 30, 2010.

Total stockholders' equity increased by \$50,194,000, or from \$116,462,000 at December 31, 2009 to \$166,656,000 at September 30, 2010. The most significant reason for the increase was the sale of 1,437,500 shares of common stock through an underwritten public offering at a price of \$24 per share. The net proceeds of the offering after the underwriting discount and offering expenses payable by the Corporation were \$32,362,000. Other primary reasons for the increase in stockholders’ equity are net income of \$14,328,000 and unrealized gains on available-for-sale securities of \$7,202,000, as partially offset by \$4,810,000 in cash dividends declared.

Index

Stock Repurchase Program and Market Liquidity. Since 1988, the Corporation has had a stock repurchase program under which it has purchased, from time to time, shares of its own common stock in market or private transactions. The Corporation's market transactions are generally intended to comply with the manner, timing, price and volume conditions set forth in SEC Rule 10b-18 and therefore, with respect to such transactions, provide the Corporation with safe harbor from liability for market manipulation under section 9(a)(2) and Rule 10b-5 of the Securities Exchange Act of 1934.

The Corporation periodically reevaluates whether it wants to continue purchasing shares of its own common stock in open market transactions under Rule 10b-18 or otherwise. The Corporation significantly reduced its open market share repurchases in 2009 and eliminated them in 2010 in order to preserve and build capital in an uncertain economic climate.

Russell 3000 and 2000 Indices. The Corporation's common stock is included in the Russell 3000 and Russell 2000 Indices which were reconstituted in June 2010. Upon reconstitution, the average market capitalization of companies in the Russell 2000 Index was \$987 million, the median market capitalization was \$448 million, the capitalization of the largest company in the index was \$2.3 billion, and the capitalization of the smallest company in the index was \$112 million. The Corporation's market capitalization on September 30, 2010 was approximately \$217 million.

The Corporation believes that inclusion in the Russell indices positively affects the price, trading volume and liquidity of its common stock. Conversely, if the Corporation's market capitalization falls below the minimum necessary to be included in the indices at any future reconstitution date, the opposite could occur.

Cash Flows and Liquidity

Cash Flows. The Corporation's primary sources of cash are deposit growth, maturities and amortization of loans and investment securities, operations, and borrowing. The Corporation uses cash from these and other sources to fund loan growth, purchase investment securities, expand and improve its physical facilities and pay cash dividends. During the first nine months of 2010, the Corporation's cash and cash equivalent position decreased by \$6,942,000. The decrease occurred primarily because cash used to repay short-term Federal Home Loan Bank advances, grow the loan portfolio, improve physical facilities and pay cash dividends exceeded the cash provided by deposit growth, a reduction in the size of the securities portfolio, the common stock offering and operations.

Liquidity. The Bank has both internal and external sources of liquidity that can be used to fund loan growth and accommodate deposit outflows. The Bank's primary internal sources of liquidity are its overnight investments, investment securities designated as available-for-sale, and maturities and monthly payments on its investment securities and loan portfolios. At September 30, 2010, the Bank had approximately \$390 million in unencumbered available-for-sale securities.

The Bank is a member of the Federal Reserve Bank of New York ("FRB") and the Federal Home Loan Bank of New York ("FHLB"), has repurchase agreements in place with a number of brokerage firms and commercial banks and has federal funds lines with several commercial banks. In addition to customer deposits, the Bank's primary external sources of liquidity are secured borrowings from the FRB, FHLB and repurchase agreement counterparties. In addition, the Bank can purchase overnight federal funds under its existing lines. However, the Bank's FRB membership, FHLB membership, repurchase agreements and federal funds lines do not represent legal commitments to extend credit to the Bank. The amount that the Bank can potentially borrow is currently dependent on, among other things, the amount of unencumbered eligible securities and loans that the Bank can use as collateral and the collateral margins required by the lenders. At September 30, 2010, the Bank had unencumbered securities and loans of over \$1.0 billion that are eligible collateral for borrowings.

Index

Proposed Accounting Pronouncement

In June 2010, the FASB issued a proposed Accounting Standards Update that requires the recording of all financial instruments, with some exceptions, at fair value. Changes in fair value would be recorded in net income or other comprehensive income. Pursuant to this proposal, the Bank could be required to record losses on assets such as loans where it has no intention to sell the loans and expects the loans to be repaid in full. The implementation of this proposal could adversely impact the Corporation's net income, comprehensive income and stockholders' equity.

Legislation and Regulatory Matters

In July 2010, the Dodd-Frank Wall Street Reform and Consumer Protection Act (the "Reform Act") was signed into law. The Reform Act includes sweeping changes that increase regulation and oversight of the financial services industry and impose restrictions on the ability of firms within the industry to conduct business consistent with historical practices. The Reform Act addresses, among other things, corporate governance, systemic risk, deposit insurance assessments, consumer financial protection, interchange fees, derivatives, lending limits, interest on business checking and reassignment of regulatory authority among agencies. In particular, the Reform Act contains the following provisions which, when implemented, could have a significant impact on the Corporation and the Bank.

- A change in the FDIC deposit insurance assessment base from total deposits to total consolidated assets minus average tangible equity. This should reduce the Bank's FDIC assessment and thereby positively impact its results of operations.
- The unlimited FDIC deposit insurance coverage on noninterest-bearing accounts is extended for two years through December 31, 2012.
- The Federal Reserve is given the authority to require that debit interchange rates be "reasonable and proportionate to the cost incurred by the issuer with respect to the transaction." Although the bill contains an exemption for issuers like the Bank with less than \$10 billion in assets, the Bank may need to reduce its interchange fees in order to remain competitive.
- The long standing prohibition on the payment of interest on corporate checking deposits is repealed. As a result, the Bank may need to pay interest on corporate checking deposits in order to remain competitive. Commercial checking deposits currently account for approximately 21% of the Bank's total deposits. If the Bank is unable to offset the interest cost with service charges on these accounts, it could have a material adverse impact on the Corporation's results of operations.
- The minimum Deposit Insurance Fund ("DIF") ratio is increased from 1.15% of insured deposits to 1.35% and the FDIC is required to reach that level by September 30, 2020. Based on the most recent available information, the DIF balance was a negative \$15.2 billion at June 30, 2010 and would need to be increased by approximately \$89 billion to be at the statutory minimum of 1.35% of insured deposits. In October 2010, the FDIC proposed a comprehensive, long-range plan for Deposit Insurance Fund management with the goals of maintaining a positive fund balance and steady, predictable assessment rates throughout economic and credit cycles. The plan forgoes the uniform three basis point assessment rate increase previously scheduled to go into effect on January 1, 2011 and maintains the current schedule of assessment rates for all insured depository institutions. Management has reviewed the proposal and, assuming that the Bank's current risk category does not change, believes that the proposal will not have a material adverse impact on the Bank's FDIC insurance expense.

Index

The provisions of the American Recovery and Reinvestment Act of 2009 enabled the Bank to purchase certain municipal securities issued in 2009 without the usual limitations imposed by the federal alternative minimum tax (“AMT”). The provisions of the Act have enabled the Bank to make such purchases again in 2010. Beginning in 2011, the Bank’s purchase of tax-exempt municipal securities will once again be subject to the limitations of the AMT. This could adversely impact the income that the Bank is able to earn on its securities portfolio.

The New York State Department of Taxation and Finance has undertaken a project to reform the State’s corporate income tax system that would, among other things, revamp general corporation tax law under Article 9-A and merge into Article 9-A bank tax law under Article 32. The proposed changes would be effective for tax years beginning on or after January 1, 2011. If enacted into law in 2011 or otherwise, the changes could have a material adverse impact on the Bank’s results of operations because they could result in a significant reduction or elimination of the tax benefit that the Corporation receives from FNY and the REIT and otherwise cause the Corporation’s New York State tax burden to increase. Management estimates that the Bank will derive a tax benefit from FNY and the REIT in 2010 of approximately \$600,000.

The SEC is currently considering the incorporation of International Financial Reporting Standards (“IFRS”) into the U.S. financial reporting system and is scheduled to make a determination by 2011. If IFRS is adopted by the SEC, the first time that U.S. companies would report under IFRS would be no earlier than 2015. The Corporation is evaluating the impact of the adoption of IFRS on its results of operations, financial position and disclosures.

In September 2010, the oversight body of the Basel Committee on Banking Supervision (Basel Committee) released new capital standards for banks including a time frame over which they would need to be implemented. The new common equity requirement and new capital conservation buffer will require banks to hold more capital, predominantly in the form of common equity, than under current rules. The new common equity requirement will be phased in between January 1, 2013 and January 1, 2016, and the new capital conservation buffer will be phased in between January 1, 2016 and January 1, 2019.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

The Bank invests in interest-earning assets which are funded by interest-bearing deposits and borrowings, noninterest-bearing deposits, and capital. The Bank's results of operations are subject to risk resulting from interest rate fluctuations generally and having assets and liabilities that have different maturity, repricing, and prepayment/withdrawal characteristics. The Bank defines interest rate risk as the risk that the Bank's earnings and/or net portfolio value (present value of expected future cash flows from assets less the present value of expected future cash flows from liabilities) will change when interest rates change. The principal objective of the Bank's asset/liability management activities is to maximize net interest income while at the same time maintain acceptable levels of interest rate and liquidity risk and facilitate the funding needs of the Bank.

Because the Bank's loans and investment securities generally reprice slower than its interest-bearing liabilities, an immediate increase in interest rates uniformly across the yield curve could initially have a negative effect on net interest income. However, if the Bank does not increase the rates paid on its deposit accounts as quickly or in the same amount as increases in market interest rates and/or owns interest rate caps that are in-the-money at the time of the interest rate increase or become in-the-money as a result of the increase, the magnitude of the negative impact will decline and the impact could even be positive. Over a longer period of time, and assuming that interest rates remain stable after the initial rate increase and the Bank purchases securities and originates loans at yields higher than those maturing and reprices loans at higher yields, the impact of an increase in interest rates should be positive. This occurs primarily because with the passage of time more loans and investment securities will reprice at the higher rates and there will be no offsetting increase in interest expense for those loans and investment securities funded by noninterest-bearing checking deposits and capital.

Conversely, a decrease in interest rates uniformly across the yield curve could initially have a positive impact on the Bank's net interest income. Furthermore, if the Bank owns interest rate floors that are in the money at the time of the interest rate decrease or become in the money as a result of the decrease, the magnitude of the positive impact should increase. However, if the Bank does not decrease the rates paid on its deposit accounts as quickly or in the same amount as decreases in market interest rates or cannot decrease the rates paid on its deposit accounts in the same amount as decreases in market interest rates because, as in the current interest rate environment, rates are already very low, the magnitude of the positive impact will decline and could even be negative. If interest rates decline, or have declined, and are sustained at the lower levels and, as a result, the Bank purchases securities at lower yields and loans are originated or repriced at lower yields, the impact on net interest income should be negative because a significant portion of the Bank's interest-earning assets are funded by noninterest-bearing checking deposits and capital.

The Bank monitors and controls interest rate risk through a variety of techniques including the use of interest rate sensitivity models and traditional gap analysis. Through use of the models, the Bank projects future net interest income and then estimates the effect on projected net interest income of various changes in interest rates and balance sheet growth rates. The Bank also uses the models to calculate the change in net portfolio value over a range of interest rate change scenarios.

Index

Traditional gap analysis involves arranging the Bank's interest-earning assets and interest-bearing liabilities by repricing periods and then computing the difference, or interest-rate sensitivity gap, between the assets and liabilities which are estimated to reprice during each time period and cumulatively through the end of each time period.

Both interest rate sensitivity modeling and gap analysis involve a variety of significant estimates and assumptions and are done at a specific point in time. Interest rate sensitivity modeling requires, among other things, estimates of: (1) how much and when yields and costs on individual categories of interest-earning assets and interest-bearing liabilities will change because of projected changes in market interest rates; (2) future cash flows; (3) discount rates; and (4) decay or runoff rates for nonmaturity deposits such as checking, savings, and money market accounts.

Gap analysis requires estimates as to when individual categories of interest-sensitive assets and liabilities will reprice and assumes that assets and liabilities assigned to the same repricing period will reprice at the same time and in the same amount. Like sensitivity modeling, gap analysis does not fully take into account the fact that the repricing of some assets and liabilities is discretionary and subject to competitive and other pressures.

Changes in the estimates and assumptions made for interest rate sensitivity modeling and gap analysis could have a significant impact on projected results and conclusions. Therefore, these techniques may not accurately reflect the actual impact of changes in the interest rate environment on the Bank's net interest income or net portfolio value.

The table that follows is provided pursuant to the market risk disclosure rules set forth in Item 305 of Regulation S-K of the Securities and Exchange Commission. The information provided in the following table is based on significant estimates and assumptions and constitutes, like certain other statements included herein, a forward-looking statement. The base case information in the table shows (1) an estimate of the Corporation's net portfolio value at September 30, 2010 arrived at by discounting estimated future cash flows at current market rates and (2) an estimate of net interest income on a tax-equivalent basis for the year ending September 30, 2011 assuming that maturing assets or liabilities are replaced with new balances of the same type, in the same amount, and at current rate levels and repricing balances are adjusted to current rate levels. For purposes of the base case, nonmaturity deposits are included in the calculation of net portfolio value at their carrying amount. The rate change information in the table shows estimates of net portfolio value at September 30, 2010 and net interest income on a tax-equivalent basis for the year ending September 30, 2011 assuming rate changes of plus 100 and 200 basis points and minus 100 and 200 basis points. The changes in net portfolio value from the base case have not been tax affected. In addition, cash flows for nonmaturity deposits are based on a decay or runoff rate of six years. Also, rate changes are assumed to be shock or immediate changes and occur uniformly across the yield curve regardless of the duration to maturity. In projecting future net interest income under the indicated rate change scenarios, activity is simulated by replacing maturing balances with new balances of the same type, in the same amount, but at the assumed rate level and adjusting repricing balances to the assumed rate level.

Based on the foregoing assumptions and as depicted in the table that follows, an immediate increase in interest rates of 100 or 200 basis points would have a negative effect on net interest income over a one-year time period. This is principally because the Bank's interest-bearing deposit accounts are assumed to reprice faster than its loans and investment securities. However, if the Bank does not increase the rates paid on its deposit accounts as quickly or in the same amount as increases in market interest rates, the magnitude of the negative impact will decline, and the impact may even become positive. Over a longer period of time, and assuming that interest rates remain stable after the initial rate increase and the Bank purchases securities and originates loans at yields higher than those maturing and reprices loans at higher yields, the impact of an increase in interest rates should be positive. This occurs primarily because with the passage of time more loans and investment securities will reprice at the higher rates and there will be no offsetting increase in interest expense for those loans and investment securities funded by noninterest-bearing checking deposits and capital. Generally, the reverse should be true of an immediate decrease in interest rates of 100 or 200 basis points. However, the positive impact of a decline in interest rates of 100 or 200 basis points is currently

constrained by the fact that the annual percentage yields on many of the Bank's deposit products are below 1%.

Index

Rate Change Scenario	Net Portfolio Value at September 30, 2010		Net Interest Income September 30, 2011	
	Amount	Percent Change From Base Case (dollars in thousands)	Amount	Percent Change From Base Case
+ 200 basis point rate shock	\$132,455	(15.0)%	\$51,916	(17.4)%
+ 100 basis point rate shock	143,666	(7.8)	57,367	(8.7)
Base case (no rate change)	155,812	-	62,818	-
- 100 basis point rate shock	169,763	9.0	65,011	3.5
- 200 basis point rate shock	186,776	19.9	63,840	1.6

Forward Looking Statements

“Management’s Discussion and Analysis of Financial Condition and Results of Operations”, “Quantitative and Qualitative Disclosures about Market Risk”, and “Other Information” contain various forward-looking statements with respect to financial performance and business matters. Such statements are generally contained in sentences including the words “may”, “expect”, “could”, “should”, “would” or “believe.” The Corporation cautions that these forward-looking statements are subject to numerous assumptions, risks and uncertainties, and therefore actual results could differ materially from those contemplated by the forward-looking statements. In addition, the Corporation assumes no duty to update forward-looking statements.

ITEM 4. CONTROLS AND PROCEDURES

(a) Evaluation of Disclosure Controls and Procedures

The Corporation’s Chief Executive Officer, Michael N. Vittorio, and Chief Financial Officer, Mark D. Curtis, have evaluated the Corporation’s disclosure controls and procedures, as defined in Rule 13a-15(e) under the Securities Exchange Act of 1934 (the “Act”), as of the end of the period covered by this report. Based upon that evaluation, they have concluded that the Corporation’s disclosure controls and procedures are effective in ensuring that information required to be disclosed by the Corporation in the reports that it files or submits under the Act, as amended, is recorded, processed, summarized, and reported within the time periods specified in the Securities and Exchange Commission’s rules and forms. Such controls and procedures include, without limitation, controls and procedures designed to ensure that information required to be disclosed is accumulated and communicated to the Corporation’s management, including the principal executive and principal financial officers, to allow timely decisions regarding disclosure.

(b) Changes in Internal Control Over Financial Reporting

There were no changes in internal control over financial reporting that occurred during the fiscal quarter covered by this report that have materially affected, or are reasonably likely to materially affect, the Corporation's internal control over financial reporting.

PART II.

OTHER INFORMATION

Item 1. Legal Proceedings

From time to time the Corporation and the Bank may be involved in litigation that arises in the normal course of business. As of the date of this Form 10-Q, neither the Corporation nor the Bank is a party to any litigation that management believes could reasonably be expected to have a material adverse effect on the Corporation's or the Bank's financial position or results of operations for an annual period.

Item 2. Issuer Purchase of Equity Securities

Since 1988, the Corporation has had a stock repurchase program under which it is authorized to purchase, from time to time, shares of its own common stock in market or private transactions. No shares were purchased under the stock repurchase program during the third quarter of 2010. Throughout the third quarter of 2010, the maximum number of shares that could have been purchased was 76,568. Such shares were authorized under a 200,000 share plan approved by the Corporation's Board of Directors on February 21, 2008 and publicly announced on February 22, 2008. The Corporation's share repurchase plans do not have fixed expiration dates.

Item 6. Exhibits

a) The following exhibits are included herein.

Exhibit No.	Name
31.1	Certification of the Chief Executive Officer pursuant to Section 302 of the Sarbanes-Oxley Act of 2002 (Rules 13a-14(a) and 15d-14(a) of the Exchange Act)
31.2	Certification of the Chief Financial Officer pursuant to Section 302 of the Sarbanes-Oxley Act of 2002 (Rules 13a-14(a) and 15d-14(a) of the Exchange Act)
32	Certification by Chief Executive Officer and Chief Financial Officer pursuant to Section 906 of the Sarbanes-Oxley Act of 2002 (18 U.S.C. Section 1350)
99.1	Press Release dated November 5, 2010 regarding the Corporation's financial condition as of September 30, 2010 and its results of operations for the nine and three month periods then ended
