1/ Since inception, ICE has shown its potential for growth through acquisition. Could you share some light as to the reasoning and timing behind the NYSE Euronext bid?

The announcement that we made at the end of last year positions ICE and NYSE Euronext to create a leading operator of global exchanges and clearing houses for commodities, credit derivatives, equities and equity derivatives, foreign exchange and interest rates. We believe we can unlock significant value and grow our businesses to a greater extent than could be done independently, while providing an expanded range of products and services for global markets as regulatory reform creates further demand.

The combined entity will offer a full range of financial and commodity markets served by global platforms and distribution and supported by a strong management team with significant corporate governance. Upon closing the new company will be the world's 3rd largest exchange by traded contract volume and operate 14 regulated exchanges and five central clearing houses.

The transaction to acquire NYSE Euronext will allow us to tap new markets and respond to demand across all asset classes amid a time of significant change.

2/ NYSE has had a presence in Tokyo for some years now, but this merger would possibly equate to an entry level presence into Japan for ICE. What are your plans for Japan in particular, and for Asia as a whole?

As a global operator of energy markets, ICE has had a presence in Asia via our office in Singapore for over a decade. In Japan specifically, Japanese based companies are able to access our trading platform through becoming members of ICE Futures Europe (www.theice.com/publicdocs/futures_jurisdiction.pdf).

Asia is an important region for ICE's global energy business. Our portfolio of global energy products includes over 40 Asia-specific cleared energy contracts. These include the ICE JKM LNG future based on the Platts daily LNG assessment for the Japan / Korea Marker (JKM), ICE 180cst Singapore Fuel Oil future which is the leading refined oil price benchmark for the region and ICE GlobalCOAL Newcastle futures contract, the leading coal benchmark in Asia-Pacific. This month, we also announced the upcoming launch of API 8 South China coal futures which is a cash settled contract based on price of coal delivered into Southern China. In addition, Brent and Gasoil futures are widely traded in Asia and the region has contributed to the growth seen in these contracts over recent years.

3/ What are your thoughts on the current regulatory changes taking place in the US and in Europe, and how could this impact your business strategy in Asia?

The development of new financial regulation follows G20 commitments defined in 2008 and is an ongoing and dynamic process and ICE is investing substantial time and resources in this area in order to comply with the rules as they become evident.

ICE is therefore working extensively with the industry and regulators across all the jurisdictions in which we operate, from the U.S. to Europe and Asia, to ensure that new solutions maximise and enhance market efficiencies, while minimising unintended consequences such as a reduction in market liquidity or dramatically increased costs. However, it is important to note that many of the proposed regulatory changes have already taken place in our energy markets, well in advance of the completion of financial reform. Therefore, we are well positioned to support our members and clients across the world, including across Asia, with implementation.
