GENTIUM S.p.A.
(Exact Name of Registrant as Specified in its Charter)

NOT APPLICABLE
(Translation of Registrant's Name into English)

Italy
(Jurisdiction of incorporation or organization)

Piazza XX Settembre 2
22079 Villa Guardia (Como), Italy
+39 031 385111

(Address, including zip code, and telephone number,
including area code, of Registrant's principal executive offices)

Securities registered or to be registered pursuant to Section 12(b) of the Act.

None
(Title of Class)

Securities registered or to be registered pursuant to Section 12(g) of the Act:

Title of each class	Name of each exchange on which registered
American Depositary Shares	The Nasdaq National Market
Ordinary shares with a par value of €1.00 each*	The Nasdaq National Market

Back to Table of Contents

Securities for which there is a reporting obligation pursuant to Section 15(d) of the Act:

None

(Title of Class)

Indicate the number of outstanding shares of each of the issuer's classes of capital or common stock as of the close of the period covered by the annual report.

9,610,630 ordinary shares

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act.

Yes ☐

No ☒

If this report is an annual or transition report, indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934.

Yes ☐

No ☒

Note - Checking the box above will not relieve any registrant required to file reports pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934 from their obligations under those Sections.

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days.

Yes ☒

No ☐

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, or a non-accelerated filer. See definition of "accelerated filer and large accelerated filer" in rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer ☐

Accelerated filer ☐

Non-accelerated filer ☒

Indicate by check mark which financial statement item the registrant has elected to follow.

Item 17 ☐

Item 18 ☒

If this is an annual report, indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act).

Yes ☐

No ☒

Indicate by check mark whether the registrant has filed all documents and reports required to be filed by Sections 12, 13 or 15(d) of the Securities Exchange Act of 1934 subsequent to the distribution of securities under a plan confirmed by a court.

Not applicable.

- Not for trading, but only in connection with the registration of the American Depositary Shares.

GENTIUM S.P.A.

We are a biopharmaceutical company focused on the research, discovery and development of drugs to treat and prevent a variety of vascular diseases and conditions related to cancer and cancer treatments.

SELECTED FINANCIAL DATA

The following selected financial data should be read in conjunction with “Operating and Financial Review and Prospects” and our financial statements and the related notes appearing elsewhere in this annual report. The selected financial data as of December 31, 2004 and December 31, 2005 and for each of the three years ended December 31, 2005 are derived from our audited financial statements, which are included in this annual report. The selected financial data as of December 31, 2003 and for the year ended December 31, 2002 has been derived from our audited financial statements, which are not included in this annual report. The selected financial data as of December 31, 2001 and December 31, 2002 and for the year ended December 31, 2001 has been derived from our unaudited financial statements, which are not included in this annual report. Our historical results are not necessarily indicative of results to be expected in any future period.

Back to Table of Contents

Certain reclassification of prior period amounts have been made to our financial statements to conform to the current period presentation. The convenience translation into U.S. dollars has been done solely for the benefit of the reader, and does not imply that our results would actually have been these amounts in U.S. dollars had the U.S. dollar been our functional currency.

Exchange Rate Information

Fluctuations in the exchange rates between the euro and the U.S. dollar will affect the U.S. dollar amounts received by owners of ADSs on conversion by the depositary of dividends, if any, paid in euros on the ordinary shares represented by the ADSs. Moreover, such fluctuations may also affect the U.S. dollar price of the ADSs on the American Stock Exchange or the Nasdaq National Market System. The following table sets forth information regarding the exchange rates of U.S. dollars per euro for the periods indicated, calculated by using the average of the noon buying rates on the last day of each month during the periods presented.

Year	U.S. Dollar per Euro	
	Average	Period End
2000	0.9207	0.9388
2001	0.8909	0.8901
2002	0.9495	1.0485
2003	1.1411	1.2597
2004	1.2478	1.3538
2005	1.2400	1.1842

Source: Federal Reserve Statistical Release H.10

The following table sets forth information regarding the high and low exchange rates of U.S. dollars per euro for the periods indicated using the noon buying rate on each day of such period.

Month	U.S. Dollar per Euro	
	High	Low
November 2005	1.2067	1.1667
December 2005	1.2041	1.1699
January 2006	1.2287	1.1980

February 2006	1.2100	1.1860
March 2006	1.2197	1.1886
April 2006	1.2624	1.2091
May 2006 (through May 25, 2006)	1.2888	1.2607

Source: Federal Reserve Statistical Release H.10

On May 25, 2006, the noon buying rate was €1.00 to \$1.2777.

We use the euro as our native currency for financial reporting. This annual report contains translations of euros into U.S. dollars at specified rates solely for the convenience of the reader. No representation is made that the euro amounts referred to in this annual report could have been or could be converted into U.S. dollars at any particular rate or at all.

CAPITALIZATION AND INDEBTEDNESS

Not applicable.

REASONS FOR THE OFFER AND USE OF PROCEEDS

Not applicable.

RISK FACTORS

You should carefully consider the risks described below, in conjunction with the other information and financial statements and related notes included elsewhere in this annual report, before making an investment decision. You should pay particular attention to the fact that we conduct our operations in Italy and are governed by a legal and regulatory environment that in some respects differs significantly from the environment that prevails in other countries with which you may be familiar. Our business, financial condition or results of operations could be affected materially and adversely by any or all of these risks. In that event, the market price of our ADSs could decline and you could lose all or part of your investment.

Risks Relating to Our Business

We have generated limited revenues from commercial sales of our products to date, our revenues have declined significantly since 2003, and we do not know whether we will ever generate significant revenues or achieve profitability.

We are focused on product development and have generated limited revenue from commercial sales of our products to date since 2003, because Sirton Pharmaceuticals S.p.A., our primary customer, has had a decrease in demand for some of the products we sell to it, as discussed below. In 2004, we had total product sales of €3.113 million and in 2005 we had total product sales of €3.361 million.

We do not expect our total product sales to materially increase unless we are able to sell our product candidates, and we will continue to incur significant expenses as we research, develop, test and seek regulatory approval for these product candidates. While we were profitable in 2002 and 2003, we incurred a net loss of €581 thousand in 2001, a net loss of €7.0 million in 2004 and a net loss of €12.3 million in 2005. Our general and administrative expenses have increased as we added personnel to support our operations in connection with our development of our product candidates, internalized certain administrative services that were performed for us by our largest shareholder, FinSirton, and our affiliate, Sirton, and supported our operations in connection with being a public company. As a result, we anticipate incurring substantial and increasing losses for the foreseeable future. We cannot assure you that we will ever become profitable. If we fail to achieve profitability within the time frame expected by investors or securities analysts, the market price of our ADSs may decline.

Most of our revenues are from sales to Sirton, our affiliate; those sales have declined over the past several years and may continue to decline in the future.

Substantially all of our product sales in 2001, 2002 and 2003, approximately 92% of our product sales in 2004 and approximately 97% of our product sales in 2005 have been from the sale of our active pharmaceutical ingredients and products to Sirton, which has recently experienced financial difficulties. Sirton sells its finished products to one customer, Crinos, which sells them to the retail market. Our products have seen decreased demand over the past several years due to various market factors. As a result, Sirton's demand for these products has decreased over the past several years, and may continue to decrease over the next several years until and unless both we and Sirton develop

new customers. If we and Sirton are unsuccessful at developing new customers and the demand for our products continues to decrease, it could increase our need for additional capital, and our business could be adversely affected.

We currently do not have any regulatory approvals to sell defibrotide to treat or prevent VOD or defibrotide to treat multiple myeloma or any of our other product candidates and we cannot guarantee that we will ever be able to sell any of these products anywhere in the world.

We must demonstrate that our product candidates satisfy rigorous standards of safety and effectiveness before the FDA, the European Commission and other regulatory authorities will approve the products for commercial marketing. We or others must conduct clinical trials of those products which must be approved by the FDA or other regulatory agencies. These trials are time consuming and expensive, and we cannot guarantee whether they will be successful. Currently, the only regulatory approvals we have relate to the use of defibrotide to prevent vascular disease with risk of thrombosis in Italy. We do not have approval to sell defibrotide to treat or prevent VOD, defibrotide to treat multiple myeloma or any of our other product candidates anywhere in the world. We will need to conduct significant additional research, preclinical testing and clinical testing before we can file applications with the FDA, the European Commission and other regulatory authorities for approval

-8-

Back to Table of Contents

of our product candidates. In addition, to compete effectively, our future products must be easy to use, cost-effective and economical to manufacture on a commercial scale. We may not achieve any of these objectives, and, as a result, may not be able to sell any of our product candidates anywhere in the world.

The FDA and other regulatory authorities may require us to conduct a new clinical trial of defibrotide to treat VOD with multiple-organ failure using a control group.

The Dana-Farber Cancer Institute at Harvard University conducted a Phase II clinical trial in the United States for the use of defibrotide to treat VOD with multiple-organ failure that concluded in December 2005. Based on our review of more than 200 articles in the medical literature, we believe that the survival rate for this disease is only approximately 20%. As a result of this fact and the fact that we and the Dana-Farber clinical investigators believe that there are no approved treatments available at this time, the Dana-Farber clinical investigators did not establish a control group of patients who do not receive the drug, as is customarily done in the FDA approval process. The FDA has stated a preference for a double-blind study that utilizes a control group but indicated that they would review a trial using a historical control only. Our Phase III clinical trial of defibrotide to treat VOD with multiple-organ failure that is currently underway uses historical control only. The FDA, upon reviewing this trial, may require us to conduct a new clinical trial using a control group and other regulatory authorities may take the same position. This could significantly delay the filing of a New Drug Application with the FDA or applications for other regulatory approval for this use because one or more of the clinical centers where the clinical trial is to be conducted may not be willing to conduct such a clinical trial on the basis that it is unethical to refuse treatment to patients when the treatment being investigated could potentially save their lives. The committee of clinical investigators who sponsored a Phase II/III clinical trial of defibrotide to treat VOD in Europe conducted by Consorzio Mario Negri Sud, which had a control group, cancelled the trial in October 2005 due to a lack of patients enrolling. We believe that patients were reluctant to enroll due to the possibility of being placed into the control group and not receiving treatment. A requirement for a control group would also require the expenditure of more funds on clinical trials and delay our ability to generate revenue from this product candidate.

At present, we do not have sole control of the distribution of defibrotide in Italy, and we may not be able to gain such control, which may adversely affect our clinical trials and our pricing of defibrotide.

Because defibrotide is on the market in Italy, we believe it has been purchased and sold in other countries where its use is not licensed or permitted. This could impact our ability to enroll patients in our trials and the timing of such enrollments. Also, in the future, it could have a negative impact on our ability to appropriately price defibrotide for new indications, unless we can control the distribution of defibrotide in Italy. There can be no assurance of our ability to do so.

Our additional product candidates are at early stages of development and will require clinical trials which may not be successful.

We intend to apply for FDA and other regulatory agency approval for our additional product candidates, including other uses of defibrotide, in the future, and these additional product candidates will require that we conduct clinical trials and undergo the regulatory approval process. The commencement and completion of these clinical trials could be delayed or prevented by a variety of factors, including:

- delays in identifying and reaching agreement on acceptable terms with institutional review boards of clinical trial providers and prospective clinical trial sites;
- delays in obtaining FDA or other regulatory agency clearance to commence a clinical trial;

- delays in the enrollment of patients;
- lack of effectiveness of the product candidate during clinical trials; or
- adverse events or safety issues.

We do not know whether these future clinical trials will be initiated or completed at all. Significant delays in clinical trials will impede our ability to commercialize these additional product candidates and generate revenue, and could significantly increase our development costs.

We may be required to suspend or discontinue clinical trials, including due to adverse events or other safety issues that could preclude approval of our products or due to difficulty enrolling participants.

Our clinical trials may be suspended at any time for a number of safety-related reasons. For example, we may voluntarily suspend or terminate our clinical trials if at any time we believe that our product candidates present an unacceptable risk to the clinical trial patients. In addition, institutional review boards of clinical trial providers or regulatory agencies may order the temporary or permanent discontinuation of our clinical trials at any time if they believe that the clinical trials are not being conducted in accordance with applicable regulatory requirements, including if they present an unacceptable safety risk to patients.

Back to Table of Contents

Administering any product candidate to humans may produce undesirable side effects. VOD and VOD with multiple-organ failure are complications associated with high dose chemotherapy and stem cell transplantation. Adverse events involving vascular disorders, coagulation, and potentially life-threatening bleeding have been reported in patients with VOD treated with defibrotide which potentially could be related to the defibrotide therapy. Hypotension has been reported as a possibly related serious adverse event in the trials of defibrotide to treat VOD with multiple-organ failure. Also, we discontinued a 69-patient Phase I/II clinical trial of defibrotide to prevent deep vein thrombosis after hip surgery in Denmark in 2002 after three patients experienced hypotension after receiving the defibrotide intravenously. That trial was discontinued due to the hypotension and because defibrotide can also be administered orally to prevent deep vein thrombosis. These adverse events reports will be weighed by FDA and other regulatory authorities in determining whether defibrotide can, from a risk-benefit perspective, be considered to be safe and effective to treat VOD with multiple-organ failure, to prevent deep vein thrombosis or any other indication for which approval is sought.

It is possible that as further data are collected and analyzed, additional adverse events or safety issues could emerge which could impact conclusions relating to the safety of these additional product candidates. As one of our current products and many of our product candidates utilize or will utilize defibrotide, any problems that arise from the use of this drug would severely harm our business operations, since most of our anticipated primary revenue sources would be negatively affected.

Furthermore, the committee of clinical investigators who sponsored a Phase II/III clinical trial of defibrotide to treat VOD in Europe that was conducted by Consorzio Mario Negri Sud cancelled the trial in October 2005 due to a lack of enrollees. In addition, the National Institute of Tumors in Milan cancelled a Phase I clinical trial of defibrotide to increase the number of stem cells available for transplant in December 2005 due to a lack of eligible enrollees. We are co-sponsoring with the European Group for Blood and Marrow Transplantation a Phase II/III clinical trial in Europe of defibrotide to prevent VOD in children, and a Phase II/III clinical trial in Europe of defibrotide to prevent VOD and transplant associated microangiopathy in adults. The participants in both of these trials randomly receive either defibrotide or no treatment. We may have difficulty enrolling participants in these trials as patients may be reluctant to take the risk of not receiving treatment with defibrotide. Further, because defibrotide is available on the market in Italy, we believe it has been purchased and sold in other countries where its use is not licensed. This could impact our ability to enroll patients in our trials and the timing of such enrollments. Our other clinical trials may also be discontinued if we or the sponsors are not successful in enrolling participants.

Our products could be subject to restrictions or withdrawal from the market and we may be subject to penalties if we fail to comply with regulatory requirements, if and when any of our product candidates are approved.

Any product for which we obtain marketing approval, together with the manufacturing processes, post-approval commitments, and advertising and promotional activities for such product, will be subject to continued regulation by the FDA and other regulatory agencies. Later discovery of previously unknown problems with our products or their manufacture, or failure to comply with regulatory requirements, may result in:

· restrictions on such products or manufacturing processes;

· withdrawal of the products from the market;

· voluntary or mandatory recalls;

· fines;

suspension of regulatory approvals;

product seizures; or

injunctions or the imposition of civil or criminal penalties.

If we are slow to adapt, or unable to adapt, to changes in existing regulatory requirements or adoption of new regulatory requirements or policies, we may lose marketing approval for our products when and if any of them are approved.

Our manufacturing facility is subject to continuing regulation by Italian authorities and is subject to inspection and regulation by the FDA and European regulatory. These authorities could force us to stop manufacturing our products if they determine that we are not complying with applicable regulations or require us to complete further costly alterations to our facility.

Although our main business is discovering, researching and developing drugs, we also manufacture drugs, active pharmaceutical ingredients and other products at our manufacturing facility located near Como, Italy. This facility is subject to continuing regulation by the Italian Health Authority and other Italian regulatory authorities. During a biannual inspection of our manufacturing facility by the Italian Health Authority in October 2004, the Italian Health Authority noted by way of observations certain deficiencies in regard to the operation of our facility. We have corrected all of these deficiencies, and have kept the Italian Health Authority current with respect to the progress of our corrective actions. No penalties were imposed, our

Back to Table of Contents

facility was not shut down and our manufacturing activities were not otherwise limited or curtailed as a result of the Italian Health Authorities' notation of these deficiencies.

Our manufacturing facility is subject to inspection and regulation by the FDA and European regulatory authorities with respect to manufacturing our product candidates for investigational use. Also, part of the process for obtaining approval from the FDA and European regulatory authorities for our product candidates is approval by those authorities of our manufacturing facility's compliance with current good manufacturing practices. After receiving initial approval, if any, the FDA or those European regulatory authorities will continue to inspect our manufacturing facility, including inspecting it unannounced, to confirm whether we are complying with the good manufacturing practices.

These regulators may require us to stop manufacturing our products and product candidates if they determine that we are not complying with applicable regulations or require us to complete costly alterations to our facility. We spent approximately €292 thousand in 2004 to correct the deficiencies noted by the Italian Health Authority and spent approximately €200 thousand in 2005 to complete these corrective actions. We spent approximately €7.2 million in 2004 to substantially upgrade our facility in anticipation of the FDA and European regulatory approval process for our product candidates.

If our third-party clinical trial vendors fail to comply with strict regulations, the clinical trials for our product candidates may be delayed or unsuccessful.

We do not have the personnel capacity to conduct or manage all of the clinical trials that we intend for our product candidates. We rely on third parties to assist us in managing, monitoring and conducting most of our clinical trials. We expect to enter into clinical trial agreements with numerous centers in the United States and Canada regarding our Phase III clinical trial of defibrotide to treat VOD with multiple-organ failure. We have entered into co-sponsoring agreements with the European Group for Blood and Marrow Transplantation, regarding a Phase II/III clinical trial of defibrotide to prevent VOD in children in Europe and a Phase II/III clinical trial of defibrotide to prevent VOD and transplant associated microangiopathy in adults in Europe. We have entered into an agreement with Bradstreet Clinical Research & Associates, Inc. to perform clinical research project management services in connection with clinical trials conducted in the United States and agreements with KKS-UKT, GmbH and MDS Pharma Services Italy SpA to provide such services for our clinical trials in Europe. If these third parties fail to comply with applicable regulations or do not adequately fulfill their obligations under the terms of our agreements with them, we may not be able to enter into alternative arrangements without undue delay or additional expenditures, and therefore the clinical trials for our product candidates may be delayed or unsuccessful.

Furthermore, the FDA can be expected to inspect some or all of the clinical sites participating in our clinical trials, or our third party vendors' sites, to determine if our clinical trials are being conducted according to current good clinical practices. If the FDA determines that our third-party vendors are not in compliance with applicable regulations, we may be required to delay, repeat or terminate the clinical trials. Any delay, repetition or termination of our clinical trials could materially harm our business.

Our failure to raise additional funds in the future may delay the development of certain of our product candidates and sale of our products.

The development and approval of our product candidates and the acquisition and development of additional products or product candidates by us, as well as the expansion of our research, regulatory and manufacturing operations, will require a commitment of substantial funds. Our future capital requirements are dependent upon many factors, some of which are beyond our control, including:

- the successful and continued development of our existing product candidates in preclinical and clinical testing;
- the costs associated with protecting and expanding our patent and other intellectual property rights;
- future payments, if any, received or made under existing or possible future collaborative arrangements;
- the timing of regulatory approvals needed to market our product candidates; and
- market acceptance of our products.

We will need additional funds before we have completed the development of our product candidates. We have no committed sources of additional funds. We cannot assure you that funds will be available to us in the future on favorable terms, if at all. If adequate funds are not available to us on terms that we find acceptable, or at all, we may be required to delay, reduce the scope of, or eliminate research and development efforts or clinical trials on any or all of our product candidates. We may also be forced to curtail or restructure our operations, obtain funds by entering into arrangements with collaborators on unattractive terms or relinquish rights to certain technologies or product candidates that we would not otherwise relinquish in order to continue independent operations.

Back to Table of Contents

We are currently dependent on third parties to market and distribute our products in finished dosage form, and we may continue to be dependent on third parties to market and distribute our products and product candidates.

Our internal ability to handle the marketing and distribution functions for our current products and our product candidates is limited and we do not expect to develop the capability to provide marketing and distribution for all of our future products. Our long-term strategy includes having alliances with third parties to assist in the marketing and distribution of our product candidates. We have entered into an agreement with Sigma-Tau Pharmaceuticals, Inc. to market defibrotide to treat VOD in North America, Central America and South America and we may need to enter into similar agreements to market and distribute our other product candidates or develop these capabilities internally. We face, and will continue to face, intense competition from other companies for collaborative arrangements with pharmaceutical and biotechnology companies, for establishing relationships with academic and research institutions, for attracting investigators and sites capable of conducting our clinical trials and for licenses of proprietary technology. Moreover, these arrangements are complex to negotiate and time-consuming to document. Our future profitability will depend in large part on our ability to enter into effective marketing agreements and our product revenues will depend on those marketers' efforts, which may not be successful.

If we are unable to attract and retain key personnel, we may be unable to successfully develop and commercialize our product candidates or otherwise manage our business effectively.

We are highly dependent on our senior management, especially Dr. Laura Ferro, our President and Chief Executive Officer, and Dr. Massimo Iacobelli, our Senior Vice President and Scientific Director, whose services are critical to the successful implementation of our product acquisition, development and regulatory strategies. If we lose their services or the services of one or more of the other members of our senior management or other key employees, our ability to successfully commercialize our product candidates or otherwise manage our business effectively could be seriously harmed. Dr. Ferro's employment agreement with us is for a period of three years with a two year renewal option and prohibits her from competing with us during the term of her employment and for a period of one year after the termination of her employment. Dr. Ferro's employment agreement provides that she is not obligated to spend more than 75% of her time working for our company. Cary Grossman, our Chief Financial Officer, is an independent contractor, rather than an employee. Mr. Grossman works for our company on an at-will basis, and has not committed to continue to work for us for any defined period of time. We have an understanding with Mr. Grossman that he will devote approximately 50% of his time working for our company. If Mr. Grossman's services are discontinued and we are not able to hire an appropriate full-time, permanent Chief Financial Officer on a timely basis, we may not be able to maintain effective internal controls, accurately report our financial results or prevent fraud. As a result, our operating results could be harmed, we may fail to meet our reporting obligations and potential shareholders could lose confidence in our financial reporting, which would harm our business and the trading price of our ADSs.

Replacing key employees may be difficult and may take an extended period of time because of the limited number of individuals in our industry with the breadth of specific skills and experience required to develop, gain regulatory approval of and commercialize products successfully. Competition to hire from this limited pool is intense, and we may be unable to hire, train, retain or motivate these additional key personnel. In addition, under Italian law, we must pay our employees a severance amount based on their salary and years of service if they leave their employment, even if we terminate them for cause or they resign.

In order to expand our operations, we will need to hire additional personnel and add corporate functions that we currently do not have. Our ability to manage our operations and growth will require us to continue to improve our operational, financial and management controls and reporting system and procedures, or contract with third parties to provide these capabilities for us.

Our independent registered public accounting firm reported a material weakness in our internal controls and we may not be able to remedy this material weakness or prevent future weaknesses. If we fail to maintain effective internal controls, we may not be able to accurately report our financial results or prevent fraud. As a result, potential shareholders could lose confidence in our financial reporting, which would harm our business and the trading price of our ordinary shares.

Prior to our initial public offering in June 2005, we were a relatively small, family run Italian business. We had not been required to close our accounting records on a monthly or even quarterly basis. A very small accounting team handled the accounts for not only us, but also our then-parent, FinSirton S.p.A., and sister companies, Sirton and Foltene Pharmaceuticals S.p.A., all of which are also private companies. Therefore, the internal control structure was not adequate for a company publicly listed and reporting in the United States. Also, the financial reporting environment in Italy for private companies is significantly different than for public companies in the United States.

As an Italian company publicly listed in the United States, we are required by Italian law to keep our books according to the local statutory accounting methods, but we also prepare U.S. GAAP based financial statements for our Securities Act

Back to Table of Contents

registration statements and Exchange Act reports. The preparation of our U.S. GAAP based financial statements is a manual process which involves the transformation of our Italian statutory financial statements into U.S. GAAP through a significant number of complex accounting adjustments and processes. This process also requires an ongoing review and update of the applicable U.S. GAAP that should be applied to the underlying Italian financial statements. This process is complicated and time-consuming and requires significant attention and time of our senior accounting personnel. Moreover, U.S. GAAP accounting adjustments tend to result in large differences between our Italian statutory and U.S. GAAP based financial statements.

When we started the process of preparing for our initial public offering, one of the first needs we identified to solve these issues was that of a full time, dedicated finance professional with knowledge of both U.S. and Italian accounting principles. We believe we satisfied that need by hiring Mr. Salvatore Calabrese, our Vice-President, Finance, in February of 2005. However, our independent registered public accounting firm informed us during the course of auditing our 2005 financial statements that our financial statement close process and the transformation of our Italian statutory financial statements into U.S. GAAP still did not reduce to an acceptably low level the risk that errors in amounts that would be material in relation to those financial statements may occur and may not be detected within a timely period by management in the normal course of business at December 31, 2005. Our independent registered public accounting firm considered these deficiencies in determining the nature, timing and extent of their procedures in their audit of our 2005 financial statements, and those deficiencies did not affect their report on our 2005 financial statements. The following highlights the issues identified and the steps that we are taking to remedy these items. We believe that all material weakness issues will be resolved during 2006.

- **Issue:** For the first six months of 2005, we still relied on FinSirton for most of the data processing related to our significant processes, such as inventory costing, payroll and general ledger. We also had limited control over FinSirton's information technology system related to the input or output of data. Additionally, we had no direct control over the security of data and access controls related to the control environment.

Remedy: During the second six months of 2005, we established our own six (6) person accounting, controlling and reporting department, separate from FinSirton, which includes not only Mr. Calabrese but also Roberta Grandini as our controller. Ms. Grandini is experienced in U.S. GAAP and was previously the controller for the Italian subsidiary of a U.S. public biotechnology company. In addition, we purchased, and are in the process of installing, our own information technology system which will allow us to have full control, including information security control, over our data processing, including our underlying books and records. We expect that this transition from FinSirton's accounting department and information technology system to our accounting department and information technology system will be complete by the end of the second quarter of 2006.

- **Issue:** Our process for budgeting, awarding, tracking and verifying research and development contracts and costs has historically been handled outside of the general accounting system. We have not had controls surrounding this process to closely monitor such areas as actual costs versus budgeted costs, actual costs billed versus the contractual amounts and the timing of when those costs have been incurred.

Remedy: As mentioned above, during the second half of 2005, we established and expanded our own independent accounting department. In addition to Mr. Calabrese and Ms. Grandini, this department includes a contract administrator who now has primary responsibility for controlling the research and development contracts and costs. We also established internal procedures for purchases, cash disbursements, limits of authorization and segregation of duties. These procedures include requirements that all research and development expenditures be accompanied by a budget estimate, and any deviations be adequately explained. Additionally, the procedures require that expenses over €2,500 not previously budgeted must be approved by the internal control department, Mr. Calabrese and by our medical director before any purchase requests or contracts may be signed. Furthermore, on a quarterly basis, we perform an analysis of actual expenses versus budgeted expenses, and such analysis is presented and discussed with our

management, our Audit Committee and the Board of Directors as a whole.

· Issue: Our overall control environment continued to have difficulties in 2005 in closing our accounting records on a timely basis, given (i) the lack of personnel dedicated to performing such services for us, separate from our affiliated companies, (ii) our reliance upon FinSirtion's information technology system and (iii) the need for us to prepare Italian statutory financial statements and then manually convert those statements into U.S. GAAP financial statements.

Remedy: We believe that our establishment of and expansion of our own, independent accounting department, including Mr. Calabrese and Ms. Grandini, and the acquisition of our own independent information technology system, will solve points (i) and (ii) above. In addition, although we will continue to need to prepare both Italian statutory financial statements and U.S. GAAP based financial statements, we believe that the expansion of our accounting department will help us close our records more quickly and that the establishment of our new information technology system will reduce the overall complexity of the process and the risk of errors.

-13-

Back to Table of Contents

Any failure to implement new or improved internal controls, or resolve difficulties encountered in their implementation, could harm our operating results or cause us to fail to meet our reporting obligations. Inferior internal controls could also cause investors to lose confidence in our reported financial information, which could have a negative effect on the trading price of our ordinary shares.

Our revenues, expenses and results of operations have been and will continue to be subject to significant fluctuations, which makes it difficult to compare our operating results from period to period.

Since 2003, our revenues have fluctuated significantly due to the need to temporarily cease operations at our manufacturing facility for an upgrade to the facility for seven months in 2004 and increase production at the facility in 2003 to stockpile inventory in anticipation of this cessation. Our revenues have also fluctuated due to changes in the amounts of each of our products that we sell in different periods. Due to the fact that we do not sell directly to the end-user, the timing of manufacturer orders can cause variability in sales. In 2005, we experienced higher sales volume in the second and in the fourth quarters; however we cannot predict if such fluctuation will happen in future years. Until we have successfully developed and commercialized a product candidate, we expect that substantially all of our revenues will result from the sale of our existing products. We expect that our operating results will vary significantly from quarter to quarter and year to year as a result of the timing and extent of:

- our research and development efforts;
- the revenues generated from the sale or licensing of our products;
- the execution or termination of collaborative arrangements;
- the receipt of grants;
- the initiation, success or failure of clinical trials; and
- the manufacture of our product candidates, or other development related factors.

Some of Series A senior convertible promissory notes we issued in the fourth quarter of 2004 and the first quarter of 2005 were converted into our ordinary shares upon the closing of our initial public offering in June 2005 and the remainder were repaid in June and July 2005. Our results of operations in 2004 and 2005 reflect the interest expense we incurred on those notes. That interest expense included the amortization of the debt issue costs and of the original issue discount resulting from the inclusion of the warrants with the notes and the amortization of the value of the beneficial conversion feature resulting from the effective conversion price since the conversion ratio, which is equal to the principal amount of the notes divided by \$8.10 (ninety percent (90%) of the initial offering price per ADS in our initial public offering), was less than the fair value of our ordinary shares at the time of issuance of the notes, which was \$10.00. During 2004 and 2005, we incurred €1.828 million and €4.095 million, respectively, of interest expense on these notes (including amortization of original issue discount and debt issue costs). As a result, our interest expense, pre-tax income (loss) and net income (loss) for those periods was less than it would have been otherwise.

Accordingly, our revenues and results of operations for any period may not be comparable to the revenues or results of operations for any other period.

Most of our manufacturing capability is located in one facility that is vulnerable to natural disasters, telecommunication and information system failures, terrorism and similar problems, and we are not insured for losses caused by all of these incidents.

We conduct most of our manufacturing operations in one facility located in Villa Guardia, near Como, Italy. This facility could be damaged by fire, floods, earthquake, power loss, telecommunication and information system failures, terrorism or similar events. Our insurance covers losses to our facility, including the buildings, machinery, electronic equipment and goods, for approximately €15 million, but does not insure against all of the losses listed above, including terrorism and some types of flooding. Although we believe that our insurance coverage is adequate for our current and proposed operations, there can be no guarantee that it will adequately compensate us for any losses that may occur. We are not insured for business interruption and we have no replacement manufacturing facility readily available.

We obtain office and manufacturing space and certain administrative, financial, information technology, human resources, regulatory and quality control services from affiliates. This structure creates inherent conflicts of interest that may adversely affect us.

Our largest shareholder is FinSirton, which owned approximately 39% of our ordinary shares at March 31, 2006. Dr. Ferro, who is our Chief Executive Officer and President and one of our directors, together with members of her family, controls FinSirton. FinSirton provides some of our office space, and corporate, payroll and information technology services. Sirton, which is a wholly owned subsidiary of FinSirton, has been and currently is our principal customer. Sirton also provides

Back to Table of Contents

us with a number of business services such as, quality control and infrastructure services, and leases us office and manufacturing space.

If either of these affiliates failed to perform services for us adequately or caused us damage through their negligent conduct, our management would be presented with inherent conflicts of interest due to their ownership and oversight of FinSirton. We may have limited recourse in the event of such conflicts, and our business may be adversely affected by their occurrence.

Our industry is highly competitive and subject to rapid technological changes. As a result, we may be unable to compete successfully or to develop innovative products, which could harm our business.

Our industry is highly competitive and subject to significant and rapid technological change as researchers learn more about diseases and develop new technologies and treatments. While we are unaware of any other products or product candidates that treat or prevent VOD or the apoptosis that our product candidate oligotide is designed to treat, we believe that other companies have products or are currently developing products to treat some of the same disorders and diseases that our other product candidates are designed to treat. These companies include AnorMED Inc., AstraZeneca International, British Biotech plc, Abbott Laboratories, The Bayer Group, GlaxoSmithKline plc, Bristol-Myers Squibb Company, Eli Lilly Company, Boehringer Ingelheim, Axcan Pharma Inc., The Proctor & Gamble Company, Solvay Pharmaceuticals, Inc., Millenium Pharmaceuticals, Inc., ARIAD Pharmaceuticals, Inc., Celgene Corp., Titan Pharmaceuticals, Inc., Cell Genesys, Inc., Human Genome Sciences, Inc., Chugai Pharmaceutical Co., Ltd., The National Cancer Institute, Seattle Genetics, Inc., EntreMed, Inc., NeoRxx Corporation, Xcyte Therapies, Inc., Amgen, Inc., CuraGen Corporation, Aesgen, Inc. and Endo Pharmaceutical Holdings Inc.

In addition, low molecular weight heparin, made by Aventis and other companies, competes with calcium heparin, which is one of the active pharmaceutical ingredients that we sell to Sirton which makes it into a finished product for sale by Crinos.

Many of these competitors have substantially greater research and development capabilities and experience, and greater manufacturing, marketing and financial resources, than we do. In addition, these companies' products and product candidates are in more advanced stages of development than ours or have been approved for sale by the FDA and other regulatory agencies. As a result, these companies may be able to develop their product candidates faster than we can or establish their products in the market before we can. Their products may also prove to be more effective, safer or less costly than our product candidates. This could hurt our ability to recognize any significant revenues from our product candidates.

In May 2003, the FDA designated defibrotide as an orphan drug to treat VOD. If the FDA approves the New Drug Application that we intend to file before approving a New Drug Application filed by anyone else for this use of defibrotide, the orphan drug status will provide us with limited market exclusivity for seven years from the date of the FDA's approval of our New Drug Application. However, a marketing authorization may be granted for the same therapeutic indications to a similar medicinal product if we give our consent to the second applicant, we are unable to supply sufficient quantities of defibrotide, or the second applicant can establish in its application that the second medicinal product, although similar to defibrotide, is safer, more effective or otherwise clinically superior. In that case, our product would not have market exclusivity. Additionally, while we are not aware of any other company researching defibrotide for this use, if another company does develop defibrotide for this use, there is no guarantee that the FDA will approve our New Drug Application before approving anyone else's defibrotide product for this use, in which case the first product approved would have market exclusivity and our product would not be eligible for approval until that exclusivity expires.

In July 2004, the European Commission designated defibrotide as an orphan medicinal product to both treat and prevent VOD. If the European regulators grant us a marketing authorization for those uses of defibrotide, we will have limited market exclusivity for those uses for ten years after the date of the approval. However, a marketing authorization may be granted for the same therapeutic indications to a similar medicinal product if we give our consent to the second applicant, we are unable to supply sufficient quantities of defibrotide, or the second applicant can establish in its application that the second medicinal product, although similar to defibrotide, is safer, more effective or otherwise clinically superior. In that case, our product would not have market exclusivity.

If we are unable to adequately protect our intellectual property, our ability to compete could be impaired.

Our long-term success largely depends on our ability to create and market competitive products and to protect those creations. Our pending patent applications, or those we may file in the future, may not result in patents being issued. Until a patent is issued, the claims covered by the patent may be narrowed or removed entirely, and therefore we may not obtain adequate patent protection. As a result, we may face unanticipated competition, or conclude that without patent rights the risk of bringing products to the market is too great, thus adversely affecting our operating results.

Because of the extensive time required for the development, testing and regulatory review of a product candidate, it is possible that before any of our product candidates can be approved for sale and commercialized, our relevant patent rights may

Back to Table of Contents

expire or remain in force for only a short period following commercialization. Our issued United States patents expire between 2008 and 2019, and our United States patents for which we have submitted applications will expire between 2008 and 2026. Our United States patent covering defibrotide expires in 2010, and our U.S. patent covering the chemical process for extracting defibrotide expires in 2008. Our European patent covering both defibrotide and the chemical process for extracting defibrotide expires in 2007. There may be no opportunities to extend these patents and thereby extend FDA approval exclusivity, in which case we could face increased competition for our products that are derived from defibrotide. Patent expiration could adversely affect our ability to protect future product development and, consequently, our operating results and financial position.

We also rely on trade secrets to protect our technology, especially where we do not believe patent protection is appropriate or obtainable. However, trade secrets are difficult to protect. While we use reasonable efforts to protect our trade secrets, our employees, consultants, contractors, outside scientific collaborators and other advisors may unintentionally or willfully disclose our information to competitors. Enforcing a claim that a third party illegally obtained and is using our trade secrets is expensive and time consuming, and the outcome is unpredictable. In addition, courts outside the United States are sometimes less willing to protect trade secrets. We intend to eventually license or sell our products in China, Korea and other countries which do not have the same level of protection of intellectual property rights as exists in the United States and Europe. Moreover, our competitors may independently develop equivalent knowledge, methods and know-how.

Risks Related to Ownership of the ADSs

Our largest shareholder exercises significant control over us, which may make it more difficult for you to elect or replace directors or management and approve or reject mergers and other important corporate events.

Our largest shareholder, FinSirtion, owned approximately 39% of our outstanding ordinary shares at March 31, 2006. Dr. Laura Ferro, who is our Chief Executive Officer and President and one of our directors, together with members of her family, controls FinSirtion. As a result, Dr. Ferro and her family, through FinSirtion, will substantially control the outcome of all matters requiring approval by our shareholders, including the election of directors and the approval of mergers or other important corporate events. They may exercise this ability in a manner that advances their best interests and not necessarily yours. In particular, Dr. Ferro may use her control over FinSirtion's shareholdings in our company to resist any attempts to replace her or other members of our board of directors or management or approve or reject mergers and other important corporate events. Also, the concentration of our beneficial ownership may have the effect of delaying, deterring or preventing a change in our control, or may discourage bids for the ADSs or our ordinary shares at a premium over the market price of the ADSs. The significant concentration of share ownership may adversely affect the trading price of the ADSs due to investors' perception that conflicts of interest may exist or arise.

If a significant number of ADSs are sold into the market, the market price of the ADSs could significantly decline, even if our business is doing well.

Some of our executive officers (other than Cary Grossman, our Chief Financial Officer) and directors and our current largest shareholder, FinSirtion, have agreed with the underwriters of our initial public offering to a lock-up of an aggregate of 3,750,000 outstanding ordinary shares and 822,000 ordinary shares issuable upon exercise of options outstanding for a period of 18 months after the effective date of the registration statement relating to our initial public offering of securities, provided, however, that if the average price per ADS equals or exceeds 200% of the initial public offering price of the ADSs in our initial public offering for a minimum of twenty continuous trading days, the ordinary shares may be released from the lock-up at the request of the holder, which could result in the release from the lock-up restrictions of the 3,750,000 outstanding shares held by FinSirtion and the 822,000 ordinary shares issuable upon exercise of the options. Our Chief Financial Officer, Cary Grossman, has agreed with the underwriters to a

lock-up of 85,000 ordinary shares issuable upon exercise of certain of his options for a period of 365 days after the effective date of the registration statement relating to our initial public offering of securities. Sales of a substantial number of ADSs representing these ordinary shares in the public market could depress the market price of the ADSs and impair our ability to raise capital through the sale of additional equity securities. The underwriters, in their sole discretion and at any time without notice, may release all or any portion of the ordinary shares held by our officers, directors, and existing shareholders subject to these lockup agreements. Our other outstanding ordinary shares, ordinary shares issuable upon exercise of warrants and ordinary shares issuable upon exercise of options are not subject to lock-up agreements. We have filed a registration statement registering the resale of 2,001,125 outstanding ordinary shares and ADSs and 1,143,482 ordinary shares and ADSs issuable upon exercise of warrants by certain selling security holders. Further, we have agreed to register (upon request) 1,159,505 outstanding ordinary shares currently held by two of our shareholders, 73,334 shares issuable upon conversion of warrants issued in connection with our Series A senior convertible promissory notes held by one of our securityholders and 151,200 ordinary shares issuable upon exercise of purchase options we granted to the underwriters of our initial public offering for resale in the market. We intend to register ADSs representing such ordinary shares in addition to the ordinary shares themselves, and such registration and ultimate sale of the securities in the markets may adversely affect the market for the ADSs.

Back to Table of Contents

Risks Relating to Being an Italian Corporation

The process of seeking to raise additional funds is cumbersome, subject to the verification of a notary public as to compliance with our bylaws and applicable law and may require prior approval of our shareholders at an extraordinary meeting of shareholders.

We were incorporated under the laws of the Republic of Italy. The principal laws and regulations that apply to our operations, those of Italy and the European Union, are different from those of the United States. In order to issue new equity or debt securities convertible into equity, with some exceptions, we must increase our authorized capital. In order to do so, our board must meet and resolve to recommend to our shareholders that they approve an amendment to our bylaws to increase our capital. Our shareholders must then approve that amendment to our bylaws in a formal meeting duly called, with the favorable vote of the required majority, which may change depending on whether the meeting is held on a first or subsequent call. These meetings take time to call. In addition, a notary public must verify the compliance of the capital increase with our bylaws and applicable Italian law. Further, under Italian law, our existing shareholders and any holders of convertible securities sometimes have preemptive rights to acquire any such shares on the same terms as are approved concurrent with the new increase of the authorized capital pro rata based on their percentage interests in our company. Also, our shareholders can authorize the board of directors to increase our capital, but the board may exercise such power for only five years. If the authorized capital is not issued by the end of those five years, the authorized capital expires, and our board and shareholders would need to meet again to authorize a new capital increase. Our shareholders authorized our board of directors to increase our capital by up to €90 million of par value for ordinary shares and €10 million for ordinary shares issuable upon conversion of convertible bonds on April 28, 2006. Italian law also provides that if the shareholders vote to increase our capital, dissenting, abstaining or absent shareholders representing more than 5% of the outstanding shares of our company may, for a period of 90 days following the filing of the shareholders' approval with the Registry of Companies, challenge such capital increase if the increase was not in compliance with Italian law. In certain cases (if, for example, a shareholders' meeting was not called), any interested person may challenge the capital increase for a period of 180 days following the filing of the shareholders' approval with the Registry of Companies. Finally, once our shareholders authorize a capital increase, we must issue all of those authorized shares before the shareholders may authorize a new capital increase, unless the shareholders vote to cancel the previously authorized shares. These restrictions could limit our ability to issue new equity or convertible debt securities on a timely basis.

We are restricted under Italian law as to the amount of debt securities that we may issue relative to our equity.

Italian law provides that we may not issue debt securities for an amount exceeding twice the amount of the sum of the aggregate par value of our ordinary shares (which we call our capital), our legal reserve and any other disposable reserves appearing on our latest Italian GAAP balance sheet approved by our shareholders. The legal reserve is a reserve to which we allocate 5% of our Italian GAAP net income each year until it equals at least 20% of our Italian GAAP capital. One of the other reserves that we maintain on our balance sheet is a "share premium reserve", meaning amounts paid for our ordinary shares in excess of the capital. At December 31, 2005, the sum of our capital, legal reserves and other reserves on our Italian GAAP balance sheet was €29.6 million. If we issue debt securities in the future, until such debt securities are repaid in full, we may not voluntarily reduce our capital or our reserves (such as by declaring dividends) if it results in the aggregate of the capital and reserves being less than half of the outstanding amount of the debt. If our equity is reduced by losses or otherwise such that the amount of the outstanding debt securities is more than twice the amount of our equity, some legal scholars are of the opinion that the ratio must be restored by a recapitalization of our company. If our equity is reduced, we could recapitalize by issuing new shares or having our shareholders contribute additional capital to our company, although there can be no assurance that we would be able to find purchasers for new shares or that any of our current shareholders would be willing to contribute additional capital.

If we suffer losses that reduce our capital to less than €120 thousand, we would need to either recapitalize, change our form of entity or be liquidated.

Italian law requires us to reduce our shareholders' equity and, in particular, our capital (aggregate par value of our ordinary shares) to reflect on-going losses. We are also required to maintain a minimum capital of €120 thousand. At December 31, 2005, our Italian GAAP capital was approximately €9.611 million. If we suffer losses from operations that would reduce our capital to less than €120 thousand, then either we must increase our capital (which we could do by issuing new shares or having our shareholders contribute additional capital to our company) or convert the form of our company into an S.r.l., which has a lower capital requirement of €10 thousand. If we did not take these steps, a court could liquidate our company.

You may not have the same voting rights as the holders of our ordinary shares and may not receive voting materials in time to be able to exercise your right to vote.

Except as described in this annual report and in the deposit agreement for the ADSs, with our depositary, holders of the ADSs will not be able to exercise voting rights attaching to the ordinary shares evidenced by the ADSs on an individual basis. Holders of the ADSs will have the right to instruct the depositary as their representative to exercise the rights attached to

Back to Table of Contents

the ordinary shares represented by the ADSs. You may not receive voting materials in time to instruct the depositary to vote, and it is possible that you, or persons who hold their ADSs through brokers, dealers or other third parties, will not have the opportunity to exercise a right to vote.

You may not be able to participate in rights offerings and may experience dilution of your holdings as a result.

We may from time to time distribute rights to our shareholders, including rights to acquire our securities. Under our deposit agreement for the ADSs with our depositary, the depositary will not offer those rights to ADS holders unless both the rights and the underlying securities to be distributed to ADS holders are either registered under the Securities Act of 1933, as amended, or exempt from registration under the Securities Act with respect to all holders of ADSs. We are under no obligation to file a registration statement with respect to any such rights or underlying securities or to endeavor to cause such a registration statement to be declared effective. In addition, we may not be able to take advantage of any exemptions from registration under the Securities Act. Accordingly, holders of our ADSs may be unable to participate in our rights offerings and may experience dilution in their holdings as a result.

You may be subject to limitations on transfer of your ADSs.

Your ADSs represented by the ADRs are transferable on the books of the depositary. However, the depositary may close its transfer books at any time or from time to time when it deems expedient in connection with the performance of its duties. In addition, the depositary may refuse to deliver, transfer or register transfers of ADSs generally when our books or the books of the depositary are closed, or at any time if we or the depositary deem it advisable to do so because of any requirement of law or of any government or governmental body, or under any provision of the deposit agreement, or for any other reason.

Due to the differences between Italian and U.S. law, the depositary (on your behalf) may have fewer rights as a shareholder than you would if you were a shareholder of a U.S. company.

We are incorporated under the laws of the Republic of Italy. As a result, the rights and obligations of our shareholders are governed by Italian law and our bylaws, and are in some ways different from those that apply to U.S. corporations. Some of these differences may result in the depositary (on your behalf) having fewer rights as a shareholder than you would if you were a shareholder of a U.S. corporation. We have presented a detailed comparison of the Italian laws applicable to our company against Delaware law in “*Item 10, Additional Information, Comparison of Italian and Delaware Corporate Laws.*” We compared the Italian laws applicable to our company against Delaware law because Delaware is the most common state of incorporation for U.S. public companies.

Italian labor laws could impair our flexibility to restructure our business.

In Italy, our employees are protected by various laws giving them, through local and central works councils, rights of consultation with respect to specific matters regarding their employers’ business and operations, including the downsizing or closure of facilities and employee terminations. These laws and the collective bargaining agreements to which we are subject could impair our flexibility if we need to restructure our business.

FORWARD-LOOKING STATEMENTS

This annual report may contain forward-looking statements that involve substantial risks and uncertainties regarding future events or our future performance. When used in this annual report, the words “anticipate,” “believe,” “estimate,” “may,” “intent,” “continue,” “will,” “plan,” “intend,” and “expect” and similar expressions identify forward-looking statements. You should read statements that contain these words carefully because they discuss our future expectations, contain projections of our future results of operations or of our financial condition or state other “forward-looking” information.

We believe that it is important to communicate our future expectations to our investors. Although we believe that our expectations reflected in any forward-looking statements are reasonable, these expectations may not be achieved. The factors listed in the section captioned “Risk Factors,” as well as any cautionary language included in this annual report or incorporated by reference, provide examples of risks, uncertainties and events that may cause our actual results to differ materially from the expectations we describe in our forward-looking statements. Before you invest in our ordinary shares, you should be aware that the occurrence of the events described in the “Risk Factors” section and elsewhere in this annual report could have a material adverse effect on our business, performance, operating results and financial condition. All subsequent written and oral forward-looking statements attributable to us or persons acting on our behalf are expressly qualified in their entirety by the cautionary statements set forth in this annual report. Except as required by federal securities laws, we are under no obligation to update any forward-looking statement, whether as a result of new information, future events, or otherwise.

You should rely only on the information contained in this annual report. We have not authorized anyone to provide you with information different from that contained in this annual report. The information contained in this annual report is accurate only as of the date of this annual report.

ITEM 4.

INFORMATION ON THE COMPANY

HISTORY AND DEVELOPMENT OF THE COMPANY

We are a biopharmaceutical company focused on the research, discovery and development of drugs to treat and prevent a variety of vascular diseases and conditions related to cancer and cancer treatments. In 1986, our founding company received approval to sell in Italy a drug called “defibrotide” to treat deep vein thrombosis, and, in 1993, it received approval to manufacture and sell defibrotide to both treat and prevent all vascular disease with risk of thrombosis. Our primary focus is on development of defibrotide for other uses in the United States and Europe, including to treat and prevent VOD and to treat multiple myeloma. In addition to defibrotide, we sell urokinase and calcium heparin, which are active pharmaceutical ingredients used to make other drugs, sulglycotide, which is intended to be used to treat peptic ulcers, and other miscellaneous pharmaceutical products. We have also developed a formulation of the drug mesalazine to treat inflammatory bowel disease. We will need to raise additional financing and/or enter into collaborative or licensing agreements in the future to fund continuing research and development for our product candidates.

We are part of a group of pharmaceutical businesses founded in Italy in 1944 that has been involved in the research and development of drugs derived from DNA and DNA molecules since the 1970's. In 1993, FinSirton S. p.A. formed our company as Pharma Research S.r.L., an Italian private limited company, to pursue research and development activities of prospective pharmaceutical specialty products. FinSirton is our largest shareholder, and is controlled by Dr. Laura Ferro, who is our Chief Executive Officer and President and one of our directors, and her family. We receive certain administrative and other services and lease office and manufacturing space from FinSirton and Sirton Pharmaceuticals S.p.A., a wholly-owned subsidiary of FinSirton. In December 2000, Crinos Industria Farmacobiologica S.p.A., a subsidiary of FinSirton, contributed its plants, equipment and patents relating the development of biological pharmaceutical products, including all of its rights relating to defibrotide, to us in return for 98% of our ordinary shares. FinSirton continued to own the remaining 2%. At that time, we changed from a private limited company to a corporation and in July 2001 we changed our name to Gentium S.p.A.

In May 2002, Crinos Industria Farmacobiologica S.p.A. sold its commercial division, including its products, licenses and patents relating to pharmaceutical products in Italy, including the brand name “Crinos,” to a newly formed subsidiary, called Crinos S.p.A., of Stada, a leader in the generic pharmaceutical industry in Europe. At that time, Crinos Industria Farmacobiologica S.p.A. changed its name to Sirton Pharmaceuticals S.p.A. since it no longer had the rights to the name “Crinos.” At the same time, we granted certain licenses to Crinos S.p.A. to market defibrotide and mesalazine. Sirton now produces pharmaceutical products for third parties, including taking ingredients that we manufacture and turning them into finished drugs, and markets various skin care products.

In 2003 and 2004, Sirton distributed the 98% of our ordinary shares that it owned to FinSirton as dividends. As a result, FinSirton became our 100% shareholder at that time. In January 2005 and April 2005, FinSirton sold some of our ordinary shares that it owned to third parties. In June 2005, we made an initial public offering of 2,400,000 ADSs, each representing the right to receive one ordinary share, and listed the ADSs on the American Stock Exchange. FinSirton remains our largest shareholder, owning 39% of our outstanding ordinary shares at March 31, 2006. FinSirton also holds 100% of the outstanding shares of Sirton.

We have Italian, United States and international trademark rights in “Gentium,” United States and European Union trademark rights in “Gentide,” international and Italian trademark rights in “Oligotide” and Italian trademark rights to “Pharma Research” and “Dinelasi.” We also have a number of patent registrations issued and pending in Italy, the United States and other countries. This annual report also refers to brand names, trademarks, service marks, and trade names of other companies and organizations, and these brand names, trademarks, service marks, and trade names are the property of their respective holders.

This annual report contains market data and industry forecasts that were obtained from industry publications and third parties.

Our principal executive offices are located at Piazza XX Settembre 2, 22079 Villa Guardia (Como), Italy. Our telephone number is +39 031 385111. Our website is located at www.gentium.it. The information contained on our website is not part of this annual report. Our registered agent for service of process is CT Corporation System, located at 111 Eighth Avenue, 13th Floor, New York, New York 10011, telephone number (212) 894-8940. Under our current bylaws, the duration of our company will expire on December 31, 2050.

-19-

Back to Table of Contents**CAPITAL EXPENDITURES**

The following table sets forth our capital expenditures, before retirements, for each year in the three-year period ended December 31, 2005. Most of our 2003 and 2004 expenditures relate to the major upgrade of our facility we completed in 2004.

<i>(in thousands)</i>	For the Year Ended December 31,

BUSINESS OVERVIEW

We are a biopharmaceutical company focused on the research, discovery and development of drugs to treat and prevent a variety of vascular diseases and conditions related to cancer and cancer treatments. In 1986, our founding company received approval to sell in Italy a drug called “defibrotide” to treat deep vein thrombosis, and, in 1993, it received approval to manufacture and sell defibrotide to both treat and prevent all vascular disease with risk of thrombosis. In addition to defibrotide, we sell urokinase and calcium heparin, which are active pharmaceutical ingredients used to make other drugs, sulglicotide, which is intended to be used to treat peptic ulcers, and other miscellaneous pharmaceutical products. We have also developed a formulation of the drug mesalazine to treat inflammatory bowel disease.

We are building upon our extensive experience with defibrotide, which our predecessors discovered over 20 years ago, to develop it for a variety of additional uses, including to treat and prevent hepatic Veno-Occlusive Disease, or VOD, a condition in which some of the veins in the liver are blocked as a result of toxic cancer treatments such as chemotherapy. A severe form of VOD with multiple-organ failure is a potentially devastating complication with a survival rate after 100 days of only approximately 20%, according to our review of more than 200 published medical articles. Results from a Phase II clinical trial conducted at Harvard University’s Dana-Farber Cancer Institute of VOD with multiple-organ failure that concluded in December 2005 showed that the survival rate after 100 days was approximately 39% after treatment with defibrotide. We believe that there is no drug approved by the FDA or European regulators to treat or prevent VOD.

In May 2003, the FDA designated defibrotide as an orphan drug for use to treat VOD and made grants of \$525 thousand to Dana-Farber supporting research into the use of defibrotide to treat VOD with multiple-organ failure. We have supported this research with a grant of \$480 thousand to Dana-Farber. In July 2004, the European Commission granted us orphan medicinal product designation for the use of defibrotide to both treat and prevent VOD.

Due to the historically low survival rate and lack of treatments for this condition, we believe there is an immediate need for a drug to treat VOD with multiple-organ failure. The FDA has a “fast track” designation program which is designed to facilitate the development and expedite their review of new drugs that are intended to treat serious or life-threatening conditions and that demonstrate the potential to address unmet medical needs. The FDA has approved our application for “fast track” designation for defibrotide to treat VOD with multiple-organ failure occurring after stem cell transplantation by means of injection. The FDA approval process for defibrotide for this use remains dependent

upon the successful completion of clinical trials.

If we are successful in obtaining FDA approval and/or European regulatory approval for the initial use of defibrotide, we expect that the cash flows from operations generated by this use of defibrotide will contribute towards our working capital requirements and funding for the further development of defibrotide for other uses and our ultimate goal of FDA and European regulatory approval for other uses of defibrotide, including to prevent VOD and treat multiple myeloma. However, we will need to raise additional funds by either issuing new debt or equity securities or entering into licensing or similar collaborative arrangements in order to complete the development of these other uses of defibrotide.

If we are successful in bringing these advanced product candidates to market, we intend to use the cash flow from operations generated by them and our current products to continue to discover and develop additional uses of defibrotide, such as to mobilize and increase the number of stem cells available in patients' and donors' blood for subsequent stem cell transplantation, to prevent deep vein thrombosis in markets outside of Italy, and to develop other drugs, such as oligotide

-20-

Back to Table of Contents

(which we believe may protect against damage to blood vessel wall cells caused by a particular cancer treatment) and Gen 301 (which we believe may prevent and treat oral ulcers that often develop during and after cancer treatments). These product candidates will be very expensive to develop, and it is likely that we will need to either raise additional funds through debt and/or equity financings, or enter into licensing or similar collaborative arrangements, or both, in addition to cash flow we may generate from operations, to complete these developments.

Our strategy is to continue to enter into collaborative and strategic agreements to assist us in the development, manufacturing and marketing of our products and product candidates. To date, we have licensed the right to market defibrotide to treat VOD in North America, Central America and South America, upon regulatory approval, to Sigma-Tau Pharmaceuticals, Inc., which markets drug treatments for rare conditions and diseases. Sigma-Tau Pharmaceuticals, Inc. is an United States subsidiary of Sigma Tau Finanziaria S.p.A., an international family of pharmaceutical companies. We sold the rights to develop and sell our formulation of mesalazine in Canada, upon approval by Health Canada, and the United States, upon FDA approval, to Axcan Pharma, Inc., a specialty pharmaceutical company with offices in North America and Europe. We licensed the right to distribute mesalazine in Italy to Crinos S.p.A., a subsidiary of Stada Arzneimittel AG. Crinos also markets defibrotide in Italy to both treat and prevent vascular disease with risk of thrombosis under a semi-exclusive license agreement with us. We intend to continue to seek similar agreements with strategic partners as to other products and product candidates.

We manufacture defibrotide, calcium heparin, sulglycotide and other miscellaneous pharmaceutical products at our manufacturing facility near Como, Italy, and we lease our affiliate Sirton's facility to manufacture urokinase. Urokinase and calcium heparin are active pharmaceutical ingredients used to make other drugs. Sulglycotide is intended to be used to treat peptic ulcers. Almost all of our revenues during the past three years have come from sales of these products to Sirton. Our revenues from the sales of these products to date have been generated only in Italy and, in 2004, also in Korea and amounted to €5.9 million, €6.5 million, €3.1 million and €3.4 million in 2002, 2003, 2004 and 2005, respectively. In 2004 we completed an upgrade to our facilities that cost approximately €7.2 million which we believe will facilitate the FDA and European regulatory approval process for our product candidates and enable our future production. In anticipation of the renovations, we temporarily increased our production shifts and deliveries in 2003 and suspended our production for approximately seven months in 2004. Comparison of our results between those periods will therefore be difficult.

Market Overview

The American Cancer Society estimated that in 2006 approximately 1.4 million new patients in the United States will be diagnosed with cancer and that there will be approximately 565,000 patient deaths attributable to these cancers. Cancer is a group of diseases characterized by uncontrolled growth and spread of abnormal cells. If the spread is not controlled, it can result in death. Most cancer patients will receive one or more of chemotherapy, radiation therapy and hormone therapy.

Chemotherapy, radiation therapy and hormone therapy treatments for cancer are used to target and kill cancer cells. In some cases, the therapy treats the cancer directly; in other cases, it is administered to prepare the patient for a stem cell or bone marrow transplant, which treats cancer or other diseases. Unfortunately, these therapies often have significant negative side effects, including damage to the cells that line the blood vessel walls. The damage to these cells can lead to various disorders of the vascular system. Some patients may not be able to continue with cancer treatments because they develop these vascular system complications; other patients considered at high risk of developing these vascular system complications may not receive optimal cancer treatments or any treatment at all.

VOD. One of the disorders of the vascular system that can result from chemotherapy, radiation therapy, hormone therapy and stem cell and bone marrow transplants is VOD. These therapies can cause extensive damage to the cells that line the walls of small veins in the liver. The body's natural response is to swell or clot the sites of injury, but this

blocks or “occludes” the vein. This blockage of the veins is called “Veno-Occlusive Disease.” VOD can cause damage to the liver and, in its severe form, leads to failure of the liver and other organs (multiple-organ failure), which usually results in death. The International Bone Marrow Transplant Registry estimates that approximately 45,000 people worldwide received blood and bone marrow transplants, which are types of stem cell transplants, in 2002. Based on our review of more than 200 articles in the medical literature, we believe that approximately 20% of patients who undergo stem cell transplants develop VOD, approximately one-third of those patients progress to VOD with multiple-organ failure, and only approximately 20% of patients who develop VOD with multiple-organ failure survive more than 100 days after the stem cell transplant. VOD poses a severe risk to the victim’s health. We believe that there are no FDA or European regulatory approved treatments at this time for VOD.

Multiple myeloma. Multiple myeloma is a cancer of the plasma cell. The American Cancer Society estimates that about 16,570 new cases of multiple myeloma will be diagnosed in the U.S. during 2006. Approximately 11,300 Americans are expected to die of multiple myeloma in 2006. The 5-year survival rate for patients with multiple myeloma is approximately 32%.

Back to Table of Contents

Strategy

Our goal is to research, discover, develop and manufacture drugs derived from DNA extracted from natural sources and drugs that are synthetic oligonucleotides (molecules chemically similar to natural DNA) to treat and prevent of a variety of vascular diseases and conditions related to cancer and cancer treatments. The primary elements of our strategy include:

- **Obtain FDA approval to use defibrotide to treat VOD with multiple-organ failure.** The Dana-Farber investigator presented the results from its Phase II clinical trial of defibrotide in patients with VOD with multiple-organ failure at the 47th Annual Meeting of the American Society of Hematology held on December 12, 2005. Results show that the survival rate after 100 days for the 142 patients treated was approximately 39% after 100 days as compared to the historical 100 day survival rate of approximately 20%. The FDA has approved our application for “fast track” designation for defibrotide to treat VOD with multiple-organ failure occurring after stem cell transplantation by means of injection. The FDA approval process for defibrotide for this use remains dependent upon the successful completion of clinical trials. We are sponsoring a Phase III clinical trial of defibrotide for this use in the United States.
- **Obtain European regulatory approval to use defibrotide to treat VOD with multiple-organ failure.** We believe that we may be able to use results from U.S. clinical trials of defibrotide to treat VOD with multiple-organ failure to apply for European regulatory approval of this product candidate without the need to replicate the clinical trials in Europe.
- **Expand approval of defibrotide to include prevention of VOD in Europe and the United States.** A preliminary study indicated that defibrotide may provide safe and effective protection against VOD. We are co-sponsoring a Phase II/III clinical trial for this use of defibrotide in children in Europe and a Phase II/III clinical trial in Europe for both the prevention of VOD and the prevention of transplant associated microangiopathy in adults. We intend to start a Phase II/III clinical trial in the United States of this product candidate in 2007. If the clinical trials confirm the preliminary indications, we intend to pursue further development in Europe and the United States, and ultimately to apply for FDA and European regulatory approval for this use.
- **Expand approval of defibrotide to include treatment of multiple myeloma.** Based on preclinical studies conducted at the Jerome Lipper Multiple Myeloma Center at Harvard University’s Dana Farber Cancer Institute, a Phase I/II clinical study of defibrotide to treat multiple myeloma started in December 2005 which we expect will include approximately 10 cancer centers in Italy. The principal investigator for the clinical trial is Dr. Mario Boccadoro, M.D., Division of Hematology, University of Turin, Italy.
- **Discover and develop additional product candidates.** We and others have conducted preclinical studies of other uses of defibrotide and of other drugs in our pipeline. We plan to continue to develop these product candidates and to further expand the possible markets for our products and product candidates. If we are successful in bringing our initial product candidates to market, our cash flow from operations will fund some of the costs needed to develop these product candidates. These product candidates will be very expensive to develop, and we will need to either raise additional funds through debt and/or equity financings, or enter into strategic partnerships, or both, to complete these developments.
- **Increase our marketing capacity, including the use of strategic partnerships.** We have already entered into a strategic license agreement with Sigma-Tau Pharmaceuticals, Inc. to market defibrotide to treat VOD in North America, Central America and South America upon regulatory approval and have granted Sigma-Tau Pharmaceuticals, Inc. a right of first refusal to market defibrotide to prevent VOD, to mobilize and increase the number of stem cells available for transplant and in non-intravenous forms. We intend to pursue similar agreements

with Sigma-Tau Pharmaceuticals, Inc. and other strategic partners to market defibrotide in other jurisdictions and to market our other product candidates and/or develop such capacity internally.

Advanced Product Candidates

We have extensive experience developing and manufacturing drugs derived from DNA extracted from natural sources and drugs that are synthetic oligonucleotides. Our most advanced product candidates utilize defibrotide, a drug which our founding company discovered and we currently manufacture and license to others for sale in Italy, to treat and prevent VOD and to treat multiple myeloma. Our most advanced product candidates and their stages of development are set forth below.

The FDA's designation of a product candidate as an orphan drug means that if the FDA approves our New Drug Application for that product candidate before approving a New Drug Application filed by anyone else for that product candidate, we will have limited market exclusivity for that product candidate for seven years from the date of the FDA's approval of our New Drug Application. If the FDA were to approve a New Drug Application filed by someone else for a product candidate prior to the FDA approving our New Drug Application for the product candidate, our ability to market the product candidate would be restricted by their orphan drug exclusivity. Similarly, the Commission of the European Communities designation of a product candidate as an orphan medicinal product means that if the European regulators grant us a marketing authorization for that product candidate, we will have limited market exclusivity for that product candidate for ten years after date of the approval. If the European regulators were to grant a marketing authorization filed by someone else for a

Back to Table of Contents

product candidate prior to the European regulators granting a marketing authorization for the product candidate, our ability to market the product candidate could be restricted.

The following table sets forth the clinical trials of our advanced product candidates completed or being conducted to date.

Product candidate	Intended use	Orphan drug designation	Territory and status of clinical trial	Sponsor of clinical trial	Centers participating in clinical trial	Number of patients participating in clinical trials
Defibrotide	Treat VOD with multiple-organ failure	Orphan drug designation in the United States and Europe	United States, Phase I/II, results published in 2002	Investigator at Dana-Farber Cancer Institute at Harvard University	Dana-Farber Cancer Institute, Boston Brigham and Women's Hospital, Boston The Children's Hospital, Boston Massachusetts General Hospital, Boston Beth Israel Deaconess Medical Center, Boston Columbia University, New York Loyola University Medical Center, Chicago University of Colorado Health Center, Denver Duke University Medical Center, Durham Johns Hopkins Oncology Center, Baltimore Fred Hutchinson Cancer Research Center, Seattle.	88
	Treat VOD with multiple-organ failure		United States, Phase II, results published in December 2005	Investigator at Dana-Farber Cancer Institute at Harvard University	Dana-Farber Cancer Institute, Boston Brigham and Women's Hospital, Boston The Children's Hospital, Boston Massachusetts General Hospital, Boston Beth Israel Deaconess Medical Center, Boston Fred Hutchinson Cancer Research Center, Seattle Duke University Medical Center, Durham Johns Hopkins Oncology Center, Baltimore	142

				Memorial Sloan Kettering Cancer Center, New York City of Hope, Duarte	
Treat VOD with and without multiple-organ failure	Europe, “Compassionate use” study, results published in 2000	Committee of clinical investigators	Christie Hospital, Manchester Royal Free Hospital, London Ospedali Riuniti, Bergamo University Hospital, Munich University Hospital, Graz	40	
Treat VOD with multiple-organ failure	United States, Phase III, enrollment scheduled to begin in May 2006	Gentium	Dana-Farber Cancer Institute, Boston Brigham and Women’s Hospital, Boston The Children’s Hospital, Boston Massachusetts General Hospital, Boston	0

Product candidate	Intended use	Orphan drug designation	Territory and status of clinical trial	Sponsor of clinical trial	Centers participating in clinical trial	Number of patients participating in clinical trials
Defibrotide	Prevent VOD	Orphan drug designation in Europe	Switzerland, preliminary pilot clinical study completed	University Hospital of Geneva	University Hospital of Geneva	104
			Europe, Phase II/III, pediatric, started in January 2006	European Group for Blood and Marrow Transplantation and Gentium	Pediatric Hematology Centers of Frankfurt, Ulm, Tübingen, Jena, Kiel, Düsseldorf, München, Muenster, Hannover, Dresden, Hamburg, Zürich, Genf, Bern, Graz, Wien, Tivka, Israel, Leiden, Utrecht, Goeteborg, Upsala, Huddinge, Lund; London, Bristol, Genua, Monza	17 at April 30, 2006
			Europe, Phase II/III, adult, enrollment scheduled to begin in second quarter of 2006	European Group for Blood and Marrow Transplantation and Gentium	Trial has not started	0
Defibrotide	Treat multiple myeloma		United States, preclinical studies, completed	Investigator at Dana-Farber Cancer Institute at Harvard University	Dana-Farber Cancer Institute at Harvard University	0 (study was in rodents)
			Italy, Phase I/II started in December 2005	Investigator at the University of Turin	Approximately 10 centers, beginning with Hospital Molinetter of Tornio	7 at April 30, 2006

Defibrotide to treat VOD with multiple-organ failure

Our leading product candidate is defibrotide to treat VOD, and in particular VOD with multiple-organ failure. In May 2003, the FDA designated defibrotide as an orphan drug to treat VOD. In July 2004, the Commission of the European Communities designated defibrotide to treat and prevent VOD as an orphan medicinal product, which is similar to being designated an orphan drug by the FDA.

In 2000, the British Journal of Hematology published the results of a 40 patient “compassionate use” study of defibrotide to treat VOD conducted in 19 centers in Europe from December 1997 to June 1999. Nineteen patients, or

47.5%, survived more than 100 days. The publication indicated that four of the 19 patients who survived more than 100 days subsequently died. Twenty-eight patients were judged likely to die or had evidence of multiple-organ failure, and 10, or 36%, of these patients survived more than 100 days. The 100 day survival rate is a milestone generally used to determine transplant success. This publication stated that the defibrotide was generally safely administered with no significant side-effects.

In 2002, the results from 88 patients with VOD with multiple-organ failure following stem cell transplants who were treated with defibrotide from March 1995 to May 2001 were published in *Blood*, the Journal of the American Society of Hematology. This publication reported data on 19 patients treated under individual Investigational New Drug Applications and on a subsequent 69 patient multi-center Phase I/II clinical trial that was conducted under an Investigational New Drug Application filed by a Dana-Farber investigator. The primary goal of the trial was the assessment of the potential effectiveness of the drug and its side effects, if any. All patients in the clinical trial received defibrotide on an emergency basis. This publication stated that 31 patients, or 35.2%, of those patients survived at least 100 days after stem cell transplant with minimal adverse side effects, primarily transient mild hypotension. Thirteen of those 31 patients who had survived more than 100 days had died by October 2001, the latest date for which survival information was available. No mortality from VOD or other toxicity related to the cancer treatment was seen more than 134 days after treatment with defibrotide, with the most common cause of later death being relapse.

The Dana-Farber investigator also sponsored, under its Investigational New Drug Application, a Phase II clinical trial in the United States of defibrotide which enrolled 145 stem cell transplant patients with VOD with multiple-organ failure at eight cancer centers. This trial was funded by us and \$525 thousand in grants from the orphan drug division of the FDA. The purpose of this trial was to evaluate the effectiveness of this drug, including the effect of the drug on the survival rate of patients with VOD with multiple-organ failure, the effective dosage and potential adverse side effects.

The Dana-Farber investigator presented the results from this Phase II clinical trial at the 47th Annual Meeting of the American Society of Hematology on December 12, 2005. Results show that the survival rate after 100 days for the 142 patients treated was approximately 39% after 100 days with minimal adverse events as compared to the historical 100 day survival rate of approximately 20%. We do not have information about the survival rate after 100 days.

The FDA has approved our application for “fast track” designation for defibrotide to treat VOD with multiple-organ failure occurring after stem cell transplantation by means of injection. The FDA approval process for defibrotide for this use remains dependent upon the successful completion of clinical trials. Fast track designation may shorten and facilitate the approval process.

We started a Phase III clinical trial in the United States for this use in December 2005. Enrollment of patients is scheduled to begin in May 2006. We are the sponsor and will conduct the Phase III clinical trial and any additional clinical

Back to Table of Contents

trials required by the FDA under our own Investigational New Drug Application that we submitted to the FDA in December 2003. Sponsoring and conducting the additional clinical trials under our own Investigational New Drug Application will allow us to communicate directly with the FDA regarding the development of this drug for marketing approval.

Conorzio Mario Negri Sud had been conducting a multi-center Phase II/III clinical trial in Europe and Israel of defibrotide to treat VOD after stem cell transplants that was sponsored by a committee of clinical investigators. The trial was scheduled to include approximately 340 patients, of which approximately 60 had been enrolled at December 31, 2004. We were funding the costs of this clinical trial. The committee of clinical investigators cancelled the trial in October 2005 due to a lack of patients enrolled in the trial. This trial included a randomly selected control group. We believe that patients may have been reluctant to enroll due to the possibility of being placed in the control group and not receiving treatment.

Defibrotide to prevent VOD

We believe there is a significant market opportunity for defibrotide to prevent VOD for patients at risk of developing VOD. Based on our experience researching VOD, we believe that many recipients of high doses of chemotherapy, radiation therapy or hormone therapy or of therapies that prepare for stem cell transplants have an elevated risk of developing VOD. We believe that there are no FDA or European regulatory approved drugs to prevent VOD at this time.

A preliminary pilot clinical study in Switzerland by the University Hospital of Geneva on defibrotide, in patients at high risk of VOD, suggested that defibrotide may provide effective and safe prevention against VOD. The study tested patients who received stem cell transplants. None of 52 successive transplant patients who received defibrotide as a preventative agent developed VOD. By comparison, 10 of 52 patients who underwent transplants in the same center before the study developed VOD, which was fatal in three cases. The study report indicated that mild to moderate toxicity such as mild nausea, fever and abdominal cramps was documented, although the report stated that it was difficult to determine whether the toxicity was directly attributable to the defibrotide, the chemotherapy that preceded the stem cell transplants or other drugs used during the stem cell transplants. The study report did not indicate the number of patients who experienced this toxicity.

We are co-sponsoring with the European Group for Blood and Marrow Transplantation, a not-for-profit scientific society, a Phase II/III clinical trial in Europe of defibrotide to prevent VOD in children. We expect this study, which began enrollment in the first quarter of 2006, to include 270 patients enrolled by several centers in Europe, who will randomly receive either defibrotide or no treatment.

We are also co-sponsoring with the European Group for Blood and Marrow Transplantation a second Phase II/III clinical trial in Europe of defibrotide to prevent VOD and transplant associated microangiopathy in adults. We expect the trial to include at least 370 patients, enrolled by several centers in Europe beginning by the second quarter of 2006, who will randomly receive either defibrotide or a placebo in a double-blind study. The total number of patients enrolled will be confirmed upon finalization of the study protocol.

We intend to initiate development of defibrotide to prevent VOD in the United States by starting a clinical trial of this product candidate in 2007.

Defibrotide to treat multiple myeloma

Preclinical studies conducted by the Myeloma Center of the Dana-Farber Cancer Institute at Harvard University on human multiple myeloma in rodents suggests that defibrotide's effect on the cells of blood vessel walls may help

increase the effectiveness of other treatments for multiple myeloma. In particular, the overall survival rate of rodents with human multiple myeloma increased and tumor volume decreased when the animals were administered defibrotide in combination with other chemotherapy agents. The Myeloma Center of Dana-Farber is conducting additional preclinical studies of defibrotide's effects on multiple myeloma.

An independent Phase I/II clinical study of defibrotide to treat multiple myeloma in combination with melphalan, prednisone, and thalidomide (MPT) started in December 2005 which we expect to include approximately 10 cancer centers in Italy. The principal investigator for the clinical trial is Dr. Mario Boccadoro, M.D., Division of Hematology, University of Turin, Italy. We will pay part of the costs of this trial. The trial is scheduled to be a dose-escalating, multi-center, non-comparative, open label study designed to assess the safety and the efficacy of Defibrotide with MPT regimen as a salvage treatment in advanced refractory MM patients. The Phase I component of the trial will combine oral MPT with escalating doses of defibrotide to determine the maximum tolerated dosage of defibrotide combined with MPT in 24 patients (three cohorts of eight patients). In the Phase II component of the trial, the oral MPT regimen will be combined with the maximum tolerated dosage of defibrotide and administered to 20 consecutive patients to assess response rate and clinical efficacy.

Additional Product Candidates

We and other unrelated institutions have conducted preclinical studies of other uses of defibrotide and of other drugs in our pipeline. We plan to continue to develop our product candidates to further expand our possible markets. If we are successful in bringing our advanced product candidates to market, we intend to use our cash flow from operations generated by

Back to Table of Contents

them and our current products to continue to fund some of the costs needed to develop these product candidates. These product candidates will be very expensive to develop, and we will need to either raise additional funds through debt and/or equity financings, or enter into strategic partnerships, or both, to complete these developments.

Product

Candidate	Intended Use	Stage of Development
Defibrotide	Mobilize and increase the number of stem cells available in patients' and donors' blood for subsequent stem cell transplantation	Preclinical completed in Italy; Phase I trial in Italy cancelled due to lack of enrollees
Defibrotide	Oral administration to prevent deep vein thrombosis outside Italy	Phase I/II completed in Denmark
Mesalazine	Treat inflammatory bowel disease	Phase III in United States and Canada
Oligotide	Protect against damage (apoptosis) of cells of the blood vessel walls caused by fludarabine, a chemotherapy agent	Preclinical in Germany
Gen 301	Prevent and treat mucositis	Preclinical in England

Defibrotide to mobilize and increase the number of stem cells available in patients' and donors' blood for subsequent stem cell transplantation

We believe that we may be able to further expand our market for defibrotide to include its use to mobilize and increase the number of stem cells available for transplant. A stem cell transplant is a medical procedure that involves collecting stem cells from the blood of a patient before chemotherapy, radiation therapy or hormone therapy or a compatible donor intravenously and then re-administering them to the patient after the treatment. Stem cell transplants are used to treat side effects of certain cancer therapies. One side effect of chemotherapy, radiation therapy and hormone therapy is that these treatments can permanently damage the bone marrow, which inhibits or halts the production of blood cells and can be life threatening. There are many different types of blood cells, but they all develop from stem cells. Most of these stem cells are found in the bone marrow (the soft inside part of the bone), although some are found in the blood (peripheral blood stem cells). Doctors may use stem cell transplants to regenerate bone marrow after these cancer therapies. Stem cell transplants can also be used to treat some cancers directly, in addition to treating this side effect of some cancer treatments.

Peripheral blood stem cell transplants are less invasive than bone marrow transplants, which require a surgical procedure to remove bone marrow from the patient's or donor's bones. However, since blood is not as rich in stem cells as bone marrow, the availability of adequate amounts of peripheral blood stem cells from the patient or a compatible donor is critical to the effectiveness of a peripheral blood stem cell transplant.

Preclinical studies conducted by The National Institute of Tumors of Milan in rodents and non-human primates (rhesus monkeys) used defibrotide in combination with G-CSF, a drug commonly used to cause stem cells to migrate (mobilize) from the bone marrow into the blood circulatory system for collection and transplant. The preclinical study in rodents showed a statistically significant increase in certain types of stem cells available for transplant. The preclinical study in primates showed that the number of stem cells available for transplant increased by a factor of six.

The National Institute of Tumors of Milan was conducting a Phase I clinical trial in Italy to evaluate the safety and effectiveness of defibrotide to increase the number of stem cells available for transplant when used with G-CSF in humans. The primary objective of this study was to determine the dose of defibrotide to be injected over a 24-hour

period by continuous intra-venous injection necessary to increase the number of stem cells to the level that was obtained in the rhesus monkeys study. Patients who did not achieve a target number of stem cells available for transplant after an initial treatment with G-CSF were eligible to be enrolled for this study. The strict enrollment criteria led to difficulties in enrolling patients and the National Institute of Tumors of Milan cancelled this trial in December 2005 for this reason.

Defibrotide to prevent deep vein thrombosis

We and our predecessors have manufactured and marketed defibrotide in Italy to treat deep vein thrombosis since 1986 and to both treat and prevent all vascular disease with risk of thrombosis since 1993. These uses of defibrotide both involve intra-venous injection and oral administration. Beginning in 2002, we licensed the right to sell defibrotide to treat and prevent all vascular disease with risk of thrombosis in Italy to Crinos.

Vascular disease with risk of thrombosis refers to several serious cardiovascular conditions, one of which is deep vein thrombosis. Deep vein thrombosis is a blockage of the veins in the legs that can have many causes, including hip surgery, pregnancy, cancer and cancer therapies and injuries. Deep vein thrombosis can lead to pulmonary embolism, the dislodging and migration of blood clots to the lungs, which is often fatal.

Our future plans include the development of oral administration of defibrotide to prevent deep vein thrombosis for markets outside of Italy. We concluded a 69-patient Phase I/II clinical trial of defibrotide to prevent deep vein thrombosis after

Back to Table of Contents

hip surgery in Denmark in 2002. In this clinical trial, the defibrotide was administered through intra-venous infusion for up to two days followed by oral administration for a further three to six days. This trial was discontinued after three patients receiving defibrotide through intra-venous infusion experienced hypotension, a serious adverse event. No serious adverse events were noted in patients receiving defibrotide orally. Based on the results of this trial and prior use of defibrotide to prevent deep vein thrombosis in Italy, we nonetheless believe that defibrotide may be safe and effective to prevent deep vein thrombosis. We believe that the largest market opportunity for this use of defibrotide involves administering it orally, as this would allow patients to take the drug at home instead of a hospital. We would need to conduct additional clinical trials in markets outside of Italy to explore the safety and effectiveness of oral administration of defibrotide for this use.

Mesalazine

Inflammatory bowel disease, or ulcerative colitis, is a disease that causes inflammation and lesions in the large intestine. We have created a gel formulation of mesalazine, an anti-inflammatory product intended to treat the disease. In 2002 we sold to Axcan the exclusive rights to develop and market in Canada, upon Health Canada approval, and the United States, upon FDA approval, our formulation of mesalazine to be developed to treat inflammatory bowel disease. Axcan is a Canadian pharmaceutical company that specializes in gastrointestinal therapies and markets its products through its own sales force in North America and Europe. In addition to certain upfront payments aggregating €1.258 million, Axcan has agreed to pay us deferred consideration in the amount of 4% of Axcan's net sales of mesalazine in Canada and the United States during the first ten years of its commercialization.

Axcan completed an open-label, randomized 180-patient Phase III study to assess the evolution of the clinical symptoms of inflammatory bowel disease during the induction of remission by our formulation of mesalazine in 2005. This study was supported by two 50-patient placebo-controlled studies. Axcan has reported that they expect to "launch" the formulation in 2006 if it is approved by Health Canada and/or the FDA. We believe that patients will tolerate our formulation of mesalazine better than other companies' formulations.

We also licensed the rights to develop and sell our formulation of mesalazine in Italy to Crinos, which has a right of first refusal to license the rights for substantially all other European countries.

Oligotide

We are developing oligotide, another product derived from natural DNA. One particular chemotherapy agent, fludarabine, is used to treat chronic lymphocytic leukemia. Fludarabine interferes with the growth of cancer cells, but it also causes damage, specifically apoptosis (a series of events in a cell that leads to its death), to blood vessel wall cells, which is an undesirable toxic effect of the chemotherapy. Researchers at the University of Regensburg, Germany, performed preclinical studies showing that oligotide, when used in combination with fludarabine, reduced the level of apoptosis in the cells of blood vessel walls to approximately the same level normally found in cells that have not been treated with fludarabine. We believe there is a potential market for oligotide to be used in conjunction with fludarabine and other cancer therapies to reduce the undesirable toxic effects of these cancer therapies. We may conduct further research on oligotide to investigate its effectiveness in protecting blood vessel cell walls against cancer therapies.

Gen 301

Some cancer therapies, such as chemotherapy and radiation therapy, can cause mucositis. Mucositis is a condition in which the lining of the digestive system becomes inflamed and ulcerated, often resulting in sores in the mouth. Patients with these oral ulcerations suffer from pain and have an associated risk of developing life-threatening infections because the patients also have a diminished natural immune system following chemotherapy or radiation

therapy. Gen 301 is another product derived from pig intestines that we are developing and investigating in preclinical studies to prevent and treat this complication. *Oral Complications in Cancer Chemotherapy, Cancer Incidence, and Mortality in the U.S.*, a 2003 article in *Dental Article Review and Testing*, states that mucositis occurs in approximately 40% of cancer patients who receive chemotherapy and 80% of patients who receive certain stem cell transplants. 50% of patients who develop oral ulcerations require intervention that often includes modifying or discontinuing the chemotherapy. *Oral Mucositis and the Clinical and Economic Outcomes of Hematopoietic Stem-Cell Transplantation*, by Stephen T. Sonis, et. al. (2001) estimates that there is an additional cost of more than approximately €31 thousand for every patient that develops oral ulcerations during the 100-day post transplant period.

We are currently investigating Gen 301 in preclinical studies on a rodent model of mucositis caused by radiation therapy.

Current Products

Our revenues from the sales of our current products were €6.5 million, €5.9 million, €6.5 million, €3.1 million and €3.4 million in 2001, 2002, 2003, 2004 and 2005, respectively. We and our predecessors have manufactured defibrotide since 1986 using a manufacturing process on which we hold a U.S. patent and a European patent granted in 1991 and license others to sell it in Italy. In addition to defibrotide, we manufacture and sell in Italy urokinase and calcium heparin, which are active

Back to Table of Contents

pharmaceutical ingredients used to make other drugs, sulglicotide, which is intended to treat peptic ulcers, and other miscellaneous pharmaceutical products. We have also developed a formulation of the drug mesalazine to treat inflammatory bowel disease.

Defibrotide

Currently, we manufacture defibrotide for Sirton, our affiliate. Sirton focuses on processing the defibrotide for either oral administration or intra-venous administration and sells the finished products to Crinos. Crinos markets defibrotide in Italy to both treat and prevent vascular disease with risk of thrombosis under a semi-exclusive license agreement. We have the right to grant a second license in Italy but only to a third party that has been expressly approved by Crinos.

Urokinase

Urokinase is made from human urine and has the potential to dissolve fibrin clots and, as such, is used to treat various vascular disorders such as deep vein thrombosis and pulmonary embolisms. We sell urokinase to Sirton, who uses it as an ingredient in the manufacture of generic drugs. Sirton sells the final formulated generic drugs to other companies, which then sell the drugs to hospitals and pharmacies.

Heparin Calcium

Heparin calcium is made from pig intestines and prevents the blood from clotting. Decreasing clot formation diminishes the likelihood of strokes and heart attacks. Heparin calcium has numerous uses including the treatment of certain types of lung, blood vessel, and heart disorders, and administration during or after certain types of surgery, such as open heart and bypass surgeries. Other uses include the flushing of catheters and other medical equipment. Heparin calcium and its salts are also part of many topical preparations to treat various inflammatory disorders. We sell heparin calcium to Sirton, who uses it as an ingredient in the manufacture of generic drugs. Sirton sells the final formulated generic drugs to other companies, which then sell the drugs to hospitals and pharmacies.

Sulglicotide

Sulglicotide is developed from pig intestines and appears to have ulcer healing and gastrointestinal protective properties. The effects of this drug have prompted us to commission a preclinical investigation by Epistem Ltd., an United Kingdom contract research organization specializing in studies of mucositis caused by anticancer or radiation therapies, into its function in potential prevention and treatment of mucous membrane damage. We also sell sulglicotide to Sirton for use in contract manufacturing of Gliptide, a drug marketed in Italy to treat peptic ulcers. In 2004, we sold sulglicotide to Samil, a Korean company, for use in manufacturing a product of Samil's in Korea. Samil used this supply to manufacture its product for launch and marketing activities. In March 2006 we received a purchase order from Samil for 490 kg of sulglicotide. We have been informed by Samil that another 490kg of sulglicotide may be needed in 2006.

Seasonality

Seasonality does not affect our business.

Regulatory Matters

Overview

The preclinical and clinical testing, manufacture, labeling, storage, distribution, promotion, sale, import and export, reporting and record-keeping of our product candidates are subject to extensive regulation by governmental authorities in the United States, principally the FDA and corresponding state agencies, and regulatory agencies in foreign countries.

Non-compliance with applicable regulatory requirements can result in, among other things, injunctions, seizure of products, total or partial suspension of product manufacturing and marketing, failure of the government to grant approval, withdrawal of marketing approvals, civil penalty actions and criminal prosecution. Except as discussed below, we believe that we are in substantial compliance in all material respects with each of the currently applicable laws, rules and regulations mentioned in this section. During a biannual inspection of our manufacturing facility by the Italian Health Authority in October 2004, the Italian Health Authority noted by way of observations certain deficiencies in regard to the operation of our facility. We have corrected all of these deficiencies, and have kept the Italian Health Authority current with respect to the progress of our corrective actions. Also, a regional Italian regulatory inspector, during an April 2005 inspection of our manufacturing facility, requested that we install an exhaust vent on one of our machines. We have installed this device. In order to obtain FDA approval for the sale of any of our product candidates, the FDA must determine that this facility meets their current good manufacturing practices, or GMP, including requirements for equipment verification and validation of our manufacturing and cleaning processes. The FDA has not yet inspected our facility, but we have recently completed an approximately €7.2 million major overhaul and upgrade in anticipation of such an inspection. We are not aware of any other situation that could be characterized as an incidence of non-compliance in the last three years.

Back to Table of Contents

United States Regulatory Approval

FDA regulations require us to undertake a long and rigorous process before any of our product candidates may be marketed or sold in the United States. This regulatory process typically includes the following general steps:

- our performance of satisfactory preclinical laboratory and animal studies under the FDA's good laboratory practices regulations;
- our obtaining the approval of independent Institutional Review Boards at each clinical site to protect the welfare and rights of human subjects in clinical trials;
- our submission to and acceptance by the FDA of an Investigational New Drug Application (IND) which must become effective before human clinical trials may begin in the United States;
- our successful completion of a series of adequate and well-controlled human clinical trials to establish the safety, purity, potency and effectiveness of any product candidate for its intended use;
- our submission to, and review and approval by, the FDA of a marketing application prior to any commercial sale or shipment of a product; and
- our development and demonstration of manufacturing processes which conform to FDA-mandated current good manufacturing practices.

This process requires a substantial amount of time and financial resources. In 2002, the FDA announced a reorganization that has resulted in the shift of the oversight and approval process for certain therapeutic biologic drugs and the related staff from the Center for Biologics Evaluation and Research to the Center for Drug Evaluation and Research. Our initial product candidate, defibrotide to treat VOD with multiple-organ failure, is being regulated through the latter.

Preclinical Testing

Preclinical tests generally include laboratory evaluation of a product candidate, its chemistry, formulation, stability and toxicity, as well as certain animal studies to assess its potential safety and effectiveness. We must submit the results of these preclinical tests, together with manufacturing information, analytical data and the clinical trial protocol, to the FDA as part of an Investigational New Drug Application, which must become effective before we may begin any human clinical trials. An application automatically becomes effective 30 days after receipt by the FDA, unless the FDA, within this 30-day time period, raises concerns or questions about the intended conduct of the trials and imposes what is referred to as a clinical hold. If one or more of our products is placed on clinical hold, we would be required to resolve any outstanding issues to the satisfaction of the FDA before we could begin clinical trials. Preclinical studies generally take several years to complete, and there is no guarantee that an Investigational New Drug Application based on those studies will become effective, allowing clinical testing to begin.

In addition to FDA review of an application, each clinical institution that desires to participate in a proposed clinical trial must have the clinical protocol reviewed and approved by an independent Institutional Review Board. The independent Institutional Review Boards consider, among other things, ethical factors, informed consent and the selection and safety of human subjects. Clinical trials must be conducted in accordance with the FDA's good clinical practices requirements.

In addition to FDA review of an Investigational New Drug Application, clinical trials must meet requirements for Institutional Review Board oversight, informed consent and the FDA's good clinical practices. Prior to commencement of each clinical trial, the sponsor must submit to the FDA a clinical plan, or protocol, accompanied by the approval of the committee responsible for overseeing clinical trials at one of the clinical trial sites. The FDA, and/or the Institutional Review Board at each institution at which a clinical trial is being performed, may order the temporary or permanent discontinuation of a clinical trial at any time if it believes that the clinical trial is not being conducted in accordance with FDA requirements or presents an unacceptable risk to the clinical trial patients.

The sponsor must submit to the FDA the results of the pre-clinical and clinical trials, together with, among other things, detailed information on the manufacturing and composition of the product, in the form of New Drug Application or a Biologics License Application. Once the submission has been accepted for filing, the FDA has 180 days to review the application and respond to the applicant. The review process is often significantly extended by FDA requests for additional information or clarification.

Back to Table of Contents

Clinical Trials

Human clinical trials are typically conducted in three sequential phases that may overlap, including the following:

Phase I

In Phase I clinical trials, a product candidate is typically given to either healthy people or patients with the medical condition for which the new drug is intended to be used. The main purpose of the trial is to assess a product candidate's safety and the ability of the human body to tolerate the product candidate, and may also assess the dosage, absorption, distribution, excretion and metabolism of the product candidate.

Phase II

During Phase II, a product candidate is given to a limited number of patients with the disease or medical condition for which it is intended to be used in order to:

- further identify any possible adverse side effects and safety risks;
- assess the preliminary or potential effectiveness of the product candidate for the specific targeted disease or medical condition; and
- assess dosage tolerance and determine the optimal dose for a Phase III trial.

Phase III

If and when one or more Phase II trials demonstrate that a specific dose or range of doses of a product candidate is likely to be effective and has an acceptable safety profile, one or more Phase III trials are generally undertaken to demonstrate clinical effectiveness and to further test for safety in an expanded patient population with the goal of evaluating the overall risk-benefit relationship of the product candidate. The successful demonstration of clinical effectiveness and safety in one or more Phase III trials is typically a prerequisite to the filing of an application for FDA approval of a product candidate.

After approval, the FDA may also require a Phase IV clinical trial to continue to monitor the safety and effectiveness of the product candidate.

Post-Approval Regulations

If a product candidate receives regulatory approval, the approval is typically limited to specific clinical uses. Subsequent discovery of previously unknown problems with a product may result in restrictions on its use or even complete withdrawal of the product from the market. Any FDA-approved products manufactured or distributed by us are subject to continuing regulation by the FDA, including record-keeping requirements and reporting of adverse events or experiences. Drug manufacturers and their subcontractors are required to register their establishments with the FDA and state agencies, and are subject to periodic inspections by the FDA and state agencies for compliance with current good manufacturing practice, or GMP, which impose rigorous procedural and documentation requirements upon us and our contract manufacturers. Failure to comply with these requirements may result in, among other things, total or partial suspension of production activities, failure of the FDA to grant approval for marketing, and withdrawal, suspension, or revocation of marketing approvals.

If the FDA approves one or more of our product candidates, we and our contract manufacturers must provide certain updated safety and effectiveness information. Product changes, as well as changes in the manufacturing process or facilities where the manufacturing occurs or other post-approval changes, may necessitate additional FDA review and approval. The labeling, advertising, promotion, marketing and distribution of a drug or biologic product also must be in compliance with FDA requirements which include, among others, standards and regulations for direct-to-consumer advertising, communication of information relating to off-label uses, industry sponsored scientific and educational activities and promotional activities involving the Internet. The FDA has very broad enforcement authority, and failure to abide by these regulations can result in penalties, including the issuance of a warning letter directing a company to correct deviations from regulatory standards and enforcement actions that can include seizures, fines, injunctions and criminal prosecution.

Fast track and orphan drug designation

The FDA has developed “fast track” policies, which provide the potential for expedited review of an application. However, there is no assurance that the FDA will, in fact, accelerate the review process for a fast track product candidate. Fast track status is provided only for new and novel therapies that are intended to treat persons with life-threatening and severely debilitating diseases, where there is a defined unmet medical need, especially where no satisfactory alternative therapy exists or the new therapy is significantly superior to alternative therapies. During the development of product candidates that qualify for this status, the FDA may expedite consultations and reviews of these experimental therapies. Furthermore, an accelerated approval process is potentially available to product candidates that have been studied for their safety and effectiveness in treating serious or life-threatening illnesses. The FDA can base approval of a marketing application for a fast track product on an effect on a clinical endpoint, or on a surrogate endpoint that is reasonably likely to predict clinical benefit. The FDA may condition the approval of an application for certain fast track products on additional post-approval studies to validate the surrogate endpoint or confirm the effect on the clinical endpoint. Fast track status also provides the potential for a product candidate to have a “priority review.” A priority review allows for portions of the application to be submitted to the FDA for

Back to Table of Contents

review prior to the completion of the entire application, which could result in a reduction in the length of time it would otherwise take the FDA to complete its review of the application. Fast track status may be revoked by the FDA at any time if the clinical results of a trial fail to continue to support the assertion that the respective product candidate has the potential to address an unmet medical need. A product approved under a “fast track” designation is subject to expedited withdrawal procedures and to enhanced scrutiny by the FDA of promotional materials.

The FDA may grant orphan drug status to drugs intended to treat a “rare disease or condition,” which is generally a disease or condition that affects fewer than 200,000 individuals in the United States. If and when the FDA grants orphan drug status, the generic name and trade name of the therapeutic agent and its potential orphan use are disclosed publicly by the FDA. Aside from guidance concerning the non-clinical laboratory studies and clinical investigations necessary for approval of the application, orphan drug status does not convey any advantage in, or shorten the duration of, the regulatory review and approval process. The FDA may grant orphan drug designations to multiple competing product candidates targeting the same uses. A product that has been designated as an orphan drug that subsequently receives the first FDA approval for the designated orphan use is entitled to orphan drug exclusivity, which means the FDA may not approve any other applications to market the same drug for the same indication, except in very limited circumstances, for seven years from the date of FDA approval. Orphan drug status may also provide certain tax benefits. Finally, the FDA may fund the development of orphan drugs through its grants program for clinical studies.

The FDA has designated defibrotide as an orphan drug to treat VOD and has provided funding for clinical studies for this use. The FDA has approved the Company’s application for “fast track” designation for defibrotide to treat VOD with multiple-organ failure occurring after stem cell transplantation by means of injection. The FDA approval process for defibrotide for this use remains dependent upon the successful completion of clinical trials. If our other product candidates meet the criteria, we may also apply for orphan drug status and fast track status for such products.

Market Exclusivity

In addition to orphan drug exclusivity, a product regulated by the FDA as a “new drug” is potentially entitled to non-patent and/or patent exclusivity under the FFDCA against a third party obtaining an abbreviated approval of a generic product during the exclusivity period. Conversely, under current law, a third party cannot obtain an abbreviated approval of a drug regulated as a “biological product” and concomitantly there is no opportunity for non-patent or patent exclusivity under the FFDCA for biological products. An abbreviated approval allows an applicant to obtain FDA approval without generating, or obtaining a right of reference to, the basic safety and effectiveness data necessary to support the initial approval of the drug product or active ingredient. In the case of a new chemical entity (an active ingredient which has not been previously approved with respect to any drug product) non-patent exclusivity precludes an applicant for abbreviated approval from submitting an abbreviated application until five years after the approval of the new chemical entity. In the case of any drug substance (active ingredient), drug product (formulation and composition) and method of use patents listed with the FDA, patent exclusivity under the FFDCA precludes FDA from granting effective approval of an abbreviated application of a generic product until the relevant patent(s) expire, unless the abbreviated applicant certifies that the relevant listed patents are invalid, not infringed or unenforceable and the NDA/patent holder does not bring an infringement action within 45 days of receipt of notification of the certification or an infringement action is brought within 45 days and a court determines that the relevant patent(s) are invalid, not infringed or un-enforceable or 30 months have elapsed without a court decision of infringement.

User Fees

A New Drug Application for a prescription drug product that has been designated as an orphan drug is not subject to the payment of user fees to the FDA unless the application includes as indication for other than a orphan indication.

A supplement proposing to include a new indication for a designated orphan disease or condition in an application is also not subject to a user fee, if the drug has been designated an orphan drug with regard to the indication proposed in such supplement.

There is no specific exemption for orphan drug products from annual product and establishment fees. However, sponsors of orphan drugs can request a waiver of such fees on hardship or other grounds.

Other federal legislation may affect our ability to obtain certain health information in conjunction with our research activities. The Health Insurance Portability and Accountability Act of 1996, or HIPAA, mandates, among other things, the adoption of standards designed to safeguard the privacy and security of individually identifiable health information. In relevant part, the U.S. Department of Health and Human Services, or HHS, has released two rules to date mandating the use of new standards with respect to such health information. The first rule imposes new standards relating to the privacy of individually identifiable health information. These standards restrict the manner and circumstances under which covered entities may use and disclose protected health information so as to protect the privacy of that information. The second rule released by HHS establishes minimum standards for the security of electronic health information. While we do not believe we are directly regulated as a covered entity under HIPAA, the HIPAA standards impose requirements on covered entities conducting research activities regarding the use and disclosure of individually identifiable health information collected in the course of conducting

Back to Table of Contents

the research. As a result, unless they meet these HIPAA requirements, covered entities conducting clinical trials for us may not be able to share with us any results from clinical trials that include such health information.

Foreign Regulatory Approval

Outside of the United States, our ability to market our product candidates will also be contingent upon our receiving marketing authorizations from the appropriate foreign regulatory authorities whether or not FDA approval has been obtained. The foreign regulatory approval process in most industrialized countries generally includes risks that are similar with the FDA approval process we have described herein. The requirements governing conduct of clinical trials and marketing authorizations, and the time required to obtain requisite approvals may vary widely from country to country and differ from that required for FDA approval.

European Union Regulatory Approval

Under the current European Union regulatory system, applications for marketing authorizations may be submitted either under a centralized or decentralized procedure. The centralized procedure (which is compulsory for certain categories of drugs) provides for the grant of a single marketing authorization that is valid for all European Union member states. The decentralized procedure provides for mutual recognition of national approval decisions. Under this procedure, the holder of a national marketing authorization that is obtained in accordance with the procedure and requirements applicable in the member state concerned may submit an application to the remaining member states. Within 90 days of receiving the applications and assessment report, each member state must decide whether to recognize approval. The mutual recognition process results in separate national marketing authorizations in the reference member state and each concerned member state.

The centralized procedure

An applicant under the centralized procedure must be a person who is domiciled in the European Union or an entity established in the European Union. The applicant must file a preliminary request containing the information regarding the product candidate, including its description and the location of the production plant, as well as the payment of the application fees. The European Agency for the Evaluation of Medicinal Products (an European Union statutory entity) formally evaluates the preliminary request and indicates either an initial approval to review a full application or a rejection. If the European Agency indicates an initial approval to review a full application, the applicant must submit the application to the European Agency. This application must indicate certain specific information regarding the product candidate, including the composition (quality and quantity) of all the substances contained in the product, therapeutic indications and adverse events, modalities of use, the results of physical, chemical, biological and microbiological tests, pharmacological and toxicity tests, clinical tests, a description of production and related control procedures, a summary of the characteristics of the product as required by the European legislation and samples of labels and information to consumers. The applicant must also file copies of marketing authorizations obtained, applications filed and denials received for the same product in other countries, and must prove that the manufacturer of the product candidate is duly authorized to produce it in its country.

The European Agency (through its internal Committee for Proprietary Medicinal Products) examines the documents and information filed and may carry out technical tests regarding the product, request information from the member state concerned with regard to the manufacturer of the product candidate and, when it deems necessary, inspect the manufacturing facility in order to verify that the manufacturing facility is consistent with the specifications of the product candidate, as indicated in the application.

The Committee generates and submits its final opinion to the European Commission, the member states and the applicant. The Commission then issues its decision, which is binding on all member states. However, if the

Commission approves the application, member states still have authority to determine the pricing of the product in their territories before it can be actually marketed.

The European Agency may reject the application if the Agency decides that the quality, safety and effectiveness of the product candidate have not been adequately and sufficiently proved by the applicant, or if the information and documents filed are incomplete, or where the labeling and packaging information proposed by the applicant do not comply with the relevant European rules.

The European Agency has also established an accelerated evaluation procedure applying to product candidates aimed at serious diseases or conditions for which no suitable therapy exists, if it is possible to predict a substantial beneficial effect for patients.

The marketing authorization is valid for five years and may be renewed, upon application, for further five year terms. After the issue of the authorization the holder must constantly take into consideration scientific and technical progress so that the product is manufactured and controlled in accordance with scientific methods generally accepted.

-32-

Back to Table of Contents

We plan to apply for approvals for our product candidates under the centralized procedure. We believe that the centralized procedure will result in a quicker approval of our product candidates than the decentralized procedure due to the fact that we intend to market our product candidates in many European Union member states, rather than just one.

The decentralized procedure

The decentralized procedure provides for mutual recognition of national approval decisions. Under this procedure, the holder of a national marketing authorization—obtained in accordance with the procedure and requirements applicable in the member state concerned (see the description below for Italy)—may submit an application to the remaining member states. Within 90 days of receiving the applications and assessment report, each member state must decide whether to recognize approval. The mutual recognition process results in separate national marketing authorizations in the reference member state and each concerned member state.

An application under the decentralized procedure begins with the applicant obtaining a national marketing authorization. An example of the process for obtaining a national marketing authorization in Italy is set forth below. The applicant then submits an application for authorization in other member states and the European Agency. If any of the member states refuses to recognize the authorization by the original member state, the matter is deferred to arbitration proceedings, unless the applicant withdraws its request in the member state refusing recognition. The characteristics of the product in the new applications must be identical to those approved in the original member state.

The competent Health Authority of a member state is bound to recognize the decision of another member state if it ascertains that the same application has been filed also in the other member state or that the approval has already been granted in the other member state. This requirement is intended to ensure the wide and effective application of mutual recognition within the European Union.

Italian Regulatory Approval

An application for marketing authorization in Italy must be filed with the competent office of the Italian Ministry of Health and must contain certain specific information, including the composition (quality and quantity) of all the substances contained in the product, therapeutic indications and adverse events, modalities of use, the results of physical, chemical, biological and microbiological tests, pharmacological and toxicity tests, clinical tests, a description of production and related control procedures and samples of labels and information to consumers. Italian legislation (in accordance with European laws) regulates in great detail the information to be indicated on the packaging. Marketing authorization includes a 10-year protection period during which no one else may use the results of the clinical trials included in the application to apply for a substantially similar drug. This period may be extended where there are new therapeutic indications for the same product, which require new complete clinical studies and justify the same protection as that granted to a new drug.

The Ministry may grant or deny the national authorization after a review of the contents of the application, both from a formal and substantial viewpoint. If an authorization is granted, it is valid for an initial period of five years and, upon application, may be renewed for subsequent five year terms. In particular, the Ministry examines the quality, effectiveness and safety of the product and the Italian Drugs' Committee (*Commissione Unica del Farmaco*), a statutory agency supporting the Ministry in the authorization process, prepares an evaluation report on the test results. The Ministry may also order further tests prior to granting or denying the authorization regarding the suitability of the production and control methods described in the application. The Ministry may reject the authorization if the ordinary use of the drug has adverse events, the quality and quantity of the ingredients of the drugs do not correspond to the data indicated in the application, there is a lack, either total or partial, of beneficial therapeutic effects or the information and the documents included in the application do not comply with the requirements provided by law.

After the Ministry grants a national authorization, the Ministry may temporarily suspend or revoke the authorization if the information disclosed in the relevant application turns out to be incorrect, the drug no longer meets the necessary quality, effectiveness or safety requirements, or adequate production controls have not been carried out.

Clinical Trials

Italy has recently implemented European legislation regarding good practices in drug clinical trials. As a result, clinical trials are now governed in great detail and failure to comply with these rules means that the results of the trials will not be taken into consideration in evaluating an application for a marketing authorization.

Prior to starting any clinical trial, the organizing and/or financing entity must obtain the approval of the competent health authorities (which vary depending on the type of drug concerned) and obtain the favorable opinion of the Ethical Committee, an independent body. Good practice rules include the following principles:

- the predictable risks and inconveniences shall not outweigh the beneficial effects for the person subject to the trials and for the other current and future patients;

Back to Table of Contents

- the person participating in the trials must have been duly informed of all the relevant circumstances and in particular of the right to interrupt the experimentation at any time without any prejudicial consequence, and must have given consent after having been properly informed;
- the right of the participants to their physical and mental integrity, as well as their right to privacy, shall be respected;
- the entity organizing the trial must have obtained adequate insurance coverage for any damage that may derive to the participants because of the trial;
- the name of a person to be contacted for any information must be communicated to the participant; and
- the trial must be conducted by suitably qualified medical personnel.

The trial must be constantly monitored, in particular with regard to serious adverse events which are not envisaged in the approved clinical protocol. Whenever the safety of the participants is in danger due to unexpected serious adverse events, the Ministry of Health must be promptly informed by the entity organizing the trials. Italian legislation provides sanctions (criminal sanctions and administrative fines) in case of violation of specific good practice rules.

Post-approval issues

There are many national legislative instruments (implementing European Union rules) governing controls on drugs in the post-authorization phase. For instance, the holder of the national marketing authorization must promptly record in detail and notify any adverse reaction to the drug of which it becomes aware, regardless of the country where the reaction occurs, also preparing periodic update reports on these adverse events. For these and other purposes, the holder of the authorization must hire and maintain in its organization a person expert in the field and responsible for all drug controlling and reporting activities.

Moreover, any form of information and advertising aimed at promoting the sale of drugs is governed by specific national legislation (also implementing European Union rules), which provides for the requirements and limitations of advertising messages in general, as well as of other particular promotional activities, such as the organization of conferences regarding certain drugs and the distribution of free samples.

The export of drugs from Italy is not subject to authorization (except for plasma and blood-related products), but the import into Italy from non-European Union countries must be authorized by the Ministry of Health, on the basis of the adequacy of the quality controls to be carried out on the imported drugs.

European orphan drug status

European legislation lays down a particular procedure for the designation of medicinal products as orphan drugs. Such designation may include incentives for the research, development and marketing of these orphan drugs and, in case of a subsequent successful application for a marketing authorization regarding the same therapeutic indications, grants a substantial period of market exclusivity.

A medicinal product - at any stage of its development but in any case prior to the filing of any application for the marketing authorization - may be designated as an orphan drug if the person/entity that has applied for the designation can establish that it is intended for the diagnosis, prevention or treatment of a life-threatening or chronically debilitating condition affecting no more than five persons out of every ten thousand persons in the European Union, or that it is intended for the diagnosis, prevention or treatment of a life-threatening, seriously debilitating or serious and chronic condition in the European Union and that without incentives it is unlikely that the marketing of the medicinal

product would generate sufficient income to cover the necessary investments. Moreover, the sponsor must prove that there is no satisfactory method of diagnosis, prevention or treatment of the condition in question that has been authorized in the European Union or, if such method exists, that the medicinal product will be of significant benefit to those affected by that condition.

In order to obtain the designation of a medicinal product as an orphan drug, the sponsor shall submit an application to the European Agency for the Evaluation of Medical Products, which must describe the indication of the active ingredients of the medicinal product, the proposed therapeutic indications and proof that the criteria established by the relevant European legislation are met.

The European Agency reviews the application and prepares a summary report to a special Committee for Orphan Medicinal Products, which issues an opinion within 90 days of the receipt of the application. The European Commission must adopt a decision within 30 days of the receipt of the committee's opinion. If the European Commission approves the application, the designated medicinal product is entered in the European Register of Orphan Medicinal Products and the product is eligible for incentives made available by the European Union and by member states to support research into, and development and availability of, orphan drugs.

Back to Table of Contents

After the registration, the sponsor must submit to the European Agency an annual report on the state of development of the designated orphan drug. A designated orphan drug may be removed from the Register of Orphan Medicinal Products in three cases:

- at the request of the sponsor;
- if it is established, before the market authorization is granted, that the requirements laid down in the European orphan drug legislation are no longer met; or
- at the end of the period of market exclusivity (as explained below).

Orphan drug market exclusivity means that the European Union shall not, for a period of 10 years from the grant of the marketing authorization for an orphan drug, accept any other application for a marketing authorization, grant a marketing authorization or accept an application to extend an existing marketing authorization, for the same therapeutic indications in respect of a similar medicinal product. This period, however, may be reduced to six years if at the end of the fifth year it is established that the criteria laid down in the legislation are no longer met by the orphan drug, or where the available evidence shows that the orphan drug is sufficiently profitable, so that market exclusivity is no longer justified.

However, as an exception to orphan drug market exclusivity, a marketing authorization may be granted for the same therapeutic indications to a similar medicinal product if:

- the holder of the marketing authorization for the orphan drug has given his consent to the second applicant;
- the holder of the marketing authorization for the orphan drug is unable to supply sufficient quantities of the latter; or
- the second applicant can establish in its application that the second medicinal product, although similar to the authorized orphan drug, is safer, more effective or otherwise clinically superior.

Raw Materials

We extract many of our products and product candidates from the DNA of pig intestines through well-established processes used by others to manufacture many other drugs. In particular, we extract defibrotide and calcium heparin from swine intestinal mucosa and sulglycotide from swine duodenum. In 2004, we entered into supply agreements with La.bu.nat. S.r.l. for La.bu.nat. to supply us with the swine intestinal mucosa and swine duodenum we need to produce defibrotide, calcium heparin and sulglycotide. We believe La.bu.nat can meet our current and near-term supply needs.

The initial contract term of the swine intestinal mucosa supply agreement expires on December 31, 2007, with automatically renewable three year periods, unless either party notifies the other party in writing six months prior to the annual date of termination. We must give written purchase orders to La.bu.nat at least two months in advance of the date of delivery. The purchase price was fixed at €0.1677 per kilogram until April 10, 2005 (plus an additional €0.0135 for the first 2,400,000 kilograms), at which time the price increased 5% until December 31, 2006. After December 31, 2006, both parties may request renegotiation of the price with reference to market trends and manufacturing costs. In the event that the parties cannot agree on a renegotiated price, an arbitrator will determine the new price.

The initial contract term of the swine duodenum supply agreement expires on December 31, 2007, with automatically renewable three year periods, unless either party notifies the other party in writing six months prior to the annual date

of termination. We must give written purchase orders to La.bu.nat at least four months in advance of the date of delivery. The purchase price was fixed at €1.1286 per kilogram until December 31, 2005. In 2006, the purchase price was reduced to €1.01574 per kilogram pursuant to a verbal agreement between us and La.bu.nat in which we obtained a 10% discount on the purchase price as an incentive to increase the purchase volume. The discount is not linked with any purchase objectives or commitments.

While we have no current arrangements with any other supplier of our critical raw material, we believe there are suitable alternative sources of pig intestine. The FDA and other regulatory bodies may evaluate La.bu.nat.'s or any other supplier's processing centers as part of approving our product candidates and our ongoing production of our products.

Our other product, urokinase, is derived from human urine, which is subject to similar regulatory review. While we currently purchase the urine from only one supplier of urine and do not have a fixed supply agreement with that supplier, we believe there are suitable alternative sources of the material.

Historically, there has been no significant price volatility for any of our raw materials. It is possible that widespread illness or destruction of pigs could result in volatility of the price of pig intestines.

-35-

Back to Table of Contents

Competition

Our industry is highly competitive and characterized by rapid technological change. Significant competitive factors in our industry include:

- controlling the manufacturing costs;
- the effectiveness and safety of products;
- the timing and scope of regulatory approvals;
- the willingness of private insurance companies and government sponsored health care programs to reimburse patients or otherwise pay for the drugs and the related treatments;
- the availability of alternative treatments for the disorders as well as the availability of alternatives to the treatments which cause or contribute to these disorders (such as chemotherapy, radiation therapy, stem cell transplants, etc.);
- the ability to perform clinical trials, independently or with others;
- intellectual property and patent rights and their protection; and
- sales and marketing capabilities.

We face competition in both the development and marketing of our product candidates. During development alternative treatments for similar or completely different disorders may limit our ability to get participants or co-sponsors for clinical trials with our product candidates. Any product candidates that we successfully develop that are approved for sale by the FDA or similar regulatory authorities in other countries may compete with products currently being used or that may become available in the future. Many organizations, including large pharmaceutical and biopharmaceutical companies, as well as academic and research organizations and government agencies, may be interested in pursuing the research and development of drug therapies that target the blood vessel wall. Many of these organizations have substantially greater capital resources than we have, and greater capabilities and resources for basic research, conducting preclinical studies and clinical trials, regulatory affairs, manufacturing, marketing and sales. As a result, our competitors may develop or license products or other novel technologies that are more effective, safer or less costly than our existing products or products that are being developed by us, or may obtain regulatory approval for products before we do. Clinical development by others may render our products or product candidates noncompetitive.

While we are unaware of any other products or product candidates that treat or prevent VOD or the apoptosis that our product candidate oligotide is designed to treat, we believe that other companies have products or are currently developing products to treat some of the same disorders and diseases that our other product candidates are designed to treat.

Our statements above are based on our general knowledge of and familiarity with our competitors.

Legal Proceedings

Currently, we are not a party to or engaged in any material legal proceedings.

ORGANIZATIONAL STRUCTURE

We are part of a group of pharmaceutical businesses founded in Italy in 1944 that has been involved in the research and development of drugs derived from DNA and DNA molecules since the 1970's. In 1993, FinSirton formed our company as Pharma Research S.r.L., an Italian private limited company, to pursue research and development activities of prospective pharmaceutical specialty products. FinSirton is our largest shareholder, and is controlled by Dr. Laura Ferro, who is our Chief Executive Officer and President and one of our directors, together with her family. In December 2000, we changed from a private limited company to a corporation and in July 2001 we changed our name to Gentium S.p.A. Under our current bylaws, the duration of our company will expire on December 31, 2050. We have no subsidiaries.

[Back to Table of Contents](#)**PROPERTY, PLANTS AND EQUIPMENT****Manufacturing and Facilities**

We own a manufacturing facility near Como, Italy which, at December 31, 2005, is subject to three mortgages securing repayment of an aggregate of approximately €2.3 million of debt owed to Banca Nazionale del Lavoro. In order to obtain FDA approval for the sale of any of our product candidates, the FDA must determine that this facility meets their current good manufacturing practices, or GMP, including requirements for equipment verification and validation of our manufacturing and cleaning processes. The FDA has not yet inspected our facility, but in 2004 we completed an approximately €7.2 million major overhaul and upgrade in anticipation of such an inspection. We have also upgraded our quality control laboratory equipment and upgrade equipment for our molecular biology and cell culture laboratories in 2005 in further anticipation of an FDA inspection at a cost of approximately €513 thousand.

We incurred costs of €207 thousand to purchase an electrical meter and back-up electrical power generator, including an advance payment to the utility company. We currently use Sirton's electrical meter, but Italian law requires us to have separate equipment. We are waiting for permission from a local authority to install a back-up generator that we have bought. In the event of a power outage, such back-up generator would prevent interruption of our operations and allow us to be independent from Sirton. We are planning to install it in August 2006, when the manufacturing facility halts production and closes down for annual maintenance. We are also planning to replace a storage tank for certain solvents. We anticipate that the replacement of the storage tank will be necessary to satisfy the FDA that the facility meets their good manufacturing practices. We expect to complete these upgrades in 2007. We raised the money to fund these improvements from our sale of our Series A notes and our initial public offering, and we may also use some of the net proceeds of our initial public offering and our October 2005 private placement to pay for future improvements.

We produce defibrotide, sulglycotide and calcium heparin at this facility. Defibrotide and calcium heparin are produced simultaneously. However, since the first steps of the manufacturing processes for defibrotide and sulglycotide currently utilize the same equipment, we do not run the manufacturing facility to produce defibrotide and sulglycotide simultaneously. We typically produce one of these products for a few weeks and then produce the other for a few weeks. We are planning to replace a principal reactor in the defibrotide production line and to separate the defibrotide production line from the sulglycotide line by installing an additional reactor in August 2006. These improvements will increase our potential capacity to manufacture defibrotide and sulglycotide by a factor of two, although we would have to hire new employees to do so. We expect to spend €600 for these two reactors including installation costs. We plan to finance these expenditures with a five-year term loan. We produce urokinase in a separate facility that is owned by Sirton and leased to us under a written lease agreement.

We typically operate our manufacturing facility on two eight hour shifts per day. Our estimated current production, our production capacity (assuming we do not produce any sulglycotide) and percentage of utilization for defibrotide and calcium heparin for the fiscal year 2006 are set forth below:

Product	Estimated Current Production Levels (kilograms/year)	Maximum Production Capacity With Two Eight Hour Shifts (kilograms/year)	Percentage of Utilization
Defibrotide	3,000	4,400	68%

Product	Estimated Current Production Levels (millions of units/year)	Maximum Production Capacity With Two Eight Hour Shifts (millions of units/year)	Percentage of Utilization
calcium heparin	28,000	41,000	68%

We currently manufacture defibrotide to treat and prevent venous thrombosis in Italy. Compared to the dosage necessary to treat and prevent VOD and to treat multiple myeloma, the treatment for this current use is significantly longer and therefore the overall amount of defibrotide is much larger than would be used to treat or prevent VOD or to treat multiple myeloma. Accordingly, if we obtain FDA or European regulatory approvals for those new uses, a smaller portion of our maximum capacity would be required for the manufacture of defibrotide for those additional uses.

Back to Table of Contents

Our estimated current production, production capacity (assuming we do not produce any defibrotide or calcium heparin) and percentage of utilization for sulglicotide for the fiscal year 2006 are set forth below:

Product	Estimated Current Production Level (kilograms/year)	Maximum Production Capacity With Two Eight Hour Shifts (kilograms/year)	Percentage of Utilization
Sulglicotide	1,050	2,750	38%

Our contract with Samil requires us to increase our production of sulglicotide to 2,600 kilograms in the period from June 20, 2005 to June 20, 2006 and to 3,400 kilograms in the period from June 20, 2006 to June 20, 2007. However, we believe it would be possible to increase the production of our products and to manufacture defibrotide and sulglicotide simultaneously by adding additional shifts of employees. In August 2006, we are planning to install a new reactor totally dedicated to the production of sulglicotide. Such installation will allow us to increase the production capacity of both defibrotide and sulglicotide, although we would need to hire additional employees to run both simultaneously.

Our estimated current production, production capacity and percentage of utilization for urokinase for the fiscal year 2006 are set forth below:

Product	Estimated Current Production Level (millions of units/year)	Maximum Production Capacity With One Eight Hour Shift (millions of units/year)	Percentage of Utilization
Urokinase	17.4	37	47%

Our business plan does not include increasing our current levels of production of urokinase.

Our facility is subject to customary regulation by regional agencies regarding worker health and safety, fire department, water, air, noise and environmental pollution and protection by Azienda Sanitaria Locale and Agenzia Regionale Prevenzione e Ambiente. We have engaged Lariana Depur, a consortium that specializes in the treatment of waste water, to treat our waste water. We monitor our waste water to control the levels of nitrogen, chlorides and chemical oxygen before delivering the waste water to Lariana Depur for additional treatment. We do not expect any difficulties in complying with these regulations. Also, we installed two scrubbers to reduce the odors and chemicals released into the air by the facility to comply with Italian regulations.

ITEM 4A.**UNRESOLVED STAFF COMMENTS**

Not applicable.

ITEM 5.**OPERATING AND FINANCIAL REVIEW AND PROSPECTS**

You should read the following discussion together with the financial statements, related notes and other financial information included elsewhere in this annual report. This discussion may contain predictions, estimates and other forward-looking statements that involve risks and uncertainties, including those discussed under “Risk Factors” and elsewhere in this annual report. These risks could cause our actual results to differ materially from any future performance suggested below.

[Back to Table of Contents](#)**OPERATING RESULTS****Overview**

We manufacture defibrotide at our facility. Currently, we sell the defibrotide to our affiliate, Sirton. Sirton focuses on processing the defibrotide for either oral administration or intra-venous administration and sells the finished products to Crinos S.p.A., a subsidiary of Stada Arzneimittel AG. Crinos markets defibrotide in Italy to both treat and prevent vascular disease with thrombosis under a semi-exclusive license agreement with us. We also manufacture and sell to Sirton two active pharmaceutical ingredients, urokinase and calcium heparin, used by Sirton to make generic drugs, and sulglicotide, which is intended to be used to treat peptic ulcers. We sell sulglicotide to unrelated third parties and are actively working on developing other customers for these products. We also manufacture a variety of other miscellaneous pharmaceutical products.

For each of the four years ended December 31, 2005, the sale of defibrotide, urokinase, calcium heparin, sulglicotide and our other products to Sirton amounted to approximately 100%, 100%, 92% and 97%, respectively, of our total product sales. The price of defibrotide to Sirton is based on comparable sale prices in years prior to 2002 to unrelated third-parties. The price for urokinase, calcium heparin, sulglicotide and our other products is based on comparable market prices charged by other manufacturers.

Sirton sells its finished products, including calcium heparin, primarily to one customer, Crinos, which sells them to the retail market. Calcium heparin, which is a by-product of manufacturing defibrotide, has seen decreased demand over the past several years due to a new competitive product, low molecular weight heparin, made by Aventis and other companies. Also, Crinos has limited its sale of urokinase to a single dose, which has a more limited market than multiple doses. As a result, Sirton's demand for these products has decreased over the past several years, and may continue to decrease over the next several years until and unless both we and Sirton develop new customers outside of Crinos's exclusive area. Despite the fact that Sirton has recently experienced financial difficulties which could impact our business, we believe that we can continue to operate without a significant change in our operations or any disposal of our assets.

We have also generated revenue from the receipt of research grants, from the sale of rights to our intellectual property, and from licensing agreements. Our licensing agreements have included up-front payments, some of which are paid based on achieving defined milestones and royalties from product sales in the licensed territories. Our revenues by type are as described below:

<i>(in thousands)</i>	For the Years Ended December 31,					
	2003		2004		2005	
Product sales:						
Defibrotide	€	4,012	€	1,424	€	2,476
Urokinase		1,784		1,316		684
Calcium heparin		579		51		125
Sulglicotide		147		243		53
Other		10		79		23
Total product sales		6,532		3,113		3,361
Other income		1,843		583		280
Total revenue	€	8,375	€	3,696	€	3,641

Of our product sales in the periods shown in the table above, all were sales in Italy to our affiliate Sirton except for 7.8% during the year ended December 31, 2004, which were sales of sulglicotide in Korea. Substantially all of our

other income was for licensing the rights to our product candidates in the United States and Canada.

Our cost of goods sold consists of material costs, direct labor and related benefits and payroll burden, utilities, quality control expenses, depreciation of our facility and other indirect costs of our facility.

The gross margin from our current revenues contributes towards our general and administrative expenses, research and development expenses, and capital expenditures. Our general and administrative expenses include compensation for our executive officers, office facilities, accounting and human resources, information technology services, professional fees and other corporate expenses, including public company expenses. Some of these services are provided pursuant to contracts with Sirton and FinSirton. We have implemented plans to decrease our reliance on shared services from these affiliates over time. As of December 31, 2005, we are providing our own purchasing, logistic, quality assurance, accounting, controlling and

-39-

Back to Table of Contents

reporting services and continue to obtain corporate services, payroll services, information technology services, infrastructure costs and quality control services from these affiliates. As of February 2006, we established our own treasury, regulatory and information technology departments, but we are still relying on the IT infrastructure provided by Sirton.

As discussed in our financial statements included herein, we also changed the estimated useful life of our productive equipment. As part of a fair value review of our assets, a third party specialist appraised the asset value and the residual life of our installed plant. On the basis of that independent appraisal, we increased the estimated life of our plant equipment from 8 to 10 years, effective October 1, 2005. The effect was to reduce the total depreciation expense by €239 thousand for the year ended December 31, 2005.

We expect to continue to incur net losses as we continue the development of our product candidates, apply for regulatory approvals and expand our operations.

Critical Accounting Policies and Estimates

Our financial statements have been prepared in accordance with accounting principles generally accepted in the United States. The preparation of these financial statements requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues, expenses and related disclosures. Actual results could differ from those estimates.

We believe the following policies to be the most critical to an understanding of our financial conditions and results of operations because they require us to make estimates, assumptions and judgments about matters that are inherently uncertain.

Revenue Recognition

Currently, our primary source of revenue is from the sale of products to our affiliate, Sirton. We recognize revenue from product sales when ownership of the product is transferred to and accepted by the customer, the sales price is fixed and determinable, and collectibility is reasonably assured. Provisions for returns and other adjustments related to sales are provided in the same period the related sales are recorded on the basis of historical rates of return. Historically our returns have been insignificant due to our most significant customer also being an affiliate. However, given our intent to grow our non-affiliate revenues, we expect that in the future we will be required to periodically estimate the amount of goods subject to return.

Licensing and royalty agreements generally contemplate that our technology or intellectual property will be utilized to commercialize or produce certain pharmaceutical products and that we will receive certain fees pursuant to these agreements. Up-front payments related to licensing agreements are deferred and recognized ratably over the life of the agreement. Royalty revenues are recognized in proportion to the underlying sales. We also derive revenues from research and development agreements with co-development partners. We initially defer milestone revenues on such arrangements and subsequently recognize them as income in proportion to the costs incurred for the related development phase and in accordance with the contract terms. Performance milestone payments are not subject to forfeiture. We recognize revenue from these contractual arrangements according to Staff Accounting Bulletin No. 104, "Revenue Recognition." When necessary, we divide our agreements into separate units of accounting as required by Emerging Issues Task Force No. 00-21, "Revenue Arrangements with Multiple Deliverables" before using the applicable revenue recognition policy for each arrangement within the agreement. Accordingly, we recognize revenues on performance milestones contracts only when we have met specific targets or milestones set forth in the contracts. We defer and recognize as revenue non-refundable payments received in advance that are related to future performance over the life of the related research project.

We have used and expect to continue to enter into arrangements that have multiple deliverables. The timing and amount of revenue recognition is subject to our estimates of the relative fair values of the individual components of an agreement. In connection with recording revenue, we must make estimates and assumptions determining the expected conversion of the revenue streams to cash collected. The cash conversion estimation process requires that our management make assumptions based on historical results, future expectations, the economic and competitive environment and changes in the credit worthiness of customers, and other relevant factors. If these assumptions prove to be incorrect, our actual conversion rate of recorded revenue to cash may be lower than expected and we would be required to increase our allowance for doubtful accounts.

Our current estimate of bad debt expense is zero, as approximately 95% of our product sales are with one affiliate. If we increased our estimate of bad debt to 1% of sales, our operating results would have been lower by approximately €65 thousand, €31 thousand and €34 thousand for the three years ended December 31, 2005, respectively. These amounts would have a material impact on our results of operation and our shareholder's equity, but no impact on our cash flow in those periods.

Inventories

We state inventories at the lower of cost or market, determining cost on an average cost basis. We periodically review inventories and reduce items that we consider outdated or obsolete to their estimated net realizable value. We estimate reserves

Back to Table of Contents

for excess and obsolete inventories based on inventory levels on hand, future purchase commitments, and current and forecasted product demand. Our reserve level, and as a result our overall profitability, is therefore subject to our ability to reasonably forecast future sales levels versus quantities on hand and existing purchase commitments. Forecasting of demand and resource planning are subject to extensive assumptions that we must make regarding, among other variables, expected market changes, overall demand, pricing incentives and raw material availability. Significant changes in these estimates could indicate that inventory levels are excessive, which would require us to reduce inventories to their estimated net realizable value. We capitalize inventory costs associated with certain by-products, based on management's judgment of probable future commercial use and net realizable value. We could be required to permanently write down previously capitalized costs related to commercial inventory upon change in such judgment, a delay in commercialization, delay of approval by regulatory bodies, or other potential factors. In the highly regulated industry in which we operate, raw materials, work in progress and finished goods inventories have expiration dates that must be factored into our judgments about the recoverability of inventory cost. Additionally, if our estimate of a product's demand and pricing is such that we may not fully recover the cost of inventory, we must consider that in our judgment as well. In the context of reflecting inventory at the lower of cost or market, we will record a permanent inventory write-down as soon as a need for such a write down is determined.

Impairment of Long-lived Assets

Our long-lived assets consist primarily of product rights and property and equipment. In accordance with Statement of Financial Accounting Standards No. 144, "Accounting for the Impairment or Disposal of Long-Lived Assets" (SFAS 144), we evaluate our ability to recover the carrying value of long-lived assets used in our business, considering changes in the business environment or other facts and circumstances that suggest their value may be impaired.

To assess impairment of property, manufacturing facility and equipment and amortizing intangible assets for purposes of U.S. generally accepted accounting principles, we use the guidance outlined in SFAS 144. If, based on the preceding discussion, our management has concluded that impairment indicators exist, we will initially review by assessing the undiscounted cash flows expected to be derived from the asset or group of assets, comparing the lowest level of total expected undiscounted cash flow to the carrying value. If the carrying value of the asset or the group of assets exceeds the sum of the undiscounted cash flows, impairment is considered to exist. An impairment charge is assessed by comparing the assets' fair value to the carrying value. Fair value can be calculated by a number of different approaches, including discounted cash flow, comparables, market valuations or quoted market prices. The process and steps required to assess the possible impairments of assets, including the identification of possible impairment indicators, assessing undiscounted cash flows, selecting the appropriate discount rate, the calculation of the weighted average cost of capital and the discounts or premiums inherent in market prices requires a substantial amount of management discretion and judgment. If actual results differ from these estimates, or if we adjust these estimates in future periods, operating results could be significantly affected.

Research and Development Expenses

We have several activities and cost drivers that we collectively refer to as "research and development." These activities include salaries and benefits of our direct employees, facility costs, overhead costs, clinical trial costs and related trial product manufacturing costs, contracted services, subcontractor costs and other research and or developmental related costs. Research and development costs, including any upfront payments and milestones paid to collaborators, are expensed as incurred. The timing of upfront fees and milestone payments in the future may cause variability in future research and development expenses. Clinical trial costs include costs associated with contract research organizations. The billings that we receive from contract research organizations for services rendered can lag for several months. We accrue the estimated costs of the contract research organizations related services based on our estimate of management fees, site management and monitoring costs and data management costs. Our research and development department is in continuous communication with our contract research organizations suppliers to assess both their progress on the

underlying study and the reasonableness of their cost estimates. Differences between estimated trial costs and actual have not been material to date, and any changes have been made when they become known. Under this policy, research and development expense can vary due to accrual adjustments related to the underlying clinical trials and the expenses incurred by the contract research organizations. For the years ended December 31, 2003, 2004 and 2005, we have incurred research and development expenses of €2.253 million, €2.922 million and €4.557 million, respectively. As of December 31, 2005, we had €2.649 million of future payables under outstanding contracts with various contract research organizations. Most of these contracts are on a cost plus basis or actual cost basis.

Share-Based Compensation

We have adopted the fair value based method of accounting for share-based employee compensation in accordance with the provisions of Statement of Financial Accounting Standards No. 123R, "Share Based Payment" (SFAS 123R). SFAS 123R requires us to estimate a significant number of variables in order to derive a fair value of an equity based instrument. For example, the risk of the underlying deliverable equity instruments (i.e., our ordinary shares) as compared to the market as a whole, is generally reflected in our unique "Beta". This is a unique measurement to each company, and requires several assumptions. The most common and generally accepted valuation models related to option pricing also include many

Back to Table of Contents

significant assumptions related to such variables as dividend yields, share prices and the estimated life of the option before being exercised. The actual selection of which valuation model to use requires judgment, as there are several models to choose from.

In using the option pricing model that we have selected, changes in the underlying assumptions have the following effect on the resulting fair value output:

An increase to the:	Results in a fair value estimate that is:
Price of the underlying share	Higher
Exercise price of option	Lower
Expected volatility of stock	Higher
Expected dividends on stock	Lower
Risk-free interest rate	Higher
Expected term of option	Higher

In our current valuation, we consider the volatility factor to be critical. We have used a weighted average 40% factor based on what we believe is a representative sample of similar biopharmaceutical companies. However, this sample is not perfect as it omits, for example, Italian companies, due to the fact that there are a limited number of companies such as ourselves publicly traded in the U.S. market. If we increased our volatility factor to 80%, the fair value of our stock options granted in 2004 and in 2005 would have increased by \$41 thousand and \$1.857 million, respectively, and would have resulted in \$23 thousand and \$337 thousand in additional compensation expense in 2004 and 2005, respectively. Therefore, significant changes to these estimates could have a material impact on the results of our operations.

Accounting for income taxes

We use the liability method of accounting for income taxes, as set forth in Statement of Financial Accounting Standards No. 109, "Accounting for Income Taxes." Under this method, we recognize deferred tax assets and liabilities for the expected future tax consequences of temporary differences between the carrying amounts and the tax basis of assets and liabilities and net operating loss carry-forwards, all of which we calculate using presently enacted tax rates. We establish valuation allowances when necessary to reduce deferred tax assets to the amount that we expect to be realized.

In our accompanying financial statements we have reserved for all of our deferred tax assets as we currently believe that it is more likely than not that the assets will not be recoverable during their estimated life. In establishing our deferred tax position, in particular deferred tax assets, we only establish the tax asset if we believe that it is probable that this asset will be an allowable deduction in our tax jurisdiction. The assessment of the "recoverability" of that asset is a separate exercise, which uses the "more likely than not" criteria. In Italy, which is currently the only taxing jurisdiction where we are required to file a tax return, we have assessed that due to the limited lives of our net operating losses (limited to 5 years), we believe that these assets will not be recoverable before expiration. Although we have paid some corporate income taxes in the past, the significant amount of other tax assets in conjunction with the higher level of expected expenditures, the already existing net operating losses and limited taxable income expected in the near future resulted in our estimating that a complete valuation allowance was necessary. Significant changes either to the underlying facts, such as an increase in the net operating loss life in Italy, or our estimates, such as our ability to generate meaningful taxable income, could result in changes to our existing valuation allowance. Such

changes could have a material impact on our results of operations or financial position.

Recent Accounting Pronouncements

In May 2005, the FASB issued Statement of Financial Accounting Standard No 154, "Accounting Changes and Error Corrections" (SFAS 154), which replaces APB Opinion No. 20, "Accounting Changes," and supersedes FASB Statement No. 3, "Reporting Accounting Changes in Interim Financial Statements - an amendment of APB Opinion No. 28." SFAS 154 requires retrospective application to prior periods' financial statements of changes in accounting principle, unless it is impracticable to determine either the period-specific effects or the cumulative effect of the change. When it is impracticable to determine the period-specific effects of an accounting change on one or more individual prior periods presented, SFAS 154 requires that the new accounting principle be applied to the balances of assets and liabilities as of the beginning of the earliest period for which retrospective application is practicable and that a corresponding adjustment be made to the opening balance of retained earnings for that period rather than being reported in an income statement. When it is impracticable to determine the cumulative effect of applying a change in accounting principle to all prior periods, SFAS 154 requires that the new accounting principle be applied as if it were adopted prospectively from the earliest date practicable. SFAS 154 is effective for accounting changes and corrections of errors made in fiscal years beginning after December 15, 2005. We have adopted the provisions of SFAS 154, which did not have a significant impact on our results of operations.

Back to Table of Contents

In July 2005, the FASB published an Exposure Draft of a proposed Interpretation, “Accounting for Uncertain Tax Positions.” The Exposure Draft seeks to reduce the significant diversity in practice associated with recognition and measurement in the accounting for income taxes. It would apply to all tax positions accounted for in accordance with SFAS 109, “Accounting for Income Taxes.” The Exposure Draft requires that a tax position meet a “probable recognition threshold” for the benefit of the uncertain tax position to be recognized in the financial statements. This threshold is to be met assuming that the tax authorities will examine the uncertain tax position. The Exposure Draft contains guidance with respect to the measurement of the benefit that is recognized for an uncertain tax position, when that benefit should be recognized, and other matters. This proposed interpretation would clarify the accounting for uncertain tax positions in accordance with SFAS 109. The FASB staff is considering the comment letters that have been received and is determining the plan for deliberations. The FASB board expects to issue a final interpretation, which would include amendments to SFAS 109, in the first quarter of 2006. We are currently evaluating the impact this proposed interpretation would have on our results of operations.

Results of Operations

The following tables set forth our results of operations expressed as a percentage of total product sales:

	For The Years Ended December 31,					
	2003		2004		2005	
<i>000s omitted</i>	Amount	Percent	Amount	Percent	Amount	Percent
Sales to affiliates	€ 6,532	100.0%	€ 2,870	92.2%	€ 3,260	97.0%
Third party product sales			243	7.8	101	3.0
Total product sales	6,532	100.0	3,113	100.0	3,361	100.0
Other income and revenues	1,843	28.2	583	18.7	280	8.3
Total Revenues	8,375	128.2	3,696	118.7	3,641	108.3
Operating costs and expenses:						
Cost of goods sold	2,435	37.3	2,579	82.8	2,911	86.6
Charges from affiliates	1,485	22.7	1,665	53.5	1,047	31.2
Research and development	2,253	34.5	2,922	93.9	4,557	135.6
General and administrative	854	13.1	1,194	38.4	2,284	68.0
Depreciation and amortization	67	1.0	89	2.9	118	3.5

Net income/(loss) per share:						
Basic and diluted net income/(loss) per share	0.24		(1.41)		(1.78)	
Weighted average shares used to compute basic and diluted net income/(loss) per share	5,000,000		5,000,000		6,933,104	

Year Ended December 31, 2005 Compared to Year Ended December 31, 2004

Product sales.

Our sales were €3.36 million for 2005 compared to €3.11 million in 2004. The timing of manufacturer orders can cause variability in sales. Total product sales in 2005 were in line with the prior period although sales to our affiliate increased

Back to Table of Contents

13% to €3.26 million and sales to third parties decreased 58% to €101 thousand. Sales to affiliates increased due to higher sales volume of our main product, defibrotide, which represents 74% (or 2.47 million) and 46% (or €1.42 million) of the total product sales in 2005 and 2004, respectively. The increase in affiliate sales of defibrotide was partially offset by a decrease in sales of urokinase which decreased from 42% (or €1.31 million) to 20% (or €684 thousand) of the total product sales. The decrease is due to Crinos, the principal customer of our affiliate Sirton, selling urokinase in only a single dose, which has a more limited market than multiple doses. Third party product sales decreased primarily due to lower sales volume of sulglicotide to a Korean customer. The Korean customer delayed the launch of a new product which uses sulglicotide. We expect future growth in sulglicotide revenue due to the expected launch of the Korean customer's product in 2006.

Cost of goods sold.

Our cost of goods sold was €2.91 million for 2005 compared to €2.58 million in 2004. In 2005, we wrote down €291 thousand of inventory which was charged to cost of goods sold to adjust cost to its estimated net realizable value. Cost of goods sold as percent of product sales was 86.6% in 2005 and 82.8% in 2004. The slight increase in costs as a percentage of sales was due to the revised estimate on manufacturing facilities and equipment useful life which resulted in lower depreciation expenses allocated to cost of goods sold in the fourth quarter of 2005 offset by the increase in inventory write-off and quality control expenses.

Other income and revenues

Our other income and revenues was €280 thousand for 2005 compared to €583 thousand in 2004. In 2004, the Company recognized a milestone payment of €273 thousand under its license agreement with Sigma-Tau Pharmaceuticals, Inc. due to the issuance of an investigational new drug application for the Phase III clinical trial of defibrotide to treat VOD.

Research and development expenses.

We incurred research and development expenses of €4.56 million for 2005 compared to €2.92 million in 2004. The increase was primarily related to the timing and amount of research and development expenses for the development of defibrotide to treat and prevent VOD and performance of related obligations under our license agreement with Sigma-Tau. Also contributing to the increase were growth in headcount and outside services to support increased activity in our clinical trials, including the preparation of regulatory filings and clinical production costs and stock based compensation expense of €117.

General and administrative expenses.

Our general and administrative expenses were €2.28 million in 2005 compared to €1.19 million in 2004. The increase in 2005 was primarily due to increased headcount and facilities related expenses, general corporate expenses of being a public company, increase in internally provided administrative services to replace administrative services previously provided by affiliates and stock based compensation expense of €329.

Depreciation and amortization expense.

Depreciation and amortization expense was €118 thousand in 2005 compared to €89 thousand in 2004. Depreciation expense excludes depreciation on our manufacturing facilities which are included in cost of goods sold.

Interest income (expense), net.

The components of interest expense have changed primarily due to the effects of our issuance of our Series A senior convertible promissory notes in the fourth quarter of 2004 and first quarter of 2005. In the 2005 period, interest expense on the Series A notes was €4.095 million, including non-cash interest expense of €3.837 million from amortization of the issue discount and issue cost. Interest expense for the 2004 period is net of interest which was capitalized as part of our manufacturing facility overhaul. The increase in interest expense was partially offset by income amounting to €156 resulting from higher level of invested funds due to the completion of our initial public offering in June 2005.

Income taxes.

Income tax expense was €646 thousand on a pre-tax loss of €11.67 million for the year ended December 31, 2005. We incurred income tax expense of €28 thousand on a pre-tax loss of €7 million for the year ended December 31, 2004. In the 2005 period our income tax expense included an update of our assumptions underlying the recovery of a pre-paid tax asset that we inherited from the original spin-off from Sirton. We believe that the tax benefits related to the prepayment will no longer be available, therefore we have written off the entire pre-paid tax asset.

Net loss.

Our net loss was €12.3 million in 2005 compared to €7.0 million in 2004. The increase was primarily due to the increase in interest expense, stock based compensation, research and development, general and administrative expenses, deferred tax write-off and a decrease in other income and revenue.

Back to Table of Contents

Year Ended December 31, 2004 Compared to Year Ended December 31, 2003

Sales revenue.

Our sales were €3.11 million for the year ended December 31, 2004 compared to €6.53 million for the comparable period in 2003, a decrease of 52%. The decrease was primarily due to a need to temporarily cease operations at our manufacturing facility from February 2004 through August 2004 to complete a major facility overhaul and upgrade. A decline in sales to our principal customer and affiliate, Sirton, due to decreased demand by Sirton's principal customer, Crinos, also contributed to the decrease, slightly offset by an increase in revenues of €243 thousand from sales of sulglicotide.

Cost of goods sold.

Our cost of goods sold was €2.57 million for the year ended December 31, 2004 compared to €2.43 million for the comparable period in 2003. Our cost of goods sold as a percentage of product sales increased to 83% in 2004 from 37% in 2003. The increase in costs as a percentage of product sales was primarily due to the absorption of the fixed portion of our production costs by a reduced level of sales and the cost of materials for testing batches of product as we restarted our facility after the upgrade.

Other income and revenues.

Our other income and revenues was €583 thousand for the year ended December 31, 2004, compared to €1.84 million for the comparable period in 2003. Other income is primarily due to our recognition of revenues for performance milestone payments received under our license agreement with Sigma Tau Pharmaceuticals, Inc. and upfront payments recognized ratably over the expected life of the research period.

Research and development expenses.

We incurred research and development expenses of €2.92 million for the year ended December 31, 2004 compared to €2.25 million for the comparable period in 2003. The expenses were primarily for the development of defibrotide to treat and prevent VOD. The difference between the periods is primarily due to the timing and expenses incurred for clinical trials.

General and administrative expense.

Our general and administrative expense was €1.194 million for the year ended December 31, 2004 compared to €854 thousand for the comparable period in 2003. The slight decrease in expenses incurred is mainly due to the overhaul of our manufacturing facilities in 2004 and stock based compensation expense.

Depreciation and amortization expense.

Depreciation and amortization expense was €89 thousand for the year ended December 31, 2004 compared to €67 thousand for the comparable period in 2003. Depreciation expense excludes depreciation on our manufacturing facilities which are included in cost of goods sold.

Interest income (expense), net.

Interest expense was €2.20 million for the year ended December 31, 2004 compared to €71 thousand for the comparable period in 2003. Interest expense increased because of our increased borrowings, including our new mortgage, our

equipment financing, loans from our affiliate, Sirton, and the issuance of our Series A senior convertible promissory notes. In 2004, interest expense included non-cash interest expense from the amortization of the beneficial conversion feature of our Series A notes of €1.77 million and amortization of debt issue costs in the aggregate amount of €1.775 million. Interest expense for the 2004 period is net of interest which was capitalized as part of our manufacturing facility overhaul.

Income taxes.

Income tax expense was €28 thousand on a pre-tax loss of €7 million for the year ended December 31, 2004. We incurred tax expenses of €159 thousand for the comparable 2003 period on a pre-tax income of €1.366 million. The Company has significant tax assets, therefore the 2003 Italian tax provision allowed the utilization of certain tax assets related to our considerable differences between the carrying value of our fixed assets. Also, as Italy is a dual-income tax jurisdiction, non-taxable income for the corporate income tax rate does not, necessarily, indicate that no income taxes are due. In 2003 some amounts of tax expense were paid due to the taxable income on our local tax return. In 2004, less tax expense overall was due, even though our taxable income was considerably worse. Given our considerable tax assets and expected high levels of research and development going forward, we don't expect to have any cash tax expense for at least 3 years.

Net income (loss).

Our net loss was €7.02 million for the year ended December 31, 2004 compared to a net income of €1.2 million for the comparable 2003 period. The increased loss was primarily due to the decrease in revenues and the related decrease in gross margin and the increase in general and administrative expenses.

[Back to Table of Contents](#)

LIQUIDITY AND CAPITAL RESOURCES

For the three years ended December 31, 2003, we funded our operations principally from operating cash flow, which included research grants, and the sale and licensing of intellectual property. For the year ended December 31, 2004, we used €4.377 million of cash in operating activities and we spend €5.341million on capital expenditures. We funded our operations in 2004 principally with loans from our affiliate, Sirton, in the amount of €3.0 million, short-term borrowings from a financial institution in the amount of €2.690 million and the proceeds of our Series A notes in the amount of \$6.098 million. We used €800 thousand of the proceeds of the sale of the Series A notes to repay a portion of the loans we owed to Sirton during the year ended December 31, 2004.

From January 2005 through the closing of our initial public offering in June 2005, described below, we funded our operations and repaid an additional €700 thousand of the loans we owed to Sirton with additional proceeds of the sale of our Series A notes in the amount of \$1.912 million and capital contributions from our then-majority shareholder, FinSirton, in the amount of €3.9 million. We also used part of the proceeds of the sale of the Series A notes to pay for part of the costs of our initial public offering.

In June 2005 we completed an initial public offering of 2.4 million of our ADSs generating gross proceeds of \$21.6 million. In addition, the holder of \$2.912 million of our Series A notes converted its notes into 359,505 of our ordinary shares concurrent with the closing of our initial public offering. In July 2005, the underwriters of our initial public offering exercised part of their over-allotment option by purchasing an additional 300,000 of our ADSs generating additional gross proceeds of \$2.7 million. We repaid the remaining €1.5 million of the loans we owed to Sirton and the remaining \$5.098 million of our Series A notes with the proceeds of the initial public offering and over-allotment option exercise. These proceeds also funded our operations in 2005.

In October 2005, we completed a private placement of 1,551,125 of our ADSs together with warrants to purchase 620,450 ADSs in consideration for a price of \$7.05 per unit, for aggregate gross proceeds of \$10.9 million.

The Company applied to a national banking institution, Intesa-Mediocredito, for a medium/long-term financing facility of up to €1 million to finance the Company's purchase and installation of two reactors in our manufacturing facility. In February 2006, Intesa-Mediocredito notified the Company that it would grant the financing facility, and in April 2006, Intesa-Mediocredito granted the financing. The financing has a five-year term and bears interest at the three-month Euribor rate plus 1.7%. It is secured by Banca Intesa debt securities in the aggregate amount of €525 thousand that the Company purchased and which expire on May 10, 2011. The Company makes installment payments on the financing facility of €131 thousand every six months until its final maturity in April 2011.

Under Italian law, a local authority, the Lombardy Regional Authority, provided various incentives to the Company to purchase the new reactors, on the theory that the reactors improve the working conditions for the Company's employees and constitute an investment in innovation. These incentives were in the form of the agreement by the Lombardy Regional Authority to pay (i) up to €75 thousand of certain social securities contributions that the Company is obligated to pay to the national government and (ii) up to €80 thousand of interest due on the financing facility.

We expect to devote substantial resources to continue our research and development efforts, on regulatory expenses, and to expand our licensing and collaboration efforts. Our funding requirements will depend on numerous factors including:

- whether we are able to commercialize and sell defibrotide for the uses for which we are developing it;
- the scope and results of our clinical trials;

- advancement of other product candidates in development;
- the timing of, and the costs involved in, obtaining regulatory approvals;
- the cost of manufacturing activities;
- the costs involved in preparing, filing, prosecuting, maintaining and enforcing patent claims and other patent-related costs, including litigation costs and results of such litigation; and
- our ability to establish and maintain additional collaborative arrangements.

We do not expect our revenues to increase significantly until we successfully obtain FDA and European regulatory marketing approval for, and begin selling, defibrotide to treat VOD with multiple-organ failure. We believe that some of the key factors that will affect our internal and external sources of cash are:

- our ability to obtain FDA and European regulatory marketing approval for and to commercially launch defibrotide to treat VOD with multiple-organ failure;

Back to Table of Contents

- the success of our other clinical and pre-clinical development programs, including development of defibrotide to prevent VOD and to treat multiple myeloma;
- the receptivity of the capital markets to financings of biotechnology companies; and
- our ability to enter into additional strategic agreements with corporate and academic collaborators and the success of such relationships.

In 2005, we used approximately €8.9 million of cash to fund operations and working capital requirements, including research and development, and incurred capital expenditures of approximately €1.4 million. As of December 31, 2005, we had cash and cash equivalents of €12.8 million. In 2006, we expect to use approximately €15 million of cash to fund operating activities, €1.7 million for capital expenditures and €0.9 million for scheduled payments on our debt for an aggregate of €3.4 million.

Therefore, in order to meet our capital requirements and maintain an adequate safety reserve of cash, we expect to need additional funding in 2006. Changes in our operating plans, delays in obtaining approval to market our product candidates, lower than anticipated revenues, increased expenses or other events, including those described in “Risk Factors,” may cause us to seek additional debt or equity financing on an accelerated basis. Financing may not be available on acceptable terms, or at all, and our failure to raise capital when needed could negatively impact our growth plans and our financial condition and results of operations. Additional equity financing may be dilutive to the holders of our ordinary shares and debt financing, if available, may involve significant cash payment obligations and covenants and/or financial ratios that restrict our ability to operate our business.

Italian law provides for limits and restrictions on our issuance of debt securities. We may not issue debt securities for an amount exceeding twice the amount of the sum of the aggregate par value of our ordinary shares (which we call our capital), our legal reserve and any other disposable reserves appearing on our latest balance sheet approved by our shareholders. The legal reserve is a reserve to which we allocate 5% of our net income each year until it equals at least 20% of our capital. One of the other reserves that we maintain on our balance sheet is a “share premium reserve”, meaning amounts paid for our ordinary shares in excess of the capital. At December 31, 2005, the sum of our capital, legal reserves and other reserves on our Italian GAAP balance sheet was €29.6 million. If we issue debt securities in the future, we may not voluntarily reduce our capital or our reserves (such as by declaring dividends) if it results in the aggregate of the capital and reserves being less than half of the outstanding amount of the debt. If our equity is reduced by losses or otherwise such that the amount of the outstanding debt securities is more than twice the amount of our equity, some legal scholars are of the opinion that the ratio must be restored by a recapitalization of our company. If our equity were reduced, we could recapitalize by means of issuing new shares or having our shareholders contribute additional capital to our company, although there can be no assurance that we would be able to find purchasers for new shares or that any of our shareholders would be willing to contribute additional capital.

In order to issue new equity or debt securities convertible into equity, with some exceptions, we must increase our authorized capital. In order to do so, our board must meet and resolve to recommend to our shareholders that they approve an amendment to our bylaws to increase our capital. Our shareholders must then approve that amendment to our bylaws in a formal meeting duly called, with the favorable vote of the required majority, which may change depending on whether the meeting is held on a first or subsequent call. These meetings take time to call. In addition, a notary public must verify the compliance of the capital increase with our bylaws and applicable Italian law. Further, under Italian law, our existing shareholders and any holders of convertible securities sometimes have preemptive rights to acquire any such shares on the same terms as are approved concurrent with the new increase of the authorized capital pro rata based on their percentage interests in our company. Also, our shareholders can authorize the board of directors to increase our capital, but the board may exercise such power for only five years. If the authorized capital is not issued by the end of those five years, the authorized capital expires, and our board and shareholders would need to

meet again to authorize a new capital increase. Our shareholders authorized our board of directors to increase our capital by up to €90 million of par value for ordinary shares and €10 million for ordinary shares issuable upon conversion of convertible bonds on April 28, 2006. Italian law also provides that if the shareholders vote to increase our capital, dissenting, abstaining or absent shareholders representing more than 5% of the outstanding shares of our company may, for a period of 90 days following the filing of the shareholders' approval with the Registry of Companies, challenge such capital increase if the increase was not in compliance with Italian law. In certain cases (if, for example, a shareholders' meeting was not called), any interested person may challenge the capital increase for a period of 180 days following the filing of the shareholders' approval with the Registry of Companies. Finally, once our shareholders authorize a capital increase, we must issue all of those authorized shares before the shareholders may authorize a new capital increase, unless the shareholders vote to cancel the previously authorized shares. These restrictions could limit our ability to issue new equity or convertible debt securities on a timely basis.

If we are unable to obtain additional financing, we may be required to reduce the scope of, or delay or eliminate some or all of our planned research, development and commercialization activities, which could harm our financing condition and operating results.

[Back to Table of Contents](#)**RESEARCH AND DEVELOPMENT**

We discover, research and conduct initial development of our product candidates at our facilities in Italy, and also hire consultants to do so in various countries in Europe and the United States. We typically conduct preclinical laboratory and animal studies of product candidates either ourselves or through other research facilities. We typically engage medical centers to conduct clinical trials of our product candidates. In certain cases, where we believe the development costs will be substantial, we may enter into strategic partnerships to help us develop those product candidates. We expense research and development costs as incurred.

Research and Development Expenses

Our research and development expenses consist primarily of costs associated with research, preclinical development and clinical trials for our product candidates. During the years ended December 31, 2003, 2004 and 2005, we had three major categories of research projects relating to our advanced product candidates: defibrotide to treat VOD, defibrotide to prevent VOD and assorted other projects. The table below presents our research and development expenses by project for each of the years ended December 31, 2003, 2004 and 2005.

<i>(in thousands)</i>	For the Year Ended December 31,					
	2003		2004		2005	
Defibrotide to treat VOD	€	2,077	€	2,521	€	4,123
Defibrotide to prevent VOD		25		112		175
Others		151		289		259
Total	€	2,253	€	2,922	€	4,557

The Dana-Farber Cancer Institute at Harvard University sponsored and completed in December 2005 a Phase II clinical trial in the United States of defibrotide to treat VOD with multiple-organ failure. We started enrollment of patients in a Phase III clinical trial of this product candidate in the United States in the second quarter of 2006. We do not anticipate obtaining FDA or European regulatory approval of this product candidate before 2008. The table above also includes research and development expenses that we incurred in connection with a Phase II/III clinical trial of defibrotide to treat VOD in Europe and Israel that was sponsored by a committee of clinical investigators and conducted by Consorzio Mario Negri Sud. The committee of clinical investigators terminated this trial in October 2005.

Defibrotide to prevent VOD is also currently in a Phase II/III clinical trial of children in Europe sponsored by our company and the European Group for Blood and Marrow Transplantation. We expect to begin a Phase II/III clinical trial of defibrotide to prevent VOD and transplant associated microangiopathy in adults in Europe in the second quarter of 2006, which will be sponsored by our company and the European Group for Blood and Marrow Transplantation. We do not anticipate obtaining European regulatory approval of this product candidate before 2009.

An independent Phase I/II clinical trial in Italy of defibrotide, in combination with melphalan, prednisone and thalidomide, to treat patients with advanced and refractory multiple myeloma started in December 2005. As a result, no costs associated with development of this product candidate are reflected in the table above. This clinical trial is being conducted at approximately 10 cancer centers in Italy, starting with Hospital Molinette of Torino, and the principal investigator is Dr. Mario Boccadoro, M.D., at the Division of Hematology, University of Turin, Italy.

The table above includes research and development expenses that we incurred in connection with a Phase I clinical trial of defibrotide to mobilize and increase the number of stem cells available in patients' and donors' blood for subsequent stem cell transplantation sponsored by the National Institute of Tumors of Milan. The National Institute of Tumors of Milan terminated this trial in December 2005. We cannot estimate when, if ever, we will be able to obtain

European regulatory approval of this product candidate.

We expect to continue to increase our research and development expenses for the research and development of defibrotide to treat and prevent VOD and the treatment of multiple myeloma and possibly for other indications for defibrotide. This will involve sponsoring or funding, or both, clinical trials in both the United States and Europe. Development timelines and costs are difficult to estimate and may vary significantly for each product candidate and from quarter to quarter. The process of seeking regulatory approvals, and the subsequent compliance with applicable regulations, requires the expenditure of substantial resources. We expect that we will need additional funds before we have completed the development of our product candidates. We may seek to raise these funds through licensing and other collaboration agreements or through the sale of debt or equity securities. There can be no assurance that we will be successful in raising additional funds or that if we are, it will be on favorable terms.

-48-

Back to Table of Contents

A further discussion of the risks and uncertainties associated with developing our product candidates and certain consequences of failing to do so are set forth in the risk factors under the heading “Risks Relating to Our Business” as well as other risk factors.

Intellectual Property Rights And Patents

As of December 31, 2005, we had seven issued U.S. patents, four pending U.S. patent applications, 28 issued foreign patents, 96 pending foreign patent applications and three international patent applications (not nationalized yet). These include the following. The United States Patent & Trademark Office issued a patent covering our manufacturing process of defibrotide in 1991, which expires in 2008. In April 2001, we filed a patent application with the United States Patent & Trademark Office and corresponding patent applications in certain foreign countries regarding the use of defibrotide in stem cell transplants, which expires in 2021.

Patent rights and other proprietary rights are important in our business. We have sought, and intend to continue to seek, patent protection for our inventions and rely upon patents, trademarks, trade secrets, know-how, continuing technological innovations and licensing opportunities to develop and maintain a competitive advantage.

However, the patent positions of companies like ours involve complex legal and factual questions and, therefore, their enforceability cannot be predicted with any certainty. Our patents, those licensed to us, and those that may be issued to us in the future may be challenged, invalidated or circumvented, and the rights granted under them may not provide us with protection or competitive advantages against competitors with similar technology. Furthermore, our competitors may independently develop similar technologies or duplicate any technology developed by us. Because of the extensive time required for development, testing and regulatory review of a potential product, it is possible that, before any of our product candidates can be approved for sale and commercialized, our relevant patent rights may expire or remain in force for only a short period following commercialization.

TREND INFORMATION

As a result of the temporary cessation of operations from February through August of 2004 in connection with the upgrade of our manufacturing facility, comparison of our operating results in 2004 and 2005 may not be meaningful.

Currently, our primary source of revenue is from the sale of products to our affiliate, Sirton. Sirton manufactures finished products from, in part, our products, and sells those products primarily to one customer, Crinos. Sirton sells its finished products, including calcium heparin, primarily to one customer, Crinos, which sells them to the retail market. Calcium heparin has seen decreased demand over the past several years due to a new competitive product, low molecular weight heparin, made by Aventis and other companies. Also, Crinos has limited its sale of urokinase to a single dose, which has a more limited market than multiple doses. As a result, Sirton’s demand for these products of ours has decreased over the past several years, and may continue to decrease over the next several years until and unless both we and Sirton develop new customers.

On November 11, 2003, we entered into a Supply Agreement with Samil Pharm. Co., Ltd., a Korean corporation. Under this agreement, we supply Samil with sulglycotide, and Samil has the following purchase obligations:

Period	Purchase Amount
June 20, 2005 to June 20, 2006	at least 2,600 kilograms
June 20, 2006 to June 20, 2007	at least 3,400 kilograms

After June 20, 2007	to be renegotiated
---------------------	-----------------------

In any given period, excess purchases by Samil may be applied as a reduction of the immediately following period's minimum purchases or as compensation for a failure to purchase the immediately preceding period's minimum purchase, at Samil's choice. Samil informed us that it experienced a delay in the launch of its product that uses sulglicotide because of further market analyses required in order to properly position the product into the Korean market. Samil launched its product in early 2006 and in March 2006 we received a purchase order from Samil for 490 kg of sulglicotide. Additionally, we have been informed by Samil that another 490 kg of sulglicotide may be needed in 2006. We expect future growth in sulglicotide revenue due to the expected penetration of the Samil's product in the Korean market. However, we cannot be certain that the Samil will be successful on its efforts.

In connection with the issue of our Series A senior convertible promissory notes, we incurred debt issues costs which are amortized over the term of the notes and included in interest expense. In addition, we recorded original issue discount on the notes due to the beneficial conversion feature of the notes and related detachable warrants. As of December 31, 2005, all of the notes have been repaid or converted into our ordinary shares. We incurred interest expense in 2005 on the notes in the amount of €4.095 million, including amortization of the issue costs and issue discount of €3.837 million.

Back to Table of Contents

As a public reporting company, we incur significant legal, accounting and other expenses that we did not incur as a private company. In addition, the Sarbanes-Oxley Act of 2002, as well as new rules subsequently implemented by the Securities and Exchange Commission, the American Stock Exchange and the Nasdaq National Market System, have required changes in corporate governance practices of public companies. We expect these new rules and regulations to increase our legal and financial compliance costs and to make some activities more time-consuming and costly. We also expect these new rules and regulations to make it more difficult and more expensive for us to obtain director and officer liability insurance.

OFF-BALANCE SHEET ARRANGEMENTS

We do not have any off-balance sheet arrangements.

TABULAR DISCLOSURE OF CONTRACTUAL OBLIGATIONS**Contractual Obligations and Commitments**

Our major contractual obligations and commitments relate to our real estate mortgages, other financing from banks and financial institutions and various service agreements (including those related to our clinical trials).

The following table summarizes our long-term commitments as of December 31, 2005.

<i>(000s omitted)</i>		Total	1 Year	2 Years	3 Years	4 Years	5 Years	More than 5 Years
Long-Term Debt Obligations:								
Mortgage loans	€	2,255 €	655 €	400 €	400 €	400 €	400 €	—
Equipment loans		696	195	195	175	131	—	—
Research loan		450	66	67	68	68	70	111
	€	3,401 €	916 €	662 €	643 €	599 €	470	111
Purchase Obligations and Operating Leases:								
Inter-company services and lease								
		815	163	163	163	163	163	—
Clinical research		1,885	967	437	412	69	—	—
Consultants		764	756	9	—	—	—	—
		3,464 €	1,886 €	609 €	575 €	232 €	163	—
Total	€	6,865 €	2,802 €	1,271 €	1,218 €	831 €	633 €	111

We have a mortgage loan with Banca Nazionale del Lavoro that was originally granted for €1.549 million in May 1999 and bears interest at the six-month Euribor rate plus 1.0%. The loan is secured by some of our real property and was originally granted to our affiliate, Sirton, but we assumed it in 2002 in connection with a corporate reorganization of Sirton. We are required to make installment payments on the loan every six months until the final maturity in February 2006. At December 31, 2005, the amount outstanding under this loan was €119 thousand. This loan was repaid in full in February 2006.

We have another mortgage loan with Banca Nazionale del Lavoro originally granted for €1.291 million in November 1996 that bears interest at the six-month Euribor rate plus 1.75%. The loan is secured by a mortgage on some of our real property and was originally granted to our affiliate, Sirton, but we assumed it in 2002 as part of the

corporate reorganization of Sirton. We are required to make installment payments on the loan every six months until the final maturity in October, 2006. At December 31, 2005, the amount outstanding under this loan was €136 thousand.

We received a loan commitment from the Minister for University and Research granted through San Paolo-IMI Bank. The loan is for financing research and development of defibrotide to treat and prevent VOD, and it bears interest at 1.0% per annum. In order to receive advances on the loan, we must provide the Minister with documentation supporting research and development expenses. We will need to repay this loan in installments every six months beginning six months after the completion of the related research and development, but no later than January 2012. At December 31, 2005, the amount outstanding under this loan was €450 thousand.

-50-

Back to Table of Contents

On July 9, 2004, we obtained a loan in the approximate amount of €487 thousand from Cassa di Risparmio di Parma e Piacenza. The loan was obtained pursuant to Law No. 1329 of 28 November 1965 (Legge Sabatini), a law that facilitates the purchase and the lease of new production equipment. The loan is secured by a lien on our equipment and machinery. On August 4, 2004, we obtained an additional loan in the amount of €388 thousand from Cassa di Risparmio di Parma e Piacenza under the same terms and conditions. At December 31, 2005, the amount outstanding under both of these loans was €656 thousand.

On July 20, 2004, we obtained a third mortgage loan in the amount of €2.0 million from Banca Nazionale del Lavoro. The mortgage loan is secured by real estate owned by us and real estate owned by Sirton, and was secured by a guarantee executed by FinSirton. Banca Nazionale del Lavoro released Sirton from its mortgage and FinSirton from its guarantee in April 2006; we deposited €550,000 with Banca Nazionale del Lavoro to secure repayment of the loan. In addition, payment of up to €1.0 million of our trade payables to Sirton is subordinated and made junior in right of payment to the prior payment in full in cash of the mortgage loan. No payment or prepayment of up to €1.0 million of the trade payables to Sirton may be made until our obligations under the mortgage loan are performed in full. Amounts due under the mortgage loan bear interest at the six-month Euribor rate plus 1.40%. We make installment payments on the loan every six months until its final maturity in August 2010. At December 31, 2005, the amount outstanding under this loan was €2.0 million.

Our commitments for clinical research consist of fixed price contracts with third-party research organizations related to clinical trials for the development of defibrotide and related consulting services for advice regarding FDA issues.

ITEM 6.***DIRECTORS, SENIOR MANAGEMENT AND EMPLOYEES*****DIRECTORS AND SENIOR MANAGEMENT**

Set forth below is the name, age, position and a brief account of the business experience of each of our executive officers, significant employees and directors as of April 30, 2006. The business address of each of the individuals listed below, except for Cary Grossman, is Piazza XX Settembre 2, 22079 Villa Guardia (Como), Italy. Cary Grossman's business address is 9821 Katy Freeway, Suite 500, Houston, Texas, 77024.

Name	Date of Birth (mm/dd/yyyy)	Position
Dr. Laura Ferro	08/03/1951	President and Chief Executive Officer, Director
Cary Grossman	02/15/1954	Executive Vice-President and Chief Financial Officer
Dr. Massimo Iacobelli	04/28/1959	Senior Vice-President, Scientific Director
Dr. Guenther Eissner	01/28/1964	Senior Vice-President, Chief of Biology Research Laboratory
Danilo Moltrasio	08/12/1954	Chief of Chemical Research Laboratory
Armando Cedro	07/16/1955	Chief of Manufacturing
Salvatore Calabrese	01/04/1970	Vice-President, Finance and Secretary
Dr. Kenneth Anderson (1)	10/03/1951	Director
Gigliola Bertoglio (2)	08/22/1934	Director
Luca Breveglieri (3)	01/23/1952	Director
Marco Codella	09/17/1959	Director
David Kroin (4)	08/24/1975	Director
Dr. Lee M. Nadler (5)	03/22/1947	Director
Dr. Andrea Zambon (6)	01/14/1958	Director

Dr. Laura Ferro has served as our President and Chief Executive Officer and one of our directors since 1991. Her current term as a director expires on the date of the ordinary shareholders' meeting approving our 2006 financial statements, which would normally be held in April 2007. Dr. Ferro is also the President and Chief Executive Officer of our largest shareholder, FinSirton. She also serves as Vice President of Sirton, a subsidiary of FinSirton that specializes in manufacturing pharmaceutical products. Dr. Ferro is also a member of the board of directors of each of FinSirton, Sirton and Foltene

Back to Table of Contents

Laboratories S.p.A., a former subsidiary of FinSirtion that is in the hair care products business. From 1991 to 1997, Dr. Ferro held various executive positions at Sirtion, including Chief Executive Officer and Chairperson of the research and development unit. Prior to that, Dr. Ferro was a practicing physician for 15 years. Dr. Ferro is the chairperson of the research committee of Europharm, the European Association of Small and Medium-Sized Pharmaceutical Companies, and is a member of the executive committee of Farindustria, an Italian pharmaceutical industry group. She is also the President of the Gianfranco Ferro Foundation, a not-for-profit Italian organization with the mission of stimulating research, education and dissemination of information on the correct use of medications and adverse events of medicines. Dr. Ferro received her M.D. and Ph.D. degrees from the University of Milan, and a MBA from Bocconi University in Milan in 1994. Dr. Ferro is a licensed physician. She was certified in psychiatry at the University of Milan in 1981, and in Clinical Pharmacology at the University of Milan in 1994.

Cary M. Grossman has served as our Executive Vice President and Chief Financial Officer since August 2004. He is also the Chairman and Chief Executive Officer of Coastal Bancshares Acquisition Corp., a special purpose acquisition company. Mr. Grossman is a Director of Sand Hill IT Security Acquisition Corp., a special purpose acquisition company, and I-Sector Corporation, which provides network infrastructure and Internet protocol telephony solutions. From 2002 until 2003 he served as the Executive Vice President and Chief Financial Officer of U S Liquids, Inc, an American Stock Exchange listed environmental services company. Mr. Grossman left U S Liquids, Inc. in 2003 as a result of the acquisition of three of its businesses by a private equity firm and was President and Chief Executive Officer of the acquiring company, ERP Environmental Services until November 2003. From 1997 until 2002, Mr. Grossman served Pentacon, Inc., a provider of inventory management services and distributor of components to Fortune 50 original equipment manufacturers, as a board member and in several senior executive positions including: Chairman of the Board of Directors (2001-2002), Acting Chief Financial Officer (2001-2002) and Lead Director (1998-2001). Pentacon and substantially all of its subsidiaries filed a Joint Chapter 11 Plan of Debtors in 2002. From 1991 until 2002, Mr. Grossman was the Managing Partner of McFarland, Grossman & Company, Inc., an investment banking and financial advisory firm he co-founded in 1991. Prior to that, Mr. Grossman practiced public accounting for 15 years. He earned a Bachelor of Business Administration in Accounting from The University of Texas, and is a Certified Public Accountant.

Dr. Massimo Iacobelli has served as our Senior Vice-President, Scientific Director since 2002 and as our Vice President, Clinical Development and Chief Medical Office from 1995 to 2002. From 1990 to 1994, he was the Senior Vice-President, Medical Marketing, at Sirtion. From 1988 to 1989, Dr. Iacobelli directed the Drug Safety Department at Bayer S.p.A. He received a medical degree from Università degli Studi, Napoli, Italy.

Dr. Guenther Eissner has served as our Senior Vice-President, Chief of Biology Research Laboratory since August 2004. Since May 1998, Dr. Eissner has served as the Senior Scientific Group Leader of the Lab for Experimental Allogeneic BMT in the Department of Hematology and Oncology at the University of Regensburg, Germany. From October 1997 to April 1998, Dr. Eissner was the Group Leader at the Medical Clinic III, Ludwig-Maximilians-University of Munich, Germany. From 1992 to September 1997, he worked at the Institute for Clinical Molecular Biology of the GSF-Research Center for Environment and Health, in Munich, Germany. Prior to 1992, Dr. Eissner served as group leader at the Medical Clinic III, Ludwig-Maximilians-University of Munich, Germany. Dr. Eissner received a degree in Human Biology (Theoretical Medicine) from Philipps-University of Marburg, Germany, a Masters degree from the Max Planck-Institute for Biochemistry at Martinsried, Germany, and a Ph.D. from the Institute for Immunology of the Ludwig-Maximilians-University of Munich, Germany.

Danilo Moltrasio has served as our Chief of Chemical Research Laboratory since February 1997. From 1995 to January 1997, he served as our Pharmaceutical Technology Laboratory Manager. From 1994 to 1995, he served as the head of our Pharmaceutical Technology Laboratory. From 1983 to 1994 he served as the head of the Analytical Laboratory of Research and Development of Sirtion. From 1981 to 1983, he served as one of Sirtion's chemical analysts. Mr. Moltrasio received a degree in Chemistry and Pharmaceutical Technology from the University of Milan,

Italy.

Armando Cedro has served as our Chief of Manufacturing since 2003. From 1997 to 2003, he served as our Active Pharmaceutical Ingredient Production Manager. From 1987 to 1997, he served as the Chemical Research and Development Laboratories and Pilot Plant Manager at Sirton. From 1982 to 1987, he served as the Chemical Development Laboratory Manager at Societa Prodotti Antibiotici, a manufacturer of antibiotic pharmaceutical products. Mr. Cedro received a degree in Industrial Chemistry from the Universita degli Studi di Milano, Italy.

Salvatore Calabrese has served as our Vice-President, Finance and Secretary since February 2005. From December 2003 until February 2005, he was an Accounting and Finance Manager for Novuspharma, S.p.A., a development stage biopharmaceutical company focused on the discovery and development of cancer drugs and a subsidiary of Cell Therapeutics, Inc., a public reporting company, which then merged into Cell Therapeutics, Inc. He reported to the Chief Financial Officer of Cell Therapeutics, Inc. and was responsible for cost containment, budgeting, financial reporting and the implementation of Sarbanes-Oxley compliance. From September 1996 until November 2003, Mr. Calabrese was employed by PricewaterhouseCoopers as an accountant and was a Manager in Assurance Business Advisory Services at the time of

-52-

Back to Table of Contents

departure. From October 2000 to June 2003, Mr. Calabrese worked in the Boston, MA office of PricewaterhouseCoopers. He earned a Bachelors' Degree in Economics at the University of Messina and a Masters' Degree in Accounting, Audit and Financial Control at the University of Pavia. He is also a chartered accountant in the Republic of Italy.

Dr. Kenneth Anderson has served as one of our directors since June 2005. His current term expires on the date of the ordinary shareholders' meeting approving our 2006 financial statements, which would normally be held in April 2007. Dr. Anderson has been a professor at the Dana-Farber Cancer Institute, Cancer Research and Clinical Care, since 1980, a professor of medicine at Harvard Medical School since 2000 and a Kraft Family professor of medicine at Harvard Medical School since 2002. He has been the Chief of the Division of Hematologic Neoplasia at the Dana-Farber Cancer Institute since 2002, the Vice Chair of the Joint Program in Transfusion Medicine at Harvard Medical School since 2000, the Director of the Jerome Lipper Multiple Myeloma Center at the Dana-Farber Cancer Institute since 2000, the Associate Medical Director of Brigham and Women's Hospital Blood Bank since 1998 and an attending physician at the Bone Marrow Transplantation Service at Brigham and Women's Hospital since 1997. Dr. Anderson is a member of 11 medical and scientific societies and on the editorial boards of 11 medical and scientific journals. He received a Bachelors' degree, summa cum laude, from Boston University in 1973, a M.D. from Johns Hopkins University School of Medicine in 1977 and a Masters' Degree in Art from Harvard University in 2000.

Gigliola Bertoglio has served as one of our directors since December 2004. Her current term as a director expires on the date of the ordinary shareholders' meeting approving our 2006 financial statements, which would normally be held in April 2007. Ms. Bertoglio has been a self-employed consultant since January 2003. From 1970 through 2002 she was employed by Reconta Ernst & Young (the Italian affiliate of Ernst & Young LLP) and its predecessors and was an audit partner beginning in 1977. From 1998 until leaving the firm, she was responsible for the firm's Capital Market Group in Italy. From 1989 to 1998, she was responsible for directing the firm's Professional Standards Group and member of the Accounting and Auditing Standards Group of Ernst & Young International and as a coordinating audit partner on clients with international operations. From 1977 to 1989, Ms. Bertoglio was a partner of the Italian firm of Arthur Young & Co. (the predecessor to Ernst & Young) where she was responsible for directing the firm's Professional Standards Group and serving in an advisory role to the Accounting and Auditing Standards Group of Arthur Young International and as a coordinating audit partner on clients with international operations. From 1970 to 1977, she was an Audit Manager (1970 to 1974) and an Audit Principal (1975 to 1977) with the Italian firm of Arthur Young & Co. in its Rome and Milan offices. Prior to 1970, Ms. Bertoglio was employed in the New York offices of Horwath & Horwath and LKH&H, both of which were public accounting firms. She earned a degree in Public Accounting from New York University and a Diploma in Accounting from Economics Institution in Biella, Italy. She was a Certified Public Accountant (active license to August 31, 2002, inactive after that) in the United States and included in the Register of Authorized Auditors of Consob, the Italian Stock Exchanges regulatory agency of public companies.

Luca Breveglieri has served as one of our directors since April 2006. His current term expires on the date of the ordinary shareholders' meeting approving our 2006 financial statements, which would normally be held in April 2007. Mr. Breveglieri is an Italian-qualified attorney and has been a partner of Breveglieri Verzini e Soci, an Italian law firm, since 2000. From 1982 to 2000, Mr. Breveglieri was the founding partner of Breveglieri e Associati. Mr. Breveglieri is an Italian certified public accountant. Mr. Breveglieri received a degree in law from Università degli Studi, Pisa, Italy, in 1977.

Marco Codella has served as one of our directors since June 2005. His current term expires on the date of the ordinary shareholders' meeting approving our 2006 financial statements, which would normally be held in April 2007. Mr. Codella has been the Chief Financial Officer of Sigma Tau Industrie Farmaceutiche Riunite S.p.A., an international family of pharmaceutical companies, since May 1999. Mr. Codella has been a professor of Economics and Management Accounting at University of Rome, La Sapienza since 2001. From 1997 to 1999, Mr. Codella was

the Finance, IT and Logistics Director of Crown Cork & Seal Italy S.p.A., an Italian subsidiary of Crown Holdings, Inc., a manufacturer of packaging products to consumer marketing companies. From 1994 to 1997, Mr. Codella was the Finance and IT Director of Crown Cork & Seal Italy S.p.A. From 1990 to 1994, Mr. Codella held various finance positions at Digital Equipment Italia S.p.A., an Italian subsidiary of Digital Equipment Corporation, a computer company. From 1987 to 1990, Mr. Codella was the Finance Manager of an Italian subsidiary of Ampex Corporation, a provider of technology for acquisition, storage and processing of visual information. From 1984 to 1987, Mr. Codella was an auditor at Deloitte, Haskins & Sells, an accounting firm. Mr. Codella is a director of Eubiotina Research S.p.A., Biosint S.p.A., Avantgarde S.p.A., SigmaTau Health Science S.p.A., Techogen S.p.A. and Kenton S.r.l., each of which is a subsidiary of Sigma Tau Finanziaria S.p.A., and Fonchim, a pension fund for chemical industry workers. Mr. Codella is an Italian certified public accountant. Mr. Codella graduated summa cum laude from Rome University in 1984 with a degree in economics.

David Kroin, has served as a member of our board of directors since December 2005. His current term as a director expires on the date of the ordinary shareholders' meeting approving our 2006 financial statements, which would normally be held in April 2007. Mr. Kroin has been the Managing Director of Great Point Partners, LLC, an asset management firm focusing in the healthcare industry, with an emphasis on life sciences, since September 2003. From December 1998 to

Back to Table of Contents

September 2003, Mr. Kroin was a senior member of the healthcare group at J.H. Whitney & Co., an alternative-asset-management firm. From June 1997 to December 1998, Mr. Kroin worked as an analyst in the corporate finance and mergers and acquisitions group at Merrill Lynch & Co., Inc. Mr. Kroin graduated from the University of Michigan with a B.S. in actuarial mathematics in May 1997. Mr. Kroin was nominated for election by Biomedical Value Fund, L.P. and Biomedical Offshore Value Fund, Ltd., two of the investors in our October 2005 private placement, pursuant to a voting agreement among the participants in the private placement and FinSirtion.

Dr. Lee M. Nadler has served as one of our directors since June 2005. His current term expires on the date of the ordinary shareholders' meeting approving our 2006 financial statements, which would normally be held in April 2007. Dr. Nadler is the Senior Vice President of Experimental Medicine at Harvard University's Dana-Farber Cancer Institute and a Professor of Medicine at Harvard University. He joined the staff of the Dana-Farber Cancer Institute in 1977, and was promoted to the faculty in 1980. He served as chief and chair of several departments, including serving as the First Chairperson of the Dana-Farber Cancer Institute's Department of Adult Oncology. Dr. Nadler received a medical degree from Harvard Medical School in 1973.

Dr. Andrea Zambon has served as one of our directors since June 2005. His current term expires on the date of the ordinary shareholders' meeting approving our 2006 financial statements, which would normally be held in April 2007. Dr. Zambon was a co-founder and President of a web-based company, OKSalute S.p.A. serving the medical community from 2000 until 2002. From 2000 until 2004 he was President of Zambon, S.p.A, the holding company of Zambon Group, S.p.A., an Italian pharmaceutical and chemical company that operates in 19 countries in Europe, North and South America and Asia. From 1989 until 1999, he served in various capacities at Zambon Group S.p.A., including President and Chief Executive Officer from 1993 to 1999, Managing Director from 1991 to 1993, Managing Director of Zambon Research, S.p.A. in 1990, a research subsidiary of Zambon Research S.p.A., and manager of the international regulatory affairs unit in 1989. From 1988 to 1989, Dr. Zambon was employed by Smith Kline & Beckman in various departments, including clinical development, regulatory affairs, and market research, for three new chemical businesses. From 1986 to 1987 he was employed by Zambon Group, S.p.A. where he helped establish its research and development division. He has served on numerous corporate and industry association boards. Dr. Zambon earned a Medical Degree from the University of Milan Medical School.

Our Scientific Advisory Board

Our scientific advisory board advises us with respect to our product development strategy as well as the scientific and business merits of licensing opportunities or acquisition of compounds and the availability of opportunities for collaborations with other pharmaceutical companies. We have in the past compensated and in the future intend to compensate scientific advisory board members with cash fees for attending meetings. In addition to Dr. Lee Nadler and Dr. Kenneth Anderson, who are also directors, the current scientific advisory board members are:

Dr. Alessandro M. Gianni is the Head of the Bone Marrow Transplant Unit at The National Institute of Tumors of Milan in Italy. Dr. Gianni has been the Director of the Department of Leukemias and Lymphomas of the Milan Cancer Institute since February 2004. Since 1998, he has been the Director of the Chair of Medical Oncology at the University of Milan and has been a professor at the University of Milan since 1978. Since 1992, he has been the Director of several different units of the Division of Medical Oncology at the Milan Cancer Institute. He is a member of the European Group for Blood and Marrow Transplantation, the American Association for Cancer Research, the American Society of Clinical Oncology, the Italian Society of Experimental Hematology, the European Hematology Association and the International Society of Hematotherapy & Graft Engineering. He has authored or co-authored more than 250 publications in peer-reviewed journals. Dr. Gianni graduated from the Liceo Classico Alessandro Manzoni, Milan, in 1962 and obtained his Medical Degree, magna cum laude, from the University of Milan in 1968.

Professor Cy Stein, M.D. Ph.D. is the Head of Medical Genitourinary Oncology and Professor of Medicine, Urology and Molecular Pharmacology at the Albert Einstein College of Medicine, New York. He also serves as an Attending Physician at the Montefiore Medical Center and is a Diplomate of nearly 20 years' standing of both the American Board of Internal Medicine and the American Board of Oncology. Professor Stein has been a director of CytonGenix, Inc., a biomedical research and development company, since 2003. Professor Stein has been involved for the past 15 years with preclinical and clinical trials of nucleic acid therapies for cancers, with increasing emphasis in recent years on RNA interference. Professor Stein received a Bachelor of Arts from Brown University in 1974, a Ph.D. in organic chemistry in 1978 from Stanford University and a Medical Degree from Albert Einstein College of Medicine in 1982.

Peter Levitch has been president of Peter Levitch & Associates (PLA), an independent consulting firm to health professionals, since 1981, providing guidance in the development of pharmaceuticals, medical devices, biologics and diagnostics. The primary focus of PLA is bringing products through the clinical evaluation and FDA regulatory approval phases. Mr. Levitch has participated in over 250 FDA applications as well as a number of marketing applications for drugs, biologicals and medical devices. Mr. Levitch has worked with such companies as Amgen, Genentech, Centocor, Cytogen Hybritech/Eli Lilly, Baxter, Monsanto, Becton Dickinson and Seragen, among many others. From 1980 to 1981, Mr. Levitch was Vice President, Clinical and Regulatory Affairs for Oxford Research International Corp. From 1969 to 1980 he was

Back to Table of Contents

employed by Ortho Diagnostics, Inc., a division of Johnson & Johnson, first as Manager of Clinical Research and, from 1973 to 1980, as Director of Regulatory and Clinical Affairs. Mr. Levitch has authored or co-authored numerous articles and abstracts including “Preparing an IND for New Drugs,” “Phase I Clinical Study of Gamma Interferons” and “Gaining FDA Approval of Biotechnology Derived Products.” He has conducted lectures on such topics as “Preparing INDs and NDAs and Managing Clinical Research,” “Good Clinical Practices,” “Conducting FDA Meetings,” and “FDA Approvable Indications,” among many others. Mr. Levitch earned a B.A. in Zoology-Chemistry from Hofstra University in 1954 and a M.A. in Physiology from Hofstra University in 1957.

Ralph B. D’Agostino, Sr. Ph.D. has been a Professor of Mathematics/Statistics at Boston University since 1977 and a Professor of Public Health at Boston University, School of Public Health, Department of Epidemiology and Biostatistics since 1982. He has been the editor of Statistics in Medicine since 1998. Dr. D’Agostino is also an Associate Editor of American Journal of Epidemiology, and on the editorial board of Current Therapeutic Research and the Journal of Hypertension. He has been the director of the Statistics and Consulting Unit at Boston University and Director of Data Management and Statistics at the Framingham Study. Dr. D’Agostino has served as an expert consultant to the FDA since 1974. He is a Fellow of the American Statistical Association and the Cardiovascular Epidemiology section of the American Heart Association. He has twice, in 1981 and 1995, received the FDA Commissioner’s Special Citation. He received an A.B. in Mathematics, summa cum laude, from Boston University in 1962, a A.M. in Mathematics from Boston University in 1964 and a Ph.D. in Mathematical Statistics from Harvard University in 1968.

Dr. Stephen Fredd M.D. has been a consultant to the pharmaceutical industry since 2002. From 1980 to 2002, Dr. Fredd was the Deputy Director of the Division of Cardi-Renal Drugs of the Center for Drug Evaluation and Research at the FDA. From 1987 to 1997, he was the Director and Founder of the Division of Gastrointestinal and Coagulation Drugs of the Center for Drug Evaluation and Research at the FDA. From 1982 to 1987, Dr. Fredd was a Medical Officer and the Acting Director of the Officer of Orphan Products Development of the Office of the Commissioner at the FDA. From 1980 to 1982, he was a Medical Officer at the Division of Antinflammatory, Oncological and Radiopharmaceutical Drugs of the Center for Drug Evaluation and Research at the FDA. From 1965 to 1980, Dr. Fredd was a privately practicing doctor of internal medicine. From 1977 to 1980, he was an Assistant Professor of Medicine at George Washington University Medical Center, and from 1965 to 1977, he was an Instructor in Medicine at New York University Medical Center. Dr. Fredd received FDA Awards of Merit in 1989 and 1997, FDA Commendable Service Awards in 1987 and 1998 and the FDA Commissioner’s Special Citation in 1989. Dr. Fredd received an A.B., magna cum laude, from Princeton University in 1955 and a M.D. from New York University Medical Center in 1959.

Richard Champlin, M.D. has been a Professor of Medicine and Chairman of the Department of Blood and Marrow Transplantation at the University of Texas M. D. Anderson Cancer Center since 1990. From 1981 to 1990, Dr. Champlin was an Assistant and Associate Professor of Medicine and directed the Transplantation Biology Program at the UCLA Center for the Health Sciences. Dr. Champlin chaired the Working Committee on Alternative Donors and Cell Sources of the International Bone Marrow Transplant Registry from 1995 to 2000. He was the founding president of the American Society of Blood and Marrow Transplantation from 1992 to 1994 and president of the Council for Donor, Transplant and Collection Centers for the National Marrow Donor Program from 1990 to 1993. He has been a vice president of the Foundation for Accreditation of Hematocellular Therapy since 1996, was a member of the Biologic Response Modifiers Advisory Board for the FDA from 1999 to 2002 and was a member of the Hematology Board, American Board of Internal Medicine from 1996 to 2002. Dr. Champlin is a member of several scientific societies and serves on the Editorial Boards of Blood, Bone Marrow Transplantation and Journal of Hematotherapy. He has been the President of the Center for International Blood and Marrow Transplantation since 2003. Dr. Champlin received a M.D. from the University of Chicago’s Pritzker School of Medicine in 1975.

COMPENSATION

Compensation of Directors and Executive Officers

For the year ended December 31, 2003, the aggregate cash compensation to our executive officers and directors as a group was approximately €530 thousand. For the year ended December 31, 2004, the aggregate cash compensation to our executive officers and directors as a group was approximately €601 thousand. For the year ended December 31, 2005, the aggregate cash compensation to our executive officers and directors as a group was approximately €900 thousand.

Share-Based Compensation Plans

2004 Equity Incentive Plan

Our board of directors proposed capital increases for our equity incentive plans to our shareholders on September 2, 2004. Our shareholders approved those capital increases on September 30, 2004. Our board of directors approved the specific terms of our 2004 Equity Incentive Plan effective as of September 30, 2004. Our shareholders approved the specific terms of our 2004 Equity Incentive plan on April 28, 2005. The incentive plan authorizes 1,500,000 ordinary shares for issuance. The

-55-

Back to Table of Contents

maximum number of shares that may be issued under the incentive plan subject to incentive share options is 1,500,000. At December 31, 2005, there were 992,000 shares underlying outstanding options, with a weighted average exercise price of \$8.72. Shares subject to share awards that have expired or otherwise terminated without having been exercised in full again become available for the grant of awards under the incentive plan. In the event of a share split or other alteration in our capital structure, without the receipt of consideration, appropriate adjustments will be made to the authorized shares and outstanding awards to prevent dilution or enlargement of participant's rights. The plan is governed by Delaware law.

Our incentive plan provides for the grant of incentive share options (as defined in Section 422 of the U.S. Internal Revenue Code) to employees, including officers and employee-directors, and nonstatutory share options, restricted share purchase rights, restricted share unit awards, share appreciation rights and share bonuses to employees, including our officers, directors and consultants who are subject to tax in the United States. The incentive plan also provides for the periodic automatic grant of nonstatutory share options to our non-employee directors.

The incentive plan is administered by our board of directors or a committee appointed by our board of directors. The board or the committee determines recipients and types of awards to be granted, including the number of shares subject to an award, the vesting schedule of awards, the exercisability of awards, and subject to applicable restrictions, other terms of awards. The board of directors has delegated administration of the incentive plan to the compensation committee.

The term of share options granted under the incentive plan generally may not exceed ten years, although the capital increase relating to the ordinary shares issuable upon exercise of such options expires on September 30, 2009. Our compensation committee determines the price of share options granted under the incentive plan, provided that the exercise price for an incentive share option cannot be less than 100% of the fair market value of our ordinary shares on the date of grant. No incentive share option may be granted to any person who, at the time of the grant, owns (or is deemed to own) ordinary shares possessing more than 10% of our total voting ordinary shares, unless the option exercise price is at least 110% of the fair market value of the ordinary shares on the date of grant and the term of the incentive share option does not exceed five years from the date of grant. The exercise price for a nonstatutory share option can vary in accordance with a predetermined formula while the option is outstanding. In addition, the aggregate fair market value, determined at the time of grant, of the ordinary shares with respect to which an incentive share option first becomes exercisable during any calendar year (under the incentive plan and all of our other equity compensation plans) may not exceed \$100 thousand.

Options granted under the incentive plan vest at the rate determined by our compensation committee. Typically, options granted under the incentive plan vest over three years, at the rate of one-third of the shares covered by the option vesting each year.

Generally, the optionee may not transfer a share option other than by will or the laws of descent and distribution unless the optionee holds a nonstatutory share option that provides otherwise. However, an optionee may designate a beneficiary who may exercise the option following the optionee's death. An optionee whose service relationship with us ceases for any reason may exercise the option to the extent it was vested for the term provided in the share option agreement. Options generally expire three months after the termination of an optionee's service. However, if an optionee is permanently disabled or dies during his or her service, that person's options generally may be exercised up to 12 months following disability or death.

Share appreciation rights granted under our incentive plan may be paid in our ordinary shares, cash or a combination of the two, as determined by our board of directors. The grant of a share appreciation right may be granted subject to a vesting schedule determined by our board of directors.

Restricted share purchase rights granted under the incentive plan may be granted pursuant to a repurchase option in our favor that will lapse in accordance with a vesting schedule and at a price determined by the board of directors (or a committee appointed by the board of directors). Restricted share unit awards may be granted subject to a vesting schedule determined by the board of directors (or a duly appointed committee). Share bonuses may be awarded in consideration of past services without a purchase payment. Rights under a share bonus or a restricted share purchase award are transferable only upon such terms and conditions as are set forth in the relevant agreement, as determined by the board of directors (or the committee appointed by the board of directors) in its sole discretion.

When we become subject to Section 162(m) of the Internal Revenue Code which denies a deduction to publicly held companies for certain compensation paid to specified employees in a taxable year to the extent the compensation exceeds \$1.0 million, no person may be granted share options and/or share appreciation rights under the incentive plan covering more than 500,000 ordinary shares in any fiscal year. In addition, no person may be granted restricted share purchase rights, share units and/or share bonuses under the incentive plan covering more than 250,000 ordinary shares in any fiscal year. However, in connection with a participant's first year of employment, such participant may be granted options and/or share appreciation rights covering up to 600,000 ordinary shares and restricted share purchase rights, share units and/or share bonuses covering up to 500,000 ordinary shares.

Each director (other than Dr. Nadler) who is not otherwise one of our employees or consultants automatically was granted a nonstatutory share option for 10,000 ordinary shares upon his or her initial election or appointment to our board of

Back to Table of Contents

directors after the completion of our initial public offering. These grants vest one-third one year after the date of grant and the remainder in twenty-four equal monthly installments beginning one year and one month from the date of grant, provided that the person is still serving as a non-employee director on each such vesting date. Upon the conclusion of each regular annual meeting of our shareholders, each non-employee director receives a nonstatutory share option for 5,000 ordinary shares. These grants vest in twelve equal monthly installments beginning one month from the date of grant, provided that the person is still serving as a non-employee director on each such vesting date. The exercise price of the options granted to non-employee directors is equal to the fair market value of our ordinary shares on the date of grant and the term ends on September 30, 2009.

In the event of certain corporate transactions (including, but not limited to, a sale or other disposition of all or substantially all of our assets, a merger or a consolidation), all outstanding awards under the incentive plan will be subject to the terms and conditions of the agreement memorializing the transaction. The agreement may provide for the assumption or substitution of awards by any surviving entity, the acceleration of vesting (and exercisability, if applicable) or the cancellation of awards with or without consideration. In addition, at the time of grant, our board of directors may provide for acceleration of vesting in the event of a change in control. In the event of a change in control, non-employee director options outstanding under the incentive plan will automatically become vested and will terminate if not exercised prior to such a change in control.

The board of directors may amend the incentive plan at any time. Amendments will be submitted for shareholder approval to the extent required by applicable laws, rules and regulations. The incentive plan will terminate on September 30, 2014 unless sooner terminated by the board of directors or a committee appointed by the board of directors.

2004 Italy Stock Award Sub-Plan

Our 2004 Italy Stock Award Sub-Plan is a part of our 2004 Equity Incentive Plan and provides for the grant of share options and the issuance of share grants to certain of our employees who reside in the Republic of Italy and who are liable for income tax in the Republic of Italy. Generally, the exercise price for a share option under the Italy sub-plan cannot be less than the average of the closing price of our ordinary shares listed on the American Stock Exchange or the Nasdaq National Market System, as applicable, over the 30 days preceding the date of grant. No share option granted under our Italy sub-plan may cover more than 10% of the voting rights in our annual meeting of shareholders or 10% of our capital or equity. Share grants will be made in consideration for past services.

Generally, a participant under the Italy sub-plan may not transfer a share award other than by applicable law. However, a participant under the Italy sub-plan may designate a beneficiary who may exercise the award following the participant's death.

In the event of certain corporate transactions (including, but not limited to, a sale or other disposition of all or substantially all of our assets, a merger or a consolidation), all outstanding awards under the Italy sub-plan will be subject to the terms and conditions of the agreement memorializing the transaction. The agreement may provide for the assumption or substitution of awards by any surviving entity, the acceleration of vesting (and exercisability, if applicable) or the cancellation of awards with or without consideration. In addition, at the time of grant, our board of directors may provide for acceleration of vesting in the event of a change in control.

The Italy sub-plan will terminate on September 30, 2014 unless sooner terminated by our board of directors.

2004 Nonstatutory Share Option Plan and Agreement

Our board of directors proposed capital increases for our equity incentive plans to our shareholders on September 2, 2004 and our shareholders approved those capital increases on September 30, 2004. Our board adopted the specific terms of our 2004 Nonstatutory Share Option Plan and Agreement on October 1, 2004. Our shareholders approved the specific terms of our 2004 Nonstatutory Share Option Plan and Agreement on April 28, 2005. The sole person eligible to receive an option under the plan is Cary Grossman, our Executive Vice President and Chief Financial Officer. On October 1, 2004, Mr. Grossman received an option to purchase all 60,000 shares authorized for issuance under the plan. The exercise price of the option issued under the plan is \$4.50. The option became fully vested on December 15, 2004. On March 23, 2006, we and Mr. Grossman amended and restated this option to have an exercise price of \$5.58 to comply with a requirement under Italian law. We entered into an agreement with Mr. Grossman whereby we agreed to pay him \$64,800 (the amount of the aggregate increase in the exercise price), subject to certain conditions, in return for amending the exercise price. In certain corporate transactions, a surviving or acquiring corporation may either assume the option or substitute other awards for the outstanding option. If the surviving or acquiring corporation does not assume or substitute the outstanding option, the option will terminate prior to the event if not otherwise exercised, provided that Mr. Grossman is providing service to us at the time of the corporate transaction. The option has a term ending on September 30, 2009.

Other pension and retirement plans

We do not have any other pension or retirement plans.

-57-

[Back to Table of Contents](#)

BOARD PRACTICES

Board Composition

Our board of directors currently consists of eight members: Dr. Anderson, Ms. Bertoglio, Mr. Breveglieri, Mr. Codella, Dr. Ferro, Mr. Kroin, Dr. Nadler and Dr. Zambon. Dr. Anderson, Ms. Bertoglio, Mr. Breveglieri, Mr. Kroin, Dr. Nadler and Dr. Zambon have never been employed by us or any of our subsidiaries and are independent directors. FinSirtion agreed to vote its shares in favor of electing one person to be designated by Biomedical Value Fund, L.P. and Biomedical Offshore Value Fund, Ltd. for so long as such entities collectively own ADSs representing at least 5% of our outstanding ordinary shares. Mr. Kroin is the designee of those two shareholders. We do not have any agreements with any of our directors that provide for benefits upon termination of employment, although under Italian law, if directors are removed by the vote of shareholders at an ordinary shareholders' meeting prior to the end of their term without cause, they are entitled to receive the consideration that they would have received through the end of their term.

Our Compensation Committee and shareholders usually determine the compensation of our directors. Our Compensation Committee and shareholders have approved the following director compensation for the term from our April 2006 ordinary shareholder meeting to our April 2007 shareholder meeting. Each director would receive, as applicable:

- €20 thousand per year for being a member of the board;
- an additional €12 thousand per year for being the chairperson of the audit committee;
- €1 thousand for each board meeting attended;
- €1 thousand per committee meeting attended for the chairperson of the nominating and corporate governance committee and the chairperson of the compensation committee;
- €500 per committee meeting attended for the other members of the nominating and corporate governance committee and the compensation committee; and
- €2 thousand per committee meeting attended for all members of the audit committee, including the chairperson.

We granted options to purchase 10,000 ordinary shares to each of our non-employee directors (other than Dr. Nadler) upon consummation of our initial public offering. We granted Dr. Nadler additional cash compensation instead of options to purchase ordinary shares. Each of our non-employee directors also receive an option to purchase an additional 5,000 ordinary shares upon reelection at each annual shareholders' meeting.

Board Committees and Code of Ethics

Our board of directors has established an audit committee, a compensation committee and a nominating and corporate governance committee.

Audit Committee. Our audit committee consists of Ms. Bertoglio, Mr. Kroin and Dr. Zambon, each of whom is an independent director. Ms. Bertoglio is our audit committee financial expert. The audit committee is a standing committee of, and operates under a written charter adopted by, our board of directors. The audit committee:

establishes procedures for the receipt, retention and treatment of complaints received by us regarding accounting, internal accounting controls or auditing matters and the confidential, anonymous submission by our employees of concerns regarding questionable accounting or auditing matters;

· has the authority to engage independent counsel and other advisors, as it determines necessary to carry out its duties, and determine the compensation of such counsel and advisors, as well as its ordinary administrative expenses; and

· approves related party transactions.

Our audit committee directly oversees our independent accountants, including the resolution of disagreements between management and the independent accountants. As discussed below, under Italian law, our board of statutory auditors

-58-

Back to Table of Contents

also oversees our independent accountants with respect to our Italian GAAP financial statements. Under Italian law, our shareholders must be the party that appoints, terminates and determines the compensation for our independent accountants, although our audit committee does make recommendations on such matters to our board of directors, which in turn makes recommendations to our shareholders.

We anticipate that the audit committee will prepare an “Organizational and Operational Model” permitted by Italian Legislative Decree of June 8, 2001 No. 231 (relating to the administrative responsibility of companies). We expect that this document will consist of:

- operating procedures and reporting system;
- internal supervisory and monitoring body; and
- a disciplinary system.

Compensation Committee. Our compensation committee consists of Dr. Anderson, Dr. Nadler and Dr. Zambon, each of whom is independent director. Under Nasdaq rules, the compensation of a U.S. domestic company’s chief executive officer and all other officers must be determined, or recommended to the board of directors, either by a compensation committee comprised of independent directors or a majority of the independent directors of its board of directors. Disclosure of individual management compensation information is mandated by the Exchange Act proxy rules, but foreign private issuers are generally exempt from that requirement. Our compensation committee performs the duties required by the rules of Nasdaq including making decisions and recommendations regarding salaries, benefits, and incentive compensation for our executive officers. Part of the compensation of our directors is fixed periodically by our shareholders at their annual ordinary shareholder meetings. We disclose the aggregate compensation of our executive officers and directors in our Exchange Act reports, but not individual compensation of those officers or directors.

Nominating and Corporate Governance Committee. Our nominating and corporate governance committee consists of Ms. Bertoglio, Mr. Breveglieri, Mr. Kroin and Dr. Nadler, each of whom is an independent director. Under Nasdaq rules, the directors of a U.S. domestic company must be either selected or recommended for the board of directors’ selection by either a nominating committee comprised solely of independent directors or by a majority of the independent directors. Under Italian law, directors may be nominated by our shareholders or our board of directors. Our nominating and corporate governance committee performs the duties required by Nasdaq, including assisting the board of directors in fulfilling its responsibilities by:

- identifying and approving individuals qualified to serve as members of our board of directors;
- selecting director nominees for our annual meetings of shareholders;
- evaluating our board’s performance; and
- developing and recommending to our board corporate governance guidelines and oversight with respect to corporate governance and ethical conduct.

Our shareholders will be able to nominate directors other than those nominated by the nominating committee.

Other Committees. Our board of directors may establish other committees as it deems necessary or appropriate from time to time, including, but not limited to, an executive committee.

Board of Statutory Auditors

Under Italian law, in addition to electing our board of directors, our shareholders also elect a board of statutory auditors. The statutory auditors are elected for a term of three years, may be reelected for successive terms and may be removed only for cause and with the approval of a competent court. Each member of the board of statutory auditors must provide certain evidence that he or she is qualified to act in that capacity under Italian law, and that he or she meets certain professional standards. The board of statutory auditors is required to verify that we comply with applicable law and our by-laws, respect the principles of correct administration and maintain adequate organizational structure, internal controls and administrative and accounting system, and oversees our independent accountants with respect to our Italian GAAP financial statements.

-59-

Back to Table of Contents

The following table sets forth the names of the three members of our board of statutory auditors and the two alternate statutory auditors and their respective positions, as of the date of this annual report. The current board of statutory auditors was elected on April 28, 2006 for a term that ends at the date of the ordinary shareholders' meeting to approve our 2008 annual financial statements, which would normally be held in April 2009.

Name	Position
Giorgio Iacobone	Chairman
Carlo Ciardiello	Member
Augusto Belloni	Member
Domenico Ferrari	Alternate
Romano Chiapponi	Alternate

Mr. Belloni also serves as a member of the board of statutory auditors of Sirton.

Our board of statutory auditors met five times and attended two shareholder and board of directors meetings during 2003, and met five times and attended five shareholder and three board of directors meetings during 2004. In 2005, they met five times and attended four board of directors meetings and two shareholders meetings. In 2005, we accrued \$35 thousand as compensation for their service as our statutory auditors.

Indemnification of Directors and Executive Officers and Limitation of Liability

We have entered into indemnification agreements with each of our current and future directors and executive officers which may, in some cases, be broader than the specific indemnification provisions contained in Italian law.

At present, there is no pending litigation or proceeding involving any of our directors, officers, employees, or agents where indemnification by us will be required or permitted and we are not aware of any threatened litigation or proceeding that may result in a claim for such indemnification.

We have purchased directors' and officers' liability insurance, including liabilities arising under the Securities Act, and intend to maintain this insurance in the future.

EMPLOYEES

The table below shows the number, activity and geographic location of our permanent employees as of December 31, 2003, 2004 and 2005. All of our employees are in Italy, although Cary Grossman, our Chief Financial Officer, who was hired as an independent contractor in August 2004, is based in the United States. Prior to June 2005, most of our administrative, accounting, finance and business development services were performed by employees of FinSirton and Sirton. In 2005 we established our administrative, finance and accounting department.

	As of December 31,		
	2003	2004	2005
Administration, accounting, finance, business development	1	1	6
R&D, clinical, regulatory, quality assurance & control	11	17	17
Production	14	17	26
Total	26	35	49

Italian law imposes certain confidentiality obligations on our employees and provides that either any intellectual property created by them while in our employ belong to us or we have a right of option on it, although we must compensate them for such intellectual property creation. Our employees in Italy are subject to national collective bargaining agreements. National agreements are negotiated collectively between the national associations of companies within a given industry and the respective national unions. National agreements provide a basic framework on working conditions, including, among other things, pay, security and other provisions. Our employees other than executive officers in Italy were subject to a collective bargaining agreement that was renewed on May 10, 2005 and expires on December 31, 2009. Our executive officers in Italy are subject to a collective bargaining agreement that was renewed on November 20, 2004 and expires on December 31, 2008. We believe that we maintain satisfactory relations with our employees.

Under Italian law, employees are entitled to amounts based on salary and years of service upon leaving their employment, even if we terminate them for cause or they resign. We had a liability for these termination indemnities of €706 thousand at December 31, 2005. Under Italian law, we make social security and national healthcare contributions for our employees to the Italian government, which provides pension and healthcare insurance benefits.

-60-

Back to Table of Contents**SHARE OWNERSHIP**

Dr. Laura Ferro and members of her family control FinSirton. As a result, Dr. Ferro may be deemed to beneficially own FinSirton's shares of our company. Dr. Ferro disclaims such beneficial ownership.

As of March 31, 2006, Cary Grossman had beneficial ownership of 114,583 ordinary shares, which constitutes 1.2 percent of the ordinary shares of our company, issuable upon exercise of currently exercisable options.

To our knowledge, none of our other directors and officers listed herein owned one percent or more of our ordinary shares at March 31, 2006. See "Item 7, Major Shareholders and Related Party Transactions."

ITEM 7. MAJOR SHAREHOLDERS AND RELATED PARTY TRANSACTIONS**MAJOR SHAREHOLDERS**

The following table shows information with respect to the beneficial ownership of our ordinary shares as of March 31, 2006 by:

- each person, or group of affiliated persons, who we know owns beneficially 5% or more of our ordinary shares, and
- all of our directors and executive officers as a group.

Except as indicated in the footnotes to this table and subject to community property laws where applicable, the persons named in the table have sole voting and investment power with respect to all ordinary shares shown as beneficially owned by them. Beneficial ownership and percentage ownership are determined in accordance with the rules of the SEC. Ordinary shares underlying our convertible securities that are exercisable within 60 days from March 31, 2006 are deemed outstanding for computing the amount and percentage owned by the person or group holding such convertible securities, but are not deemed outstanding for computing the percentage owned by any other person or group. The address for those individuals for which an address is not otherwise indicated is: c/o Gentium S.p.A., Piazza XX Settembre 2, 22079 Villa Guardia (Como), Italy.

- (7) Based upon information obtained from a Schedule 13D filed with the Securities and Exchange Commission, as amended. Address is 2 Pickwick Plaza, Suite 450, Greenwich, Connecticut, 06830. Includes 212,766 ADSs issuable upon exercise of warrants exercisable within 60 days of March 31, 2006.
- (8) Based upon information obtained from a Schedule 13D filed with the Securities and Exchange Commission, as amended. Address is P.O. Box 1748 GT, Cayman Corporate Centre, 27 Hospital Road, Georgetown, Grand Cayman, Cayman Islands CJ08. Includes 212,766 ADSs issuable upon exercise of warrants exercisable within 60 days of March 31, 2006.
- (9) Address is c/o Alexandra Investment Management, LLC, 467 Third Avenue, 39th Floor, New York, New York 10016. Includes 84,978 ADSs representing ordinary shares issuable upon exercise of warrants currently exercisable. Alexandra Investment Management, LLC, serves as investment advisor to Alexandra Global Master Fund Ltd. By reason of such relationship, Alexandra Investment Management, LLC, may be deemed to share dispositive control over the ADSs beneficially owned by Alexandra Global Master Fund Ltd. and therefore may be deemed to be a beneficial owner of such securities. Alexandra Investment Management, LLC disclaims such beneficial ownership. Mikhail A. Filimonov and Dimitri Sogoloff are managing members of Alexandra Investment Management, LLC. By reason of such relationship, Mr. Filimonov and Mr. Sogoloff may be deemed to share dispositive control over the ADSs beneficially owned by Alexandra Global Master Fund Ltd. and therefore may be deemed to be a beneficial owner of such securities. Mr. Filimonov and Mr. Sogoloff disclaims such beneficial ownership.
- (10) Includes 114,583 ordinary shares issuable upon exercise of currently exercisable options.

As of March 31, 2006, there were no record holders of our ordinary shares located in the United States. There were no changes in percentage ownership by holders of 5% or more of our outstanding ordinary shares since January 1, 2003 except for the following.

- FinSirton sold 450,000 of our ordinary shares that it owned to third parties in January 2005 and an additional 800,000 shares in April 2005 to Sigma Tau Finanziaria S.p.A.. Mr. Paolo Cavazza and Mr. Claudio Cavazza may be deemed to have acquired the ordinary shares acquired by Sigma Tau Finanziaria S.p.A.
- In connection with our initial public offering in June 2005, Defiante acquired 359,505 ordinary shares upon the exercise of our Series A notes, and Mr. Paolo Cavazza, Mr. Claudio Cavazza and Sigma Tau Finanziaria S.p.A. may be deemed to have acquired such shares.
- All shareholders of our company prior to our initial public offering were substantially diluted by the shares issued in that public offering, and all shareholders of our company prior to our October 2005 private placement were substantially diluted by the shares issued in that private placement.
- In our October 2005 private placement, Biomedical Value Fund, L.P. acquired 531,915 ordinary shares, Biomedical Offshore Value Fund, Ltd. acquired 531,915 ordinary shares and Chaumiere Consultadoria e Servicos S.A. acquired 152,376 ordinary shares. Dr. Jay may be deemed to have acquired the ordinary shares acquired by Biomedical Value Fund, L.P. and Biomedical Offshore Value Fund, Ltd. Mr. Paolo Cavazza may be deemed to have acquired the ordinary shares acquired by Chaumiere Consultadoria e Servicos S.A..

The holders of 5% or more of our outstanding ordinary shares do not have different voting rights than other holders of our ordinary shares. Dr. Ferro and her family, through their ownership of 100% of the outstanding ordinary shares of FinSirton, effectively control all decisions and actions that must be made or taken by holders of our ordinary shares by virtue of the fact that FinSirton owned approximately 39% of our outstanding ordinary shares at March 31, 2006.

Change of control arrangements

There are no arrangements of which we are aware that could result in a change of control over us other than those described above and the following.

· We and certain parties are subject to certain registration rights, as described below.

· FinSirtion has agreed to vote its ordinary shares in our company in favor of electing a nominee to our board of directors, as described below.

Registration Rights

Holders of shares issued upon conversion of Series A notes and warrants

We have registered the resale of 429,000 ordinary shares pursuant to an investor rights agreement with the purchasers of our Series A notes and related warrants with respect to the ordinary shares issued upon conversion of the Series A notes and issuable upon exercise of the warrants. We have not registered the resale of another 73,334 ordinary shares issuable upon exercise of warrants that are covered by the investor rights agreement. The agreement provides that, beginning 270 days after

-63-

Back to Table of Contents

the effective date of the registration statement relating to our initial public offering, the holders of a majority of the ordinary shares that were issued upon conversion of our Series A notes or exercise of our warrants would be entitled to demand that we register their shares for resale under the Securities Act of 1933, as amended. We are not required to effect more than three registrations for these holders under these demand registration rights. These demand rights terminate on June 21, 2008. No more than two of the demand registrations may be effected using a Form F-1 registration statement. The securities registered pursuant to F-1 registrations must have an aggregate offering price of \$2.5 million and any short-form or Form F-3 registrations must have an aggregate offering price of \$1.0 million.

The investor rights agreement also provides that if we propose to register any of our securities under the Securities Act, either for our own account or for the account of other shareholders exercising registration rights, the holders of warrants or ordinary shares received upon conversion of the Series A notes or warrants are entitled to notice of the registration and are entitled to include such ordinary shares in any such registration. These “piggyback rights” are subject to conditions and limitations, among them a minimum aggregate offering price of \$1.0 million each and the right of the underwriters of an offering to limit the number of ordinary shares included in the registration. These piggyback rights terminate on June 21, 2008.

We have registered ADSs representing such ordinary shares, in addition to the ordinary shares themselves. We are generally required to bear all of the expenses of these registrations, except underwriting discounts and selling commissions. Registration of ADSs representing any ordinary shares held by security holders with registration rights results in those ADSs becoming freely tradable without restriction under the Securities Act immediately upon effectiveness of registration.

Alexandra Global Master Fund Ltd., Generation Capital Associates and Sigma Tau Finanziaria S.p.A.

We have registered the resale of 450,000 ordinary shares pursuant to an investor rights agreement with Alexandra Global Master Fund Ltd. and Generation Capital Associates with respect to an aggregate of 450,000 ADSs held by those parties and with Sigma Tau Finanziaria S.p.A. with respect to 800,000 ordinary shares held by Sigma Tau Finanziaria S.p.A. (the resale of the 800,000 ordinary shares held by Sigma Tau Finanziaria S.p.A. has not been registered). Each investor rights agreement provides that beginning six months after the effective date of the registration statement relating to our initial public offering, the holders of the majority of the ordinary shares covered by that agreement would be entitled to demand that we register their shares for resale under the Securities Act. These “demand rights” are subject to limitations described in the agreements. We are not required to effect more than two registrations under these demand registration rights pursuant to each agreement. These demand rights terminate on June 21, 2008. The securities registered pursuant to F-1 registrations must have an aggregate offering price of \$2.0 million and any short-form or Form F-3 registrations must have an aggregate offering price of \$1.0 million.

Each investor rights agreement also provides that if we propose to register any of our securities under the Securities Act, either for our own account or for the account of other shareholders exercising registration rights, the holders are entitled to notice of the registration and are entitled to include ordinary shares in any such registration. These “piggyback rights” are subject to conditions and limitations, among them a minimum aggregate offering price of \$1.0 million each and the right of the underwriters of an offering to limit the number of shares included in the registration. These piggyback rights terminate on June 21, 2008.

We have registered ADSs representing such ordinary shares in addition to the ordinary shares themselves. We are generally required to bear all of the expenses of these registrations, except underwriting discounts and selling commissions. Registration of ADSs representing any ordinary shares held by security holders with registration rights results in those ADSs becoming freely tradable without restriction under the Securities Act immediately upon effectiveness of registration.

Underwriters of our initial public offering

We have issued purchase options to purchase an aggregate of 151,200 ordinary shares to the underwriters of our initial public offering. Each purchase option provides that, beginning one year after the effective date of the registration statement relating to our initial public offering and ending four years after the effective date of the registration statement relating to our initial public offering, the holders of a majority of all of the ordinary shares issuable upon exercise of the purchase options may, on one occasion, demand that we register for resale all or any portion of the purchase options and all of the ordinary shares issuable upon exercise of the purchase options and kept the registration statement effective for at least six consecutive months.

Each purchase option also provides that if we propose to register any of our securities under the Securities Act, either for our own account or for the account of other shareholders exercising registration rights, the holders are entitled to notice of the registration and are entitled to include ordinary shares in any such registration, which we must keep effective for at least six consecutive months. These “piggyback rights” commence one year after the effective date of the registration statement relating to our initial public offering and terminate on seven years after the effective date of the registration statement relating to our initial public offering.

Back to Table of Contents

We intend to register ADSs representing such ordinary shares in addition to the ordinary shares themselves. We are generally required to bear all of the expenses of these registrations, except underwriting discounts and selling commissions. Registration of ADSs representing any ordinary shares held by security holders with registration rights would result in those ADSs becoming freely tradable without restriction under the Securities Act immediately upon effectiveness of registration.

October 2005 private placement participants

We have registered the resale of 2,264,643 ordinary shares pursuant to a registration rights agreement between us and the purchasers of our ordinary shares and warrants in our October 2005 private placement agreement. We must keep the registration statement effective until all of the securities registered have been sold or may be sold without volume restrictions pursuant to Rule 144(k).

We have registered ADSs representing such ordinary shares in addition to the ordinary shares themselves. We are generally required to bear all of the expenses of these registrations, except underwriting discounts and selling commissions. Registration of ADSs representing any ordinary shares held by security holders with registration rights would result in those ADSs becoming freely tradable without restriction under the Securities Act immediately upon effectiveness of registration.

Voting Agreements

In connection with our October 2005 private placement, FinSirton agreed to vote its ordinary shares in our company in favor of electing one nominee to our board of directors selected by Biomedical Value Fund, L.P. and Biomedical Offshore Value Fund, Ltd. for so long as those entities collectively own ADSs representing 5% of our outstanding ordinary shares. Mr. Kroin is the designee of these entities.

RELATED PARTY TRANSACTIONS

Other than described below, since January 1, 2005, there have not been, and there is not currently proposed, any transaction or loan between us and any affiliate of ours, any of our directors, executive officers, holders of 10% or more of our ordinary shares, any member of their immediate family or any enterprise over which any such person is able to exercise a significant influence other than our employment agreement with Dr. Laura Ferro, our President and Chief Executive Officer.

Control by Dr. Ferro's Family

Dr. Laura Ferro, who is our Chief Executive Officer and President and one of our directors, and members of her family control FinSirton. As a result, Dr. Ferro and her family indirectly control 39% of our outstanding ordinary shares at March 31, 2006.

Agreements with FinSirton, Sirton, Alexandra, Sigma-Tau, Biomedical Value Fund, LP and Biomedical Offshore Value Fund, Ltd.

On October 15, 2004, our then-majority shareholder, FinSirton, entered into a pledge agreement with respect to our issuance of \$8.010 million of Series A senior convertible promissory notes. Under the agreement, FinSirton pledged 1,650,000 of our ordinary shares held by FinSirton to secure the performance of all of our obligations under the notes. The notes were repaid in June 2005 with the net proceeds of our initial public offering or converted into our ordinary shares.

As of December 31, 2004, we had inter-company outstanding debt in the amount of €2.2 million to Sirton, a wholly-owned subsidiary of FinSirton. Sirton lent us €1.0 million in each of March 2004 and May 2004, €400 thousand in June 2004, and €600 thousand in July 2004. All loans were borrowed at 3.5% interest per annum and each matures on October 1, 2008. We repaid €800 thousand of the loans in 2004 and €700 thousand in January 2005 with the net proceeds from the sale of our Series A notes. We repaid the remaining €1.5 million of the loans with net proceeds of our initial public offering in June 2005.

On July 20, 2004, we obtained a mortgage loan in the amount of €2.0 million from Banca Nazionale del Lavoro. The mortgage loan is secured by the real estate owned by us and by Sirton, and was secured by a guarantee executed by FinSirton. Banca Nazionale del Lavoro released Sirton from its mortgage and FinSirton from its guarantee in April 2006; at the same time, we deposited €550,000 with Banca Nazionale del Lavoro to secure repayment of the loan. We cannot make any payment or prepayment of principal or interest on up to €1.0 million of the amounts that we owe Sirton under our service agreements with Sirton until we have performed in full our obligations under the mortgage loan. Amounts under the mortgage loan will bear interest at the six-month Euribor rate plus 1.4%. The mortgage loan will mature on August 6, 2010.

On January 2, 2004, we entered into an Agreement for the Supply of Services with FinSirton pursuant to which FinSirton supplied us with accounting and personnel administration services. This agreement was to expire on December 31, 2004, but was renewed for 2005. In 2004 and 2005, we paid FinSirton €189 thousand and €152 thousand, respectively, under this agreement. On January 2, 2006, we entered into a Service Agreement with FinSirton pursuant to which FinSirton supplies

Back to Table of Contents

us with general management and personnel administration services. This agreement is to expire on December 31, 2006. The agreement is renewable automatically each year barring cancellation of the agreement, which requires notice one month prior to expiration. We pay FinSirton €950 per employee per year for personnel services and €48 thousand per year for general management services. No other services are provided by FinSirton.

On January 2, 2004 we entered into a Service Agreement with Sirton pursuant to which Sirton supplied us with a number of business services including quality assurance, quality control, analytical assistance for research and development, regulatory services, engineering services, procurement and logistic services, general and car rental services, administrative assistance, library services, utilities services, and maintenance services. This agreement was to expire on December 31, 2004, but was renewed for 2005. In 2004 and 2005, we paid Sirton €1.10 million and €855 thousand, respectively, under this agreement. On January 2, 2006, we entered into a Service Agreement with Sirton pursuant to which Sirton supplies us with a number of business services including quality control, analytical assistance for research and development, engineering services, general and car rental services, utilities services, and maintenance services. This agreement expires on December 31, 2006, but is renewable automatically each year barring cancellation of the agreement, which requires notice one month prior to expiration.

On January 2, 2004, we entered into an Agreement for the Supply of Services with Sirton pursuant to which Sirton supplied us with organizational assistance in business management by drawing up strategic plans and coordinating our internal resources. This agreement was to expire on December 31, 2004 but was renewed for 2005. The agreement was not renewed in 2006. In 2004 and 2005, we paid Sirton €40 thousand and €54 thousand, respectively, under this agreement.

On January 1, 2005, we entered into a Commercial Lease Contract with Sirton to lease manufacturing space. This agreement expires on December 31, 2010. As of December 31, 2005, we owed €8 thousand to Sirton under this agreement.

On January 1, 2005, we entered into a Commercial Lease Contract with FinSirton to lease space for offices, laboratories and storage facilities. This agreement expires on December 31, 2010. As of December 31, 2005, we paid FinSirton €76 thousand and we owed €76 thousand under this agreement.

On January 2, 2004 we entered into an Active Ingredient Supply Agreement with Sirton pursuant to which we supplied Sirton with defibrotide and certain ingredients for generic drugs that Sirton manufactures. This agreement was to expire on December 31, 2004, but was renewed for 2005. In 2004 and 2005, Sirton paid us €2.870 million and €3.691 million, respectively, under this agreement. On January 2, 2006, we entered into a Contract to Supply Active Ingredients with Sirton, pursuant to which we manufacture urokinase, calcium heparin, defibrotide, sulglucotide and glucidamine for Sirton, which Sirton uses to produce specialty pharmaceutical products. Sirton also processes and sells the defibrotide to Crinos. The agreement automatically renews each year unless one party gives written notice of its intent to terminate the agreement at least one month prior to the annual termination date. The prices are as follows: €53 per unit of urokinase, €2.300 per unit of defibrotide for injection, €660 per unit of oral defibrotide, €390 per unit of sulglucotide, and €160 per unit of glucidamine.

On March 29, 2005, we borrowed €106 thousand from Alexandra Global Master Fund Ltd., one of our shareholders. The loan bore interest at 8% per annum, which interest was payable on maturity. We repaid this loan in April 2005 with the proceeds of a capital contribution from our then-majority shareholder, FinSirton.

In April 2005, Sigma Tau Finanziaria S.p.A. became one of our shareholders by purchasing 800,000 outstanding ordinary shares from FinSirton. Pursuant to a voting agreement between Sigma-Tau Finanziaria S.p.A. and FinSirton, a designee of Sigma-Tau Finanziaria S.p.A., Marco Codella, was elected to be a member of our board of directors upon consummation of our initial public offering in June 2005. Mr. Codella is the Chief Financial Officer of Sigma

Tau Industrie Farmaceutice Reunite S.p.A., which is a wholly-owned subsidiary of Sigma-Tau Finanziaria S.p.A. Sigma Tau Finanziaria S.p.A. is an affiliate of:

- Defiante Farmaceutica, L.d.a., which converted its Series A notes into 359,505 ordinary shares at the consummation of our initial public offering and holds warrants issued in connection with the Series A notes to purchase 73,334 ordinary shares;
- Chaumiere Consultadoria e Servicos S.A., which purchased 152,376 ADSs and warrants to purchase 60,951 ADSs in our October 2005 private placement; and
- Sigma-Tau Pharmaceuticals, Inc., which is a party to a License and Supply Agreement with us pursuant to which we have licensed the right to market defibrotide to treat VOD in North America, Central America and South America to Sigma-Tau Pharmaceuticals, Inc. and pursuant to which Sigma-Tau Pharmaceuticals, Inc. has agreed to purchase defibrotide for this use from us. This agreement is described in more detail in “Business—Our Strategic Alliances—License and Distribution Agreements.” Sigma-Tau Pharmaceuticals, Inc. also has a right of first refusal to market defibrotide for certain other uses in North America, Central America and South America.

Back to Table of Contents

David Kroin, a member of Gentium's Board of Directors, is the Managing Director of Great Point Partners, LLC. Great Point Partners LLC is the investment manager of Biomedical Value Fund, LP and Biomedical Offshore Value Fund Ltd. Mr. Kroin was elected to Gentium's board of directors pursuant to a voting agreement among the participants in the October 2005 private placement and FinSirton, Gentium's largest shareholder.

Nadler Consulting Agreement

We have entered into a consulting agreement, dated as of April 1, 2005, with Dr. Nadler, one of our directors, under which we have retained Dr. Nadler as an independent contractor in connection with providing consulting and advising services relating to our clinical development of defibrotide to treat VOD in the United States and participating in our scientific advisory board. In return, we have agreed to pay Dr. Nadler a fee of \$15,000 per year, a fee of \$5,000 per meeting of our scientific advisory board outside the United States and a fee of \$3,000 for each meeting of our scientific advisory board in the United States, as well as reimbursing Dr. Nadler for his reasonable and necessary expenses incurred in providing his services. The consulting agreement has an initial term of twelve months and is automatically renewed for additional one-year periods unless terminated by either party upon notice given at least 30 days prior to the end of such period.

Anderson Consulting Agreement

We have entered into a consulting agreement, dated as of April 27, 2006, with Dr. Anderson, one of our directors, under which we have retained Dr. Anderson as an independent contractor in connection with providing consulting and advisory services relating to our clinical development of defibrotide to treat VOD in the United States and participating in our scientific advisory board. In return, we have agreed to pay Dr. Anderson a fee of \$15,000 per year, a fee of \$5,000 per meeting of our scientific advisory board outside the United States and a fee of \$3,000 for each meeting of our scientific advisory board in the United States, provided that such fees do not in the aggregate exceed \$60,000 in any calendar year. The agreement also provides that Dr. Anderson be reimbursed for his reasonable and necessary expenses incurred in providing his services. The consulting agreement has an initial term of twelve months and is automatically renewed for additional one-year periods unless terminated by either party upon notice given at least 30 days prior to the end of such period.

Indemnification Agreements

We have entered into indemnification agreements with each of our directors and officers containing provisions that may require us to indemnify them against liabilities that may arise by reason of their status or service as directors or officers and to advance their expenses incurred as a result of any proceeding against them. However, we will not indemnify directors or officers with respect to liabilities arising from willful misconduct of a culpable nature.

Dividend Policy

We have never declared or paid any cash dividends on our ordinary shares. We currently intend to retain all available funds to support our operations and to finance the growth and development of our business. We are not subject to any contractual restrictions on paying dividends. Under Italian law and our bylaws, our payment of any annual dividend must be proposed by our board of directors and is subject to the approval of our shareholders at the annual ordinary shareholders' meeting. Before dividends may be paid out of our net income in any year, we must allocate an amount equal to 5% of the net income to our legal reserve until such reserve is at least equal to 20% of the aggregate par value of our issued shares, which we call our "capital." If a loss in our capital occurs, we may not pay dividends until the capital is reconstituted or reduced by the amount of such losses. We may pay dividends out of available retained earnings from prior years, provided that after such payment, we will have a legal reserve at least equal to the legally required minimum of 20% of the capital. We may not approve or pay dividends until this minimum is met. If the minimum is met, the board of directors proposes the issuance of a dividend and the shareholders approve that issuance, the shareholders' resolution will specify the manner and the date for their payment.

Any dividend we declare will be paid to the holders of ADSs, subject to the terms of the deposit agreement, to the same extent as holders of our ordinary shares, less the fees and expenses payable under the deposit agreement. Any dividend we declare will be distributed by the depositary to the holders of the ADSs. Cash dividends on our ordinary shares, if any, will be paid in U.S. dollars.

If we issue debt securities in the future, until those debt securities are repaid in full, we may not declare dividends if it results in the aggregate of the capital and reserves being less than half of the outstanding amount of the debt.

The board of directors may not approve interim dividends at times between our annual ordinary shareholders' meetings. Any future determination relating to dividend policy will be made at the discretion of our board of directors and will depend on a number of factors, including our future earnings, capital requirements, financial condition, future prospects and other factors as the board of directors may deem relevant.

Under Italian law, Italian companies are required to supply to the Italian tax authorities certain information regarding the identity of non-resident shareholders in connection with the payment of dividends. Shareholders are required to provide their Italian tax identification number, if any, or alternatively, in the case of legal entities, their name, country of establishment and address, or in the case of individuals, their name, address and place and date of birth, or in the case of partnerships, the information required for individuals with respect to one of their representatives. In the case of ADSs owned by non-residents of Italy, we understand that the provision of information concerning the depositary, in its capacity as holder of record of the ordinary shares underlying the ADSs, will satisfy this requirement. However, beneficial U.S. ADS holders are entitled to a reduction of the withholding taxes applicable to dividends paid to them under the income tax convention currently in effect between the United States and Italy. In order for you to benefit from that reduction, we are required to furnish certain information concerning you to the Italian tax authorities, and therefor any claim by you for those benefits would need to be accompanied by the required information.

SIGNIFICANT CHANGES

No significant changes have occurred since the date of the most recent annual financial statements.

ITEM 9.

THE OFFER AND LISTING

OFFER AND LISTING DETAILS

Our ADSs are listed on Nasdaq under the symbol “GENT.” Neither our ordinary shares nor our ADSs are listed on a securities exchange outside the United States. The Bank of New York is our depositary for purposes of issuing the ADRs representing the ADSs. Each ADS represents one ordinary share.

Back to Table of Contents

Trading in our ADSs on the Nasdaq National Market System commenced on May 16, 2006. Prior to this date, our ADSs were traded on the American Stock Exchange, beginning June 16, 2005 and ending on May 15, 2006, the date we de-listed. The following table sets forth, for each of the periods indicated, the high and low closing prices per ADS as reported by the American Stock Exchange and Nasdaq, as applicable.

	Price Range of ADSs	
	High	Low
<u>2005</u>		
Second Quarter (beginning June 16, 2005)	\$ 9.10	\$ 8.77
Third Quarter	\$ 8.99	\$ 6.92
Fourth Quarter	\$ 8.68	\$ 7.05
<u>2006</u>		
First Quarter	\$ 13.25	\$ 7.85
<u>Month Ended</u>		
November 30, 2005	\$ 8.68	\$ 7.05
December 31, 2005	\$ 8.46	\$ 7.75
January 31, 2006	\$ 9.55	\$ 7.85
February 28, 2006	\$ 10.05	\$ 9.20
March 31, 2006	\$ 13.25	\$ 9.78
April 30, 2006	\$ 19.76	\$ 13.01
May 31, 2006 (through May 25, 2006)	\$ 17.20	\$ 12.50

The closing price of the ADSs on Nasdaq on May 25, 2006 was \$12.50.

MEMORANDUM AND ARTICLES OF ASSOCIATION

Bylaws

The following is a summary of certain information concerning our ordinary shares and by-laws (*Statuto*) and of Italian law applicable to companies whose shares are not listed in a regulated market in the European Union, as in effect at the date of this annual report. The summary contains all the information that we consider to be material regarding the shares but does not purport to be complete and is qualified in its entirety by reference to our by-laws or Italian law, as the case may be.

In January 2003, the Italian government approved a wide-ranging reform of the corporate law provisions of the Italian Civil Code, which came into force on January 1, 2004. On September 30, 2004, our shareholders approved a number of amendments to our by-laws dictated or made possible by the 2003 corporate law reform. Our bylaws were also amended on April 28, 2005, November 29, 2005 and April 28, 2006. The following summary takes into account the 2003 corporate law reform and the consequent amendments to our by-laws.

General

As of March 31, 2006, our issued and outstanding share capital consisted of 9,610,630 ordinary shares, par value €1 per share. The euro was adopted in Italy on January 1, 1999. The redenomination of the ordinary shares from lire into euro was approved by our shareholders on December 27, 2000. All the issued and outstanding shares are fully paid, non-assessable and in registered form.

We are registered with the Companies' Registry of Como, with our registered office at Comune di Villa Guardia, frazione Civello, Italy, registration number 02098100130.

Our corporate purpose is the manufacturing, on behalf of our company and third parties, and marketing in both Italy and other countries, of pharmaceutical preparations, pharmaceutical products, raw materials for pharmaceutical and parapharmaceutical use and in general all and any products sold by pharmacies or for hospital use, excluding in all cases the retail sale in Italy of pharmaceutical preparations and products, medical articles and clinical apparatuses in general and organic and inorganic products that may be used in agrotechnical and/or zootechnical fields. We may also prepare and organize for our own account or on behalf of third parties the documentation required for obtaining authorizations for marketing pharmaceutical products in compliance with the regulations in force in the countries of destination and be the holders of those authorizations. We may grant and/or transfer licenses to Italian and foreign enterprises or corporate bodies or acquire licenses for ourself or third parties. For each product contemplated by our corporate purposes, we may carry out research programs in general and in particular technological, chemical, pharmacotoxicological and clinical research programs in the hospital and pharmaceutical field. We are generally authorized to take any commercial transactions necessary or useful to achieve our corporate purpose, with the exclusion of investment services and other financial or professional activities reserved by Italian law to authorized entities.

Authorization of shares

Our shareholders may authorize the issuance of additional shares at any time at an extraordinary shareholders' meeting. However, the newly issued shares may not be purchased before all the outstanding shares are entirely paid for. On September 30, 2004, after a recommendation by our board of directors, our shareholders approved a capital increase to allow for the issuance of:

- up to 1,560,000 ordinary shares upon the exercise of options available for grant under our share option plans;
- up to 1,335,000 ordinary shares upon the conversion of the Series A senior convertible promissory notes;
- up to 881,100 ordinary shares upon the exercise of the warrants; and
- 4,554,000 ordinary shares, including the shares underlying the ADSs in our initial public offering (including ordinary shares underlying the underwriters' purchase option and the over-allotment option).

As of March 31, 2006, 4,610,630 of such new ordinary shares had been issued and fully paid. The authorization for the ordinary shares authorized at this meeting is valid until September 30, 2009, except that 1,353,297 of these ordinary shares were authorized for issuance in connection with our issuance of the Series A notes and related warrants, but were not actually issued, and so become unauthorized and unissuable under Italian law.

-70-

Back to Table of Contents

On November 29, 2005, after a recommendation by our board of directors, our shareholders approved a capital increase of 713,518 ordinary shares to be reserved for issuance upon exercise of the warrants we issued to the participants in our October 2005 private placement and the placement agent for that private placement.

On April 28, 2006, after a recommendation by our board of directors, our shareholders approved an amendment to our bylaws that provides that our board of directors be granted, pursuant to articles 2443 and 2420-ter of the Italian Civil Code, with the power to (i) increase the capital of our company in cash, up to Euro 90 million of par value, in one or more transactions, and to reserve all or part of such amount for the exercise of warrants issued by means of the same resolution of our board of directors providing for the relevant capital increase; (ii) issue convertible bonds (including subordinated) and increase the capital of our company, in one or more transactions, up to Euro 10 million of par value, through the issuance of ordinary shares reserved for the conversion of such convertible bonds, and to reserve all or part of such convertible bonds for issuance upon the exercise of warrants issued by means of the same resolution of our board of directors providing for issuance of the convertible bonds; and (iii) in each case, exclude or limit the option right of our shareholders if our board of directors determines that exclusion or limitation to be in the interest of our company.

Form and transfer of shares

Our ordinary shares are not represented by share certificates; rather, they are registered in book-entry form. All of our ordinary shares are issued through Monte Titoli, an Italian clearinghouse and depositary, and held through various participants, primarily financial institutions, on Monte Titoli's system. Transfers in our ordinary shares are processed on Monte Titoli's system. We update our shareholder book (*libro soci*) that we keep at our corporate offices for Italian law purposes from time to time with the names of the record shareholders based on information that will be provided to us by Monte Titoli participants.

This shareholder book is the controlling register of our record shareholders for Italian law purposes, including for establishing the record shareholders for shareholder meetings, declaration of dividends and stock splits or combinations. A shareholders' name must be entered on this shareholder book in order for the shareholder to establish its rights against us.

Dividend rights

Our payment of any annual dividend must be proposed by our board of directors and is subject to the approval of our shareholders at the annual ordinary shareholders' meeting. Before dividends may be paid out of our unconsolidated net income in any year, we must allocate an amount equal to 5% of the Italian GAAP net income to our legal reserve until such reserve is at least equal to 20% of the aggregate par value of our issued shares, which we call our "capital." If a loss in our capital occurs, we may not pay dividends until the capital is reconstituted or reduced by the amount of such losses. We may pay dividends out of available retained earnings from prior years, provided that after such payment, we will have a legal reserve at least equal to the legally required minimum of 20% of the capital. We may not approve or pay dividends until this minimum is met. If the minimum is met, the board of directors proposes the issuance of a dividend and the shareholders' resolution approves that issuance, the shareholders' resolution will specify the manner and the date for their payment. Any dividends which shareholders do not collect within five years of the date on which they become payable will be forfeited by those shareholders and we will keep the money. The board of directors may not approve interim dividends at times between our annual ordinary shareholders' meetings.

Board of directors

Pursuant to our by-laws, our board of directors must consist of between three and eleven individuals. Our board of directors is elected at an ordinary shareholders' meeting for a period of one year.

Our directors, who may but are not required to be shareholders, may be re-elected. Our board of directors has complete power of our ordinary and extraordinary administration and in particular may perform all acts it deems advisable for the achievement of our corporate purposes, except for the actions reserved by applicable law or the by-laws to a vote of the shareholders at an ordinary or extraordinary shareholders' meeting. See also, "Item 10, Additional Information, Memorandum and Articles of Association, Meetings of Shareholders."

If we cannot repay our creditors, and a court determines that our directors did not perform their duties regarding the preservation of our assets, the court may find our directors liable to our creditors.

Our board of directors must appoint a chairman (*presidente*) and may appoint a vice-chairman and a secretary. The chairman of the board of directors is our legal representative. Our board of directors may delegate certain powers to one or more managing directors (*amministratori delegati*) or to an executive committee (*comitato esecutivo*), determine the nature and scope of the delegated powers of each director and of the executive committee and revoke such delegation at any time. Italian law provides that the board or, if it delegates such duties, the managing directors or executive committee, must ensure that our organizational and accounting structure is appropriate to our business. If the board delegates these duties to managing directors or an executive committee, then the managing directors or the executive committee, as the case may be, must report to our

Back to Table of Contents

board of directors at least every six months on our business and the main transactions carried out by us or by our subsidiaries, if any. The board, the managing directors or the executive committee, as the case may be, must report to our board of statutory auditors at least every six months on our business and the main transactions carried out by us or our subsidiaries, if any.

Our board of directors may also appoint one or more senior managers (*direttori generali*) who report directly to the board. These senior managers may be employees, and the board may delegate any powers to them that the board has not already delegated to managing directors or an executive committee, and subject to the limitations discussed below.

Under Italian law, our board of directors may not delegate certain responsibilities, including the preparation and approval of draft financial statements, the approval of merger and de-merger plans to be presented to shareholders' meetings, increases in the amount of our share capital or the issuance of convertible debentures (if any such power has been delegated to our board of directors by our shareholders at an extraordinary shareholders' meeting) and the fulfillment of the formalities required when our capital is required to be reduced as a result of accumulated losses that affect our stated capital by more than one third. See also, "Item 10, Additional Information, Memorandum and Articles of Association, Meetings of Shareholders."

Meetings of our board of directors are called eight days in advance by letter or, in case of necessity, two days in advance, by fax, e-mail with receipt or telegram to each director and each statutory auditor. Statutory auditors are normally required to attend our board meetings, but if a meeting has been duly called, the board can validly take action at the meeting even if the board of statutory auditors do not attend. If the meeting has not been duly called, the meeting is nevertheless validly constituted if all of the directors in office and all of the statutory auditors are present. The chairman may call meetings on his own initiative and meetings must be called upon the request of two directors.

Meetings of our board of directors may be held in person, or by audio-conference or tele-conference, in any member state of the European Union or in the United States. The quorum for meetings of our board of directors is a majority of the directors in office. Resolutions are adopted by the vote of a majority of the directors present at a meeting at which a quorum is present.

Under Italian law, directors having any interest in a proposed transaction must disclose their interest to the board and to the statutory auditors, even if such interest is not in conflict with our interest in the same transaction. The interested director is not required to abstain from voting on the resolution approving the transaction, but the resolution must state explicitly the reasons for, and the benefit to us of, the approved transaction. If these provisions are not complied with, or if the transaction would not have been approved without the vote of the interested director, the resolution may be challenged by a director or by our board of statutory auditors if the approved transaction may be prejudicial to us. A managing director, a member of the executive committee or any senior manager having any interest in a proposed transaction that he or she has authority to approve must solicit prior board approval of such transaction. The interested director or senior manager may be held liable for damages to us resulting from a resolution adopted in breach of the above rules. Finally, directors may be held liable for damages to us if they illicitly profit from insider information or corporate opportunities.

Under Italian law, directors may be removed from office at any time by the vote of shareholders at an ordinary shareholders' meeting although, if removed in circumstances where there was no just cause, such directors may have a claim for damages against us. These damages may include, but are not limited to, compensation that would otherwise have been paid to the director for the remainder of their term and damage to their reputation. Directors may resign at any time by written notice to our board of directors and to the chairman of our board of statutory auditors. Our board of directors must appoint substitute directors to fill vacancies arising from removals or resignations, subject to the approval of the board of statutory auditors, to serve until the next ordinary shareholders' meeting. If at any time more than half of the members of our board of directors resign or otherwise cease to be directors, the board of directors in

its entirety ceases to be in office and our board of statutory auditors must promptly call an ordinary shareholders' meeting to appoint new directors.

The remuneration of our directors is determined by our shareholders at ordinary shareholders' meetings. Our board of directors, after consultation with our board of statutory auditors, may determine the remuneration of directors that perform management or other special services for us, such as managing directors. Our directors are entitled to reimbursement for expenses reasonably incurred in connection with their service as directors, such as expenses incurred in travel to attend board meetings.

Effective January 1, 2004, an Italian share corporation may adopt one of three different models of corporate governance structure. The three models are:

- a board of directors and a board of statutory auditors, which is the historical model that all companies had prior to January 1, 2004;
- a one-tier model with a single board of directors, including an audit committee composed of independent non-executive directors; or

Back to Table of Contents

· a two-tier model, including a management board, which is entrusted with management responsibilities, and a supervisory board which is entrusted mainly with control and supervisory responsibilities and, among other functions, appoints and removes the members of the management board and approves our annual financial statements.

Replacing the historical model with the new one-tier model or two-tier model requires an extraordinary shareholders meeting resolution. The amended by-laws approved by our shareholders on September 30, 2004 do not provide for a change in our governance structure. As a result, we continue to have a board of directors and a board of statutory auditors.

Statutory auditors

In addition to electing our board of directors, our shareholders elect a board of statutory auditors (*Collegio Sindacale*) from individuals qualified to act in such capacity under Italian law. At our ordinary shareholders' meetings, the statutory auditors are elected for a term of three fiscal years, may be re-elected for successive terms and may be removed only for cause and with the approval of a competent court. Each member of our board of statutory auditors must provide certain evidence that he is qualified to act in such capacity under Italian law and meets certain professional standards.

Our by-laws currently provide that the board of statutory auditors shall consist of three statutory auditors and two alternate statutory auditors (who are automatically substituted for a statutory auditor who resigns or is otherwise unable to serve).

Our board of statutory auditors is required, among other things, to verify that we:

- comply with applicable laws and our by-laws;
- respect principles of good governance; and
- maintain adequate organizational structure, internal controls and administrative and accounting system.

Our board of statutory auditors is required to meet at least once each ninety days. In addition, our statutory auditors are supposed to attend meetings of our board of directors and shareholders' meetings. If they do not attend two consecutive meetings of the board of directors or shareholders, they may be terminated for cause by the shareholders. Our statutory auditors may decide to call a meeting of our shareholders, ask for information about our management from our directors, carry out inspections and verifications at our offices and exchange information with our external auditors. Any shareholder may submit a complaint to our board of statutory auditors regarding facts that the shareholder believes should be subject to scrutiny by our board of statutory auditors, which must take any complaint into account in its report to the shareholders' meeting. If shareholders collectively representing 5% of our share capital submit such a complaint, our board of statutory auditors must promptly undertake an investigation and present its findings and any recommendations to a shareholders' meeting (which must be convened immediately if the complaint appears to have a reasonable basis and there is an urgent need to take action). Our board of statutory auditors may report to a competent court serious breaches of directors' duties. The court may take such actions as it feels appropriate, including inspecting our company's operations, removing directors, appointing temporary administrators to manage our company and any other actions that the court feels is necessary to preserve the value of our company for our creditors and shareholders.

As mentioned in the preceding section, effective January 1, 2004, Italian share corporations may depart from the traditional Italian model of corporate governance structure and opt for two alternative models, neither of which

includes a board of statutory auditors. Our amended by-laws do not provide for a change in our governance structure, although we do have an audit committee simply as an internal body of our board of directors.

External auditor

The 2003 corporate law reform requires us to appoint an external auditor or a firm of external auditors, each of them qualified to act in such capacity under Italian law, that shall verify during the fiscal year that our accounting records are correctly kept and accurately reflect our activities, and that our financial statements correspond to the accounting records and the verifications conducted by the external auditors and comply with applicable rules. The external auditor or the firm of external auditors express their opinion on the financial statements in a report that may be reviewed by the shareholders at our offices prior to the annual shareholders' meeting. The report remains on file at our offices and may be reviewed after the annual shareholders' meeting as well; it is also published for review by the general public.

The external auditor or the firm of external auditors are appointed for a three-year term by the vote of our shareholders at an ordinary shareholders' meeting. At the ordinary shareholders' meeting, the shareholders may ask questions of the board of statutory auditors about their view of the auditors prior to voting on whether to appoint the auditors. Once appointed, the shareholders may remove the auditors only for cause and with the approval of the board of statutory auditors and of a competent court.

Back to Table of Contents

On April 28, 2006, our shareholders appointed Reconta Ernst & Young S.p.A., with offices in Italy, as our external auditors for a one-year term expiring at the time of the annual shareholders meeting to approve the financial statements for 2006.

Meetings of shareholders

Shareholders are entitled to attend and vote at ordinary and extraordinary shareholder's meetings. Votes may be cast personally or by proxy. Shareholders' meeting may be called by our board of directors (or our board of statutory auditors) and must be called if requested by holders of at least 10% of the issued shares. Shareholders are not entitled to request that a meeting of shareholders be convened to vote on issues which as a matter of law shall be resolved upon the basis of a proposal, plan or report by our board of directors. If the shareholders' meeting is not called despite the request by shareholders and such refusal is unjustified, a competent court may call the meeting.

We may hold meetings of shareholders at our registered office in Villa Guardia, or elsewhere within Italy, any other state of the European Union or in the United States following publication of notice of the meeting in the "*Gazzetta Ufficiale della Repubblica Italiana*" or in the newspaper "*Il Sole 24 Ore*" at least 15 days before the date fixed for the meeting. Our bylaws provide that we must mail written notice of meetings to our shareholders at least 10 days before the date fixed for the meeting. The depositary will mail to all record holders of ADSs a notice containing a summary of all information included in any notice of a shareholders' meeting received by the depositary. The notice of a shareholders' meeting must specify two meeting dates for an ordinary or extraordinary shareholders' meeting (first and second "calls"). The notice of the shareholders' meeting also specifies the dates for further calls. The notice must contain a list of the items to be dealt with and state the day, hour and place for the meeting for both the first and second calls. However, if the above procedures are not complied with, the shareholders' meeting will still be deemed to be validly held if all outstanding shares are represented, all other holders having the right to vote are present and the meeting is attended by a majority of the board of directors and the board of statutory auditors.

We must convene an ordinary shareholders' meeting at least once a year within 120 days after the end of the fiscal year. Our annual financial statements must be approved by vote of our shareholders at this annual ordinary shareholders' meeting. We may delay holding the shareholders' meeting to up to 180 days after the end of the fiscal year if we must prepare consolidated financial statements or if particular circumstances concerning our structure or our purposes so require. At ordinary shareholders' meetings, our shareholders also appoint the external auditors, approve any distribution of dividends that have been proposed by our board of directors, elect our board of directors and statutory auditors, determine their remuneration and vote on any business matter the resolution or authorization of which is entrusted to the shareholders by law.

We may call extraordinary shareholders' meetings to vote upon split-ups, dissolutions, appointment of receivers and similar extraordinary actions. We may also call extraordinary shareholders' meetings to vote upon proposed amendments to our by-laws, issuance of convertible debentures, mergers and de-mergers and capital increases and reductions, if the actions may not be authorized by the board of directors. The board of directors has the authority to transfer our registered office within Italy, authorize, on a non-exclusive basis, amendments to our by-laws that are required by law, authorize mergers by absorption into us of our subsidiaries in which we hold all or at least 90% of the issued share capital, authorize reductions of our share capital in case of withdrawal of a shareholder and indicate who among the directors is our legal representative. If the shareholders authorize the issuance of shares or other securities at an extraordinary meeting, they may delegate the power to make specific issuances to the board of directors.

Once our shareholders have authorized the issuance of securities, those securities must be fully paid for before the shareholders may authorize the issuance of additional securities, unless the shareholders meet and vote to cancel those authorized but not purchased securities.

The quorum for an ordinary meeting of our shareholders on the first call is 50% of the outstanding ordinary shares, while on second call there is no quorum requirement. In either case, resolutions are carried by the majority of ordinary shares present or represented at the meeting. The quorum for an extraordinary meeting of shareholders is a majority of the outstanding ordinary shares on the first call and more than one-third of the outstanding shares on second call. Resolutions are carried by a majority of the outstanding ordinary shares on first call and at least two-thirds of the holders of shares present or represented at the meeting on second call. In addition, certain matters (such as, for example, a change in our purpose, the transfer of our registered office outside Italy or our liquidation prior to the date set forth in our by-laws) must be carried by the holders of more than one-third of the outstanding ordinary shares (not just the ordinary shares present or represented at the meeting).

Shareholders are entitled to one vote per ordinary share. Neither Italian law nor our by-laws limit the right of non-resident or foreign owners to hold or vote their shares. Shareholders do not need to “lodge” their share certificates (if any) or any communication from their broker in order to take part in the meeting. As a registered shareholder, the depositary (or its nominee) will be entitled to vote the ordinary shares underlying the ADSs. The deposit agreement requires the depositary (or its nominee) to accept voting instructions from owners of ADSs and to execute such instructions to the extent permitted by law.

Back to Table of Contents

Shareholders may appoint proxies by delivering in writing an appropriate instrument of appointment to us. Our directors, auditors and employees may not be proxies. Italian law provides that any one proxy cannot represent more than 20 shareholders prior to the company “making recourse to the risk capital market.” Italian scholars are undecided as to whether listing shares on an exchange outside of Italy constitutes “making recourse to the risk capital market.” If we are deemed to make recourse to the risk capital market by means of listing ADSs representing our ordinary shares on the Nasdaq National Market System, any one proxy cannot represent more than 50 shareholders if the aggregate par value of our ordinary shares is €5 million or less or more than 100 shareholders if the aggregate par value of our ordinary shares is more than €5 million but less than or equal to €25 million. If the aggregate par value of our ordinary shares is more than €25 million, any one proxy cannot represent more than 200 shareholders. At December 31, 2005, we had 9,610,630 shares outstanding, the aggregate par value of which is €9,610,630, and so if we are deemed to make recourse to the risk capital market, each proxy may not represent more than 100 shareholders.

Preemptive rights

Pursuant to Italian law, holders of outstanding ordinary shares and convertible debentures are entitled to subscribe for issuance of ordinary shares or convertible debentures in proportion to their holdings at the time that the shareholders authorize the capital increase for those issuances, unless those issuances are for non-cash considerations. The preemptive rights may be waived or limited by shareholders’ resolution adopted by the affirmative vote of holders of more than 50 percent of the ordinary shares at an extraordinary meeting of shareholders and such waiver or limitation is in the interest of our company. There can be no assurance that the holders of ADSs may be able to exercise fully any preemptive rights to which the holders of ordinary shares may be entitled. If ADS holders are not able to exercise their preemptive rights, the depositary will, to the extent possible, dispose of such rights for their account.

FinSirtion waived its preemptive right in connection with the authorization of our private placement of the Series A notes and warrants, the issuance of options under our equity incentive plans and the issuance of 4,554,000 additional ordinary shares, which includes the shares underlying the ADSs offered in our initial public offering and the shares issued in our October 2005 private placement. Our shareholders waived their preemptive rights in connection with the authorization of 713,518 ordinary shares to be reserved for issuance upon exercise of the warrants we issued to the participants in our October 2005 private placement and the placement agent for that private placement.

Preference shares; other securities

Italian law permits us to issue preference shares with limited voting rights, other classes of equity securities with different economic and voting rights, “participation certificates” with limited economic and voting rights, as well as “tracking shares,” if our by-laws permit such issuances. Our by-laws currently do allow us to issue these securities. We may also issue convertible and non-convertible debt securities. In order to issue these securities, our board of directors would need to recommend to our shareholders that they approve the issuance of particular securities in connection with a capital increase, and the shareholders would need to vote to approve such an issuance and capital increase at an extraordinary meeting. The board would also need to recommend, and the shareholders would need to approve by vote at the extraordinary meeting, specific terms of the securities. The shareholders may vote at the extraordinary meeting to delegate to the board of directors the power to issue those securities from time to time, but not more than five years from the date of the extraordinary meeting.

Debt-equity ratio

Italian law provides that we may issue debt securities for an amount not exceeding twice the amount of the sum of the aggregate par value of our ordinary shares (which we call our capital), our legal reserve and any other disposable reserves appearing on our latest Italian balance sheet approved by our shareholders. The legal reserve is a reserve to which we allocate 5% of our Italian GAAP net income each year until it equals at least 20% of our Italian GAAP

capital. One of the other reserves that we maintain on our balance sheet is a “share premium reserve”, meaning amounts paid for our ordinary shares in excess of the capital. Until our outstanding debt securities are repaid in full, we may not voluntarily reduce our capital or distribute our reserves (such as by declaring dividends) in the event the aggregate of the capital and reserves, following such reduction of capital and/or distribution of reserves, is less than half of the outstanding amount of the debt securities. If our equity is reduced by losses or otherwise such that the amount of the outstanding debt securities is more than twice the amount of our equity, we cannot distribute profits to our shareholders until the ratio between the amount of our debt securities and our capital and reserves is restored. Moreover, some legal scholars are of the opinion that in such a case the ratio must be restored by a recapitalization of our company. If our equity is reduced, we could recapitalize by means of issuing new shares or having our current shareholders contribute additional capital to our company, although there can be no assurance that we would be able to find purchasers for new shares or that any of our current shareholders would be willing to contribute additional capital. These laws regarding the ratio of debt securities to capital and reserves do not apply to issuances of debt securities to professional investors (as defined by Italian law). However, in such a case, should the professional investors transfer such debt securities to third parties not qualified as professional investors, the former remain liable to us for the payment of such securities.

Back to Table of Contents

Reduction of equity by losses

Italian law requires us to reduce our shareholders' equity in certain situations. Our shareholders' equity has three main components: capital, legal reserves and other shareholders' equity (such as any premium paid for the shares over the par value and any retained earnings). We apply our losses from operations against our shareholders' equity other than legal reserves and capital first. If additional losses remain, or if we have no shareholders' equity other than legal reserves and capital, and the additional losses are more than one-third of the amount of our legal reserves and capital, our board of directors must call a shareholder's meeting as soon as possible. The shareholders must vote to elect to either reduce the legal reserves and capital by the amount of the remaining losses, or to carry the losses forward for up to one year. If the shareholders vote to elect to carry the losses forward up to one year, and at the end of the year, the losses are still more than one-third of the amount of the legal reserves and capital, then we must reduce our legal reserves and capital by the amount of the losses. However, as an S.p.A., we must maintain capital of at least €120 thousand. If the amount of the losses would reduce our capital to less than €120 thousand, then:

- we would need to increase our capital, which we could do by issuing new shares or having our shareholders contribute additional capital to our company, although there can be no assurance that we would be able to find purchasers for new shares or that any of our current shareholders would be willing to contribute additional capital; or
- our shareholders would need to convert our company to an "S.r.l", which has a lower capital requirement of €10 thousand; or
- if neither of these options were taken, our shareholders or, if they do not so resolve, a court of competent jurisdiction, could appoint a receiver to liquidate our company.

Segregation of assets and proceeds

Pursuant to the 2003 corporate law reform, effective January 1, 2004, our board of directors may resolve to segregate our assets into one or more separate pools. Such pools of assets may have an aggregate value not exceeding 10% of our shareholders' equity. Each pool of assets must be used exclusively for the carrying out of a specific business and may not be attached by our general creditors. Similarly, creditors with respect to such specific business may only attach those assets that are included in the corresponding pool. Tort creditors, on the other hand, may always attach any of our assets. Our board of directors may authorize us to issue securities carrying economic and administrative rights relating to a pool. In addition, financing agreements relating to the funding of a specific business may provide that the proceeds of such business be used exclusively to repay the financing. Such proceeds may be attached only by the financing party and such financing party would have no recourse against other assets of ours.

We have no present intention to enter into any such transaction and none is currently in effect.

Liquidation rights

Pursuant to Italian law and subject to the satisfaction of the claims of all creditors, our shareholders are entitled to a distribution in liquidation that is equal to the par value of their shares (to the extent available out of our net assets).

Purchase of shares by us

We are permitted to purchase our outstanding shares, subject to certain conditions and limitations provided for by Italian law. We may only purchase the shares out of profits available for dividends or out of distributable reserves, in each case as appearing on the latest shareholder-approved financial statements. Further, we may only repurchase fully paid-in shares. Such purchases must be authorized by our shareholders by vote at an ordinary shareholders' meeting.

The number of shares to be acquired, together with any shares previously acquired by us or any of our subsidiaries may not (except in limited circumstances) exceed in aggregate 10% of the total number of shares then issued and the aggregate purchase price of such shares may not exceed the earnings reserve specifically approved by shareholders. Shares held in excess of such 10% limit must be sold within one year of the date of purchase. Similar limitations will apply with respect to purchases of our ordinary shares by any subsidiaries we may create in the future.

A corresponding reserve equal to the purchase price of such shares must be created in the balance sheet, and such reserve is not available for distribution, unless such shares are sold or cancelled. Shares purchased and held by us may be resold only pursuant to a resolution of our shareholders adopted at an ordinary shareholders' meeting. The voting rights attaching to the shares held by us or our subsidiaries cannot be exercised, but the shares can be counted for quorum purposes in shareholders' meetings. Dividends and other rights, including pre-emptive rights, attaching to such shares will accrue to the benefit of other shareholders.

Notification of the acquisition of shares

In accordance with Italian antitrust laws, the Italian Antitrust Authority is required to prohibit the acquisition of control in a company which would thereby create or strengthen a dominant position in the domestic market or a significant part

Back to Table of Contents

thereof and which would result in the elimination or substantial reduction, on a lasting basis, of competition, provided that certain turnover thresholds are exceeded. However, if the turnover of the acquiring party and the company to be acquired exceed certain other monetary thresholds, the antitrust review of the acquisition falls within the exclusive jurisdiction of the European Commission.

Minority shareholders' rights; withdrawal rights

Shareholders' resolutions which are not adopted in conformity with applicable law or our by-laws may be challenged (with certain limitations and exceptions) within ninety days by absent, dissenting or abstaining shareholders representing individually or in the aggregate at least 5% of our share capital (as well as by our board of directors or our board of statutory auditors). Shareholders not reaching this threshold or shareholders not entitled to vote at our meetings may only claim damages deriving from the resolution.

Dissenting or absent shareholders may withdraw from the company as a result of shareholders' resolutions approving, among others things, material modifications of our purpose or of the voting rights of our ordinary shares, our transformation from a share corporation into a different legal entity or the transfer of our registered seat outside Italy. In such a case, our other shareholders would have a pre-emptive right to purchase the shares of the withdrawing shareholder. Should no shareholder exercise that pre-emptive right, the shares must be offered to third parties or, in the absence of any third party wishing to buy them, they will be purchased by us by using the available reserves. In the event no reserve is available, our capital must be reduced accordingly. According to the 2003 corporate law reform, any repurchase of such shares by us must be on terms authorized by our board of directors, upon consultation with our board of statutory auditors and our external auditor, having regard to our net assets value, our prospective earnings and the market value of our ordinary shares, if any. Under the 2003 corporate law reform, we may set forth different criteria in our bylaws for the consideration to be paid to withdrawing shareholders. We have not done so as of the date of this annual report.

Each shareholder may bring to the attention of the board of statutory auditors facts or acts which such shareholder deems wrongful. If such shareholders represent more than 5% of our share capital, our board of statutory auditors must investigate without delay and report its findings and recommendations to our shareholders' meeting. Shareholders representing more than 10% of our share capital have the right to report to the competent court serious breaches of the duties of the directors which may be prejudicial to us or to our subsidiaries. In addition, shareholders representing at least 20% of our share capital may commence derivative suits before the competent court against our directors, statutory auditors and general managers. We may waive or settle the suit unless shareholders holding at least 20% of the shares vote against such waiver or settlement. We will reimburse the legal costs of such action in the event that the claim of such shareholders is successful and the court does not award such costs against the relevant directors, statutory auditors or general managers.

Liability for mismanagement of subsidiaries

Pursuant to the 2003 corporate law reform, if we, acting in our own interest or the interest of third parties, mismanage a company that we control, we are liable to that company's shareholders and creditors for ensuing damages. That liability is excluded if the ensuing damage is fully eliminated, including through subsequent transactions, or the damage is effectively offset by the global benefits deriving in general to the company from the continuing exercise of such direction and coordination powers. We are presumed to have control over, among other companies, any subsidiary whose financial statements are consolidated into ours. Since we currently have no subsidiaries, this law does not apply to us at this time.

Limitation of Liability and Indemnification Matters

Insofar as indemnification for liabilities arising under Securities Act of 1933, as amended, or the Securities Act, may be permitted to directors, officers or persons controlling our company under the foregoing provisions, we have been informed that in the opinion of the Securities and Exchange Commission such indemnification is against public policy as expressed in the Securities Act and is therefore unenforceable.

The Nasdaq National Market

Our ADSs are listed on The Nasdaq National Market under the trading symbol “GENT.”

Comparison of Italian and Delaware Corporate Laws

WE ARE GOVERNED BY THE CORPORATE LAWS IN ITALY, WHICH ARE IN SOME CASES LESS FAVORABLE TO SHAREHOLDERS THEN THE CORPORATE LAWS IN DELAWARE, UNITED STATES.

The following is a summary of material differences between the Delaware General Corporate Law and the laws of Italy.

-77-

Back to Table of Contents

Mergers and other extraordinary corporate transactions

Under Delaware law, a merger or consolidation requires the approval of a majority of the votes cast by the holders of shares entitled to vote in person or by proxy and if any class or series is entitled to vote thereon as a class, the affirmative vote of a majority of the shares within each class or series entitled to vote as a class in person or by proxy, unless the certificate of incorporation requires a greater vote. The sale, lease, exchange or other disposition of all, or substantially all, the property and assets, of a Delaware corporation requires a majority vote unless the certificate of incorporation requires a greater vote. Under Delaware law, the dissolution of a corporation requires a majority vote unless the certificate of incorporation requires a greater vote.

Under Italian law, a merger or consolidation requires the approval of a majority of the votes cast by the shareholders entitled to vote in person or by proxy at an extraordinary shareholders' meeting. Our bylaws designate power to approve mergers of wholly-owned subsidiaries and subsidiaries of which we own at least 90% to our board of directors, although our shareholders may overrule our board of directors.

Amendments to charter documents

Under Delaware law, charter documents are composed of two documents: a certificate of incorporation and bylaws. An amendment to the certificate of incorporation ordinarily requires a majority vote (unless the certificate of incorporation requires a greater vote). If a class or series is entitled separately to vote on an amendment, its majority vote (unless the certificate of incorporation requires a greater vote), separately calculated, is necessary to approve the amendment. In addition, under Delaware law, the holders of outstanding shares of a class or series are entitled to vote as a class upon a proposed amendment by a majority vote (unless the certificate of incorporation requires a greater vote), whether or not entitled to vote thereon by the provisions of a company's certificate of incorporation, if the amendment would have certain effects identified in Delaware law.

Under Delaware law, directors of a corporation may adopt, amend or repeal the corporation's bylaws, unless the certificate of incorporation reserves the power exclusively to the shareholders, or the shareholders, in amending, repealing or adopting a particular bylaw, expressly provide that the board of directors may not amend or repeal that bylaw. Unless the certificate of incorporation or a bylaw adopted by the shareholders provides otherwise, a corporation's shareholders may amend, repeal or adopt the corporation's bylaws even though the bylaws may also be amended, repealed or adopted by its directors.

Under Italian law, the charter documents are composed of articles of association and bylaws. An amendment to these documents requires the approval of a majority of the votes cast by the shareholders entitled to vote in person or by proxy at an extraordinary shareholders' meeting, except that certain extraordinary actions, such as change in our purpose, liquidation or issuance of preferred shares and others, only require the approval of more than one-third of our outstanding shares for both first and second call.

Naming of companies

Under Delaware law a company shall use one of these same endings or others, including "association", "company", "corporation", "club", "foundation", "fund", "incorporated," "institute", "society", "union", "syndicate" or "limited" (or abbreviations thereof, with or without punctuation), or words (or abbreviations thereof, with or without punctuation) of like import of foreign countries or jurisdictions (provided they are written in roman characters or letters).

Under Italian law, the name of a corporation must end in "S.p.A." or "Società per Azioni."

Capital

Delaware law permits companies to be incorporated with par value shares, no par value shares or a combination of such. If a Delaware company issues par value shares and receives an amount in excess of the par value, the directors may attribute a portion of the excess as “capital.” If a Delaware company issues no par value shares, the directors may attribute a portion of the amount paid as “capital.”

Italian law permits companies to be incorporated with par value shares, no par value shares or a combination of such. If an Italian company issues par value shares and receives an amount in excess of the par value, the par value is attributed as “capital” and the excess is attributed to a “premium reserve,” which is part of shareholders’ equity. If an Italian company issues no par value shares, the entire amount is attributed as “capital.”

Franchise tax

Delaware levies a franchise tax based on authorized capital. Italian law has no such tax.

-78-

Back to Table of Contents

Liability of shareholders

The liability of shareholders of a Delaware company is limited to the amount paid for their shares. The liability of shareholders of an Italian company is also limited to the amount paid for their shares.

Quorum of shareholders

Under Delaware law, with respect to any matter, a quorum shall be present at a meeting of shareholders if the holders of a majority of the shares entitled to vote are represented at the meeting in person or by proxy, unless otherwise provided in the certificate of incorporation. Where a separate vote by a class or series or classes or series is required, a quorum shall be present at a meeting of shareholders if the holders of a majority of the shares entitled to vote are represented at the meeting in person or by proxy, unless otherwise provided in the certificate of incorporation.

Under Italian law, a quorum shall be present at an ordinary meeting of shareholders on first call if the holders of 50% of the outstanding ordinary shares are represented at the meeting in person or by proxy, but there is no quorum requirement on second call. A quorum shall be present at an extraordinary meeting of shareholders on first call if the holders of a majority of the outstanding ordinary shares are represented at the meeting in person or by proxy and if the holders of more than one-third of the outstanding shares are represented at the meeting in person or proxy on second call.

Actions without a meeting-shareholders

Under Delaware law, shareholders may take action without a meeting if a consent in writing is signed by the shareholders having the minimum number of votes that would be necessary to take such action at a meeting, unless the certificate of incorporation provides otherwise.

Under Italian law, shareholders may not act without a meeting.

Special/extraordinary meetings

Under Delaware law, special meetings of shareholders may be called by the board of directors or by such person or persons as may be authorized by the certificate of incorporation or the bylaws.

Under Italian law, an extraordinary shareholders' meeting may be called by our board of directors and must be called if requested by holders of at least 10% of the issued shares. Shareholders are not entitled to request that a meeting of shareholders be convened to vote on issues which as a matter of law shall be resolved upon the basis of a proposal, plan or report by our board of directors. If the shareholders' meeting is not called despite the request by shareholders and such refusal is unjustified, a competent court may call the meeting.

Director qualifications

Under Delaware law, directors need not be residents of Delaware or shareholders of the corporation unless the certificate of incorporation or bylaws so require. The certificate of incorporation or bylaws may prescribe other qualifications for directors.

Under Italian law, the only requirement for directors is that they have not been deemed "legally incompetent" to be a director under Italian law. "Legal incompetence" is determined by a competent court and can be determined for reasons such as lack of mental capacity, physical incapability, emotional instability, bankruptcy, certain criminal convictions or drug or alcohol addiction.

Election of directors

Under Delaware law, unless otherwise provided in the certificate of incorporation, shareholders are not entitled to cumulative voting in the election of directors. Absent such provision, the directors of a corporation are elected by a plurality of the votes cast by the holders of shares entitled to vote in person or by proxy at a meeting of shareholders at which a quorum is present.

Under Italian law, shareholders are not entitled to cumulative voting in the election of directors. The directors of a corporation are elected by a majority of the votes cast by the holders of shares entitled to vote in person or by proxy at an ordinary meeting of shareholders at which a quorum is present.

Actions without a meeting - directors

Under Delaware law, any action required or permitted to be taken at any meeting of the board of directors may be taken without a meeting if all members of the board consent to it in writing or by electronic transmission, and the writing or electronic transmission is filed with the minutes of proceedings of the board unless otherwise restricted by the certificate of incorporation or bylaws.

Under Italian law, directors may not act without a meeting.

Back to Table of Contents

Removal of directors

Under Delaware law, one or more or all the directors of a corporation may be removed for cause or, unless provided in the certificate of incorporation, removed without cause by the shareholders by the affirmative vote of the majority of votes cast by the holders of shares entitled to vote thereon, subject to certain exceptions.

Under Italian law, directors may be removed from office at any time by the vote of shareholders at an ordinary shareholders' meeting although, if removed in circumstances where there was no just cause, such directors may have a claim for damages against us. These damages may include, but are not limited to, compensation that would otherwise have been paid to the director for the remainder of their term and damage to their reputation. Our board of directors must appoint substitute directors to fill vacancies arising from removals, subject to the approval of the board of statutory auditors, to serve until the next ordinary shareholders' meeting. If at any time more than half of the members of our board of directors are removed or otherwise cease to be directors, the board of directors in its entirety ceases to be in office and our board of statutory auditors must promptly call an ordinary shareholders' meeting to appoint new directors.

Location of directors meetings

Delaware law provides that, unless otherwise restricted by the certificate of incorporation or bylaws, the board may hold its meetings outside of the State of Delaware. Under Italian law and our bylaws, meetings of our board of directors may be held in person, or by audio-conference or tele-conference, in any member state of the European Union or in the United States.

Limitation of liability and indemnification

Delaware law requires directors and members of any committee designated by the board of directors to discharge their duties in good faith and with that degree of diligence, care and skill which ordinary prudent people would exercise under similar circumstances and positions. Delaware law permits a corporation to set limits on the extent of a director's liability. Italian law requires directors and members of any committee designated by the board of directors to discharge their duties in good faith and with that degree of diligence required by the nature of their office and their specific competence. If we cannot repay our creditors, and a court determines that our directors did not perform their duties regarding the preservation of our assets, the court may find our directors liable to our creditors. Italian law permits a corporation to set limits on the extent of a director's liability. We intend to enter into indemnification agreements with our directors. We have already agreed to indemnify our directors for any tax penalties inflicted upon, among other people, our directors who, when acting on our behalf and in our interest, breach or cause breaches of tax laws unintentionally, except in the case of fraud, and to consider, on a case by case basis, waiving our right of recourse against directors who breach tax laws that result in monetary penalties inflicted on us.

Dividends

Delaware law provides that the board of directors of a corporation may authorize and the corporation may make distributions subject to any restrictions in its certificate of incorporation. However, Delaware law provides that distributions may not be made if, after giving effect to the distribution, the corporation would not be able to pay its debts as they become due in the usual course of its business or total assets would be less than total liabilities.

Under Italian law, our payment of any annual dividend must be proposed by our board of directors and is subject to the approval of our shareholders at the annual ordinary shareholders' meeting. Before dividends may be paid out of our unconsolidated net income in any year, we must allocate an amount equal to 5% of the net income to our legal reserve until such reserve is at least equal to 20% of the aggregate par value of our issued shares, which we call our "capital." If

our capital is reduced as a result of accumulated losses, we may not pay dividends until the capital is reconstituted or reduced by the amount of such losses. We may pay dividends out of available retained earnings from prior years, provided that after such payment, we will have a legal reserve at least equal to the legally required minimum of 20% of the capital. We may not approve or pay dividends until this minimum is met. If the minimum is met, the board of directors proposes the issuance of a dividend and the shareholders' resolution approves that issuance, the shareholders' resolution will specify the manner and the date for their payment. Any dividends which shareholders do not collect within five years of the date on which they become payable will be forfeited by those shareholders and we will keep the money. The board of directors may not approve interim dividends at times between our annual ordinary shareholders' meetings.

Return of capital

Delaware law provides that corporations may return capital by dividend, redemption or repurchase subject to certain solvency tests. Shareholder approval is not required for these transactions so long as the corporation meets the solvency tests.

Under Italian law, we are permitted to purchase our outstanding shares, subject to certain conditions and limitations provided for by Italian law. We may only purchase the shares out of profits available for dividends or out of distributable reserves, in each case as appearing on the latest shareholder-approved financial statements. Further, we may only repurchase fully paid-in shares. Such purchases must be authorized by our shareholders by vote at an ordinary shareholders' meeting. The

Back to Table of Contents

number of shares to be acquired, together with any shares previously acquired by us or any of our subsidiaries may not (except in limited circumstances) exceed in aggregate 10% of the total number of shares then issued and the aggregate purchase price of such shares may not exceed the earnings reserve specifically approved by shareholders. Shares held in excess of such 10% limit must be sold within one year of the date of purchase. Similar limitations will apply with respect to purchases of our ordinary shares by any subsidiaries we may create in the future.

A corresponding reserve equal to the purchase price of such shares must be created in the balance sheet, and such reserve is not available for distribution, unless such shares are sold or cancelled. Shares purchased and held by us may be resold only pursuant to a resolution of our shareholders adopted at an ordinary shareholders' meeting. The voting rights attaching to the shares held by us or our subsidiaries cannot be exercised, but the shares can be counted for quorum purposes in shareholders' meetings. Dividends and other rights, including pre-emptive rights, attaching to such shares will accrue to the benefit of other shareholders.

Officers

Under Delaware law, a corporation is required to have such officers as are required to sign instruments to be filed with the Secretary of State and stock certificates. It is necessary that the corporation have at least two officers to comply with this requirement. The corporation has complete freedom to designate its executives by whatever names it wishes and to allocate the managerial power delegated to executives as the corporation may wish. Any number of offices may be held by the same person unless otherwise provided by the certificate of incorporation or the by-laws. Officers may be chosen in any way and by any person or body if the by-laws or a resolution of the governing body so specifies.

Under Italian law, there are no requirements for any specific numbers or titles of officers.

Share certificates

Under Delaware law, the shares of a corporation shall be represented by certificates, provided that the board of directors of the corporation may provide by resolution or resolutions that some or all of any or all classes or series of its stock shall be uncertified stock. However, existing shareholders and future shareholders are able to obtain a stock certificate signed by or in the name of the corporation by the chairman or vice-chairman of the board of directors or the president or vice-president, and by the treasurer or an assistant treasurer, or the secretary or an assistant secretary of such corporation if they desire. The terms governing preferred stock must be expressed "in clear language" in the certificate of incorporation (or by a separate resolution authorized by the charter).

Under Italian law, the shares of a corporation may be issued in either registered or certificated form. Our bylaws provide that our ordinary shares are not certificated. Rather, they are held through various participants, primarily institutions, on Monte Titoli's system and registered by book-entry form on our shareholders book.

Preemptive rights

Under Delaware law, shareholders do not possess preemptive rights as to the issuance of additional securities by the corporation, unless the certificate of incorporation provide otherwise.

Under Italian law, holders of outstanding ordinary shares and convertible debentures are entitled to subscribe for issuance of ordinary shares or convertible debentures in proportion to their holdings at the time that the shareholders authorize the capital increase for those issuances, unless those issuances are for non-cash considerations. The preemptive rights may be waived or limited by shareholders' resolution adopted by the affirmative vote of holders of more than 50 percent of the ordinary shares at an extraordinary meeting of shareholders and such waiver or limitation is in the interest of our company.

Liquidation rights generally

Under Delaware law, shareholders are entitled to share ratably in the distribution of assets upon the dissolution of their corporation. Preferred shareholders typically do not participate in the distribution of assets of a dissolved corporation beyond their established contractual preferences. Once the rights of preferred shareholders have been fully satisfied, holders of common stock are entitled to the distribution of any remaining assets.

Under Italian law, and subject to the satisfaction of the claims of all creditors, our shareholders are entitled to a distribution in liquidation that is equal to the par value of their shares (to the extent available out of our net assets). Preferred shareholders and holders of “participating certificates” typically do not participate in the distribution of assets of a dissolved corporation beyond their established contractual preferences. Once the rights of preferred shareholders and holders of participating certificates have been fully satisfied, holders of ordinary shares are entitled to the distribution of any remaining assets.

Shareholder derivative suits

Under Delaware law, a derivative suit may be brought only if the plaintiff was a record or beneficial owner of shares at the time of the transaction of which he or she complains, and the initial pleading in the suit states that the ownership

Back to Table of Contents

requirement is satisfied, and with particularity, the efforts of the plaintiff to have the suit brought for the corporation by the board of directors, or the reasons for not making such efforts. The court may require the plaintiff to give security for the expenses incurred or expected to be incurred by the defendants. The court may also require the plaintiff to pay expenses to the defendants if the court finds, upon final judgment for the defendants, that the suit was brought without reasonable cause.

Under Italian law, a shareholder's name must be entered in the shareholder's register in order to establish his rights as a shareholder against us. Each shareholder may bring to the attention of the board of statutory auditors facts or acts which such shareholder deems wrongful. If such shareholders represent more than 5% of our share capital, our board of statutory auditors must investigate without delay and report its findings and recommendations to our shareholders' meeting. Shareholders representing more than 10% of our share capital have the right to report to the competent court serious breaches of the duties of the directors which may be prejudicial to us or to our subsidiaries. In addition, shareholders representing at least 20% of our share capital may commence derivative suits before the competent court against our directors, statutory auditors and general managers. We may waive or settle the suit unless shareholders holding at least 20% of the shares vote against such waiver or settlement. We will reimburse the legal costs of such action in the event that the claim of such shareholders is successful and the court does not award such costs against the relevant directors, statutory auditors or general managers.

Dissenters' rights

Any shareholder of a Delaware corporation has the right to dissent from any plan of merger or consolidation to which the corporation is a party, provided that unless the certificate of incorporation otherwise provides, a shareholder shall not have the right to dissent from any plan of merger or consolidation with respect to shares of a class or series which is listed on a national securities exchange or is held of record by not less than 2,000 holders on the record date fixed to determine the shareholders entitled to vote upon the plan of merger or consolidation. A dissenting shareholder has a right of appraisal of its shares.

Under Italian law, shareholders' resolutions which are not adopted in conformity with applicable law or our by-laws may be challenged (with certain limitations and exceptions) within ninety days by absent, dissenting or abstaining shareholders representing individually or in the aggregate at least 5% of our share capital (as well as by our board of directors or our board of statutory auditors). Shareholders not reaching this threshold or shareholders not entitled to vote at our meetings may only claim damages deriving from the resolution.

Dissenting or absent shareholders may withdraw from the company as a result of shareholders' resolutions approving, among others things, material modifications of our purpose or of the voting rights of our ordinary shares, our transformation from a share corporation into a different legal entity or the transfer of our registered office outside Italy. In such a case, our other shareholders would have a pre-emptive right to purchase the shares of the withdrawing shareholder. Should no shareholder exercise that pre-emptive right, the shares must be offered to third parties or, in the absence of any third party wishing to buy them, they will be purchased by us by using the available reserves. In the event no reserve is available, our capital must be reduced accordingly. According to the 2003 corporate law reform, any repurchase of such shares by us must be on terms authorized by our board of directors, upon consultation with our board of statutory auditors and our external auditor, having regard to our net assets value, our prospective earnings and the market value of our ordinary shares, if any. Under 2003 corporate law reform, we may set forth different criteria in our bylaws for the consideration to be paid to withdrawing shareholders in such withdrawal. We have not done so as of the date of this annual report.

Interested shareholder transactions

Delaware corporations are subject to the State of Delaware's "business combination" statute. In general, that statute prohibits a publicly-traded corporation from engaging in various "business combination" transactions with any "interested stockholder" for a period of three years after the time that the shareholder became an interested stockholder, unless the business combination is approved by the board prior to the time the shareholder became an interested stockholder, the interested stockholder acquired 85% or more of the outstanding shares in a transaction in which it became an interested stockholder, or the business combination is approved by the board and by holders of two-thirds of the shares not held by the interested stockholder. A "business combination" includes mergers, assets sales and other transactions resulting in financial benefit to a shareholder. An "interested stockholder" is a person who, together with affiliates and associates, owns 15% or more of a corporation's voting stock.

Under Italian law, directors having any interest in a proposed transaction must disclose their interest to the board and to the statutory auditors, even if such interest is not in conflict with our interest in the same transaction. The interested director is not required to abstain from voting on the resolution approving the transaction, but the resolution must state explicitly the reasons for, and the benefit to us of, the approved transaction. If these provisions are not complied with, or if the transaction would not have been approved without the vote of the interested director, the resolution may be challenged by a director or by our board of statutory auditors if the approved transaction may be prejudicial to us. A legal representative of our company having any interest in a proposed transaction that he or she has authority to approve must solicit prior board approval of such

Back to Table of Contents

transaction. The interested director may be held liable for damages to us resulting from a resolution adopted in breach of the above rules. Finally, directors may be held liable if they illicitly profit from insider information or corporate opportunities.

Inspection of books and records

Under Delaware law, upon the written request of any shareholder, the corporation shall mail to such shareholder its balance sheet as at the end of the preceding fiscal year, and its profits and loss and surplus statements for such fiscal year. Inspection rights are extended to any person who beneficially owns stock through either a voting trustee or nominee who holds the stock of record on behalf of such person. Where the shareholder is other than a record holder, such person must state under oath the person's status as a shareholder and produce documentary evidence of beneficial ownership. Any shareholder is entitled to examine a corporation's relevant books and records for any proper purpose, namely, a purpose reasonably related to such person's interest as a shareholder, upon written demand stating the purpose thereof.

Under Italian law, our shareholders may review the report of the board of directors on the management of our company and the report of our statutory auditors and our accounting firm on our financial statements during the fifteen days prior to the ordinary shareholders' meeting to approve those financial statements. The report remains on file at our offices and may be reviewed after the annual shareholders' meeting as well; it is filed with the Companies' Registry of Como for review by the general public. Moreover, any shareholder is entitled to examine the shareholders' ledger and the ledger of the minutes of the shareholders' meeting, at any time.

Registered office

Delaware law requires a "registered office" in Delaware. Italian law requires a registered office in Italy.

Issuance of shares

Under Delaware law, directors have the authority to issue shares of common stock. If the certificate of incorporation so provides, they may also designate the terms of preferred stock and issue shares of preferred stock.

Under Italian law, issuances of any shares, ordinary or otherwise, require an amendment to our bylaws to increase our capital, which must be recommended to our shareholders by our board of directors and approved by a vote of our shareholders at an extraordinary meeting of shareholders. Our shareholders may not authorize the issuance of shares for a period of more than five years from the date of the extraordinary shareholders' meeting. Once our shareholders have authorized the issuance of securities, those securities must be paid for before the newly issued shares may be purchased. The board would also need to recommend, and the shareholders would need to approve by vote at the extraordinary meeting, specific terms of the securities. Also, our shareholders can authorize the board of directors to increase our capital, but the board may exercise such power for only five years. If the authorized capital is not issued by the end of those five years, the authorized capital expires, and our board and shareholders would need to meet again to authorize a new capital increase. Our shareholders authorized our board of directors to increase our capital by up to €90 million of par value for ordinary shares and €10 million for ordinary shares issuable upon conversion of convertible bonds on April 28, 2006. Italian law also provides that if the shareholders vote to increase our capital, dissenting, abstaining or absent shareholders representing more than 5% of the outstanding shares of our company may, for a period of 90 days following the filing of the shareholders' approval with the Registry of Companies, challenge such capital increase if the increase was not in compliance with Italian law. In certain cases (if, for example, a shareholders' meeting was not called), any interested person may challenge the capital increase for a period of 180 days following the filing of the shareholders' approval with the Registry of Companies. Finally, once our shareholders authorize a capital increase, we must issue all of those authorized shares before the shareholders may authorize a new

capital increase, unless the shareholders vote to cancel the previously authorized shares.

Debt-equity ratio

Under Delaware law, a corporation is not restricted as to the amount of debt securities that it may issue.

Under Italian law, we may issue debt securities for an amount not exceeding twice the amount of the sum of the aggregate par value of our ordinary shares (which we call our capital), our legal reserve and any other disposable reserves appearing on our latest Italian balance sheet approved by our shareholders. The legal reserve is a reserve to which we allocate 5% of our net income each year until it equals at least 20% of our capital. One of the other reserves that we maintain on our balance sheet is a “share premium reserve”, meaning amounts paid for our ordinary shares in excess of the capital. Until our outstanding debt securities are repaid in full, we may not voluntarily reduce our capital or distribute our reserves (such as by declaring dividends) in the event the aggregate of the capital and reserves, following such reduction of capital and/or distribution of reserves, is less than half of the outstanding amount of the debt securities. If our equity is reduced by losses or otherwise such that the amount of the outstanding debt securities is more than twice the amount of our equity, we cannot distribute profits to our shareholders until the ratio between the amount of our debt securities and our capital and reserves is restored. Moreover, some legal scholars are of the opinion that in such a case the ratio must be restored by a recapitalization of our company. If our equity is reduced, we could recapitalize by means of issuing new shares or having our current shareholders

Back to Table of Contents

contribute additional capital to our company, although there can be no assurance that we would be able to find purchasers for new shares or that any of our current shareholders would be willing to contribute additional capital. These laws regarding the ratio of debt securities to capital and reserves do not apply to issuances of debt securities to professional investors (as defined by Italian law). However, in such a case, should the professional investors transfer such debt securities to third parties not qualified as professional investors, the former remain liable to us for the payment of such securities.

Reduction of equity by losses

Under Delaware law, a corporation's shareholders' equity is reduced by losses, and may become negative.

Italian law requires us to reduce our shareholders' equity in certain situations. Our shareholders' equity has three main components: capital, legal reserves and other shareholders' equity (such as any premium paid for the shares over the par value and any retained earnings). We apply our losses from operations against our shareholders' equity other than legal reserves and capital first. If additional losses remain, or if we have no shareholders' equity other than legal reserves and capital, and the additional losses are more than one-third of the amount of our legal reserves and capital, our board of directors must call a shareholder's meeting as soon as possible. The shareholders must vote to elect to either reduce the legal reserves and capital by the amount of the remaining losses, or to carry the losses forward for up to one year. If the shareholders vote to elect to carry the losses forward up to one year, and at the end of the year, the losses are still more than one-third of the amount of the legal reserves and capital, then we must reduce our legal reserves and capital by the amount of the losses. However, as an S.p.A., we must maintain capital of at least €120 thousand. If the amount of the losses would reduce our capital to less than €120 thousand, then:

- we would need to increase our capital, which we could do by issuing new shares or having our shareholders contribute additional capital to our company, although there can be no assurance that we would be able to find purchasers for new shares or that any of our current shareholders would be willing to contribute additional capital; or
- our shareholders would need to convert our company to an "S.r.l", a private limited liability company, which has a lower capital requirement of €10 thousand; or
- if neither of these options were taken, our shareholders or, if they do not so resolve, a court of competent jurisdiction, could appoint a receiver to liquidate our company.

Comparison of our Corporate Governance Procedures with Nasdaq's Corporate Governance Requirements

The Nasdaq Marketplace Rules set forth the corporate governance requirements of companies listed on The Nasdaq Stock Market. Subsection (a)(1) of Marketplace Rule 4350 provides that a foreign private issuer may follow its home country practices in lieu of the corporate governance requirements of The Nasdaq Stock Market, under certain circumstances. Pursuant to this Marketplace Rule 4350(a)(1), we follow Italian practices in lieu of two of The Nasdaq Stock Market's corporate governance requirements pertaining to: (1) quorum requirements and (2) our audit committee.

Quorum requirements.

The Nasdaq Stock Market: Marketplace Rule 4350(f) sets forth The Nasdaq Stock Market's quorum requirement for shareholder meetings, stating that "in no case shall such quorum be less than 33 1/3% of the outstanding shares of the company's common voting stock."

Italian law: In accordance with Italian law, our shareholders are entitled to attend and vote at regular and special shareholders' meetings. Shareholders are notified of two meeting dates for a regular or special shareholders' meeting (first and second "calls"). The quorum for a regular meeting of shareholders on the first call is 50% of the outstanding ordinary shares, while on a second call there is no quorum requirement. The quorum for a special meeting of shareholders is a majority of the outstanding ordinary shares on the first call and more than one-third of the outstanding shares on a second call.

Appointment, Compensation, Retention and Oversight of Independent Accountants.

The Nasdaq Stock Market: Rule 4350(d)(3) of The Nasdaq Marketplace Rules requires compliance with Rule 10A-3 of the Securities Exchange Act of 1934, as amended, which requires that:

- a company's audit committee be directly responsible for the appointment, compensation, retention and oversight of the work of any registered public accounting firm engaged (including resolution of disagreements between management and the auditor regarding financial reporting) for the purpose of preparing or issuing an audit report or performing other audit, review or attest services for the company;

- each such registered public accounting firm must report directly to the audit committee;

Back to Table of Contents

- that the audit committee establish procedures for the receipt, retention and treatment of complaints regarding accounting, internal accounting controls or auditing matters;
- that the audit committee have authority to engage independent counsel and other advisors;
- that the audit committee determine compensation for the independent accountants; and
- that the audit committee determine compensation for any advisors to the audit committee, as well as its ordinary administrative expenses.

Italian law: Under Italian law, our shareholders, not the audit committee, must be the party that appoints, terminates and determines the compensation for our independent accountants, although our audit committee does make recommendations on such matters to our board of directors, which in turn makes recommendations to our shareholders. As a result, our audit committee is not able to perform all of the duties required by Rule 10A-3 of the Securities Exchange Act of 1934, as amended. Our audit committee directly oversees our independent accountants, including the resolution of disagreements between management and the independent accountants. Under Italian law, our board of statutory auditors also oversees our independent accountants with respect to our Italian GAAP financial statements. Rule 10A-3 provides that foreign private issuers with a board of statutory auditors established in accordance with local law or listing requirements and meeting specified requirements with regard to independence and responsibilities (including the performance of most of the specific tasks assigned to audit committees by the rule, to the extent prohibited by local law) (“Statutory Auditor Requirements”) are exempt from the audit committee requirements established by the rule. Our board of directors has determined that, because of the existence and nature of our board of statutory auditors, together with the performance of other duties under Rule 10A-3 by our shareholders and the performance of the remaining duties by our audit committee, we either satisfy Rule 10A-3 or qualify for an exemption provided by Rule 10A-3 from the audit committee requirements of Rule 10A-3.

MATERIAL CONTRACTS

License and Distribution Agreements

On December 7, 2001, we entered into a License and Supply Agreement with Sigma-Tau Industrie Farmaceutiche Riunite S.p.A., which later assigned the contract to an affiliate, Sigma Tau Pharmaceuticals, Inc., which markets drug treatments for rare conditions and diseases. Sigma Tau Industrie Farmaceutiche Riunite S.p.A. and Sigma Tau Pharmaceuticals, Inc. are subsidiaries of Sigma Tau Finanziaria S.p.A., an international family of pharmaceutical companies. Under this agreement, we have licensed the right to market defibrotide in North America, Central America and South America to treat VOD to Sigma-Tau Pharmaceuticals, Inc. This license expires on the earlier of the eighth year of our launch of the product or the expiration of the U.S. patent regarding the product, which expires on 2010.

In return for the license, Sigma-Tau Pharmaceuticals, Inc. agreed to pay us an aggregate of \$4.9 million, of which it has paid us \$4.0 million to date. It will owe us an additional \$550 thousand within 30 days of the end of a Phase III pivotal study, and \$350 thousand within 30 days of obtaining an FDA New Drug Application or Biologic License Application and other approvals necessary for the marketing of defibrotide in the United States. We will not recognize the amounts due for these performance criteria until the performance obligations are fully satisfied. If we unilaterally discontinue development of defibrotide to treat VOD (after written notice to Sigma-Tau Pharmaceuticals, Inc.) and then resume the development, substantially availing our company of the stages previously completed, either independently or with a third party, within 36 months of the discontinuation, then we will be required to promptly reimburse Sigma-Tau Pharmaceuticals, Inc. for the amounts received. We do not have any intention to discontinue the development of this product candidate.

If during the drug development stages we realize that the activities to bring the product to completion would require a material increase of expenditures, either party can terminate the agreement. If we or Sigma-Tau Pharmaceuticals, Inc. terminates the agreement for that reason and we then resume the development, substantially availing our company of the stages previously completed, either independently or with a third party, within 36 months of the termination, we will be required to promptly reimburse Sigma-Tau Pharmaceuticals, Inc. for the amounts received. We are not aware of any factors that would require a material increase of expenditures for the remaining development activities.

Sigma-Tau Pharmaceuticals, Inc. must purchase all of its defibrotide for this use from us at a price equal to the higher of €50.00 per unit or 31% of its net sales of defibrotide, and must also pay us a royalty equal to 7% of its net sales of defibrotide. We also granted Sigma-Tau Pharmaceuticals, Inc. an exclusive, irrevocable right of first refusal to market defibrotide to prevent VOD, to mobilize and increase the number of stem cells available in patients' and donors' blood for subsequent stem cell transplantation, and in non-intravenous forms for these indications, under certain circumstances, in North America, Central America and South America.

-85-

Back to Table of Contents

On October 9, 2002, we entered into a Purchase Agreement with Sirton and Axcan, a specialty pharmaceutical company with offices in North America and Europe. Under this agreement, we and Sirton sold the rights to develop, make, use and sell our formulation of mesalazine in the United States, upon FDA approval, and Canada, upon Health Canada approval, to Axcan in consideration for Axcan paying us:

- €170 thousand upon execution of the agreement;
- €300 thousand within 60 days of filing New Drug Application for our formulation of mesalazine with the FDA;
- €750 thousand within 60 days of Axcan's receipt of marketing approval for our formulation of mesalazine in the United States by the FDA; and
- 4% of Axcan's net sales of the product in the United States and Canada during the first ten years of its commercialization.

At December 31, 2005, Axcan had paid us an aggregate of €170 thousand. In addition to the above amounts, Axcan agreed to pay Sirton an aggregate of €280 thousand in consideration for certain intellectual property related to our formulation of mesalazine transferred by Sirton to Axcan in connection with the purchase. We and Sirton also granted Axcan a right of first refusal to purchase or license the rights to exploit, register, promote or commercialize our formulation of mesalazine in territories outside of substantially all European countries.

On May 17, 2002, we, Sirton (then known as Crinos Industria Farmacobiologica S.p.A.), SFS Stada Financial Services Ltd. and Crinos S.p.A. entered into an Umbrella Agreement. Under this Umbrella Agreement, Sirton spun off its marketing and sales division, including the brand-name "Crinos" to Crinos S.p.A., a newly formed subsidiary of Stada Arzneimittel AG. As part of the sale, we granted Crinos S.p.A. a semi-exclusive license to market defibrotide in Italy to treat and prevent of vascular disease with risk of thrombosis for no consideration. We have the right to grant a second license in Italy but only to a third party that has been expressly approved by Crinos. This agreement remains valid until the later of the expiration of the patent on defibrotide in Italy in 2009, and the date there is no market remaining for defibrotide, as determined in good faith by the parties. We also granted Crinos S.p.A. a right of first refusal for an exclusive or semi-exclusive license to market defibrotide in Italy for additional uses approved in the future, as well as for all uses in all European countries. Crinos S.p.A. can exercise this right of first refusal within 45 days of Gentium sending written notice of an offer to market or co-market defibrotide for a new use or in a new European country. As a further part of the sale, we granted Crinos S.p.A. a semi-exclusive license to market mesalazine in Italy. We have the right to grant a second license in Italy but only to a third party that has been expressly approved by Crinos. This agreement remains valid until the later of the expiration of the patent on mesalazine in Italy in 2015, and the date there is no market remaining for mesalazine, as determined in good faith by the parties. We also granted Crinos a right of first refusal for an exclusive or semi-exclusive license to market mesalazine in Italy for additional uses approved in the future, as well as for all uses in all other European countries. Crinos can exercise this right of first refusal free of charge within 45 days of Gentium sending written notice of an offer to market or co-market mesalazine for a new therapeutic use or in a new European country.

On July 15, 2004, we entered into a License Agreement with Crinos, pursuant to which we granted Crinos a non-exclusive license to use the know-how and the patent to market defibrotide under the trademark "Noravid" in Italy for both current and future uses as approved by the Italian Ministry of Health. This License Agreement is in addition to the license included as part of the Umbrella Agreement discussed above. In return for the license, Crinos will pay us a 3% royalty on its net sales of defibrotide in Italy. To date, Crinos has not sold defibrotide under the trademark "Noravid" and thus has not paid us any amounts under this License Agreement. Crinos is required to purchase the defibrotide exclusively from Sirton (we sell defibrotide to Sirton under a Supply Agreement). We provide Crinos with the existing technical information, know how and scientific assistance which Crinos needs to market, promote, and

sell defibrotide. The agreement remains valid until the expiration of the patent in 2009, but can be extended for renewable three year periods if the parties, in good faith, determine that defibrotide still has a market life after the patent expires.

On June 11, 2002, we entered into a License and Supply Agreement with Abbott S.p.A., pursuant to which we granted Abbott a semi-exclusive license to use the know-how and the patent to market our formulation of mesalazine under the trademark "Quota" in Italy. We also agreed to transfer our Italian regulatory approvals for mesalazine and the trademark "Quota" to Abbott under this agreement. In return, Abbott paid us €155 thousand when we signed the agreement, and paid us another €155 thousand when we transferred our Italian regulatory approvals for mesalazine to them. Abbott is required to purchase our formulation of mesalazine exclusively from us. We are required, upon Abbott's request, to purchase the active ingredient used in our formulation of mesalazine from Abbott. We provide Abbott with the existing technical information, know how and scientific assistance which Abbott needs to market, promote, and sell our formulation of mesalazine. The agreement remains valid until the later of the expiration of the final patent on our formulation of mesalazine in Italy in 2016 or ten years from Abbott's first third-party sale of our formulation of mesalazine (not including quantities distributed solely for research purposes, clinical trials, samples, or promotions), but is automatically renewed for an additional period of the same

Back to Table of Contents

number of years unless either party gives notice within 180 days of the date the agreement would terminate. We also granted Abbott a right of first refusal for a semi-exclusive license to market additional formulations of mesalazine in Italy. Abbott can exercise this right of first refusal free of charge within 60 days of Gentium sending Abbott written notice of an offer to co-market new formulations of mesalazine received by Gentium from a third party.

On January 2, 2006 we entered into a Contract to Supply Active Ingredients with Sirton, pursuant to which we manufacture urokinase, calcium heparin, defibrotide, sulglycotide and glucidamine for Sirton, which Sirton uses to produce specialty pharmaceutical products. Sirton also processes and sells the defibrotide to Crinos. The agreement automatically renews each year unless one party gives written notice of its intent to terminate the agreement at least one month prior to the annual termination date. The prices are as follows: €53 per unit of urokinase, €2,300 per unit of defibrotide for injection, €660 per unit of oral defibrotide, €390 per unit of sulglycotide, and €160 per unit of glucidamine. In 2005, we received €3,691 from Sirton under a predecessor agreement.

On November 11, 2003, we entered into a Supply Agreement with Samil Pharm. Co., Ltd., a Korean corporation. Under this agreement, we supply Samil with sulglycotide. From January 20, 2004 to June 20, 2005, Samil must purchase at least 1,600 kilograms of sulglycotide. From June 20, 2005 to June 20, 2006, Samil must purchase at least 2,600 kilograms of sulglycotide. From June 20, 2006 to June 20, 2007, Samil must purchase at least 3,400 kilograms of sulglycotide. After June 20, 2007, both parties will renegotiate quantity and price. In any given period, excess purchases by Samil may be applied as a reduction of the immediately following period's minimum purchases or as compensation for a failure to purchase the immediately preceding period's minimum purchases, at Samil's choice. Samil must submit purchase orders at least 90 days prior to a requested delivery date, and the minimum quantity which they can order is one batch (120 kilograms) or a multiple thereof. The price of the sulglycotide was originally set at €460/kilogram for between 0 and 2,000 kilograms, €452/kilogram for 2,001 to 3,000 kilograms, €440/kilogram for 3,001 to 4,000 kilograms, and €420/kilogram for 4,001 to 5,000 kilograms. These prices will change based on inflation and raw material price increases. As of December 31, 2005, we had not received any orders for sulglycotide from Samil. Samil informed us that it experienced a delay in the launch of its product that uses sulglycotide because of further market analyses required to properly position the product into the Korean market. In March 2006 we received a purchase order for 490 kg which we expect to deliver to Samil in June 2006. This agreement expires on June 20, 2014. The agreement automatically renews for two year periods unless either party giving notice of termination at least 180 days before the expiration of the initial term of the agreement or any successive two year period.

Clinical Trial Agreements

On February 26, 2004, we entered into a Trial Agreement with the European Blood and Marrow Transplantation Group. Under this agreement, the European Blood and Marrow Transplantation Group is conducting a clinical trial of defibrotide to prevent VOD in children after stem cell transplants, in consideration for €476 thousand to be paid over five years. Through December 31, 2005, we have not made any payments to the European Blood and Marrow Transplantation Group. We can terminate the clinical trial and the contract prior to completion of the clinical trial, but we would have to make pro-rata payments to the European Blood and Marrow Transplantation Group based on then enrolled eligible patients.

Effective October 24, 2005, we entered into a Services Agreement with MDS Pharma Services SpA, an Italian research organization. Under this agreement, MDS will manage the clinical and regulatory aspects of a portion of our clinical trial of defibrotide to prevent VOD in children that we are co-sponsoring with the European Blood and Marrow Transplantation Group. The agreement expires upon the earlier of 48 months after the effective date or completion of the services. We paid MDS €67 thousand for services provided in 2005 under a predecessor letter of intent.

On June 14, 2000, Sirton (then known as Crinos Industria Farmacobiologica S.p.A.) entered into a Research Agreement with Consorzio Mario Negri Sud. We succeeded to Sirton's interest in this agreement as part of a corporate restructuring of the FinSirton companies in 2002. Under this agreement, Consorzio was conducting a Phase II/III clinical trial in Europe and Israel of defibrotide to treat VOD after stem cell transplants. In October, 2005, the sponsor cancelled this contract due to a lack of patients being enrolled in the trial. We do not owe Consorzio any additional amounts in connection with this agreement.

On March 19, 2004 we entered into a General Consulting Agreement with Bradstreet Clinical Research & Associates, Inc., a New Jersey-based clinical research organization. Under this agreement, Bradstreet provides us with clinical and regulatory consulting services. Bradstreet provides estimated project budgets to us to determine the manner in which the services are to be provided and the number of hours required to provide the services. We pay Bradstreet on an hourly basis after Bradstreet presents us with monthly invoices and corresponding timesheets. Bradstreet is also entitled to reimbursement of its reasonable and customary expenses, including travel expenses. In 2005, we paid Bradstreet an aggregate of approximately \$438 thousand. The agreement is effective for an indefinite period of time, but either party may terminate the agreement by giving 60 days' notice to the other party.

-87-

Back to Table of Contents

On April 20, 2004 we entered into a Consulting Agreement with KKS-UKT, GmbH, a German clinical research organization. Under this agreement, KKS provided us with clinical and regulatory consulting services. KKS provides estimated project budgets to us to determine the manner in which the services will be performed. This agreement expired on April 20, 2005 and we renewed it for a subsequent six month period. In 2005, we paid KKS an aggregate of €15 thousand under this agreement.

Service Agreements

On January 2, 2006, we entered into a Service Agreement with FinSirton pursuant to which FinSirton supplies us with general management and personnel administration services. This agreement is to expire on December 31, 2006. The agreement is renewable automatically each year barring cancellation of the agreement, which requires notice one month prior to expiration. We pay FinSirton €950 per employee per year for personnel administration services and €48 thousand per year for general management services. No other services are provided by FinSirton. In 2005, we paid FinSirton €152 thousand under a predecessor agreement.

On January 2, 2006 we entered into a Service Agreement with Sirton pursuant to which Sirton supplies us with a number of business services including quality control, analytical assistance for research and development, engineering services, general and car rental services, utilities services, and maintenance services. This agreement expires on December 31, 2006, but is renewable automatically each year barring cancellation of the agreement, which requires notice one month prior to expiration. In 2005, we paid Sirton €855 thousand under a predecessor agreement.

On January 2, 2004, we entered into an Agreement for the Supply of Services with Sirton pursuant to which Sirton supplies us with organizational assistance in business management by drawing up strategic plans and coordinating our internal resources. This agreement expired on December 31, 2004 and it was renewed for 2005. The agreement is renewable automatically each year barring cancellation of the agreement, which requires notice one month prior to expiration. The agreement was not renewed in 2006. In 2004 and 2005, we paid Sirton €40 thousand and \$54 thousand, respectively, under this agreement.

EXCHANGE CONTROLS

No exchange control consent is required in Italy for the transfer to persons outside of Italy of dividends or other distributions with respect to, or of the proceeds from the sale of, shares of an Italian company.

TAXATION

Tax Consequences Applicable to US Holders

The following contains a description of the principal United States federal and Italian tax consequences of the purchase, ownership and disposition of ADSs or ordinary shares by a US holder, as defined below. This summary does not purport to be a comprehensive description of all of the tax considerations that may be relevant to a decision to purchase ADSs representing our ordinary shares and each potential purchaser is therefore urged to consult its own tax advisor.

In particular, this summary deals only with US holders who will hold their ADSs as a capital asset and does *not* address the tax treatment of a US holder (i) who owns ADSs representing 10% or more of our voting shares (either directly or through attribution); (ii) who holds ADSs in connection with a permanent establishment or fixed base of business located in Italy; (iii) who holds ADSs in the ordinary course or as an integral part of the holder's trade or business or as part of a hedging, straddle, integrated or conversion transaction; (iv) who is subject to special treatment under the US income tax laws (such as securities dealers, brokers, traders that elect to mark to market, insurance

companies, banks, tax-exempt organizations, partnerships and other pass-through entities); (v) whose functional currency is not the US dollar; or (vi) who is a resident of Italy for purposes of the income tax convention that currently is in effect between the United States and Italy. In addition, the following discussion does not address any aspect of state, local or non-US tax laws (other than certain Italian tax laws) or any alternative minimum tax consequences.

The summary is based upon tax laws of the United States and Italy and on the provisions of the income tax convention between the United States and Italy (the “Income Tax Convention”) in each case as in effect on the date hereof, all of which are subject to change (possibly with retroactive effect). We will not update this summary to reflect changes in laws and if such a change occurs, this summary could become inaccurate. In this regard, a new tax treaty to replace the current income tax convention was signed on August 25, 1999, but has not yet been ratified. (This new treaty, if ratified, would not change significantly the provisions of the income tax convention that are discussed below.) For purposes of these laws and income tax conventions, beneficial owners of ADRs representing ADSs should be treated as the beneficial owners of the ordinary shares represented by the ADSs. Prospective purchasers of the ADSs are advised to consult their own tax advisors as to the tax

-88-

Back to Table of Contents

consequences of the purchase, ownership and disposition of the ADSs including, in particular, state and local tax consequences.

For purposes of this section, a US holder means (i) an individual citizen or resident of the United States; (ii) a corporation (or other entity taxable as a corporation for U.S. federal income tax purposes) organized in or under the laws of the US or any political subdivision thereof; (iii) an estate the income of which is includible in gross income for US federal income tax purposes regardless of its source; (iv) a trust if a US court is able to exercise primary jurisdiction over the administration of the trust and one or more US persons have the authority to control all substantial decisions of the trust; and (v) any other person that is subject to US federal income taxation on a net income basis in respect of income attributable to its ownership of the ADSs. A US owner means a US holder that is considered a resident of the United States for purposes of the Income Tax Convention and who is not subject to an anti-treaty shopping provision.

Italian Taxation of US Holders

General. Under Italian law, financial instruments issued by an Italian company are subject to the same tax regime as shares, provided that their remuneration is entirely represented by a participation in the economic results of the issuer. Pursuant to Article 10(3) of the Income Tax Convention, the tax regime of dividends set forth therein applies to income from corporate rights of an Italian company, which is subject to the same taxation treatment as income from shares under the laws of Italy. One interpretation of these laws would be that a beneficial owner of an ADS should be subject to the same tax regime as a beneficial owner of a share for purposes of both Italian law and the Income Tax Convention. However, no official interpretation has been issued by the Italian tax authorities on this subject matter to date.

Income Tax Withholding on Dividends. We do not anticipate making any distributions with respect to our ordinary shares in the foreseeable future. However, if we were to make distributions with respect to our ordinary shares, we would generally be required under Italian law, except as otherwise discussed below, to apply a 27% final withholding tax on payments made to holders of ADSs who are not residents of Italy for tax purposes. Under Italian law, US owners can claim a refund of up to four-ninths of the Italian withholding tax withheld on dividends (thereby effectively reducing the rate of withholding to 15%) by presenting evidence to the Italian tax authorities that income taxes have been fully paid on the dividends in the country of residence of the US owners in an amount at least equal to the total refund claimed. US holders should consult their own tax advisers concerning the possible availability of this refund, which traditionally has been payable only after extensive delays.

Under the Income Tax Convention, dividends paid to US owners will be subject to Italian withholding tax at a reduced rate of 15%. However, the amount that we will initially make available to the depositary for payment to US owners will reflect withholding at the 27% rate. US owners who comply with the certification procedures described below may claim a refund of the difference between the 27% rate and the 15% rate (referred to herein as a “treaty refund”). The certification procedure will require the US owner (i) to obtain from the US Internal Revenue Service (generally, by filing Form 8802) a form of certification required by the Italian tax authorities with respect to each dividend payment (Form 6166, printed on U.S. Department of Treasury stationery), unless a previously filed certification is effective with respect to the payment, (ii) to produce a statement whereby the US owner represents that it is a US owner that does not maintain a permanent establishment in Italy, and (iii) to set forth certain other required information. The time for processing requests for certification by the Internal Revenue Service can be lengthy. Accordingly, US owners should begin the process of obtaining a certification from the Internal Revenue Service as soon as possible after receiving instructions from the depositary.

The depositary’s instructions will specify certain deadlines for delivering the documentation required to obtain a treaty refund, including the certification that the US owners must obtain from the US Internal Revenue Service. In the case

of ADSs held by US owners through a broker or other financial intermediary, the required documentation should be delivered to such financial intermediary for transmission to the depositary. In all other cases, US owners should deliver the required documentation directly to the depositary. We have agreed with the depositary that if the required documentation is received by the depositary on or within 30 days after the dividend payment date and, in our reasonable judgment, such documentation satisfies the requirements for a refund of Italian withholding taxes under the income tax convention then in effect between the United States and Italy, we will (within 45 days after that) pay an amount equal to the treaty refund to the depositary for the benefit of the US owners entitled thereto.

If the depositary does not receive a US owner's required documentation within 30 days after the dividend payment date, the US owner may for a short grace period (specified in the depositary's instructions) continue to claim an amount equal to the treaty refund by delivering the required documentation (either through the US owner's financial intermediary or directly, as the case may be) to the depositary. However, after this grace period, the treaty refund must be claimed directly from the Italian tax authorities rather than through the depositary. Expenses and extensive delays have been encountered by US owners seeking refunds from the Italian tax authorities.

Income Tax on Capital Gains. Under Italian law, capital gains realized by a person who is not a resident of Italy (not having a permanent establishment or fixed base through which carries on or performs business services in Italy) on the disposal

Back to Table of Contents

of a “qualified” shareholding held as a capital asset contribute to determine the overall taxable income for income tax purposes, to the extent of forty percent (40%) of the overall gain. Losses can be offset against taxable gains for a corresponding amount and, if in excess, can be carried forward up to four years. A “qualified” shareholding is defined as ordinary shares and/or rights (including ADSs) that represent more than 20% of share capital voting in the ordinary shareholders’ meeting or 25% of a company’s total share capital. A “disposal” of a qualified shareholding occurs if, in any 12-month period following the date when a shareholding meets one of the thresholds illustrated above, a shareholder disposes of shares or ADSs that, individually or in the aggregate, constitute a “qualified” shareholding. The taxable gain realized by (i) an individual shareholder who is not a resident of Italy would be subject to progressive personal income tax rates presently ranging from 23% to 39% (plus certain local surcharges and special contribution at a 4% rate applicable to the amount of any taxable income exceeding €100,000); (ii) a corporate shareholder who is not a resident of Italy would be subject to corporate income tax, currently levied at a rate of 33%.

Generally, Italian capital gain tax, levied at a rate of 12.5%, is imposed on gains realized upon the transfer or sale of “non-qualified” shareholdings whether held within or outside Italy. A “non-qualified” shareholding is defined as an interest in ordinary shares and/or rights (including ADSs) which does not reach the thresholds described above for a qualified shareholding.

Furthermore, pursuant to the Income Tax Convention, a US owner will not be subject to Italian capital gain tax or to Italian individual or corporate income tax unless such US owner has a permanent establishment or fixed base in Italy to which the owner’s ADSs is effectively connected. To this end, US owners selling ADSs and claiming benefits under the Income Tax Convention may be required to produce appropriate documentation establishing that the above-mentioned conditions have been met.

Estate and Gift Tax. There are no Italian estate or gift taxes. However, should you make a gift of ADSs for a value exceeding €180,759.91 and the relationship between you and the beneficiary does not qualify for the exemption regime applicable to gifts made in favor of certain family members (*e.g.*, spouse, parents, children, grandchildren), the gift may be subject to the transfer taxes that would ordinarily apply had the ADSs been transferred for consideration and limited to the excess thereof. The threshold is increased to €516,456.91 in case the beneficiary is either underage (*i.e.*, younger than 18) or a person with a handicap recognized pursuant to applicable law.

Transfer tax. An Italian transfer tax is normally payable on the transfer of ADSs in an Italian company. The transfer tax is currently payable at the following rates:

- €0.0072 per €51.56, or portion thereof, of the price at which ADSs are transferred when the transfer is made between private parties or through an intermediary other than those discussed below;
- €0.0258 per €51.65, or portion thereof, of the price at which ADSs are transferred when the transfer is made between a bank, investment services company or currency dealer and other persons set forth in Legislative Decree No. 58 of February 24, 1998, and (b) a private party, or between private parties through the intervention of one of these intermediaries; or
- €0.0062 per €51.65, or portion thereof, of the price at which ADSs are transferred when the transfer is made between the intermediaries discussed above.

The transfer tax will not be payable, however, with respect to any transfer of ADSs involving non-Italian residents concluded with the intervention of one of the intermediaries discussed above.

United States Taxation of US Holders

Taxation of Distributions Made on ADSs. As previously indicated, we do not anticipate making any distributions with respect to our ordinary shares in the foreseeable future. However, if we were to make distributions with respect to our ordinary shares, the amount of such distribution (including the amount of any Italian taxes withheld therefrom) would generally be includible in the gross income of a US holder of an ADS (on the date of receipt by the depositary) as foreign source dividend income to the extent that such distributions are paid out of our current or accumulated earnings and profits, as determined for United States federal income tax purposes. If the amount of any distribution paid on our ordinary shares exceeds our current and accumulated earnings and profits, that excess will first reduce a holder's basis in its ADSs and, to the extent the distribution is in excess of the holder's basis, the excess will be treated as capital gain. Dividends paid to US holders that are corporations will not be eligible for the dividends-received deduction (which is generally applicable only to dividends paid by US corporations).

Legislation enacted in 2003 reduces the maximum tax rate for certain dividends received by individuals to 15 percent for taxable years beginning on or before December 31, 2008, subject to exceptions for certain short-term and hedged stock positions. Dividends received from a "qualified foreign corporation" generally qualify for the reduced rate. In this regard, a foreign corporation that is not a passive foreign investment company (PFIC) in the year that the dividends are paid or in the preceding taxable year will generally constitute a qualified foreign corporation with respect to any dividends paid by it on its stock if the stock is readily tradable on an established securities market in the United States. Because the ADSs are readily

Back to Table of Contents

tradable on an established securities market in the United States, we should constitute a qualified foreign corporation and dividends paid by us prior to 2009 on our ordinary shares and received by US holders of ADSs that are individuals should qualify for the reduced rate, subject to above-mentioned exception for certain short-term and hedged stock positions, so long as we are not a PFIC in the year the dividends are paid or in the preceding taxable year (and so long as the ADSs continue to be readily tradeable on an established securities market). While we do not believe that we are currently a PFIC, no assurances can be provided that we will not constitute a PFIC in any year during which we make a distribution on our ordinary shares (or in the taxable year preceding the year of distribution).

The amount of any cash distribution received in euro with respect to the ADSs will equal the US dollar value of the distribution, including the amount of any Italian taxes withheld therefrom, determined at the spot exchange rate in effect on the date that the distribution is received by the depositary (regardless of whether or not the distribution is in fact converted into US dollars), and a US holder will have a tax basis in the euro equal to that same value. Upon a subsequent sale or other disposition of the euro, any gain or loss recognized by the US holder will be ordinary income or loss for US federal income tax purposes.

Subject to general foreign tax credit limitations, a US holder may elect to credit any Italian income taxes withheld on dividends paid with respect to the ADSs against the holder's US federal income tax liability (provided, *inter alia*, that the US holder satisfies certain holding requirements with respect to the ADSs). Amounts withheld in excess of the applicable rate under the income tax convention in effect between the United States and Italy in respect of a US holder who qualifies for the benefits of the convention will not be eligible for this credit, but the US holder may claim a refund for this excess from the Italian tax authorities. See "Item 10, Additional Information, Taxation, Italian Taxation of US Holders, Income Tax Withholding on Dividends." As an alternative to claiming a foreign tax credit, a US holder may claim a deduction for any withheld Italian income taxes, but only with respect to a year for which the US holder elects to do so with respect to all of its foreign income taxes. There are complex rules that limit the amount of foreign income taxes that may be credited against a US holder's federal income tax liability, and US holders are strongly urged to consult their own tax advisors as to the applicability and effect of these limitations.

Sales or other Disposition of the ADSs. Subject to the discussion set forth below regarding PFICs, a US holder will recognize capital gain or loss for US federal income tax purposes on the sale or other disposition of the ADSs equal to the difference between the amount realized on the disposition and the holder's basis in the ADSs. Such gain or loss will generally be long-term capital gain or loss if the US holder has owned the ADSs for more than one year at the time of the sale or other disposition.

Back-up Withholding. A US holder may be subject to back-up withholding at the applicable rate with respect to dividends paid on or proceeds from the sale or other disposition of the ADSs unless the US holder (a) is an exempt recipient or (b) provides a taxpayer identification number, certifies as to no loss of exemption from back-up withholding and otherwise complies with all applicable back-up withholding requirements.

Special Rules Applicable to PFICs. Special federal income tax rules apply to US holders who own stock in a PFIC. In this regard, a foreign corporation is generally considered a PFIC for any taxable year in which 75% or more of its gross income is passive income or in which 50% or more of the average value of its assets are considered "passive assets" (generally assets that generate passive income or assets held for the production of passive income). We believe that we currently are not a PFIC and do not anticipate that we will become a PFIC in the future.

However, if we were to be classified as a PFIC, a US holder would generally be subject to a special tax at ordinary income tax rates on so-called "excess distributions"—which include both certain distributions received on the ADSs and gain recognized on any sale or other disposition of the ADSs. The amount of income tax on these excess distributions will be increased by an interest charge to compensate for any tax deferral, calculated as if the excess distributions were earned ratably over the period the US holder held the ADSs. In addition, the tax on excess distributions treated as

earned in prior years will be subject to tax at the maximum rate applicable in the year in which such income is deemed to have been earned. The harshness of the foregoing rules may be avoided if the US holder properly elects to include in its ordinary income each year such holder's pro rata share of our ordinary earnings and to include in its long-term capital gain income each year such holder's pro rata share of our net capital gain, whether or not distributed. However, we do not intend to provide US holders with the information that they would need in order to make this election. Alternatively, a holder of ADSs may avoid the tax consequences detailed above by making a mark-to-market election, but only if the ADSs are "regularly traded" for purposes of Section 1296 of the Code. No assurances can be made that the ADSs will be regularly traded and, in any event, a US holder should consult its own tax advisor before making any election under Section 1296 of the Code.

In addition, if we were to be classified as a PFIC, US holders would not qualify for the benefit of the reduced US federal tax rate applicable to certain dividends received by individuals through the end of 2008, as described above in "United States Taxation of US Holders—Taxation of Distributions Made on the ADSs".

DOCUMENTS ON DISPLAY

We are subject to the periodic reporting and other informational requirements of the Exchange Act applicable to a foreign private issuer. Under the Exchange Act, we file annual reports on Form 20-F within six months of our fiscal year end, and we submit other reports and information under cover of Form 6-K with the SEC. Copies of the registration statements, their accompanying exhibits, as well as such reports and other information, when so filed, may be inspected without charge and may be obtained at prescribed rates at the SEC's Public Reference Room located at 450 Fifth Street, N.W., Room 1200, Washington, D.C. 20549. You may obtain information regarding the Washington, D.C. Public Reference Room by calling the SEC at 1-800-SEC-0330 or by contacting the SEC at its website at www.sec.gov.

As a foreign private issuer, we are exempt under the Exchange Act from, among other things, the rules prescribing the furnishing and content of proxy statements, and our executive officers, directors and principal shareholders are exempt from the reporting and short-swing profit recovery provisions contained in Section 16 of the Exchange Act. In addition, we will not be required under the Exchange Act to file periodic reports and financial statements with the SEC as frequently or as promptly as United States companies whose securities are registered under the Exchange Act.

SUBSIDIARY INFORMATION

Currently, we do not have any subsidiaries.

ITEM 11. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Market risk represents the risk of loss arising from adverse changes in market rates and foreign exchange rates. The carrying amounts of cash and cash equivalents, accounts receivable and other receivables, and the interest rate on our debt with floating rates represents our principal exposure to credit risk in relation to our financial assets.

As of December 31, 2005, substantially all of our cash and cash equivalents were held in accounts at financial institutions located in the Republic of Italy and the United States that we believe are of acceptable credit quality. We use interest rate swaps on our floating rate mortgage debt to hedge the risk of rising rates. We do not believe we are exposed to material risks due to changes in interest rates, although our future interest income may fluctuate in line with changes in interest rates. The risk associated with fluctuating interest rates is principally confined to our cash deposits in banks and our floating rate debt (to the extent we are not protected by interest rate hedges) and, therefore, we believe that our current exposure to interest rate risk is minimal.

Substantially all of our current revenue generating operations are transacted in, and substantially all of our assets and liabilities are denominated in the euro. In the future, we expect to transact business in the United States dollar and other currencies. The value of the euro against the United States dollar and other currencies may fluctuate and is affected by, among other things, changes in political and economic conditions. Any change in the value of the euro

relative to other currencies that we transact business with in the future could materially and adversely affect our cash flows, revenues and financial condition. To the extent we hold assets denominated in United States dollars, any appreciation of the euro against the United States dollar could result in a charge to our operating results and a reduction in the value of our United States dollar denominated assets upon remeasurement.

ITEM 14. MATERIAL MODIFICATIONS TO THE RIGHTS OF SECURITY HOLDERS AND USE OF PROCEEDS

On June 21, 2005, the Company completed an initial public offering of 2,400,000 ADSs, at a price of \$9.00 per ADS. The effective date of the Securities Act registration statement (Registration No. 333-122233) in connection with the offering was June 16, 2005. The date of consummation of the offering was June 21, 2005. The managing underwriters were Maxim Group LLC and I-Bankers Securities Incorporated. In July 2005, the underwriters of our initial public offering exercised part of their over-allotment option by purchasing an additional 300,000 of our ADSs generating additional gross proceeds of \$2.7 million.

Our reasonable estimates of the expenses we incurred in connection with the issuance and distribution of the securities through December 31, 2005 are as follows:

	Amount paid
Underwriting discounts and commissions	\$ 1,822,500
Finders' Fees	0
Expenses paid to or for Underwriters	455,792
SEC registration fee	4,270
NASD filing fee	4,272
American Stock Exchange listing fee	22,500
Legal fees and expenses	889,543
Accounting fees and expenses	240,000
Transfer agent fees	10,000
Depository fee	25,000
Printing and engraving	310,000
Miscellaneous	571,458
Total Expenses	\$ 4,355,335

Through December 31, 2005, our expenses incurred in connection with the issuance and distribution of the registered securities for underwriting discounts and commissions were \$1,822,500. We did not incur any finders fees. Through December 31, 2005, our expenses paid to or for underwriters were \$455,792. Other expenses through December 31, 2005 were \$2,077,043, and total expenses were \$4,355,335. Of these expenses, there were no direct or indirect payments to directors, officers, persons owning 10% or more of any class of our securities, or any of our affiliates, nor were there any direct or indirect payments to others. Our net proceeds of the offering after deduction of the total expenses listed above is \$20,612,000.

Back to Table of Contents

As of December 31, 2005, the net proceeds of the initial public offering and over-allotment option exercises have been used for the following purposes, in our reasonable estimate:

	(in thousands)	
Repayment of Series A senior convertible promissory notes, including accrued interest of approximately \$311 through July 21, 2005	€	4,221
Research and development of defibrotide to treat and prevent VOD through Phase III clinical trials		3,450
Repayment of Sirton loans		1,500
Capital improvements to our facilities		1,200
Hire personnel to expand operations and decrease reliance on affiliates		960
Working capital and general corporate purposes		1,000
Repayment of short-term bank borrowings		400
	€	12,731

Our Series A senior convertible promissory notes were borrowed at a per annum interest rate of seven percent (7%) through March 31, 2005, ten percent (10%) per annum from April 1, 2005 until the maturity date and the one-month LIBOR rate plus twelve percent (12%) after maturity. The notes, if not earlier converted into our ordinary shares, were due and payable 30 days following the completion of the initial public offering. One holder of these notes elected to have its \$2.912 million notes repaid with the proceeds of our initial public offering; that holder is also a shareholder of our company.

As of December 31, 2004, we had inter-company outstanding debt in the amount of €2.2 million to Sirton, a wholly-owned subsidiary of FinSirton. Sirton lent us €1.0 million in each of March 2004 and May 2004, €400 thousand in June 2004 and €600 thousand in July 2004. All loans were borrowed at 3.5% interest per annum and each matures on October 1, 2008. We repaid €800 thousand of the loans in 2004, €700 thousand in January 2005 with the net proceeds from the sale of our Series A senior convertible promissory notes, and the remaining €1.5 million from the net proceeds of the IPO.

ITEM 15.**CONTROLS AND PROCEDURES**

Not applicable.

ITEM 16A.**AUDIT COMMITTEE FINANCIAL EXPERT**

We have both a Board of Statutory Auditors and an Audit Committee. Our Audit Committee has determined that Gigliola Bertoglio qualifies as an “audit committee financial expert” within the meaning of this Item 16A. Ms. Bertoglio has served as one of our directors since December 2004. Her current term as a director expires on the date of the ordinary shareholders’ meeting approving our 2006 financial statements, which would normally be held in April 2007. Ms. Bertoglio has been a self-employed consultant since January 2003. From 1970 through 2002 she was employed by Reconta Ernst & Young (the Italian affiliate of Ernst & Young LLP) and its predecessors and was an audit partner beginning in 1977. From 1998 until leaving the firm, she was responsible for the firm’s Capital Market Group in Italy. From 1989 to 1998, she was responsible for directing the firm’s Professional Standards Group and member of the Accounting and Auditing Standards Group of Ernst & Young International and as a coordinating audit partner on clients with international operations. From 1977 to 1989, Ms. Bertoglio was a partner of the Italian firm of Arthur Young & Co. (the predecessor to Ernst & Young) where she was responsible for directing the firm’s Professional

Standards Group and serving in an advisory role to the Accounting and Auditing Standards Group of Arthur Young International and as a coordinating audit partner on clients with international operations. From 1970 to 1977, she was an Audit Manager (1970 to 1974) and an Audit Principal (1975 to 1977) with the Italian firm of Arthur Young & Co. in its Rome and Milan offices. Prior to 1970, Ms. Bertoglio was employed in the New York offices of Horwath & Horwath and LKH&H, both of which were public accounting firms. She earned a degree in Public Accounting from New York University and a Diploma in Accounting from Economics Institution in Biella, Italy. She was a Certified Public Accountant (active license to August 31, 2002, inactive after that) in the United States and included in the Register of Authorized Auditors of Consob, the Italian Stock Exchanges regulatory agency of public companies.

Back to Table of Contents**ITEM 16B.****CODE OF ETHICS**

We have adopted a code of ethics, as defined in Item 16B of Form 20-F under the Securities Exchange Act of 1934, as amended, that is applicable to, among others, our Chief Executive Officer and Chief Financial Officer. Copies of this code of ethics are available upon request by writing to us at the address on the cover page of this annual report; we have also posted the code of ethics on our website at www.gentium.com. Material appearing on this website is not incorporated by reference into this annual report. If we amend the provisions of this code of ethics, or if we grant any waiver of such provisions, we will disclose such amendment or waiver on our website at the same address.

ITEM 16C.**PRINCIPAL ACCOUNTANT FEES AND SERVICES**

The following table sets forth the aggregate fees billed to us by our independent auditors, Reconta Ernst & Young S.p.A. during the fiscal years ended December 31, 2004 and 2005:

<i>(in thousands of euro)</i>		Year ended December 31,	
		2004	2005
Audit Fees	€	35	€ 130
Audit-Related Fees		—	30
IPO Fees		304	—
All Other Fees		—	—
Total fees	€	339	€ 160

Audit fees in the above table are the aggregate fees billed by Reconta Ernst & Young S.p.A. in connection with the audit of our annual Italian GAAP statutory and U.S. GAAP financial statements, including the review services of interm financial statements. Our audit-related fees consisted of our accounting fees and expenses in connection with the offering of securities registered pursuant to the Registration Statement on Form F-1, Registration No. 333-130796, previously filed with the Securities and Exchange Commission on December 30, 2005, which were in the amount of €30,000.

Reconta Ernst & Young S.p.A. did not provide any tax compliance services or advice on specific changes in tax regulations for the years ended on December 31, 2003, 2004 and 2005.

ITEM 16D.**EXEMPTION FROM THE LISTING STANDARDS FOR AUDIT COMMITTEES**

Under Italian law, our shareholders, not the audit committee, must be the party that appoints, terminates and determines the compensation for our independent accountants, although our audit committee does make recommendations on such matters to our board of directors, which in turn makes recommendations to our shareholders. As a result, our audit committee is not able to perform all of the duties required by Rule 10A-3 of the Securities Exchange Act of 1934, as amended. Our audit committee has established procedures for the receipt, retention and treatment of complaints regarding accounting, internal accounting controls and auditing matters, has authority to engage independent counsel and other advisors and determine the compensation of such advisors, as well as its ordinary administrative expenses, and also oversees, with the board of statutory auditors, our independent accountants (including resolution of disagreements between management and the independent accountants regarding financial reporting). Rule 10A-3 provides that foreign private issuers with a board of statutory auditors established in accordance with local law or listing requirements and meeting specified requirements with regard to independence and responsibilities (including the performance of most of the specific tasks assigned to audit committees by the rule, to the extent prohibited by local law) (“Statutory Auditor Requirements”) are exempt from the audit committee requirements established by the rule. Our board of directors has determined that, because of the existence and nature of our board of statutory auditors, together with the performance of other duties under Rule 10A-3 by our shareholders

and the performance of the remaining duties by our audit committee, we either satisfy Rule 10A-3 or qualify for an exemption provided by Rule 10A-3 from the audit committee requirements of Rule 10A-3.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Shareholders of

Gentium S.p.A.

We have audited the accompanying balance sheets of Gentium S.p.A. as of December 31, 2005 and 2004, and the related statements of operations, shareholders' equity (deficit), and cash flows for each of the three years in the period ended December 31, 2005. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. We were not engaged to perform an audit of the Company's internal control over financial reporting. Our audits included consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control over financial reporting. Accordingly, we express no such opinion. An audit also includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of Gentium S.p.A. as of December 31, 2005 and 2004, and the results of its operations and its cash flows for each of the three years in the period ended December 31, 2005, in conformity with U.S. generally accepted accounting principles.
