Table of Contents**WisdomTree Managed Futures Strategy Fund****Investment Objective**

The Fund seeks to provide investors with positive total returns in rising or falling markets.

Fees and Expenses of the Fund

The following table describes the fees and expenses you may pay if you buy and hold shares of the Fund. The fees are expressed as a percentage of the Fund's average net assets.

Shareholder Fees (fees paid directly from your investment)	None
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.95%
Distribution and/or Service (12b-1) Fees	None
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.95%

Example

The following example is intended to help retail investors compare the cost of investing in the Fund with the cost of investing in other funds. It illustrates the hypothetical expenses that such investors would incur over various periods if they invest \$10,000 in the Fund for the time periods indicated and then redeem all of the shares at the end of those periods. This example assumes that the Fund provides a return of 5% a year and that operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

	1 Year	3 Years	5 Years	10 Years
	\$97	\$303	\$525	\$1,166

Investors may pay brokerage commissions on their purchases and sales of fund shares, which are not reflected in the example.

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or turns over its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in Annual Fund Operating Expenses or in the Example, affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was less than 1% of the average value of its portfolio, excluding the value of portfolio securities received or delivered as a result of in-kind creations or redemptions of the Fund's shares.

Principal Investment Strategies of the Fund

The Fund is an actively managed exchange traded fund (ETF) that seeks to achieve positive total returns in rising or falling markets that are not directly correlated to broad market equity or fixed income returns. The Fund is managed using a quantitative, rules-based strategy designed to provide returns that correspond to the performance of the Diversified Trends Indicator™ (the Benchmark). The Benchmark is a widely used indicator designed to capture the economic benefit derived from rising or declining price trends in the markets for commodity, currency and U.S. Treasury futures.

The Benchmark and Fund consist of ten commodity sectors (Energy, Grains, Precious Metals, Industrial Metals, Livestock, Natural Gas, Coffee, Cocoa, Cotton, and Sugar) and eight financial sectors (the Australian dollar, British pound, Canadian dollar, euro, Japanese yen, Swiss franc, U.S. Treasury notes and U.S. Treasury bonds) (each, a Sector). When the Energy Sector is long (as described below), the Fund's exposure will be weighted evenly between commodities and financials (approximately 50% each). When the Energy Sector is flat (as described below), the Fund's

Edgar Filing: WisdomTree Trust - Form 497

exposure will be weighted approximately 60% to financials and approximately 40% to commodities. Subject to the above limitations, a Base Weight for each Sector is set depending on whether the Energy Sector is long or flat. Commodity sectors that have higher historical production levels, and financial sectors from countries with higher Gross Domestic Product (GDP), have a higher Base Weight in the Benchmark and Fund. The weight of each Sector fluctuates intra-month based on the return of each Sector, but each Sector is reset back to its Base Weight at the end of each month and year.

2 WisdomTree Trust Prospectus

Table of Contents

The Fund invests substantially all of its assets in a combination of commodity and currency-linked investments, U.S. government securities and money market instruments whose collective performance is designed to correspond to the performance of the Benchmark. The Fund's commodity- and currency-linked investments generally are limited to investments in listed futures contracts, forward currency contracts and swap transactions that provide exposure to commodity and non-U.S. currency returns. The Fund will invest in listed U.S. Treasury futures and also may invest directly in U.S. Treasury notes and bonds. The Fund also may enter into repurchase agreements with counterparties that are deemed to present acceptable credit risks. A repurchase agreement is a transaction in which the Fund purchases securities or other obligations from a bank or securities dealer and simultaneously commits to resell them to a counterparty at an agreed-upon date or upon demand and at a price reflecting a market rate of interest unrelated to the coupon rate or maturity of the purchased obligations. The Fund also may invest in structured notes based on commodities. The Fund does not invest directly in physical commodities.

The Fund attempts to capture the economic benefit derived from rising and declining trends based on the moving average price changes of commodity, currency and U.S. Treasury futures. In an attempt to capture these trends, the Fund's investments are positioned as either long or short (with the exception of the Energy Sector). To be long means to hold or be exposed to a security or instrument with the expectation that its value will increase over time. To be short means to sell or be exposed to a security or instrument with the expectation that it will fall in value. On a monthly basis, each Sector's returns are compared to its recent weighted moving average monthly returns. If the monthly return is higher than the moving average returns, the Sector is positioned as long throughout the following month. If the Sector's returns are below its moving average returns, the Sector is positioned as short (with the exception of the Energy Sector, which would be flat). The Fund will benefit if it has a long position in a security or instrument that *increases* in value or a short position in a security or instrument that *decreases* in value. Conversely, the Fund will be adversely impacted if it holds a long position in a security or instrument that declines in value and a short position in a security or instrument that increases in value. The Energy Sector is positioned as either long or flat; it is never short. When the Energy Sector is flat, the Fund will not have any exposure to the Energy Sector and it will allocate a higher percentage of its investments to other Sectors within the Benchmark. The Fund generally does not make intra-month adjustments to its portfolio or the direction of its long and short positions. Although the Fund seeks returns comparable to the returns of the Benchmark, the Fund may have a higher or lower exposure to any Sector or component within the Benchmark at any time. The Fund will not hold more than 25% of its assets in any one industry. For these purposes, the components of the Benchmark (e.g., gold, crude oil) will be considered a separate industry. Neither the Fund nor the Benchmark is leveraged.

The Fund seeks to gain exposure to commodity markets, in whole or in part, through investments in a subsidiary organized in the Cayman Islands (the WisdomTree Subsidiary). The WisdomTree Subsidiary is wholly-owned and controlled by the Fund. The Fund's investment in the WisdomTree Subsidiary may not exceed 25% of the Fund's total assets at each quarter-end of the Fund's fiscal year. The Fund's investment in the WisdomTree Subsidiary is expected to provide the Fund with exposure to commodity returns within the limits of the federal tax requirements applicable to investment companies, such as the Fund. Except as noted, references to the investment strategies and risks of the Fund include the investment strategies and risks of the WisdomTree Subsidiary.

The Fund will invest, under normal circumstances, at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in managed futures. For these purposes, managed futures are investments in commodity and currency-linked instruments, as well as U.S. government securities and money market instruments, that taken together have economic characteristics similar or equivalent to those of the listed commodity, currency and financial futures contracts described herein. If, subsequent to an investment, the 80% requirement is no longer met, the Fund's future investments will be made in a manner that will bring the Fund into compliance with this policy. The Trust will provide shareholders with sixty (60) days' prior notice of any change to this policy for the Fund.

Principal Risks of Investing in the Fund

You can lose money on your investment in the Fund. The Fund is subject to the risks described below. Some or all of these risks may adversely affect the Fund's net asset value per share (NAV), trading price, yield, total return and/or its ability to meet its objective.

n Investment Risk. As with all investments, an investment in the Fund is subject to investment risk. Investors in the Fund could lose money, including the possible loss of the entire principal amount of an investment, over short or long periods of time.

n Market Risk. The trading prices of commodities, currencies, fixed income securities and other instruments fluctuate in response to a variety of factors. The Fund's NAV and market price may fluctuate significantly in response to these factors. As a result, an investor could lose money over short or long periods of time.

Edgar Filing: WisdomTree Trust - Form 497

n **Shares of the Fund May Trade at Prices Other Than NAV.** Although it is expected that the market price of the shares of the Fund will approximate the Fund's NAV when purchased and sold in the secondary market, there may be times when the market price of the shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). This risk is heightened in times of market volatility or periods of steep market declines.

WisdomTree Trust Prospectus **3**

Table of Contents

- n **Benchmark Risk.** The Benchmark is entirely model-based. As market dynamics shift over time, the model may become outdated or inaccurate. The Benchmark and the Fund will take both long and short positions and should not be used as proxies for taking long-only positions. The Benchmark and Fund could lose significant value during periods when long-only indexes rise. Similarly, the Benchmark and Fund are not a substitute for short-only positions. The Benchmark does not make intra-month adjustments. As a result, the Fund generally will not make intra-month adjustments to the positions it established at the end of the prior month. As a result, the Benchmark and Fund are subject to substantial losses if the market moves against the established positions on an intra-month basis. The Benchmark is based on historical price trends. There can be no assurance that such trends will be reflected in future market movements. In markets without sustained price trends, or markets with significant price movements that quickly reverse, the Benchmark and the Fund may suffer significant losses. The Benchmark is based on the price of futures contracts. Futures contracts reflect the expected future value of a commodity, currency or Treasury security. The Benchmark and Fund do not reflect spot prices. Spot prices reflect immediate delivery value, not expected future value.
- n **Cash Redemption Risk.** Unlike most ETFs, the Fund's investment strategy will require it to effect redemptions, in whole or in part, for cash. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used exclusively.
- n **Commodity Risk.** The value of commodities and commodity-linked derivative instruments typically is based upon the price movements of a physical commodity or an economic variable linked to such price movements. The prices of commodities and commodity-related investments may fluctuate quickly and dramatically and may not correlate to price movements in other asset classes. An active trading market may not exist for certain commodities. Each of these factors and events could have a significant negative impact on the Fund.
- n **Counterparty Risk.** The Fund bears the risk that the counterparty to a derivative or other contract with a third party may default on its obligations or otherwise fail to honor its obligations. If a counterparty defaults on its payment obligations the Fund will lose money and the value of an investment in Fund shares may decrease. In addition, the Fund may engage in such investment transactions with a limited number of counterparties.
- n **Credit Risk.** The financial condition of an issuer of a debt security or other instrument may cause it to default or become unable to pay interest or principal due or otherwise fail to perform. The Fund cannot collect interest and principal payments on a security or instrument if the issuer defaults. While the Fund attempts to limit credit exposure in a manner consistent with its investment objective, the value of an investment in the Fund may change quickly and without warning in response to issuer defaults and changes in the credit ratings of the Fund's portfolio investments.
- n **Currency Exchange Rate Risk.** The Fund currently invests a relatively large percentage of its assets in investments denominated in non-U.S. currencies, or in securities that provide exposure to such currencies, currency exchange rates or interest rates denominated in such currencies. Changes in currency exchange rates and the relative value of non-U.S. currencies will affect the value of the Fund's investment and the value of your Fund shares. Currency exchange rates can be very volatile and can change quickly and unpredictably. As a result, the value of an investment in the Fund may change quickly and without warning and you may lose money.
- n **Derivatives Investment Risk.** The Fund may invest in derivatives. Derivatives are subject to a number of risks described elsewhere in this Prospectus, such as interest rate risk, market risk, and credit risk. They also involve the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, rate or index, or that the counterparty to a derivative contract might default on its obligations. Derivatives can be volatile and may be less liquid than other securities. As a result, the value of an investment in the Fund may change quickly and without warning and you may lose money.
- n **Interest Rate Risk.** Interest rate risk is the risk that fixed income securities will decline in value because of changes in interest rates and other factors, such as perception of an issuer's creditworthiness.

n

Edgar Filing: WisdomTree Trust - Form 497

Issuer-Specific Risk. Issuer-specific events, including changes in the financial condition of an issuer, can have a negative impact on the value of the Fund.

- n **Liquidity Risk.** The Fund may invest in derivatives and other instruments that may be less liquid than other types of investments. The derivatives in which the Fund invests may not always be liquid. This could have a negative effect on the Fund's ability to achieve its investment objective and may result in losses to Fund shareholders.

- n **Management Risk.** The Fund is actively managed using proprietary investment strategies and processes. There can be no guarantee that these strategies and processes will be successful or that the Fund will achieve its investment objective.

- n **Non-Diversification Risk.** The Fund is considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. To the extent the Fund invests a significant percentage of its assets in a limited number of issuers, the Fund is subject to the risks of investing in those few issuers, and may be more susceptible to a single adverse economic or regulatory occurrence. As a result, changes in the market value of a single security could cause greater fluctuations in the value of Fund shares than would occur in a diversified fund.

4 WisdomTree Trust Prospectus

Table of Contents

- n **Portfolio Turnover Risk.** The Fund's strategy may frequently involve buying and selling portfolio securities to rebalance the Fund's exposure to various market sectors. Higher portfolio turnover may result in the Fund paying higher levels of transaction costs and generating greater tax liabilities for shareholders. Portfolio turnover risk may cause the Fund's performance to be less than you expect.

- n **Repurchase Agreement Risk.** The Fund's investment in repurchase agreements may be subject to market and credit risk with respect to the collateral securing the repurchase agreements. Investments in repurchase agreements also may be subject to the risk that the market value of the underlying obligations may decline prior to the expiration of the repurchase agreement term.

- n **Short Sales Risk.** The Fund may engage in short sale transactions. The Fund will lose value if the security or instrument that is the subject of a short sale increases in value. The Fund also may enter into a short derivative position through a futures contract, swap agreement, structured note, or short positions on currency forwards. If the price of the security or derivative that is the subject of a short sale increases, then the Fund will incur a loss equal to the increase in price from the time that the short sale was entered into plus any premiums and interest paid to a third party in connection with the short sale. Therefore, short sales involve the risk that losses may be exaggerated, potentially losing more money than the actual cost of the investment. Also, there is the risk that the third party to the short sale may fail to honor its contract terms, causing a loss to the Fund.

- n **Subsidiary Investment Risk.** Changes in the laws of the United States and/or the Cayman Islands, under which the Fund and the WisdomTree Subsidiary are organized, respectively, could result in the inability of the WisdomTree Subsidiary to operate as intended and could negatively affect the Fund and its shareholders.

- n **Tax Risk.** The Fund expects to obtain exposure to the commodities markets by entering into commodity-linked derivative instruments, such as listed futures contracts. In order for the Fund to qualify as a regulated investment company, the Fund must derive at least 90% of its gross income each taxable year from qualifying income. Income from certain commodity-linked derivative instruments in which the Fund invests may not be considered qualifying income. The Fund will seek to limit such income so as to qualify as a regulated investment company. The Fund intends to invest in such commodity-linked derivative instruments indirectly through the WisdomTree Subsidiary. Failure to comply with this restriction would have significant negative tax consequences to Fund shareholders.

- n **Volatility Risk.** The Fund and its underlying Benchmark are designed to capture the long-term economic benefits of rising or declining market trends. Frequent or significant short-term price movements could adversely impact the performance of the Benchmark and the Fund.

Fund Performance

The Fund commenced operations on January 5, 2011, and therefore does not have performance history for a full calendar year. Once the Fund has completed a full calendar year of operations, a bar chart and table will be included that will provide some indication of the risks of investing in the Fund by showing the variability of the Fund's return based on net assets and comparing the Fund's performance to a broad measure of market performance.

Management

Investment Adviser and Sub-Adviser

WisdomTree Asset Management, Inc. serves as the investment adviser to the Fund. Mellon Capital Management Corporation serves as the sub-adviser to the Fund.

Portfolio Managers

Vassilis Dagioglu, a Managing Director, Asset Allocation group, has been a portfolio manager of the Fund since its inception.

James Stavena, a Managing Director, Asset Allocation group, has been a portfolio manager of the Fund since its inception.

Buying and Selling Fund Shares

The Fund is an ETF. This means that shares of the Fund are listed on a national securities exchange, such as the NYSE Arca, Inc., and trade at market prices. Most investors will buy and sell shares of the Fund through brokers. Because Fund shares trade at market prices rather than NAV, shares may trade at a price greater than NAV (premium) or less than NAV (discount).

The Fund issues and redeems shares at NAV only in large blocks of shares (Creation Units), which only institutions or large investors may purchase or redeem. Currently, Creation Units generally consist of 200,000 shares, though this may change from time to time. The Fund generally issues and redeems Creation Units in exchange for money market securities and/or cash.

Tax Information

The Fund intends to make distributions that may be taxed as ordinary income or capital gains.

Table of Contents**WisdomTree Global Real Return Fund****Investment Objective**

The Fund seeks total returns (capital appreciation plus income) that exceed the rate of inflation over long-term investment horizons.

Fees and Expenses of the Fund

The following table describes the fees and expenses you may pay if you buy and hold shares of the Fund. The fees are expressed as a percentage of the Fund's average net assets.

Shareholder Fees (fees paid directly from your investment)	None
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.60%
Distribution and/or Service (12b-1) Fees	None
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.60%

Example

The following example is intended to help retail investors compare the cost of investing in the Fund with the cost of investing in other funds. It illustrates the hypothetical expenses that such investors would incur over various periods if they invest \$10,000 in the Fund for the time periods indicated and then redeem all of the shares at the end of those periods. This example assumes that the Fund provides a return of 5% a year and that operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

	1 Year	3 Years	5 Years	10 Years
	\$61	\$192	\$335	\$750

Investors may pay brokerage commissions on their purchases and sales of fund shares, which are not reflected in the example.

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or turns over its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in Annual Fund Operating Expenses or in the Example, affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was less than 1% of the average value of its portfolio, excluding the value of portfolio securities received or delivered as a result of in-kind creations or redemptions of the Fund's shares.

Principal Investment Strategies of the Fund

The Fund is an actively managed exchange traded fund (ETF) that seeks to provide protection against inflation and to generate income. Inflation is defined as an increase in the general price level of goods and services over time. The Fund invests in a combination of inflation-linked securities and debt instruments from issuers in the United States, developed markets and emerging markets throughout the world. The Fund has targeted exposure to commodities, such as gold, and employs commodity strategies structured to provide returns that exceed inflation rates. The Fund is managed using a structured investment approach that considers, among other things, country and currency exposure, sector allocation, investment exposure, and risk.

Investments in Inflation-Linked Bonds and Other Instruments. As noted above, the Fund invests in fixed income securities and other instruments linked to inflation rates in the U.S. and in developed and emerging market countries throughout the world. The Fund's U.S. investments are focused on inflation-protected securities, such as U.S. Treasury Inflation Protected Securities (TIPS), and floating-rate securities. Outside the

Edgar Filing: WisdomTree Trust - Form 497

U.S., the Fund seeks broad-based exposure to both developed and emerging economies. The Fund focuses its investments outside the U.S. in countries that are leading exporters of commodities, such as Australia, Brazil, Canada, Chile, Mexico, and South Africa. In order to provide broad-based exposure across developed and emerging markets, the Fund also invests in issuers from countries such as France, Germany, Italy, Israel, Korea, Poland, Sweden, Turkey and the United Kingdom. This list may change from time to time based on market and other conditions. Country, sector and issuer exposure and risk are reviewed on an ongoing basis and the Fund's portfolio is rebalanced quarterly. The Fund's exposure to any single non-U.S. currency generally is limited to 10% of the Fund's assets.

6 WisdomTree Trust Prospectus

Table of Contents

The Fund intends to focus its investments in inflation-linked bonds and other debt instruments issued by governments, government agencies and instrumentalities, government-sponsored enterprises and supranational organizations. For these purposes, supranational organizations include entities such as the European Investment Bank, International Bank for Reconstruction and Development, International Finance Corporation, and other regional development banks. The Fund may also invest up to 20% in debt securities issued by corporations. Inflation-linked bonds are structured to provide protection against inflation by preserving purchasing power. In a typical inflation-linked bond, the principal amount of the bond and the cash flow generated by the bond (i.e., interest) are adjusted upward in response to increases in inflation rates. The U.S. Consumer Price Index, or CPI, is a commonly used measure of U.S. inflation rates. Bonds tied to inflation rates outside the U.S. generally are linked to regional or country measures comparable to the CPI that measure inflation rates in non-U.S. markets. As inflation rises, upward adjustments to the principal amount or income paid on the bond increase the value of the bond and help preserve purchasing power in response to inflation. Conversely, some types of inflation-linked bonds may be adjusted downward in response to deflation (i.e., a decrease in the prices of goods and services over time).

The Fund may invest in floating- and variable-rate bonds. Floating- and variable-rate bonds are bonds that have a variable payment feature tied to a reference rate, such as the federal funds rate or the London Interbank Offering Rate (LIBOR). Floating- and variable-rate bonds generally are less sensitive to interest rate increases because when market rates rise, the payments made by such bonds increase. Conversely, a decrease in market interest rates will adversely affect the income received from such securities and may cause the value of such bonds to decrease.

The Fund may invest in derivatives such as swaps, forward currency contracts, and futures contracts designed to provide protection from changes in inflation rates. A swap is an agreement between two parties to exchange payments based on a reference asset, which may be a currency or interest rate but also may be a single asset, a pool of assets or an index of assets. A forward currency contract is an agreement to buy or sell a specific currency at a future date at a price set at the time of the contract. A futures contract is a standardized contract traded on a recognized exchange in which two parties agree to exchange either a specified financial asset or the cash equivalent of said asset of standardized quantity and quality for a price agreed today (the *futures prices* or the strike price) with delivery occurring at a specified future date. The Fund also may enter into repurchase agreements with counterparties that are deemed to present acceptable credit risks. A repurchase agreement is a transaction in which the Fund purchases securities or other obligations from a bank or securities dealer and simultaneously commits to resell them to a counterparty at an agreed-upon date or upon demand and at a price reflecting a market rate of interest unrelated to the coupon rate or maturity of the purchased obligations.

The average duration of the fixed income portion of the Fund's portfolio will vary based on economic fundamentals and market conditions. During most scenarios, fixed income portfolio duration will not exceed 10 years. Duration is an important indication of the Fund's sensitivity to changes in interest rates. Funds with higher durations generally are subject to greater interest rate risk. While the Fund intends to invest a relatively large percentage of its assets in investment grade securities, the Fund also may invest in non-investment grade securities. Securities rated investment grade generally are considered to be of higher credit quality and subject to lower default risk. Although securities rated below investment grade may offer the potential for higher yields, they generally are subject to higher potential risk of loss.

While inflation-linked securities offer protection against inflation, they are sensitive to changes in real interest rates. Real interest rates are interest rates that have been adjusted to remove the cost of inflation. Protracted increases in real interest rates would likely have a negative impact on the value of inflation-linked securities and the value of the Fund. The Fund may purchase or sell futures contracts on U.S. Treasury securities or other U.S. government or non-U.S. government obligations to help minimize this risk.

The Fund may invest a portion of its assets in fixed income securities that are not linked to inflation, such as U.S. government obligations. The Fund also may invest in money market instruments (including repurchase agreements) with remaining maturities of one year or less, as well as cash and cash equivalents.

Investments in Commodities. The Fund intends to have targeted exposure to commodities and commodity strategies. The commodity exposure is diversified across a number of sectors (such as gold and other precious metals, industrial materials, energy, livestock, and agriculture) utilizing systematic, rules-based strategies. Within these strategies, the Fund may take or gain exposure to long or short positions in commodities and related instruments. To be long means to hold or be exposed to a commodity or instrument with the expectation that its value will increase over time. To be short means to sell or be exposed to a commodity or instrument with the expectation that it will fall in value. The Fund will benefit if it has a long position in a commodity or instrument that *increases* in value or a short position in a commodity or instrument that *decreases* in value. Conversely, the Fund will be adversely impacted if it holds a long position in a commodity or instrument that declines in value and a short position in a commodity or instrument that increases in value.

The Fund seeks to gain exposure to commodity markets, in whole or in part, through investments in a subsidiary organized in the Cayman Islands (the WisdomTree Subsidiary). The WisdomTree Subsidiary is wholly-owned and controlled by the Fund. The Fund's investment in the WisdomTree Subsidiary may not exceed 25% of the Fund's total assets at each quarter-end of the

Table of Contents

Fund's fiscal year. The Fund's investment in the WisdomTree Subsidiary is expected to provide the Fund with exposure to commodity returns within the limits of the federal tax requirements applicable to regulated investment companies, such as the Fund. The WisdomTree Subsidiary intends to achieve exposure to commodities through investment in a combination of listed commodity futures, commodity index swaps and structured notes that provide commodity returns. A listed commodity future is a financial instrument in which a party agrees to pay a fixed price for a designated commodity at a specified future date. Listed commodity futures are traded at market prices on exchanges pursuant to terms common to all market participants. Except as noted, references to the investment strategies and risks of the Fund include the investment strategies and risks of the WisdomTree Subsidiary.

Principal Risks of Investing in the Fund

You can lose money on your investment in the Fund. The Fund is subject to the risks described below. Some or all of these risks may adversely affect the Fund's net asset value per share (NAV), trading price, yield, total return and/or its ability to meet its objective.

- n **Investment Risk.** As with all investments, an investment in the Fund is subject to investment risk. Investors in the Fund could lose money, including the possible loss of the entire principal amount of an investment, over short or long periods of time.
- n **Market Risk.** The trading prices of commodities, currencies, fixed income securities and other instruments fluctuate in response to a variety of factors. The Fund's NAV and market price, like security and commodity prices generally, may fluctuate significantly in response to these factors. As a result, an investor could lose money over short or long periods of time.
- n **Shares of the Fund May Trade at Prices Other Than NAV.** Although it is expected that the market price of the shares of the Fund will approximate the Fund's NAV when purchased and sold in the secondary market, there may be times when the market price of the shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). This risk is heightened in times of market volatility or periods of steep market declines.
- n **Cash Redemption Risk.** Unlike most ETFs, the Fund's investment strategy will require it to effect redemptions, in whole or in part, for cash. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used exclusively.
- n **Commodity Risk.** The value of commodities and commodity-linked derivative instruments typically is based upon the price movements of a physical commodity or an economic variable linked to such price movements. The prices of commodities and commodity-related investments may fluctuate quickly and dramatically and may not correlate to price movements in other asset classes. An active trading market may not exist for certain commodities. Each of these factors and events could have a significant negative impact on the Fund.
- n **Counterparty and Issuer Credit Risk.** The financial condition of an issuer of a debt security or other instrument or a counterparty to a derivative or other contract may cause such issuer or counterparty to default, become unable to pay interest or principal due or otherwise fail to honor its obligations. While the Fund attempts to limit credit and counterparty exposure in a manner consistent with its investment objective, the value of an investment in the Fund may change quickly and without warning in response to issuer or counterparty defaults and changes in the credit ratings of the Fund's portfolio investments.
- n **Currency Exchange Rate Risk.** The Fund currently invests a relatively large percentage of its assets in investments denominated in non-U.S. currencies, or in securities that provide exposure to such currencies, currency exchange rates or interest rates denominated in such currencies. Changes in currency exchange rates and the relative value of non-U.S. currencies will affect the value of the Fund's investment and the value of your Fund shares. Currency exchange rates can be very volatile and can change quickly and unpredictably. As a result, the value of an investment in the Fund may change quickly and without warning and you may lose money.

Edgar Filing: WisdomTree Trust - Form 497

- n **Deflation Risk.** The Fund currently invests a relatively large percentage of its assets in inflation-linked securities and instruments that provide similar exposure. In the event of a general decline in commodity and consumer prices, commonly referred to as deflation, these securities may lose value and have an adverse effect on Fund performance.

- n **Derivatives Investment Risk.** The Fund may invest in derivatives. Derivatives are subject to a number of risks described elsewhere in this Prospectus, such as interest rate risk, market risk, and credit risk. They also involve the risk that changes in the value of a derivative may not correlate perfectly with the underlying asset, rate or index, or that the counterparty to a derivative contract might default on its obligations. Derivatives can be volatile and may be less liquid than other securities. As a result, the value of an investment in the Fund may change quickly and without warning and you may lose money.

8 WisdomTree Trust Prospectus

Table of Contents

- n **Emerging Markets Risk.** Investments in securities and instruments traded in developing or emerging markets, or that provide exposure to such securities or markets, can involve additional risks relating to political, economic, or regulatory conditions not associated with investments in U.S. securities and instruments or investments in more developed international markets. For example, developing or emerging market governments may, without prior warning, impose capital controls on the ability to transfer currency, securities or other assets. The Fund's ability to access certain developing or emerging markets also may be limited due to a variety of factors, including currency convertibility issues. Such conditions may impact the ability of the Fund to buy, sell or otherwise transfer securities or currency, cause the Fund's returns to differ from those available to domestic investors, adversely affect the trading market and price for Fund shares and cause the Fund to decline in value.

- n **High Yield Securities Risk.** Higher yielding, high risk debt securities, sometimes referred to as junk bonds, may present additional risk because these securities may be less liquid and present more credit risk than investment grade bonds. The price of high yield securities tends to be more susceptible to issuer-specific operating results and outlook and to real or perceived adverse economic and competitive industry conditions.

- n **Income Fluctuation Risk.** The Fund's periodic income distributions are likely to fluctuate considerably more than the income distributions of a typical bond fund. The Fund's income may decline during periods of deflation or due to changes in expectations concerning the rate of inflation. In deflationary environments, the principal and income of an inflation-protected security will decline and could result in losses for the Fund.

- n **Inflation Risk.** An increase in the principal amount of an inflation-linked bond will be considered taxable ordinary income, even though investors do not receive the increased principal until maturity. As a result, in certain circumstances, the Fund may be required to make annual distributions to shareholders that exceed the cash received by the Fund on its investments. This may cause the Fund to liquidate investments when it might not be advantageous to do so and may have negative tax consequences.

- n **Interest Rate Risk.** Interest rate risk is the risk that fixed income securities will decline in value because of changes in interest rates and other factors, such as perception of an issuer's creditworthiness.

- n **Issuer-Specific Risk.** Issuer-specific events, including changes in the financial condition of an issuer, can have a negative impact on the value of the Fund.

- n **Liquidity Risk.** The Fund may invest in derivatives and other instruments that may be less liquid than other types of investments. The derivatives in which the Fund invests may not always be liquid. This could have a negative effect on the Fund's ability to achieve its investment objective and may result in losses to Fund shareholders.

- n **Management Risk.** The Fund is actively managed using proprietary investment strategies and processes. There can be no guarantees that these strategies and processes will be successful or that the Fund will achieve its investment objective.

- n **Non-Diversification Risk.** The Fund is considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. To the extent the Fund invests a significant percentage of its assets in a limited number of issuers, the Fund is subject to the risks of investing in those few issuers, and may be more susceptible to a single adverse economic or regulatory occurrence. As a result, changes in the market value of a single security could cause greater fluctuations in the value of Fund shares than would occur in a diversified fund.

- n **Non-U.S. Markets Risk.** The Fund may invest in bonds and other instruments issued by non-U.S. governments or that track non-U.S. interest or inflation rates. Foreign markets are generally less liquid and can be more volatile than the U.S. market due to increased risks of adverse

Edgar Filing: WisdomTree Trust - Form 497

issuer, political, regulatory, market, or economic developments and can perform differently from the U.S. market. Each of these factors may impact the ability of the Fund to buy, sell or otherwise transfer securities, adversely affect the trading market and price for Fund shares, and cause the Fund to decline in value.

- n **Portfolio Turnover Risk.** The Fund's strategy may frequently involve buying and selling portfolio securities to rebalance the Fund's exposure to various market sectors. Higher portfolio turnover may result in the Fund paying higher levels of transaction costs and generating greater tax liabilities for shareholders. Portfolio turnover risk may cause the Fund's performance to be less than you expect.

- n **Repurchase Agreement Risk.** The Fund's investment in repurchase agreements may be subject to market and credit risk with respect to the collateral securing the repurchase agreements. Investments in repurchase agreements also may be subject to the risk that the market value of the underlying obligations may decline prior to the expiration of the repurchase agreement term.

- n **Short Sales Risk.** The Fund may engage in short sale transactions. The Fund will lose value if the security or instrument that is the subject of a short sale increases in value. The Fund also may enter into a short derivative position through a futures contract, swap agreement, structured note, or short positions on currency forwards. If the price of the security or derivative that is the subject of a short sale increases, then the Fund will incur a loss equal to the increase in price from the time that the short sale was entered into plus any premiums and interest paid to a third party in connection

Table of Contents

with the short sale. Therefore, short sales involve the risk that losses may be exaggerated, potentially losing more money than the actual cost of the investment. Also, there is the risk that the third party to the short sale may fail to honor its contract terms, causing a loss to the Fund.

n **Sovereign Debt Risk.** Bonds issued by governments, sometimes referred to as sovereign debt, present risks not associated with investments in other types of bonds. The government or agency issuing the debt may be unable or unwilling to make interest payments and/or repay the principal owed. In such instance, the Fund may have limited recourse against the issuing government or agency. In the past, governments of emerging market countries have refused to honor their payment obligations on issued bonds.

n **Subsidiary Investment Risk.** Changes in the laws of the United States and/or the Cayman Islands, under which the Fund and the WisdomTree Subsidiary are organized, respectively, could result in the inability of the WisdomTree Subsidiary to operate as intended and could negatively affect the Fund and its shareholders.

n **Tax Risk.** The Fund expects to obtain exposure to the commodities markets by entering into commodity-linked derivative instruments, such as listed futures contracts. In order for the Fund to qualify as a regulated investment company, the Fund must derive at least 90% of its gross income each taxable year from qualifying income. Income from certain commodity-linked derivative instruments in which the Fund invests may not be considered qualifying income. The Fund will seek to limit such income so as to qualify as a regulated investment company. The Fund intends to invest in such commodity-linked derivative instruments indirectly through the WisdomTree Subsidiary. Failure to comply with this restriction would have significant negative tax consequences to Fund shareholders.

Fund Performance

The Fund commenced operations on July 14, 2011, and therefore does not have performance history for a full calendar year. Once the Fund has completed a full calendar year of operations, a bar chart and table will be included that will provide some indication of the risks of investing in the Fund by showing the variability of the Fund's return based on net assets and comparing the Fund's performance to a broad measure of market performance.

Management

Investment Adviser and Sub-Adviser

WisdomTree Asset Management, Inc. serves as the investment adviser to the Fund. Mellon Capital Management Corporation serves as the sub-adviser to the Fund.

Portfolio Managers

Lisa Mears O'Connor, a Managing Director, Fixed Income group, has been a portfolio manager of the Fund since its inception.

David Kwan, a Managing Director, Fixed Income group, has been a portfolio manager of the Fund since its inception.

Buying and Selling Fund Shares

The Fund is an ETF. This means that shares of the Fund are listed on a national securities exchange, such as the NYSE Arca, Inc., and trade at market prices. Most investors will buy and sell shares of the Fund through brokers. Because Fund shares trade at market prices rather than NAV, shares may trade at a price greater than NAV (premium) or less than NAV (discount).

The Fund issues and redeems shares at NAV only in large blocks of shares (Creation Units), which only institutions or large investors may purchase or redeem. Currently, Creation Units generally consist of 100,000 shares, though this may change from time to time. The Fund generally issues and redeems Creation Units in exchange for a portfolio of fixed income securities closely approximating the holdings of the Fund or an amount of cash.

Tax Information

Edgar Filing: WisdomTree Trust - Form 497

The Fund intends to make distributions that may be taxed as ordinary income or capital gains.

Table of Contents

Additional Information About the Funds

Additional Investment Objective Information. Each Fund's investment objective has been adopted as a non-fundamental investment policy and may be changed without a vote of shareholders upon at least 60 days' prior written notice to shareholders.

Additional Information About the Funds – Strategies. Unlike the Funds, the WisdomTree Subsidiaries are not investment companies registered under the Investment Company Act of 1940, and therefore may invest in commodities and commodity-linked derivatives to a greater extent than the Funds. The WisdomTree Subsidiaries, however, are required to invest in commodity-linked derivatives in a manner consistent with the terms of their private letter rulings and certain provisions of the Investment Company Act of 1940. The WisdomTree Subsidiaries are otherwise subject to the same general investment policies and investment restrictions as the Funds.

The Funds may invest in a variety of swap agreements, including interest rate swaps, inflation-linked swaps, total return swaps, currency swaps, and commodity index swaps. A swap is an agreement between two parties to exchange payments based on a reference asset, which may be a currency or interest rate, but also may be a single asset, a pool of assets or an index of assets. A currency swap is an agreement between two parties to exchange one currency for another at a future rate. An interest rate swap typically involves the exchange of one interest rate payment for another, such as a floating interest rate payment for a fixed payment. An inflation-linked swap is an agreement between two parties to exchange payments at a future date based on the difference between a fixed payment and a payment linked to the inflation rate at a future date. A total return swap is an agreement between two parties in which one party agrees to make payments of the total return of a reference asset in return for payments equal to a rate of interest on another reference asset. A commodity index swap is an agreement between two parties to exchange cash flows or returns (or differences in return) on a commodity index.

Temporary Defensive Strategies. Each Fund reserves the right to invest in U.S. government securities, money market instruments, and cash, without limitation, as determined by the Adviser or Sub-Adviser in response to adverse market, economic, political, or other conditions. Each Fund also may hedge or minimize its exposure to one or more foreign currencies in response to such conditions. In the event that a Fund engages in temporary defensive strategies that are inconsistent with its investment strategies, the Fund's ability to achieve its investment objective may be limited.

Additional Information About the WisdomTree Managed Futures Strategy Fund's Investment Strategy. The Fund intends to achieve its investment objective using a combination of listed futures contracts, forward currency contracts and swap transactions that provide exposure to the commodity and financial futures in the Benchmark. A futures contract is a financial instrument in which a party agrees to pay a fixed price for securities or commodities at a specified future date. Listed futures contracts are traded at market prices on exchanges pursuant to terms common to all market participants. A forward currency contract is an agreement to buy or sell a specific currency at a future date at a price set at the time of the contract. A swap agreement is an agreement between two parties to exchange cash flows or returns (or differences in return) on a reference instrument, such as a commodity or currency, according to agreed-upon terms. The Fund also may invest in structured notes based on commodities and non-U.S. currencies. A structured note is a debt instrument the return on which is tied to a reference asset or rate, such as a commodity, commodity index, or currency exchange rate. In addition, the Fund will invest in U.S. government securities and money market instruments (including repurchase agreements) with remaining maturities of one year or less, as well as cash and cash equivalents, in order to collateralize its derivatives investments or for other purposes. A repurchase agreement is a transaction where a party purchases securities and simultaneously commits to resell them at an agreed-upon date at a price reflecting a market rate of interest unrelated to the coupon rate or maturity of the securities. The Fund generally expects to maintain an average portfolio maturity of 90 days or less on its investments in money market instruments. The Fund is managed using a strategy designed to provide returns that correspond to the performance of the Benchmark. The Benchmark is a rules-based indicator designed to capture rising or falling price trends in the commodity, currency and U.S. Treasury markets through long and short positions on U.S.-listed futures contracts. The Benchmark consists of U.S.-listed futures contracts on 16 tangible commodities and 8 financial futures. The 16 commodity futures contracts are: light crude oil, natural gas, RBOB gas, heating oil, soybeans, corn, wheat, gold, silver, copper, live cattle, lean hogs, coffee, cocoa, cotton and sugar. The 8 financial futures contracts are: the Australian dollar, British pound, Canadian dollar, euro, Japanese yen, Swiss franc, U.S. Treasury notes and U.S. Treasury bonds. Each contract is sometimes referred to as a Component of the Benchmark.

Components that are similar in nature (such as gold and silver) are aggregated into Sectors. There are ten commodity Sectors in the Benchmark: Energy, Grains, Precious Metals, Industrial Metals, Livestock, Natural Gas, Coffee, Cocoa, Cotton, and Sugar. Each financial futures contract is considered to be its own Sector. As a result, there are eight financial Sectors in the Benchmark: the Australian dollar, British pound, Canadian dollar, euro, Japanese yen, Swiss franc, U.S. Treasury notes and U.S. Treasury bonds.

Table of Contents

In order to capture both rising and falling price trends, each Sector in the Benchmark (other than the Energy Sector) is positioned as either long or short (the Energy Sector is positioned as either long or flat (i.e., no exposure)). This determination is made on a monthly basis using an algorithm that compares the Sector's monthly return to the Sector's recent weighted moving average monthly returns. If the Sector's returns are above its moving average returns the Sector is positioned as long throughout the following month. If the Sector's returns are below its moving average returns the Sector is positioned as short throughout the following month (with the sole exception of the Energy Sector, which would be positioned as flat). All Components within a Sector are held in the same direction. The value of a Sector and the value of the Benchmark should increase if a long position increases in value or if a short position decreases in value. For example, if a Sector is long and the value of its Components goes up intra-month, the return of the Sector (and therefore the Benchmark) should increase. If a Sector is short, and the value of its Components goes down intra-month, the return of the Sector (and therefore the Benchmark) should increase.

The Energy Sector and its Components may never be positioned short within the Benchmark. The Benchmark's methodology provides that, due to significant levels of continuous consumption, limited reserves and other factors, the Energy Sector can only be long or flat (i.e., no exposure) within the Benchmark. If the Energy Sector is flat then the weighting of the other Sectors and Components within the Benchmark is increased on a pro-rata basis. As a result, when the Energy Sector is flat, financial futures will represent approximately 60% of the weight of the Benchmark, and commodities will represent approximately 40% of the weight of the Benchmark. When the Energy Sector is long, financial futures and commodity futures each represent 50% of the weight of the Benchmark.

At the beginning of each year and month, the Benchmark is weighted in one of two ways. If the Energy Sector is long, the Benchmark is weighted evenly (i.e., 50/50) between commodity futures contracts and financial futures contracts. If the Energy Sector is flat, financial futures represent approximately 60% of the weight of the Benchmark, and commodity futures represent approximately 40% of the Benchmark. At the beginning of each year, each Component and Sector has a Base Weight depending on whether the Energy Sector is long or flat. If the Energy Sector is flat then the Base Weight of the other Sectors and Components within the Benchmark is increased on a pro-rata basis. Commodity Sector weights are based on, but not exactly proportional to, historical world production levels. Commodity Sectors that have higher historical production levels are weighted higher in the Benchmark. Weightings of the financial futures Sectors are based on, but not directly proportional to, historical gross domestic product (GDP). Larger economic regions (i.e., Europe as measured by the euro) should get a higher weighting than smaller regions (i.e., Australia as measured by the Australian dollar).

The weight of each Component and Sector in the Benchmark changes throughout each month based upon performance. At the end of each month, each Sector is reset back to its applicable Base Weight depending on whether the Energy Sector is long or flat. Within Sectors that have multiple Components, the weight of each Component relative to the others is allowed to fluctuate throughout the year, and Component weights are reset back to their respective Base Weights only at year-end.

Benchmark Risk. The Benchmark is entirely model based. As market dynamics shift over time, the model may become outdated or inaccurate. The Benchmark is based, in part, on historical price trends. There can be no assurance that such trends will be reflected in future market movements.

The Benchmark and the Fund are not proxies for taking long positions. The Benchmark and the Fund take both long and short positions and are not substitutes for taking long positions. This is in contrast to traditional all long indices and funds which could be expected to increase and decrease in value in direct correlation to increases or decreases in global supply and demand, inflation and other factors affecting the price of the commodities and currencies on which they are based. The Benchmark and Fund could lose significant value during periods when markets rise.

The Benchmark and the Fund are not proxies for taking short positions. The Benchmark and the Fund take both long and short positions and are not substitutes for taking short positions. The Benchmark and Fund could lose significant value during periods when markets decline.

The Benchmark and the Fund are not proxies for spot price investments. The Benchmark and the Fund seek to provide returns based on price trends in commodity, currency and U.S. Treasury futures. Futures contracts reflect the expected future value of a commodity, currency or U.S. Treasury security. Spot prices reflect the immediate delivery value of a commodity, currency or U.S. Treasury security. The price movements of futures contracts typically are correlated with the movement of spot prices, but the correlation is imperfect and price moves in the spot market may not be reflected in the futures market. The Benchmark and the Fund do not track spot prices and should not be used by investors seeking exposure to the spot price of commodities, currencies and U.S. Treasury securities.

The Benchmark and the Fund only adjust positions as of the end of each month. The Benchmark does not make intra-month adjustments. As a result, the Fund generally will not make intra-month adjustments to its positions as of the end of the prior month, irrespective of intra-month price movements. Consequently, the Fund is subject to potentially significant losses during a month if the market moves against the positions established in the Benchmark and Fund as of the end of the prior month.

12 WisdomTree Trust Prospectus

Table of Contents

Materially adverse market scenarios. There are a number of market scenarios (as well as, possibly, other currently unanticipated events) in which the Benchmark and the Fund could decline materially. If the economic environment in the United States became comparable to that of Japan, for example, which has had a declining or static GDP for many years despite very low interest rates, accompanied by low inflation, the Benchmark and the Fund could decline materially. In this scenario, low inflation or a sudden shift from high inflation to disinflation would likely mean markets with few sustained price trends. This would result in a decline in the Benchmark and the Fund. In this scenario, the Benchmark's trend-following methodology would likely signal numerous long/short position switches without capturing any significant price movements. Because the Benchmark's methodology is based on historical trends, any factors which contribute to trendless markets are likely to be adverse to the Benchmark and therefore adverse to the Fund.

Whipsaw markets (as opposed to choppy or stable markets), in which significant price movements develop but then repeatedly reverse, could cause substantial losses to the Benchmark and the Fund. In this scenario, rapid reversals in prices may move against the Benchmark's long or short positions. As the Benchmark switches between such positions based on recent price histories indicating trends which then reverse and move counter to the Benchmark's long or short positions the Benchmark, and therefore the Fund, would decline in value. Financial and commodity indexes that track only long (or only short) positions would not be subject to being whipsawed in the same manner as the Benchmark. An unexpected change in government economic policy, a significant political or economic event, a surprise change in monetary policy, or a sudden shift in supply or demand, could cause a severe reversal in a number of markets traded in the Benchmark, resulting in material losses to the Fund.

The Benchmark has been structured based on, among other things, the general expectation that commodity, currency and financial prices will exhibit tendencies to trend over the intermediate term (periods of months to years). The market features and correlations which the Benchmark has been designed to capture may not be reflected in market price movements over certain periods—particularly short periods—and the Benchmark and the Fund may sustain losses during such periods.

Additional Risk Information About the Funds

This section provides additional information regarding the principal risks described under "Principal Risks of Investing in the Fund" in the Fund Summaries. Risk information may not be applicable to each Fund. Please consult the Fund Summaries sections to determine which risks are applicable to a particular Fund.

Capital Controls Risk. Economic conditions, such as volatile currency exchange rates and interest rates, political events and other conditions, may, without prior warning, lead to government intervention and the imposition of capital controls. Capital controls include the prohibition of, or restrictions on, the ability to transfer currency, securities or other assets. Levies may be placed on profits repatriated by foreign entities (such as the Global Real Return Fund). Capital controls may impact the ability of the Global Real Return Fund to buy, sell or otherwise transfer securities or currency, may adversely affect the trading market and price for shares of the Fund, and may cause the Fund to decline in value.

Cash Redemption Risk. Each Fund's investment strategy will require it to redeem shares for cash or to otherwise include cash as part of its redemption proceeds. A Fund may be required to sell or unwind portfolio investments in order to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize capital gains that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used.

Commodity Risk. The value of commodities and commodity-linked derivative instruments typically is based upon the price movements of a physical commodity or an economic variable linked to such price movements. Therefore, the value of commodities and commodity-linked derivative instruments may be affected by, for example, changes in overall economic conditions, changes in interest rates, or factors affecting a particular commodity or industry, such as production, supply, demand, drought, floods, weather, political, economic and regulatory developments. The prices of commodities and commodity-related investments may fluctuate quickly and dramatically and may not correlate to price movements in other asset classes, such as stocks, bonds and cash. An active trading market may not exist for certain commodities. This may impair the ability of a Fund to sell its portfolio holdings quickly or for full value. Commodity derivatives, such as commodity-linked swaps and notes, are subject to the risk that the counterparty to the transaction may default or otherwise fail to perform. Each of these factors and events could have a significant negative impact on the Funds.

Credit Risk. The financial condition of an issuer of a debt security, derivative or other instrument may cause it to default or become unable to pay interest or principal due. A Fund cannot collect interest and principal payments if the issuer defaults. Recent events in the financial sector have resulted in increased concerns about credit risk and exposure. Well-known financial institutions have experienced significant liquidity and other problems and have defaulted on their obligations. The degree of credit risk for a particular security may be reflected in its credit rating. A credit rating is a measure of an issuer's ability to make timely payments of interest and principal. Rating agencies (such as Moody's Investors Service, Inc., Standard & Poor's

Table of Contents

Corporation, or Fitch) assign letter designations typically ranging from AAA (lowest default risk) to C (highest default risk) or D (in default). A credit rating of BBB or higher generally is considered investment grade. Credit ratings are subjective, do not remove market risk and represent the opinions of the rating agencies as to the quality of the securities they rate. Credit ratings can change quickly and may not accurately reflect the risk of an issuer. Generally, investment risk and price volatility increase as the credit rating of a security or issuer declines. While the Funds attempt to limit credit exposure in a manner consistent with its investment objective, the value of an investment in the Funds may change quickly and without warning in response to issuer defaults and changes in the credit ratings of the Funds' portfolio investments.

Counterparty Risk. The Funds intend to engage in investment transactions or enter into derivative or other contracts with third parties (i.e., counterparties). For example, the Funds intend to enter into forward currency contracts and swap transactions. The Funds bear the risk that the counterparty to such contracts may default on its obligations or otherwise fail to honor its obligations. If a counterparty defaults on its payment obligations the Fund will lose money and the value of an investment in Fund shares may decrease. In addition, the Funds may engage in such investment transactions with a limited number of counterparties, which may increase a Fund's exposure to counterparty credit risk. Listed futures contracts can be traded on futures exchanges without material counterparty credit. After a trade is cleared, the exchange is the ultimate counterparty for all contracts, so the counterparty risk on a listed futures contract ultimately is the credit worthiness of the exchange's clearing corporation.

Currency Exchange Rate Risk. Changes in currency exchange rates and the relative value of non-U.S. currencies will affect the value of a Fund's investment and the value of Fund shares. Generally, when the U.S. dollar rises in value against a foreign currency, an investment in that currency loses value because the currency is worth fewer U.S. dollars. The value of the U.S. dollar measured against other currencies is influenced by a variety of factors. These factors include: interest rates, national debt levels and trade deficits, changes in balances of payments and trade, global commodity and energy prices, global interest rates and global inflation rates. Government intervention and monetary policy will have a significant impact on currency exchange rates. Currency exchange rates may fluctuate quickly and dramatically and investments in currencies and currency-linked instruments may subject a Fund to greater volatility than investments in traditional equity and fixed income securities.

Deflation Risk. Inflation-linked securities and instruments linked to certain types of commodities (e.g., gold) generally provide investors with protection against periods of rising commodity and consumer prices, commonly referred to as inflation. In periods with falling commodity and consumer prices, commonly referred to as deflation, these securities and instruments may lose value and have an adverse effect on the Global Real Return Funds, and to a lesser extent, the Managed Futures Strategy Funds, performance.

Derivatives Investment Risk. The Funds may invest in derivatives. Derivatives are financial instruments that derive their performance from an underlying reference asset, such as a commodity, index, interest rate or currency exchange rate. Derivatives include forward currency contracts, futures contracts and currency, interest rate swaps, total return swaps and credit linked notes. A forward currency contract is an agreement to buy or sell a specific currency at a future date at a price set at the time of the contract. A non-deliverable forward currency contract is a contract where there is no physical settlement of two currencies at maturity. Rather, based on the movement of the currencies, a net cash settlement will be made by one party to the other. A futures contract is a standardized contract traded on a recognized exchange in which two parties agree to exchange either a specified financial asset or the cash equivalent of said asset of standardized quantity and quality for a price agreed upon today (the future price or the strike price) with delivery occurring at a specified future date. A currency swap is an agreement between two parties to exchange one currency for another at a future rate. An interest rate swap involves the exchange of a floating interest rate payment for a fixed interest payment. A total return swap is an agreement between two parties in which one party agrees to make payments of the total return of a reference asset in return for payments equal to a rate of interest on another reference asset. A credit linked note is a type of structured note whose value is linked to an underlying reference asset or entity. Credit linked notes typically provide periodic payments of interest as well as payment of principal upon maturity. Derivatives are subject to a number of risks described elsewhere in this Prospectus, such as credit risk, interest rate risk, and market risk. They also involve the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, rate or index, or that the counterparty to a derivative contract might default on its obligations. Derivatives can be volatile and may be less liquid than other securities. As a result, the value of an investment in a Fund may change quickly and without warning and you may lose money.

Emerging Markets Risk. Investments in securities and instruments traded in developing or emerging markets, or that provide exposure to such securities or markets, can involve additional risks relating to political, economic, or regulatory conditions not associated with investments in U.S. securities and instruments or investments in more developed international markets. For example, emerging markets may be subject to (i) greater market volatility, (ii) lower trading volume and liquidity, (iii) greater social, political and economic uncertainty, (iv) governmental controls on foreign investments and limitations on repatriation of invested capital, (v) lower disclosure, corporate governance, auditing and financial reporting standards, (vi) fewer protections of property rights, (vii) restrictions on the transfer of securities or currency, and (viii) settlement and trading practices that differ from U.S. markets. Each of these factors may impact the ability of the Global Real Return Fund to buy, sell or otherwise transfer securities, adversely affect the trading market and price for Fund shares and cause the Fund to decline in value.

14 WisdomTree Trust Prospectus

Table of Contents

High Yield Securities Risk. The Global Real Return Fund may invest a limited portion of its assets in securities rated lower than Baa by Moody's, or equivalently rated by S&P or Fitch. Such securities are sometimes referred to as high yield securities or junk bonds. Investing in these securities involves special risks in addition to the risks associated with investments in higher-rated fixed income securities. While offering a greater potential for capital appreciation and higher yields, high yield securities typically entail higher price volatility and may be less liquid than securities with higher ratings. High yield securities may be regarded as predominately speculative with respect to the issuer's continuing ability to meet principal and interest payments. Issuers of securities in default may fail to resume principal or interest payments, in which case a Fund may lose its entire investment.

Income Fluctuation Risk. The Global Real Return Fund's periodic income distributions are likely to fluctuate considerably more than the income distributions of a typical bond fund. Income fluctuations associated with changes in interest rates are expected to be minimal. However, income fluctuations associated with changes in inflation could be significant. The Fund's income may decline during periods of deflation or due to changes in expectations concerning the rate of inflation. In deflationary environments, the principal and income of an inflation-protected security will decline and could result in losses for the Fund.

Inflation Risk. Inflation risk is the risk that an asset, or the cash flow from an asset, will diminish in purchasing power because of future increases in the prices of goods or services (i.e., inflation). Because the principal amount of and the coupon payments on inflation-linked bonds increase with inflation, inflation-linked bonds help protect against increases in inflation rates. An increase in the principal amount of an inflation-linked bond will be considered taxable ordinary income, even though investors do not receive the increased principal until maturity. As a result, in certain circumstances, the Global Real Return Fund may be required to make annual distributions to shareholders that exceed the cash received by the Fund on its investments. This may cause the Fund to liquidate investments when it might not be advantageous to do so and may have negative tax consequences.

Interest Rate Risk. The market value of fixed income securities, and financial instruments related to fixed income securities, will change in response to changes in interest rates and may change in response to other factors, such as perception of an issuer's creditworthiness. As interest rates rise, the value of certain fixed income securities is likely to decrease. Similarly, if interest rates decline, the value of fixed income securities is likely to increase. While securities with longer maturities tend to produce higher yields, the prices of longer maturity securities tend to be more sensitive to changes in interest rates and thus are subject to greater volatility than securities with shorter maturities. The average portfolio maturity of a Fund is the average of all the current maturities of the individual securities in the Fund's portfolio. Average portfolio maturity is important to investors as an indication of the Fund's sensitivity to changes in interest rates. Funds with longer portfolio maturities generally are subject to greater interest rate risk.

Issuer-Specific Risk. Changes in the financial condition of an issuer or counterparty, changes in specific economic or political conditions that affect a particular type of security or issuer, and changes in general economic or political conditions can affect a security's or instrument's value. The value of securities of smaller, less well-known issuers can be more volatile than that of larger issuers. Issuer-specific events can have a negative impact on the value of a Fund.

Investment Risk. As with all investments, an investment in the Funds is subject to investment risk. Investors in the Funds could lose money, including the possible loss of the entire principal amount of an investment, over short or even long periods of time. An investment in the Funds is not a bank deposit and it is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.

Liquidity Risk. The Funds may invest in derivatives and other instruments that may be less liquid than other types of investments. Investments that are less liquid or that trade less can be more difficult or more costly to buy, or to sell, compared to other more liquid or active investments. This liquidity risk is a factor of the trading volume of a particular investment, as well as the size and liquidity of the market for such an investment. The derivatives in which a Fund invests may not always be liquid. This could have a negative effect on a Fund's ability to achieve its investment objective and may result in losses to Fund shareholders.

Management Risk. The Funds are actively managed using proprietary investment strategies and processes. There can be no guarantee that these strategies and processes will produce the intended results and no guarantee that the Funds will achieve its investment objective or outperform other investment strategies over short- or long-term market cycles.

Market Risk. The trading prices of commodities, currencies, fixed income securities and other instruments fluctuate in response to a variety of factors. These factors include events impacting the entire market or specific market segments, such as political, market and economic developments, as well as events that impact specific issuers. The Funds' NAV and market price, like security and commodity prices generally, may fluctuate significantly in response to these and other factors. As a result, an investor could lose money over short or long periods of time.

Table of Contents

Non-Diversification Risk. Although the Funds intend to invest in a variety of securities and instruments, the Funds will be considered to be non-diversified, which means that they may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. As a result, the Funds may be more exposed to the risks associated with and developments affecting an individual issuer or a smaller number of issuers than a fund that invests more widely. This may increase each Fund's volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund's performance.

Non-U.S. Markets Risk. The Global Real Return Fund may invest in bonds and other instruments issued by non-U.S. governments or that track non-U.S. interest or inflation rates. Foreign markets can be more volatile than the U.S. market due to increased risks of adverse issuer, political, regulatory, market, or economic developments and can perform differently from the U.S. market. Investing in securities of foreign companies directly, or in financial instruments that are indirectly linked to the performance of foreign issuers, may involve risks not typically associated with investing in U.S. issuers. The value of bonds and instruments denominated in foreign currencies, and the interest and other payments attributable to such bonds and instruments, can change significantly when foreign currencies strengthen or weaken relative to the U.S. dollar. Foreign securities markets generally have less trading volume and less liquidity than U.S. markets, and prices in some foreign markets may fluctuate more than those of securities traded on U.S. markets. Many foreign countries lack accounting and disclosure standards comparable to those that apply to U.S. companies, and it may be more difficult to obtain reliable information regarding a foreign issuer's financial condition and operations. Transaction costs and costs associated with custody services are generally higher for foreign securities than they are for U.S. securities. Some foreign governments levy withholding taxes against dividend and interest income. Although in some countries portions of these taxes are recoverable, the non-recovered portion will reduce the income received by the Fund.

Portfolio Turnover Risk. Each of the Fund's strategies may frequently involve buying and selling portfolio securities to rebalance the Fund's exposure to various market sectors. Higher portfolio turnover may result in a Fund paying higher levels of transaction costs and generating greater tax liabilities for shareholders. Portfolio turnover risk may cause a Fund's performance to be less than you expect.

Repurchase Agreement Risk. The Funds will enter into repurchase agreements only with counterparties that are deemed to present acceptable credit risks, and the collateral securing the repurchase agreements generally will be limited to U.S. government securities and cash. If the market value of the underlying obligations of a repurchase agreement declines, the counterparty must provide additional collateral so that at all times the value of the collateral is greater than the repurchase price of the underlying obligations. Nonetheless, should a counterparty become insolvent or otherwise default, there could be a delay before a Fund is able to liquidate the collateral, which would subject the collateral and the Fund to market risk during that period.

Shares of the Funds May Trade at Prices Other Than NAV. As with all ETFs, Fund shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of the shares of each Fund will approximate the Fund's NAV, there may be times when the market price and the NAV vary significantly. Thus, you may pay more (or less) than NAV intra-day when you buy shares of a Fund in the secondary market, and you may receive more (or less) than NAV when you sell those shares in the secondary market.

Short Sales Risk. The Funds may engage in short sale transactions. A short sale involves the sale by a Fund of an instrument or security that it does not own with the hope of purchasing the same security at a later date at a lower price. Short sales are designed to profit from a decline in the price of a security or instrument. A Fund will lose value if the security or instrument that is the subject of a short sale increases in value. This is the opposite of traditional long investments where the value of a Fund increases as the value of a portfolio security or instrument increases. The Funds also may enter into a short derivative position through a futures contract, swap agreement, structured note, or short positions on currency forwards. If the price of the security or derivative that is the subject of a short sale increases, then a Fund will incur a loss equal to the increase in price from the time that the short sale was entered into plus any premiums and interest paid to a third party in connection with the short sale. Therefore, short sales involve the risk that losses may be exaggerated, potentially losing more money than the actual cost of the investment. Also, there is the risk that the third party to the short sale may fail to honor its contract terms, causing a loss to a Fund.

Sovereign Debt Risk. The Global Real Return Fund's investments in sovereign debt, which includes securities issued or guaranteed by a foreign sovereign government, present risks not associated with investments in other types of bonds. The issuer of the sovereign debt that controls the repayment of the debt may be unable or unwilling to repay principal or interest payments when due, and the Fund may have limited recourse against the issuing government or agency in the event of a default. During periods of economic uncertainty, the market prices of sovereign debt, and the Fund's NAV, may be more volatile than prices of U.S. bonds. In the past, governments of certain emerging market countries have encountered difficulties in servicing their debt obligations, withheld payments of principal and interest, refused to honor their payment obligations on their sovereign debt, and restructured their indebtedness. The restructuring of sovereign debt may involve obtaining

Table of Contents

additional credit to finance outstanding obligations and the reduction or rescheduling of payments of interest and principal. As a holder of such sovereign debt, the Fund may be asked to participate in the restructuring of such sovereign indebtedness. There can be no assurance that such restructurings will result in the full repayment of the issuer's sovereign debt.

Subsidiary Investment Risk. The WisdomTree Subsidiaries are not registered under the Investment Company Act of 1940 and are not subject to all of the investor protections of the Investment Company Act of 1940. Thus, the Funds, as investors in the WisdomTree Subsidiaries, will not have all of the protections offered to investors in registered investment companies. In addition, changes in the laws of the United States and/or the Cayman Islands, under which the Funds and the WisdomTree Subsidiaries are organized, respectively, could result in the inability of the Funds and/or the WisdomTree Subsidiaries to operate as intended and could negatively affect the Funds and their shareholders.

Tax Risk. The Funds expect to obtain exposure to the commodities markets by entering into commodity-linked derivative instruments, such as listed futures contracts, forward currency contracts, swaps and structured notes. In order for a Fund to qualify as a regulated investment company, the Fund must derive at least 90% of its gross income each taxable year from qualifying income. Income from certain commodity-linked derivative instruments in which the Fund invests may not be considered qualifying income. The Funds intend to invest in such commodity-linked derivative instruments indirectly through the WisdomTree Subsidiaries. To the extent a Fund makes direct investments in commodity-linked derivative instruments, it will seek to restrict the resulting income from such instruments so that, when combined with its other non-qualifying income, the Fund's non-qualifying income is less than 10% of its gross income. Failure to comply with this restriction would have significant negative tax consequences to Fund shareholders. Important tax information is described in more detail below in the section on Additional Tax Information.

Volatility Risk. The Managed Futures Strategy Fund and its underlying Benchmark are designed to capture the long-term economic benefits of rising or declining market trends. Frequent or significant short-term price movements could adversely impact the performance of the Fund and its underlying Benchmark. Whipsaw markets (as opposed to choppy or stable markets), in which significant price movements develop but then repeatedly reverse, could cause substantial losses due to prices moving against the Fund's long or short positions (which are based on prior trends) and generally are not adjusted on an intra-month basis.

Portfolio Holdings Information

Information about the Funds' daily portfolio holdings is available at www.wisdomtree.com. In addition, each Fund discloses its complete portfolio holdings as of the end of its fiscal year (August 31) and its second fiscal quarter (February 28) in its reports to shareholders. Each Fund files its complete portfolio holdings as of the end of its first and third fiscal quarters (November 30 and May 31, respectively) with the SEC on Form N-Q no later than 60 days after the relevant fiscal period. You can find the SEC filings on the SEC's website, www.sec.gov. A summarized description of the Funds' policies and procedures with respect to the disclosure of the Funds' portfolio holdings is available in the Statement of Additional Information (SAI) for WisdomTree Trust (Trust).

Management

Investment Adviser

As investment adviser, WisdomTree Asset Management Inc. (WisdomTree Asset Management) has overall responsibility for the general management and administration of the Trust. WisdomTree Investments, Inc. (WisdomTree Investments) is the parent company of WisdomTree Asset Management. WisdomTree Asset Management provides an investment program for each Fund. WisdomTree Asset Management also arranges for sub-advisory, transfer agency, custody, fund administration, and all other non-distribution related services necessary for the Funds to operate.

For the fiscal year ended August 31, 2011, the Funds paid advisory fees to WisdomTree Asset Management in the following amounts:

Name of Fund	Management Fee
WisdomTree Managed Futures Strategy Fund	0.95%
WisdomTree Global Real Return Fund	0.60%

Under the Investment Advisory Agreement for each Fund, WisdomTree Asset Management agrees to pay all expenses of each Fund and the Funds' respective WisdomTree Subsidiary, except compensation and expenses of the Independent Trustees, counsel to the Independent Trustees and the Trust's Chief Compliance Officer (CCO), interest expenses and taxes, brokerage expenses and other expenses connected with the execution of portfolio transactions, any distribution fees or expenses, legal fees or expenses and extraordinary expenses. Pursuant to a separate

contractual arrangement, WisdomTree

WisdomTree Trust Prospectus **17**

Table of Contents

Asset Management arranges for the provision of CCO services with respect to each Fund, and is liable and responsible for, and administers, payments to the CCO, the Independent Trustees and counsel to the Independent Trustees. WisdomTree Asset Management receives a fee of up to 0.0044% of each Fund's assets for providing such services and paying such expenses. WisdomTree Asset Management provides CCO services to the Trust.

The basis for the Board of Trustees' approval of the Funds' Investment Advisory Agreement is available in the Trust's Annual Report to Shareholders for the period ending August 31, 2011.

WisdomTree Asset Management is a registered investment adviser with offices located at 380 Madison Avenue, 21st Floor, New York, NY 10017 and is a leader in ETF management.

WisdomTree Asset Management is also responsible for the general management and administration of each Fund's WisdomTree Subsidiary's investment program pursuant to a separate investment advisory agreement between the Adviser and each WisdomTree Subsidiary. Under the advisory agreements, the Adviser provides each WisdomTree Subsidiary with the same type of management, for the same fee and under essentially the same terms, as is provided to the Funds. Each WisdomTree Subsidiary has also entered into separate contracts for the provision of custody, transfer agency, and accounting services with the same service providers that provide those services to the Funds.

Sub-Adviser

As sub-adviser to the Funds, Mellon Capital Management Corporation (Mellon Capital or the Sub-Adviser) is responsible for the day-to-day management of each Fund. Mellon Capital chooses each Fund's portfolio investments and places orders to buy and sell the Fund's portfolio investments. Mellon Capital also serves as sub-adviser to each Fund's WisdomTree Subsidiary and is responsible for its day-to-day management. Mellon Capital also chooses each WisdomTree Subsidiary's portfolio investments and places orders to buy and sell the WisdomTree Subsidiary's portfolio investments.

Mellon Capital is a leading innovator in the investment industry and manages global quantitative-based investment strategies for institutional and private investors. As of November 30, 2011, Mellon Capital had assets under management totaling approximately \$214 billion, including overlay strategies and assets managed as dual employees of The Bank of New York Mellon and The Dreyfus Corporation. Mellon Capital is a wholly-owned indirect subsidiary of The Bank of New York Mellon Corporation, a publicly traded financial holding company. Mellon Capital is a registered investment adviser with offices located at 50 Fremont Street, San Francisco, CA 94105.

The basis for the Board of Trustees' approval of the Investment Sub-Advisory Agreement is available in the Trust's Annual Report to Shareholders for the period ended August 31, 2011.

WisdomTree Asset Management, as the investment adviser for the Funds, may hire one or more sub-advisers to oversee the day-to-day activities of the Funds. The sub-advisers are subject to oversight by WisdomTree Asset Management. WisdomTree Asset Management and the Trust have received an exemptive order from the SEC that permits WisdomTree Asset Management, with the approval of the Independent Trustees, to retain unaffiliated investment sub-advisers for each Fund without submitting the sub-advisory agreement to a vote of the Fund's shareholders. The Trust will notify shareholders in the event of any change in the identity of such sub-adviser or sub-advisers. WisdomTree Asset Management has ultimate responsibility for the investment performance of the Funds due to its responsibility to oversee the sub-advisers and recommend their hiring, termination and replacement. WisdomTree Asset Management is not required to disclose fees paid to any sub-adviser retained pursuant to the exemptive order.

Portfolio Managers

The Sub-Adviser utilizes teams of investment professionals acting together to manage the assets of each Fund. The teams meet regularly to review portfolio holdings and to discuss purchase and sale activity. The teams adjust holdings in each Fund's portfolio as they deem appropriate in the pursuit of the Fund's investment objective. The individual members of the team who are primarily responsible for the day-to-day management of each Fund's portfolio are listed below.

David C. Kwan has been a Managing Director of Mellon Capital since 2000. He has also been the Head of the Fixed Income Management Group since 1994. Mr. Kwan has direct oversight responsibility for the management of each Fund. He received his M.B.A. from the University of California at Berkeley in 1990. Mr. Kwan has 20 years of investment experience.

Lisa Mears O'Connor, CFA, has been a Managing Director of Mellon Capital since 2010. She manages Mellon Capital's active fixed income team. Ms. Mears O'Connor has direct oversight responsibility for the Funds. She received her M.B.A. from the University of California at

Edgar Filing: WisdomTree Trust - Form 497

Berkeley in 2002. Ms. Mears O Connor attained the Chartered Financial Analyst (CFA) designation in 1998. Ms. Mears O Connor has over 18 years of investment experience.

Vassilis Dagioglu, a Managing Director of Mellon Capital s Asset Allocation team, has been with Mellon Capital for 11 years. He received his M.B.A. from the University of California at Berkeley and has a total of 12 years of investment experience.

18 WisdomTree Trust Prospectus

Table of Contents

James Stavena, a Managing Director of Mellon Capital's Asset Allocation group, has been with Mellon Capital for 12 years. He received his M.B.A. from Rice University and has over 19 years of investment experience.

Mr. Kwan and Ms. Mears O'Connor manage the WisdomTree Global Real Return Fund. Mr. Dagioglu and Mr. Stavena manage the WisdomTree Managed Futures Strategy Fund. Each Portfolio Manager has managed each Fund since its inception.

The Trust's SAI provides additional information about the Portfolio Managers' compensation, other accounts managed by the Portfolio Managers, and the Portfolio Managers' ownership of shares in the Funds for which they are Portfolio Managers.

Additional Information on Buying and Selling Shares

Most investors will buy and sell shares of the Funds through brokers. Shares of the Funds trade on the NYSE Arca and elsewhere during the trading day and can be bought and sold throughout the trading day like other shares of publicly traded securities. When buying or selling shares through a broker, most investors will incur customary brokerage commissions and charges. Shares of the Funds trade under the trading symbols listed on the cover of this Prospectus.

Share Trading Prices

As with other types of securities, the trading prices of shares in the secondary market can be affected by market forces such as supply and demand, economic conditions and other factors. The price you pay or receive when you buy or sell your shares in the secondary market may be more or less than the NAV of such shares.

The approximate value of shares of each Fund is disseminated every 15 seconds throughout the trading day by the national securities exchange on which such Fund is listed or by other information providers. This approximate value should not be viewed as a real time update of the NAV, because the approximate value may not be calculated in the same manner as the NAV, which is computed once per day. The approximate value generally is determined by using amortized cost for securities with remaining maturities of 60 days or less, current market quotations and/or price quotations obtained from broker-dealers that may trade in the portfolio securities held by the Funds. The Funds are not involved in, or responsible for, the calculation or dissemination of the approximate value and make no warranty as to its accuracy.

Determination of Net Asset Value

The NAV of each Fund's shares is calculated each day the New York Stock Exchange is open for trading as of the close of regular trading, generally 4:00 p.m., New York time. NAV per share is calculated by dividing a Fund's net assets by the number of Fund shares outstanding.

In calculating its NAV, each Fund generally values its assets on the basis of market quotations, last sale prices, or estimates of value furnished by a pricing service or brokers who make markets in such instruments. Debt obligations with maturities of 60 days or less are valued at amortized cost, which approximates fair value.

Fair value pricing is used by the Funds when reliable market valuations are not readily available or are not deemed to reflect current market values. For these purposes, a price based on amortized cost is considered a market valuation. Securities that may be valued using fair value pricing may include, but are not limited to, securities for which there are no current market quotations or whose issuer is in default or bankruptcy, securities subject to corporate actions (such as mergers or reorganizations), securities subject to non-U.S. investment limits or currency controls, and securities affected by significant events. An example of a significant event is an event occurring after the close of the market in which a security trades but before a Fund's next NAV calculation time that may materially affect the value of a Fund's investment (e.g., government action, natural disaster, or significant market fluctuation). When fair-value pricing is employed, the prices of securities used by a Fund to calculate its NAV may differ from quoted or published prices for the same securities.

Transactions in Fund shares will be priced at NAV only if you purchase or redeem shares directly from a Fund in Creation Units. Fund shares are purchased or sold on a national securities exchange at market prices, which may be higher or lower than NAV.

Dividends and Distributions

The WisdomTree Managed Futures Strategy Fund intends to pay out dividends, if any, at least annually. The WisdomTree Global Real Return Fund intends to pay out dividends, if any, on a quarterly basis. Each Fund intends to distribute its net realized capital gains, if any, annually. The Funds may occasionally be required to make supplemental distributions at some other time during the year. Distributions in cash may be

Edgar Filing: WisdomTree Trust - Form 497

reinvested automatically in additional whole shares only if the broker through whom you purchased shares makes such option available. Your broker is responsible for distributing the income and capital gain distributions to you.

WisdomTree Trust Prospectus **19**

Table of Contents

Book Entry

Shares of the Funds are held in book-entry form, which means that no stock certificates are issued. The Depository Trust Company (DTC) or its nominee is the record owner of all outstanding shares of each Fund.

Investors owning shares of the Funds are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all shares of the Funds. Participants include DTC, securities brokers and dealers, banks, trust companies, clearing corporations, and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of shares, you are not entitled to receive physical delivery of stock certificates or to have shares registered in your name, and you are not considered a registered owner of shares. Therefore, to exercise any right as an owner of shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any securities that you hold in book entry or street name form. Your broker will provide you with account statements, confirmations of your purchases and sales, and tax information.

Delivery of Shareholder Documents Householding

Householding is an option available to certain investors of the Funds. Householding is a method of delivery, based on the preference of the individual investor, in which a single copy of certain shareholder documents can be delivered to investors who share the same address, even if their accounts are registered under different names. Householding for the Funds is available through certain broker-dealers. If you are interested in enrolling in householding and receiving a single copy of prospectuses and other shareholder documents, please contact your broker-dealer. If you are currently enrolled in householding and wish to change your householding status, please contact your broker-dealer.

Frequent Purchases and Redemptions of Fund Shares

The Funds have adopted policies and procedures with respect to frequent purchases and redemptions of Creation Units of Fund shares. Since the Funds are ETFs, only a few institutional investors (known as Authorized Participants) are authorized to purchase and redeem shares directly with the Funds. Because purchase and redemption transactions with Authorized Participants are an essential part of the ETF process and help keep ETF trading prices in line with NAV, each Fund accommodates frequent purchases and redemptions of Creation Units by Authorized Participants. Frequent purchases and redemptions for cash may increase portfolio transaction costs and may lead to realization of capital gains. Frequent in-kind creations and redemptions do not give rise to these concerns. Each Fund reserves the right to reject any purchase order at any time. Each Fund reserves the right to impose restrictions on disruptive, excessive, or short-term trading and may reject purchase orders in such instances.

Investments by Registered Investment Companies

Section 12(d)(1) of the Investment Company Act of 1940 restricts investments by registered investment companies in the securities of other investment companies, including shares of each Fund. Registered investment companies are permitted to invest in the Funds beyond the limits set forth in section 12(d)(1), subject to certain terms and conditions set forth in an SEC exemptive order issued to the WisdomTree Trust, including that such investment companies enter into an agreement with the Funds.

Additional Tax Information

The following discussion is a summary of some important U.S. federal income tax considerations generally applicable to investments in the Funds. Your investment in a Fund may have other tax implications. Please consult your tax advisor about the tax consequences of an investment in Fund shares, including the possible application of foreign, state and local tax laws.

Each Fund intends to qualify each year as a regulated investment company. A regulated investment company is not subject to tax at the fund level on income and gains from investments that are distributed to shareholders. However, a Fund's failure to qualify as a regulated investment company would result in fund-level taxation, and consequently, a reduction in income available for distribution to shareholders.

Unless your investment in shares is made through a tax-exempt entity or tax-deferred retirement account, such as an individual retirement account, you need to be aware of the possible tax consequences when:

n A Fund makes distributions,

n You sell shares, and

n You purchase or redeem Creation Units (for institutional investors only).

20 WisdomTree Trust Prospectus

Table of Contents

Taxes on Distributions

For federal income tax purposes, distributions of investment income are generally taxable as ordinary income. Taxes on distributions of capital gains (if any) are determined by how long a Fund owned the investments that generated them, rather than how long a shareholder has owned his or her Fund shares. Distributions of net capital gains (the excess of net long-term capital gains from the sale of investments that a Fund owned for more than one year over net short-term capital losses) that are properly designated by the Fund as capital gain dividends (Capital Gain Dividends) will be taxable as long-term capital gains. Long-term capital gain rates have been temporarily reduced in general, to 15% with lower rates applying to taxpayers in the 10% and 15% rate brackets for taxable years beginning before January 1, 2013. Distributions of gains from the sale of investments that a Fund owned for one year or less will be taxable as ordinary income.

For taxable years beginning before January 1, 2013, distributions of investment income designated by a Fund as derived from qualified dividend income are taxed at the rates applicable to long-term capital gains, provided the holding period and other requirements are met at both the shareholder and the Fund level. The Funds do not, however, expect a significant portion of their distributions to be derived from qualified dividend income. Distributions are taxable even if they are paid from income or gains earned by a Fund before your investment (and thus were included in the price you paid for your shares).

For taxable years beginning on or after January 1, 2013, U.S. individuals with income exceeding \$200,000 (\$250,000 if married and filing jointly), will be subject to a 3.8% Medicare contribution tax on their net investment income, which includes interest, dividends and capital gains (including capital gains realized upon a sale or exchange of Fund shares).

If a shareholder is neither a lawful permanent resident nor a citizen of the United States or if a shareholder is a foreign entity, a Fund's ordinary income dividends (which include distributions of net short-term capital gains) generally will be subject to a 30% U.S. withholding tax, unless a lower treaty rate applies. However, for taxable years beginning before January 1, 2012, certain distributions designated by the Fund as either interest-related dividends or short-term gain dividends and paid to a foreign shareholder would be eligible for an exemption from U.S. withholding tax.

Also, beginning in 2014, a 30% U.S. withholding tax will be imposed on dividends and on proceeds from the sale of Fund shares paid to foreign shareholders if certain disclosure requirements are not satisfied.

The Funds (or a financial intermediary such as a broker through which a shareholder owns Fund shares) generally are required to withhold and to remit to the U.S. Treasury a percentage of the taxable distributions and the sale or redemption proceeds paid to any shareholder who fails to properly furnish a correct taxpayer identification number, who has under-reported dividend or interest income, or who fails to certify that he, she or it is not subject to such withholding.

Taxes When Fund Shares Are Sold

Any capital gain or loss realized upon a sale of Fund shares is generally treated as a long-term gain or loss if the shares have been held for more than one year. Any capital gain or loss realized upon a sale of Fund shares held for one year or less is generally treated as a short-term gain or loss, except that any capital loss on a sale of shares held for six months or less is treated as long-term capital loss to the extent that capital gain dividends were paid with respect to such shares. The ability to deduct capital losses may be limited depending on your circumstances.

Taxes on Creation and Redemption of Creation Units

An Authorized Participant having the U.S. dollar as its functional currency for U.S. federal tax purposes that exchanges debt or money market securities or non-U.S. currency for Creation Units generally will recognize a gain or loss equal to the difference between the market value of the Creation Units at the time of the exchange and the sum of the exchanger's aggregate basis in the debt or money market securities or non-U.S. currency surrendered plus the amount of cash paid for such Creation Units. A person who redeems Creation Units for debt or money market securities or non-U.S. currency will generally recognize a gain or loss equal to the difference between the exchanger's basis in the Creation Units and the sum of the aggregate U.S. dollar market value of the securities or non-U.S. currency plus the amount of any cash received for such Creation Units. The Internal Revenue Service, however, may assert that a loss that is realized by an Authorized Participant upon an exchange of securities or non-U.S. currency for Creation Units cannot be currently deducted under the rules governing wash sales, or on the basis that there has been no significant change in economic position.

Gain or loss recognized by an Authorized Participant upon an issuance of Creation Units in exchange for non-U.S. currency will generally be treated as ordinary income or loss. Gain or loss recognized by an Authorized Participant upon an issuance of Creation Units in exchange for debt or money market securities, or upon a redemption of Creation Units, may be capital or ordinary gain or loss depending on the circumstances.

Edgar Filing: WisdomTree Trust - Form 497

Any capital gain or loss realized upon an issuance of Creation Units in exchange for debt or money market securities will generally be treated as long-term capital gain or loss if the debt or money market securities have been held for more than one year. Any capital gain or loss realized upon the redemption of a Creation Unit will generally be treated as long-term capital gain or loss if the Fund shares comprising the Creation Unit have been held for more than one year. Otherwise, such capital gains or losses are treated as short-term capital gains or losses.

WisdomTree Trust Prospectus **21**

Table of Contents

A person subject to U.S. federal income tax who receives non-U.S. currency upon a redemption of Creation Units and does not immediately convert the non-U.S. currency into U.S. dollars may, upon a later conversion of the non-U.S. currency into U.S. dollars, recognize as ordinary gains or losses any gains or losses resulting from fluctuations in the value of the non-U.S. currency relative to the U.S. dollar since the date of the redemption.

Persons exchanging securities or non-U.S. currency for Creation Units should consult their own tax advisors with respect to the tax treatment of any creation or redemption transaction. If you purchase or redeem Creation Units, you will be sent a confirmation statement showing how many shares you purchased or redeemed and at what price.

Foreign Investments by the Funds

Interest and other income received by a Fund with respect to foreign securities may give rise to withholding and other taxes imposed by foreign countries. Tax conventions between certain countries and the United States may reduce or eliminate such taxes. If as of the close of a taxable year more than 50% of the total assets of a Fund consist of stock or securities of foreign corporations, the Fund intends to pass through to investors the amount of foreign income and similar taxes (including withholding taxes) paid by the Fund during that taxable year. This means that investors will be considered to have received as additional income their respective shares of such foreign taxes, but may be entitled to either a corresponding tax deduction in calculating taxable income or, subject to certain limitations, a credit in calculating federal income tax.

Investment in the WisdomTree Subsidiaries

One of the requirements for qualification as a regulated investment company (a RIC) under Subchapter M of the Internal Revenue Code of 1986, as amended (the Code) is that each Fund must derive at least 90% of its gross income for each taxable year from qualifying income. Qualifying income includes dividends, interest, payments with respect to certain securities loans, and gains from the sale or other disposition of stock, securities or foreign currencies, or other income derived with respect to its business of investing in such stock, securities or currencies. The IRS has issued a revenue ruling which concludes that income derived from certain commodity-linked swaps is not qualifying income under Subchapter M of the Code.

Each Fund has received a private letter ruling from the IRS with respect to its investments in certain commodity-linked notes and its respective WisdomTree Subsidiary, which provides that the income received from both investments will be treated as qualifying income to that Fund. The IRS recently delayed the issuance of private letter rulings similar to those issued to the Funds with respect to the WisdomTree Subsidiaries and is reconsidering certain of the issues addressed by the rulings. Any changes to the viability of the private letter rulings issued to the Funds are expected to be prospective in application. If the IRS were to change its position or otherwise determine that income derived from certain commodity-linked notes or from the Funds' investments in the WisdomTree Subsidiaries do not constitute qualifying income, and if such positions were upheld, the Funds might cease to qualify as RICs and would be required to reduce their exposure to such investments which may result in difficulty in implementing each Fund's investment strategy. If a Fund did not qualify as a RIC for any taxable year and certain relief provisions were not available, the Fund's taxable income would be subject to tax at the Fund level and to a further tax at the shareholder level when such income is distributed. In such event, in order to re-qualify for taxation as a RIC, the Fund might be required to recognize unrealized gains, pay substantial taxes and interest and make certain distributions. This would cause investors to incur higher tax liabilities than they otherwise would have incurred and would have a negative impact on Fund returns. In such event, the Fund's Board of Trustees may determine to reorganize or close the Fund or materially change the Fund's investment objective and strategies.

Changes in the laws of the United States and/or the Cayman Islands, under which the Funds and the WisdomTree Subsidiaries are organized, respectively, could result in the inability of the Funds and/or the WisdomTree Subsidiaries to operate as described in this Prospectus and could negatively affect the Funds and their shareholders. For example, Cayman Islands law does not currently impose any income, corporate or capital gains tax, estate duty, inheritance tax, gift tax or withholding tax on the WisdomTree Subsidiaries. If Cayman Islands law changes such that the WisdomTree Subsidiaries must pay Cayman Islands governmental authority taxes, the Funds' shareholders would likely suffer decreased investment returns. There remains a risk that the tax treatment of swap agreements and other derivative instruments, such as commodity-linked notes, swap agreements, commodity options, futures, and options on futures, may be affected by future regulatory or legislative changes that could affect the character, timing and/or amount of the Funds' taxable income or gains and distributions.

Distribution

ALPS Distributors, Inc. (the Distributor) serves as the distributor of Creation Units for each Fund on an agency basis. The Distributor does not maintain a secondary market in shares of the Funds. The Distributor's principal address is 1290 Broadway, Suite 1100, Denver, Colorado 80203. The Distributor has no role in determining the policies of any Fund or the securities that are purchased or sold by any Fund.

Table of Contents

Premium/Discount Information

Information regarding how often shares of each Fund traded on the Listing Exchange at a price above (i.e., at a premium) or below (i.e., at a discount) the net asset value of the Fund during the past calendar year and most recent calendar quarter can be found at www.wisdomtree.com.

Additional Notices

Shares of the Trust are not sponsored, endorsed, or promoted by any listing exchange (the Exchange). The Exchange makes no representation or warranty, express or implied, to the owners of the shares of any Fund. The Exchange is not responsible for, nor has it participated in, the determination of the timing of, prices of, or quantities of the shares of any Fund to be issued, nor in the determination or calculation of the equation by which the shares are redeemable. The Exchange has no obligation or liability to owners of the shares of any Fund in connection with the administration, marketing, or trading of the shares of the Fund. Without limiting any of the foregoing, in no event shall the Exchange have any liability for any lost profits or indirect, punitive, special, or consequential damages even if notified of the possibility thereof.

WisdomTree Investments, WisdomTree Asset Management and the Funds make no representation or warranty, express or implied, to the owners of shares of the Funds or any member of the public regarding the advisability of investing in securities generally or in the Funds particularly. WisdomTree Investments is the licensor of certain trademarks, service marks and trade names of the Funds.

Financial Highlights

The financial highlights table is intended to help you understand the Funds' financial performance since inception. The total return in the table represents the rate that an investor would have earned (or lost) on an investment in each Fund (assuming reinvestment of all dividends and distributions). This information has been derived from the financial statements audited by Ernst & Young LLP, an independent registered public accounting firm, whose report, along with the Funds' financial statements, are included in the Funds' Annual Report, which is available upon request.

Table of Contents

WisdomTree Dreyfus Brazilian Real Fund

Investment Objective

The Fund seeks to achieve total returns reflective of both money market rates in Brazil available to foreign investors and changes in value of the Brazilian real relative to the U.S. dollar.

Fees and Expenses of the Fund

The following table describes the fees and expenses you may pay if you buy and hold shares of the Fund. The fees are expressed as a percentage of the Fund's average net assets.

Shareholder Fees	None
(fees paid directly from your investment)	
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.45%
Distribution and/or Service (12b-1) Fees	None
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.45%

Example

The following example is intended to help retail investors compare the cost of investing in the Fund with the cost of investing in other funds. It illustrates the hypothetical expenses that such investors would incur over various periods if they invest \$10,000 in the Fund for the time periods indicated and then redeem all of the shares at the end of those periods. This example assumes that the Fund provides a return of 5% a year and that operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

	1 Year	3 Years	5 Years	10 Years
	\$46	\$144	\$252	\$567

Investors may pay brokerage commissions on their purchases and sales of fund shares, which are not reflected in the example.

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or turns over its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in Annual Fund Operating Expenses or in the Example, affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was less than 1% of the average value of its portfolio, excluding the value of portfolio securities received or delivered as a result of in-kind creations or redemptions of the Fund's capital shares.

Principal Investment Strategies of the Fund

The Fund is an actively managed exchange traded fund (ETF) that seeks to achieve its investment objective by investing in short-term securities and instruments designed to provide exposure to Brazilian currency and money market rates. Because the market for money market securities in Brazil generally is less liquid and accessible to foreign investors than corresponding markets in more developed economies, the Fund intends to achieve exposure to Brazilian currency markets by investing primarily in short-term U.S. money market securities and forward currency contracts and swaps. The combination of U.S. money market securities with forward currency contracts and currency swaps is designed to provide exposure equivalent to money market securities denominated in Brazilian real. A forward currency contract is an agreement to buy or sell a specific currency at a future date at a price set at the time of the contract. A currency swap is an agreement between two parties to

Edgar Filing: WisdomTree Trust - Form 497

exchange one currency for another at a future rate. The Fund also may enter into repurchase agreements with counterparties that are deemed to present acceptable credit risks. A repurchase agreement is a transaction in which the Fund purchases securities or other obligations from a bank or securities dealer and simultaneously commits to resell them to a counterparty at an agreed-upon date or upon demand and at a price reflecting a market rate of interest unrelated to the coupon rate or maturity of the purchased obligations.

In order to attempt to reduce interest rate risk, the Fund generally will maintain a weighted average portfolio maturity of 90 days or less with respect to the money market securities in its portfolio. The Fund will not purchase any security with a remaining maturity of more than 397 calendar days. All U.S. money market securities acquired by the Fund will be rated in the upper two short-term ratings by at least two nationally recognized statistical rating organizations (NRSROs) or, if unrated, deemed to be of equivalent quality. The Fund does not seek to preserve capital in U.S. dollars.

2 WisdomTree Trust Prospectus

Table of Contents

The decision to secure exposure directly or indirectly will be a function of, among other things, market accessibility, credit exposure, and tax ramifications for foreign investors. If the Fund pursues direct investment, eligible investments include short-term securities issued by the Brazilian government and its agencies or instrumentalities, bank debt obligations and time deposits, bankers' acceptances, commercial paper, short-term corporate debt obligations, mortgage-backed securities and asset-backed securities.

The Fund will invest, under normal circumstances, at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in investments whose combined performance is tied economically to Brazil. If, subsequent to an investment, the 80% requirement is no longer met, the Fund's future investments will be made in a manner that will bring the Fund into compliance with this policy. The Trust will provide shareholders with sixty (60) days' prior notice of any change to this policy for the Fund.

Principal Risks of Investing in the Fund

You can lose money on your investment in the Fund. The Fund is subject to the risks described below. Some or all of these risks may adversely affect the Fund's net asset value per share (NAV), trading price, yield, total return and/or ability to meet its objective.

- n **Investment Risk.** As with all investments, an investment in the Fund is subject to investment risk. Investors in the Fund could lose money, including the possible loss of the entire principal amount of an investment, over short or long periods of time.
- n **Market Risk.** The trading prices of currencies, fixed income securities and other instruments fluctuate in response to a variety of factors. The Fund's NAV and market price may fluctuate significantly in response to these factors. As a result, an investor could lose money over short or long periods of time.
- n **Shares of the Fund May Trade at Prices Other Than NAV.** Although it is expected that the market price of the shares of the Fund will approximate the Fund's NAV when purchased and sold in the secondary market, there may be times when the market price of the shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). This risk is heightened in times of market volatility or periods of steep market declines.
- n **Capital Controls Risk.** Economic conditions, such as volatile currency exchange rates and interest rates, political events and other conditions may, without prior warning, lead to intervention by the government of Brazil and the imposition of capital controls. Capital controls include the prohibition of, or restrictions on, the ability to transfer currency, securities or other assets. Capital controls may impact the ability of the Fund to buy, sell or otherwise transfer securities or currency, adversely affect the trading market and price for shares of the Fund, and cause the Fund to decline in value.
- n **Cash Redemption Risk.** Unlike most ETFs, the Fund's investment strategy will require it to effect redemptions, in whole or in part, for cash. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used exclusively.
- n **Counterparty and Issuer Credit Risk.** The financial condition of an issuer of a debt security or other instrument or a counterparty to a derivative or other contract may cause such issuer or counterparty to default, become unable to pay interest or principal due or otherwise fail to honor its obligations. While the Fund attempts to limit credit and counterparty exposure in a manner consistent with its investment objective, the value of an investment in the Fund may change quickly and without warning in response to issuer or counterparty defaults and changes in the credit ratings of the Fund's portfolio investments.
- n **Currency Exchange Rate Risk.** The Fund invests a significant portion of its assets in investments denominated in Brazilian real, or in securities that provide exposure to Brazilian real, currency exchange rates or interest rates denominated Brazilian real. Changes in currency exchange rates and the relative value of the Brazilian real will affect the value of the Fund's investment and the value of your Fund shares. Currency exchange rates can be very volatile and can change quickly and unpredictably. As a result, the value of an investment in the Fund

Edgar Filing: WisdomTree Trust - Form 497

may change quickly and without warning and you may lose money.

- n **Derivatives Investment Risk.** The Fund will invest in derivatives. Derivatives are subject to a number of risks described elsewhere in this Prospectus, such as interest rate risk, market risk, and credit risk. They also involve the risk that changes in the value of a derivative may not correlate perfectly with the underlying asset, rate or index, or that the counterparty to a derivative contract might default on its obligations. Derivatives can be volatile and may be less liquid than other securities. As a result, the value of an investment in the Fund may change quickly and without warning and you may lose money.

- n **Emerging Markets Risk.** Investments in securities and instruments traded in developing or emerging markets, such as Brazil, or that provide exposure to such securities or markets, can involve additional risks relating to political, economic, or regulatory conditions not associated with investments in U.S. securities and instruments or investments in more developed international markets. Such conditions may impact the ability of the Fund to buy, sell or otherwise transfer securities, adversely affect the trading market and price for Fund shares, and cause the Fund to decline in value.

Table of Contents

- n **Foreign Securities Risk.** The Fund invests a significant portion of its assets in non-U.S. securities and instruments, or in securities that provide exposure to such instruments. Investments in non-U.S. securities and instruments involve certain risks that may not be present with investments in U.S. securities, including the risk of loss due to foreign currency fluctuations or to political or economic instability.

- n **Geographic Concentration in Brazil.** Because the Fund concentrates its investments in Brazil, the Fund's performance is expected to be closely tied to social, political, and economic conditions within Brazil and to be more volatile than the performance of more geographically diversified funds. The Brazilian economy is sensitive to fluctuations in commodity prices and commodity markets. Additionally, the Brazilian economy generally has experienced and may continue to experience high inflation rates. While the Brazilian economy has experienced growth in recent years, there is no guarantee that this growth will continue. The Brazilian government currently imposes significant taxes on the transfer of currency. These and other factors could have a negative impact on the Fund's performance and increase the volatility of an investment in the Fund.

- n **Interest Rate Risk.** Interest rate risk is the risk that fixed income securities will decline in value because of changes in interest rates and other factors, such as perception of an issuer's creditworthiness.

- n **Issuer-Specific Risk.** Issuer-specific events, including changes in the financial condition of an issuer, can have a negative impact on the value of the Fund.

- n **Non-Diversification Risk.** The Fund is considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. To the extent the Fund invests a significant percentage of its assets in a limited number of issuers, the Fund is subject to the risks of investing in those few issuers, and may be more susceptible to a single adverse economic or regulatory occurrence. As a result, changes in the market value of a single security could cause greater fluctuations in the value of Fund shares than would occur in a diversified fund.

- n **Management Risk.** The Fund is actively managed using proprietary investment strategies and processes. There can be no guarantee that these strategies and processes will be successful or that the Fund will achieve its investment objective.

- n **Offshore Investor Risk.** The opportunity for offshore investors, such as the Fund, to access Brazilian markets can be limited due to a variety of factors including currency convertibility issues. These limitations and restrictions may adversely affect the availability, liquidity and pricing of securities in which the Fund seeks to invest. As a result, returns achieved by offshore investors, such as the Fund, could differ from those available to domestic investors in Brazil.

- n **Repurchase Agreement Risk.** The Fund's investment in repurchase agreements may be subject to market and credit risk with respect to the collateral securing the repurchase agreements. Investments in repurchase agreements also may be subject to the risk that the market value of the underlying obligations may decline prior to the expiration of the repurchase agreement term.

- n **Sovereign Debt Risk.** Bonds issued by governments, sometimes referred to as sovereign debt, present risks not associated with investments in other types of bonds. The government or agency issuing the debt may be unable or unwilling to make interest payments and/or repay the principal owed. In such instance, the Fund may have limited recourse against the issuing government or agency. In the past, governments of emerging market countries have refused to honor their payment obligations on issued bonds.

Fund Performance

Historical Fund performance, which varies over time, can provide an indication of the risks of investing in the Fund. The bar chart that follows shows the annual total returns of the Fund for each full calendar year since the Fund commenced operations. The table that follows the bar chart shows the Fund's average annual total returns, both before and after taxes. The table also shows how the Fund's performance compares to the JP Morgan Emerging Markets Index Plus Brazil, a relevant broad-based securities index. Index returns do not reflect deductions for fees, expenses or taxes. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after taxes) is not necessarily

an indication of how the Fund will perform in the future.

4 WisdomTree Trust Prospectus

Table of Contents

The Fund's year-to-date total return as of September 30, 2011 was (6.33%).

Best and Worst Quarter Returns (for the period reflected in the bar chart above)

	Return	Quarter/Year
Highest Return	20.20%	2/09
Lowest Return	(0.68)%	1/10

After-tax returns are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your tax situation and may differ from those shown. After-tax returns shown are not relevant to investors who hold their Fund shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts. In some cases the return after taxes may exceed the return before taxes due to an assumed tax benefit from any losses on a sale of Fund shares at the end of the measurement period.

Average Annual Total Returns for the periods ending December 31, 2010

	1 Year	Since Inception (5/14/2008)
WisdomTree Dreyfus Brazilian Real Fund		
Return Before Taxes Based on NAV	12.70%	8.74%
Return After Taxes on Distributions	9.95%	7.24%
Return After Taxes on Distributions and Sale of Fund Shares	9.81%	6.88%
JP Morgan Emerging Markets Index Plus Brazil (Reflects no deduction for fees, expenses or taxes)	13.80%	10.60%
Management		

Investment Adviser and Sub-Adviser

WisdomTree Asset Management, Inc. serves as the investment adviser to the Fund. The Dreyfus Corporation serves as the sub-adviser to the Fund.

Portfolio Managers

David C. Kwan, a Managing Director, Fixed Income, has been a portfolio manager of the Fund since its inception.

Zandra Zelaya, CFA, a Director, Fixed Income, has been a portfolio manager of the Fund since its inception.

Buying and Selling Fund Shares

The Fund is an ETF. This means that shares of the Fund are listed on a national securities exchange, such as NYSE Arca, Inc., and trade at market prices. Most investors will buy and sell shares of the Fund through brokers. Because Fund shares trade at market prices rather than NAV, shares may trade at a price greater than NAV (premium) or less than NAV (discount).

The Fund issues and redeems shares at NAV only in large blocks of shares (Creation Units), which only institutions or large investors may purchase or redeem. Currently, Creation Units generally consist of 100,000 shares, though this may change from time to time. Creation Units are not expected to consist of less than 50,000 shares. The Fund generally issues and redeems Creation Units in exchange for a portfolio of money market securities closely approximating the holdings of the Fund or a designated basket of non-U.S. currency and/or an amount of U.S. cash.

Tax Information

The Fund intends to make distributions that may be taxed as ordinary income or capital gains.

Table of Contents**WisdomTree Dreyfus Chinese Yuan Fund****Investment Objective**

The Fund seeks to achieve total returns reflective of both money market rates in China available to foreign investors and changes in value of the Chinese yuan relative to the U.S. dollar.

Fees and Expenses of the Fund

The following table describes the fees and expenses you may pay if you buy and hold shares of the Fund. The fees are expressed as a percentage of the Fund's average net assets.

Shareholder Fees	None
(fees paid directly from your investment)	
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.45%
Distribution and/or Service (12b-1) Fees	None
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.45%

Example

The following example is intended to help retail investors compare the cost of investing in the Fund with the cost of investing in other funds. It illustrates the hypothetical expenses that such investors would incur over various periods if they invest \$10,000 in the Fund for the time periods indicated and then redeem all of the shares at the end of those periods. This example assumes that the Fund provides a return of 5% a year and that operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

	1 Year	3 Years	5 Years	10 Years
	\$ 46	\$ 144	\$ 252	\$ 567

Investors may pay brokerage commissions on their purchases and sales of fund shares, which are not reflected in the example.

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or turns over its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in Annual Fund Operating Expenses or in the Example, affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was less than 1% of the average value of its portfolio, excluding the value of portfolio securities received or delivered as a result of in-kind creations or redemptions of the Fund's capital shares.

Principal Investment Strategies of the Fund

The Fund is an actively managed exchange traded fund (ETF) that seeks to achieve its investment objective by investing in short-term securities and instruments designed to provide exposure to Chinese currency and money market rates. Because the market for money market securities in China generally is less liquid and accessible to foreign investors than corresponding markets in more developed economies, the Fund intends to achieve exposure to currency markets in China using a variety of investment techniques. For example, the Fund will invest in short-term U.S. money market securities and forward currency contracts and currency swaps that settle in U.S. dollars. The combination of U.S. money market securities and forward currency contracts and swaps is designed to provide exposure equivalent to money market securities denominated in Chinese yuan. A forward currency contract is an agreement to buy or sell a specific currency at a future date at a price set at the time of the

Edgar Filing: WisdomTree Trust - Form 497

contract. A currency swap is an agreement between two parties to exchange one currency for another at a future rate. The Fund also will invest in money market securities and other instruments, including forward currency contracts and swaps, denominated in Chinese yuan that trade and settle in Hong Kong and other markets outside of mainland China. The market for these yuan-denominated instruments is sometimes referred to as the CNH market. Eligible yuan-denominated investments include time deposits of commercial banks, short-term corporate debt, short-term debt issued by the government of China (including its agencies and instrumentalities), as well as short-term debt issued by supranational organizations (such as the International Bank for Reconstruction and Development). The Fund also may enter into repurchase agreements with counterparties that are deemed to present acceptable credit risks. A repurchase agreement is a transaction in which the Fund purchases securities or other obligations from a bank or securities dealer and simultaneously commits to resell them to a counterparty at an agreed-upon date or upon demand and at a price reflecting a market rate of interest unrelated to the coupon rate or maturity of the purchased obligations.

6 WisdomTree Trust Prospectus

Table of Contents

The Fund generally will maintain a weighted average portfolio maturity of 90 days or less with respect to the money market securities in its portfolio. Forward currency contracts and swaps generally will be kept to an average term of six months or less.

The Fund will invest, under normal circumstances, at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in investments whose combined performance is economically tied to China. If subsequent to an investment, the 80% requirement is no longer met, the Fund's future investments will be made in a manner that will bring the Fund into compliance with this policy. The Trust will provide shareholders with sixty (60) days' prior notice of any change to this policy for the Fund.

Principal Risks of Investing in the Fund

You can lose money on your investment in the Fund. The Fund is subject to the risks described below. Some or all of these risks may adversely affect the Fund's net asset value per share (NAV), trading price, yield, total return and/or ability to meet its objective.

- n **Investment Risk.** As with all investments, an investment in the Fund is subject to investment risk. Investors in the Fund could lose money, including the possible loss of the entire principal amount of an investment, over short or long periods of time.

- n **Market Risk.** The trading prices of currencies, fixed income securities and other instruments fluctuate in response to a variety of factors. The Fund's NAV and market price may fluctuate significantly within a wide range in response to these factors. As a result, an investor could lose money over short or long periods of time.

- n **Shares of the Fund May Trade at Prices Other Than NAV.** Although it is expected that the market price of the shares of the Fund will approximate the Fund's NAV when purchased and sold in the secondary market, there may be times when the market price of the shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). This risk is heightened in times of market volatility or periods of steep market declines.

- n **Capital Controls Risk.** Economic conditions, such as volatile currency exchange rates and interest rates, political events and other conditions may, without prior warning, lead to foreign government intervention and the imposition of capital controls. Capital controls include the prohibition of, or restrictions on, the ability to transfer currency, securities or other assets. Capital controls may impact the ability of the Fund to buy, sell or otherwise transfer securities or currency, adversely affect the trading market and price for shares of the Fund, and cause the Fund to decline in value.

- n **Cash Redemption Risk.** Unlike most ETFs, the Fund's investment strategy will require it to effect redemptions, in whole or in part, for cash. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used exclusively.

- n **Counterparty and Issuer Credit Risk.** The financial condition of an issuer of a debt security or other instrument or a counterparty to a derivative or other contract may cause such issuer or counterparty to default, become unable to pay interest or principal due or otherwise fail to honor its obligations. While the Fund attempts to limit credit and counterparty exposure in a manner consistent with its investment objective, the value of an investment in the Fund may change quickly and without warning in response to issuer or counterparty defaults and changes in the credit ratings of the Fund's portfolio investments.

- n **CNH Market Risk.** While the CNH market is expected to continue to grow, it is relatively new and may not be as liquid as more established markets. In light of this, the Fund intends to manage its exposure to the CNH market in a prudent manner consistent with its investment objective.

n

Edgar Filing: WisdomTree Trust - Form 497

Currency Exchange Rate Risk. The Fund invests a significant portion of its assets in investments denominated in Chinese yuan, or in securities that provide exposure to Chinese yuan, currency exchange rates or interest rates denominated in Chinese yuan. Changes in currency exchange rates and the relative value of the Chinese yuan will affect the value of the Fund's investment and the value of your Fund shares. Currency exchange rates can be very volatile and can change quickly and unpredictably. As a result, the value of an investment in the Fund may change quickly and without warning and you may lose money.

Derivatives Investment Risk. The Fund will invest in derivatives. Derivatives are subject to a number of risks described elsewhere in this Prospectus, such as interest rate risk, market risk, and credit risk. They also involve the risk that changes in the value of a derivative may not correlate perfectly with the underlying asset, rate or index, or that the counterparty to a derivative contract might default on its obligations. Derivatives can be volatile and may be less liquid than other securities. As a result, the value of an investment in the Fund may change quickly and without warning and you may lose money.

Table of Contents

- n **Emerging Markets Risk.** Investments in securities and instruments traded in developing or emerging markets, or that provide exposure to such securities or markets, can involve additional risks relating to political, economic, or regulatory conditions not associated with investments in U.S. securities and instruments or investments in more developed international markets. Such conditions may impact the ability of the Fund to buy, sell or otherwise transfer securities, adversely affect the trading market and price for Fund shares, and cause the Fund to decline in value.

- n **Foreign Securities Risk.** The Fund invests a significant portion of its assets in non-U.S. securities and instruments, or in securities that provide exposure to such instruments. Investments in non-U.S. securities and instruments involve certain risks that may not be present with investments in U.S. securities, including the risk of loss due to foreign currency fluctuations or to political or economic instability.

- n **Geographic Concentration in China.** Because the Fund concentrates its investments in China, the Fund's performance is expected to be closely tied to social, political, and economic conditions within China and to be more volatile than the performance of more geographically diversified funds. The government of China maintains strict currency controls in order to achieve economic, trade and political objectives and regularly intervenes in the currency market. The Chinese government places strict regulation on the yuan and manages the yuan so that it has historically traded in a tight range relative to the U.S. dollar. The Chinese government has been under pressure to manage the currency in a less restrictive fashion so that it is less correlated to the U.S. dollar. It is expected that such action would increase the value of the yuan relative to the U.S. dollar. Of course, there can be no guarantee that this will occur, or that the yuan will move in relation to the U.S. dollar as expected. These and other factors could have a negative impact on the Fund's performance and increase the volatility of an investment in the Fund.

- n **Interest Rate Risk.** Interest rate risk is the risk that fixed income securities will decline in value because of changes in interest rates and other factors, such as perception of an issuer's creditworthiness.

- n **Issuer-Specific Risk.** Issuer-specific events, including changes in the financial condition of an issuer, can have a negative impact on the value of the Fund.

- n **Management Risk.** The Fund is actively managed using proprietary investment strategies and processes. There can be no guarantee that these strategies and processes will be successful or that the Fund will achieve its investment objective.

- n **Non-Diversification Risk.** The Fund is considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. To the extent the Fund invests a significant percentage of its assets in a limited number of issuers, the Fund is subject to the risks of investing in those few issuers, and may be more susceptible to a single adverse economic or regulatory occurrence. As a result, changes in the market value of a single security could cause greater fluctuations in the value of Fund shares than would occur in a diversified fund.

- n **Offshore Investor Risk.** In addition to the general risks associated with investing in non-U.S. currencies and non-U.S. currency markets, there are special risks associated with investing in Chinese yuan or securities designed to provide exposure to Chinese yuan. The government of China maintains strict currency controls in support of economic, trade and political objectives and regularly intervenes in the currency market. The government's actions may not be transparent or predictable. As a result, the value of the yuan, and the value of securities designed to provide exposure to the yuan, can change quickly and arbitrarily. Furthermore, it is difficult for offshore investors to directly access money market securities in China because of investment and trading restrictions. These limitations and restrictions may impact the availability, liquidity, and pricing of securities designed to provide offshore investors with exposure to Chinese markets. As a result, returns achieved by offshore investors, such as the Fund, could differ from those available to domestic investors in China.

- n **Repurchase Agreement Risk.** The Fund's investment in repurchase agreements may be subject to market and credit risk with respect to the collateral securing the repurchase agreements. Investments in repurchase agreements also may be subject to the risk that the market value of the underlying obligations may decline prior to the expiration of the repurchase agreement term.

n **Sovereign Debt Risk.** Bonds issued by governments, sometimes referred to as sovereign debt, present risks not associated with investments in other types of bonds. The government or agency issuing the debt may be unable or unwilling to make interest payments and/or repay the principal owed. In such instance, the Fund may have limited recourse against the issuing government or agency. In the past, governments of emerging market countries have refused to honor their payment obligations on issued bonds.

Table of Contents**Fund Performance**

Historical Fund performance, which varies over time, can provide an indication of the risks of investing in the Fund. The bar chart that follows shows the annual total returns of the Fund for each full calendar year since the Fund commenced operations. The table that follows the bar chart shows the Fund's average annual total returns, both before and after taxes. The table also shows how the Fund's performance compares to the JP Morgan Emerging Markets Index Plus China, a relevant broad-based securities index. Index returns do not reflect deductions for fees, expenses or taxes. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after taxes) is not necessarily an indication of how the Fund will perform in the future.

The Fund's year-to-date total return as of September 30, 2011 was (0.28%).

Best and Worst Quarter Returns (for the period reflected in the bar chart above)

	Return	Quarter/Year
Highest Return	1.64%	3/10
Lowest Return	(0.64)%	2/10

After-tax returns are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your tax situation and may differ from those shown. After-tax returns shown are not relevant to investors who hold their Fund shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts. In some cases the return after taxes may exceed the return before taxes due to an assumed tax benefit from any losses on a sale of Fund shares at the end of the measurement period.

Average Annual Total Returns for the periods ending December 31, 2010

WisdomTree Dreyfus Chinese Yuan Fund	1 Year	Since Inception (5/14/2008)
Return Before Taxes Based on NAV	1.26%	1.72%
Return After Taxes on Distributions	1.17%	1.43%
Return After Taxes on Distributions and Sale of Fund Shares	0.93%	1.32%
JP Morgan Emerging Markets Index Plus China (Reflects no deduction for fees, expenses or taxes)	2.06%	3.17%

Management**Investment Adviser and Sub-Adviser**

WisdomTree Asset Management, Inc. serves as the investment adviser to the Fund. The Dreyfus Corporation serves as the sub-adviser to the Fund.

Portfolio Managers

David C. Kwan, a Managing Director, Fixed Income, has been a portfolio manager of the Fund since its inception.

Zandra Zelaya, CFA, a Director, Fixed Income, has been a portfolio manager of the Fund since its inception.

Table of Contents

Buying and Selling Fund Shares

The Fund is an ETF. This means that shares of the Fund are listed on a national securities exchange, such as NYSE Arca, Inc., and trade at market prices. Most investors will buy and sell shares of the Fund through brokers. Because Fund shares trade at market prices rather than NAV, shares may trade at a price greater than NAV (premium) or less than NAV (discount).

The Fund issues and redeems shares at NAV only in large blocks of shares (Creation Units), which only institutions or large investors may purchase or redeem. Currently, Creation Units generally consist of 100,000 shares, though this may change from time to time. Creation Units are not expected to consist of less than 50,000 shares. The Fund generally issues and redeems Creation Units in exchange for a portfolio of money market securities closely approximating the holdings of the Fund or a designated basket of non-U.S. currency and/or an amount of U.S. cash.

Tax Information

The Fund intends to make distributions that may be taxed as ordinary income or capital gains.

10 WisdomTree Trust Prospectus

Table of Contents**WisdomTree Dreyfus Commodity Currency Fund****Investment Objective**

The Fund seeks to achieve total returns reflective of money market rates in selected commodity-producing countries and changes in value of such countries' currencies relative to the U.S. dollar.

Fees and Expenses of the Fund

This table describes the fees and expenses you may pay if you buy and hold shares of the Fund. The fees are expressed as a percentage of the Fund's average net assets.

Shareholder Fees	None
(fees paid directly from your investment)	
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.55%
Distribution and/or Service (12b-1) Fees	None
Other Expenses	0.00%
Net Annual Fund Operating Expenses	0.55%

Example

The following example is intended to help retail investors compare the cost of investing in the Fund with the cost of investing in other funds. It illustrates the hypothetical expenses that such investors would incur over various periods if they invest \$10,000 in the Fund for the time periods indicated and then redeem all of the shares at the end of those periods. This example assumes that the Fund provides a return of 5% a year and that operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

	1 Year	3 Years	5 Years	10 Years
	\$56	\$176	\$307	\$689

Investors may pay brokerage commissions on their purchases and sales of Fund shares, which are not reflected in the example.

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or turns over its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in Annual Fund Operating Expenses or in the Example, affect the Fund's performance. During the most recent fiscal year, there was no portfolio turnover rate for the Fund since the Fund invested in short-term securities with maturities less than or equal to 365 days, which are excluded from portfolio turnover calculations.

Principal Investment Strategies of the Fund

The Fund is designed to provide exposure to both the currencies and money market rates available to foreign investors in selected commodity-producing countries. The term "commodity currency" generally is used to describe the currency of a country whose economic success is commonly identified with the production and export of commodities (such as precious metals, oil, agricultural products or other raw materials) and whose value is closely linked to the value of such commodities. As the demand for, or price of, such commodities increases, money tends to flow into the country. This generally lifts the country's economic prospects and supports the value of its currency. Conversely, declines in the demand for, or value of, such commodities historically have contributed to declines in the relative value of these countries' currencies.

Edgar Filing: WisdomTree Trust - Form 497

The Fund intends to invest in commodity-producing countries, such as Australia, Brazil, Canada, Chile, Colombia, Indonesia, Malaysia, New Zealand, Norway, Peru, Russia and South Africa. This list may change based on market developments. In addition to seeking broad exposure across countries and currencies, the Fund intends to seek exposure across currencies correlated to each of the key commodity groups: industrial metals, precious metals, energy, agriculture and livestock. The Fund generally will invest only in currencies that float relative to other currencies. The value of a floating currency is largely determined by supply and demand and prevailing market rates. In contrast, the value of a fixed currency generally is set by a government or central bank at an official exchange rate. The Fund generally does not intend to invest in the currencies of notable commodity producers, such as Saudi Arabia and the United Arab Emirates, since they are fixed or otherwise closely linked to the U.S. dollar. The Fund will only invest in currencies that it deems to be sufficiently liquid and accessible.

Table of Contents

The Fund is an actively managed exchange traded fund (ETF) that seeks to achieve exposure to money market rates of selected commodity-producing countries by investing primarily in short-term U.S. money market securities, forward currency contracts, currency swaps and interest rate swaps. The combination of money market securities with forward currency contracts and interest rate and currency swaps is designed to provide exposure equivalent to money market securities denominated in a non-U.S. currency. A forward currency contract is an agreement to buy or sell a specific currency at a future date at a price set at the time of the contract. An interest rate swap involves the exchange of a floating interest rate payment for a fixed interest payment. A currency swap is an agreement between two parties to exchange one currency for another at a future rate. The Fund also may enter into repurchase agreements with counterparties that are deemed to present acceptable credit risks. A repurchase agreement is a transaction in which the Fund purchases securities or other obligations from a bank or securities dealer and simultaneously commits to resell them to a counterparty at an agreed-upon date or upon demand and at a price reflecting a market rate of interest unrelated to the coupon rate or maturity of the purchased obligations.

In order to reduce interest rate risk, the Fund generally expects to maintain an average portfolio maturity of 90 days or less. The average portfolio maturity of the Fund is the average of all the current maturities of the individual securities in the Fund's portfolio. Average portfolio maturity is important to investors as an indication of the Fund's sensitivity to changes in interest rates. Funds with longer portfolio maturities generally are subject to greater interest rate risk. All money market securities acquired by the Fund will be rated in the upper two short-term ratings by at least two nationally recognized statistical rating organizations (NRSROs) or, if unrated, deemed to be of equivalent quality.

The Fund will invest, under normal circumstances, at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in investments whose combined performance is tied economically to selected commodity-producing countries. If, subsequent to an investment, the 80% requirement is no longer met, the Fund's future investments will be made in a manner that will bring the Fund into compliance with this policy. The Trust will provide shareholders with sixty (60) days' prior notice of any change to this policy for the Fund.

Principal Risks of Investing in the Fund

You can lose money on your investment in the Fund. The Fund is subject to the risks described below. Some or all of these risks may adversely affect the Fund's net asset value per share (NAV), trading price, yield, total return and/or ability to meet its objectives.

- n **Investment Risk.** As with all investments, an investment in the Fund is subject to investment risk. Investors in the Fund could lose money, including the possible loss of the entire principal amount of an investment, over short or long periods of time.
- n **Market Risk.** The trading prices of currencies, fixed income securities and other instruments fluctuate in response to a variety of factors. The Fund's NAV and market price may fluctuate significantly in response to these factors. As a result, an investor could lose money over short or long periods of time.
- n **Shares of the Fund May Trade at Prices Other Than NAV.** Although it is expected that the market price of the shares of the Fund will approximate the Fund's NAV when purchased and sold in the secondary market, there may be times when the market price of the shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). This risk is heightened in times of market volatility or periods of steep market declines.
- n **Cash Redemption Risk.** Unlike most ETFs, the Fund's investment strategy will require it to effect redemptions, in whole or in part, for cash. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used exclusively.
- n **Commodity Country Risk.** The Fund invests a significant portion of its assets in investments designed to provide exposure to both the currencies and money market rates available to foreign investors in selected commodity-producing countries. Commodity-producing countries are vulnerable to the volatility in the demand for commodities. Declines in demand for commodities produced by a particular country may occur quickly and without warning and may negatively impact the value of the Fund and your investment.

Edgar Filing: WisdomTree Trust - Form 497

- n **Counterparty and Issuer Credit Risk.** The financial condition of an issuer of a debt security or other instrument or a counterparty to a derivative or other contract may cause such issuer or counterparty to default, become unable to pay interest or principal due or otherwise fail to honor its obligations. While the Fund attempts to limit credit and counterparty exposure in a manner consistent with its investment objective, the value of an investment in the Fund may change quickly and without warning in response to issuer or counterparty defaults and changes in the credit ratings of the Fund's portfolio investments.

- n **Currency Exchange Rate Risk.** The Fund invests a significant portion of its assets in investments denominated in non-U.S. currencies, or in securities that provide exposure to such currencies, currency exchange rates or interest rates denominated in such currencies. Changes in currency exchange rates and the relative value of non-U.S. currencies will

12 WisdomTree Trust Prospectus

Table of Contents

affect the value of the Fund's investment and the value of your Fund shares. Currency exchange rates can be very volatile and can change quickly and unpredictably. As a result, the value of an investment in the Fund may change quickly and without warning and you may lose money.

- n **Derivatives Investment Risk.** The Fund will invest in derivatives. Derivatives are subject to a number of risks described elsewhere in this Prospectus, such as interest rate risk, market risk, and credit risk. They also involve the risk that changes in the value of a derivative may not correlate perfectly with the underlying asset, rate or index, or that the counterparty to a derivative contract might default on its obligations. Derivatives can be volatile and may be less liquid than other securities. As a result, the value of an investment in the Fund may change quickly and without warning and you may lose money.

- n **Emerging Markets Risk.** Investments in securities and instruments traded in developing or emerging markets, or that provide exposure to such securities or markets, can involve additional risks relating to political, economic, or regulatory conditions not associated with investments in U.S. securities and instruments or investments in more developed international markets. For example, developing or emerging market governments may, without prior warning, impose capital controls on the ability to transfer currency, securities or other assets. The Fund's ability to access certain developing or emerging markets also may be limited due to a variety of factors, including currency convertibility issues. Such conditions may impact the ability of the Fund to buy, sell or otherwise transfer securities or currency, cause the Fund's returns to differ from those available to domestic investors, adversely affect the trading market and price for Fund shares, and cause the Fund to decline in value.

- n **Foreign Securities Risk.** The Fund invests a significant portion of its assets in non-U.S. securities and instruments, or in securities that provide exposure to such instruments. Investments in non-U.S. securities and instruments involve certain risks that may not be present with investments in U.S. securities, including the risk of loss due to foreign currency fluctuations or to political or economic instability.

- n **Interest Rate Risk.** Interest rate risk is the risk that fixed income securities will decline in value because of changes in interest rates and other factors, such as perception of an issuer's creditworthiness.

- n **Issuer-Specific Risk.** Issuer-specific events, including changes in the financial condition of an issuer, can have a negative impact on the value of the Fund.

- n **Management Risk.** The Fund is actively managed using proprietary investment strategies and processes. There can be no guarantee that these strategies and processes will be successful or that the Fund will achieve its investment objective.

- n **Non-Diversification Risk.** The Fund is considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. To the extent the Fund invests a significant percentage of its assets in a limited number of issuers, the Fund is subject to the risks of investing in those few issuers, and may be more susceptible to a single adverse economic or regulatory occurrence. As a result, changes in the market value of a single security could cause greater fluctuations in the value of Fund shares than would occur in a diversified fund.

- n **Repurchase Agreement Risk.** The Fund's investment in repurchase agreements may be subject to market and credit risk with respect to the collateral securing the repurchase agreements. Investments in repurchase agreements also may be subject to the risk that the market value of the underlying obligations may decline prior to the expiration of the repurchase agreement term.

Fund Performance

The Fund commenced operations on September 24, 2010, and therefore does not have performance history for a full calendar year. Once the Fund has completed a full calendar year of operations, a bar chart and table will be included that will provide some indication of the risks of investing in the Fund by showing the variability of the Fund's return based on net assets and comparing the Fund's performance to a broad measure of market performance.

Zandra Zelaya, CFA, a Director, Fixed Income, has been a portfolio manager of the Fund since September 2010.

Table of Contents

Buying and Selling Fund Shares

The Fund is an ETF. This means that shares of the Fund are listed on a national securities exchange, such as NYSE Arca, Inc., and trade at market prices. Most investors will buy and sell shares of the Fund through brokers. Because Fund shares trade at market prices rather than NAV, shares may trade at a price greater than NAV (premium) or less than NAV (discount).

The Fund issues and redeems shares at NAV only in large blocks of shares (Creation Units), which only institutions or large investors purchase or redeem. Currently, Creation Units generally consist of 100,000 shares, although this may change from time to time. The Fund generally issues and redeems Creation Units in exchange for a portfolio of money market securities closely approximating the holdings of the Fund or a designated basket of non-U.S. currency and/or an amount of U.S. cash.

Tax Information

The Fund intends to make distributions that may be taxed as ordinary income or capital gains.

Table of Contents**WisdomTree Dreyfus Emerging Currency Fund****Investment Objective**

The Fund seeks to achieve total returns reflective of both money market rates in selected emerging market countries available to foreign investors and changes to the value of these currencies relative to the U.S. dollar.

Fees and Expenses of the Fund

The following table describes the fees and expenses you may pay if you buy and hold shares of the Fund. The fees are expressed as a percentage of the Fund's average net assets.

Shareholder Fees	None
(fees paid directly from your investment)	
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.55%
Distribution and/or Service (12b-1) Fees	None
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.55%

Example

The following example is intended to help retail investors compare the cost of investing in the Fund with the cost of investing in other funds. It illustrates the hypothetical expenses that such investors would incur over various periods if they invest \$10,000 in the Fund for the time periods indicated and then redeem all of the shares at the end of those periods. This example assumes that the Fund provides a return of 5% a year and that operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

	1 Year	3 Years	5 Years	10 Years
	\$56	\$176	\$307	\$689

Investors may pay brokerage commissions on their purchases and sales of fund shares, which are not reflected in the example.

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or turns over its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in Annual Fund Operating Expenses or in the Example, affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was less than 1% of the average value of its portfolio, excluding the value of portfolio securities received or delivered as a result of in-kind creations or redemptions of the Fund's capital shares.

Principal Investment Strategies of the Fund

The Fund is an actively managed exchange traded fund (ETF) that seeks to achieve its investment objective by investing in short-term securities and instruments designed to provide exposure to the currencies and money market rates of selected emerging market countries.

The Fund seeks to provide exposure to currencies and money market rates from emerging and developing economies in three regions of the world: (i) Asia, (ii) Latin America and (iii) Europe, the Middle East and Africa. Within these regions, the Fund intends to invest in a subset of the following markets: Brazil, Chile, China, Colombia, the Czech Republic, Hungary, India, Indonesia, Malaysia, Mexico, Peru, Philippines,

Edgar Filing: WisdomTree Trust - Form 497

Poland, Russia, South Africa, South Korea, Taiwan, Thailand, and Turkey. This list may change based on market developments. The Fund attempts to achieve exposure to the most liquid currencies within each of the three broad regions, while at the same time maintaining geographic and economic diversity across these regions. The specific set of currencies is selected on the annual assessment date each year (typically in July) and generally remains the same throughout the year. The selected currencies are equally weighted in terms of U.S. dollar value at the annual assessment date. The Fund is rebalanced quarterly in order to maintain this equal weighting. In order to maintain geographic diversity, the Fund's exposure to each of the three broad geographic regions is limited to 45% of its total asset value on the annual assessment date and at each quarterly rebalancing. More frequent rebalancing may occur in response to significant market events. A significant event might include, for example, market conditions that significantly disrupt liquidity or result in the reclassification of a currency (from emerging to developed, for example). Currencies that generally would be considered liquid may be ineligible for investment or dropped from the Fund as a result of government action or other market events if the Fund's adviser believes doing so would be in the best interest of the Fund.

Table of Contents

Because the market for money market securities in the selected emerging markets generally is less liquid and accessible to foreign investors than corresponding markets in more developed countries, the Fund intends to achieve exposure to these markets by investing primarily in short-term U.S. money market securities and forward currency contracts and swaps of the constituent currencies. The combination of U.S. money market securities with forward currency contracts and currency swaps is designed to provide exposure equivalent to money market securities denominated in currencies of the selected markets in which the Fund invests. In aggregate, the Fund's investments should create exposure that is economically similar to a basket of money market securities denominated in each of the selected currencies. A forward currency contract is an agreement to buy or sell a specific currency at a future date at a price set at the time of the contract. A currency swap is an agreement between two parties to exchange one currency for another at a future rate. The Fund also may enter into repurchase agreements with counterparties that are deemed to present acceptable credit risks. A repurchase agreement is a transaction in which the Fund purchases securities or other obligations from a bank or securities dealer and simultaneously commits to resell them to a counterparty at an agreed-upon date or upon demand and at a price reflecting a market rate of interest unrelated to the coupon rate or maturity of the purchased obligations.

In order to attempt to reduce interest rate risk, the Fund generally will maintain a weighted average portfolio maturity of 90 days or less with respect to the money market securities in its portfolio. The Fund will not purchase any security with a remaining maturity of more than 397 calendar days. All U.S. money market securities acquired by the Fund will be rated in the upper two short-term ratings by at least two nationally recognized statistical rating organizations (NRSROs) or, if unrated, deemed to be of equivalent quality. The Fund does not seek to preserve capital in U.S. dollars.

The decision to secure exposure directly or indirectly will be a function of, among other things, market accessibility, credit exposure, and tax ramifications for foreign investors. If the Fund pursues direct investment, eligible investments include short-term securities issued by emerging market governments and their agencies or instrumentalities, bank debt obligations and time deposits, bankers' acceptances, commercial paper, short-term corporate debt obligations, mortgage-backed securities, and asset-backed securities.

The Fund will invest, under normal circumstances, at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in investments whose combined performance is tied economically to selected emerging market countries. If, subsequent to an investment, the 80% requirement is no longer met, the Fund's future investments will be made in a manner that will bring the Fund into compliance with this policy. The Trust will provide shareholders with sixty (60) days' prior notice of any change to this policy for the Fund.

Principal Risks of Investing in the Fund

You can lose money on your investment in the Fund. The Fund is subject to the risks described below. Some or all of these risks may adversely affect the Fund's net asset value per share (NAV), trading price, yield, total return and/or ability to meet its objective.

- n **Investment Risk.** As with all investments, an investment in the Fund is subject to investment risk. Investors in the Fund could lose money, including the possible loss of the entire principal amount of an investment, over short or long periods of time.
- n **Market Risk.** The trading prices of currencies, fixed income securities and other instruments fluctuate in response to a variety of factors. The Fund's NAV and market price may fluctuate significantly in response to these factors. As a result, an investor could lose money over short or long periods of time.
- n **Shares of the Fund May Trade at Prices Other Than NAV.** Although it is expected that the market price of the shares of the Fund will approximate the Fund's NAV when purchased and sold in the secondary market, there may be times when the market price of the shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). This risk is heightened in times of market volatility or periods of steep market declines.
- n **Cash Redemption Risk.** Unlike most ETFs, the Fund's investment strategy will require it to effect redemptions, in whole or in part, for cash. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used exclusively.

n

Edgar Filing: WisdomTree Trust - Form 497

Counterparty and Issuer Credit Risk. The financial condition of an issuer of a debt security or other instrument or a counterparty to a derivative or other contract may cause such issuer or counterparty to default, become unable to pay interest or principal due or otherwise fail to honor its obligations. While the Fund attempts to limit credit and counterparty exposure in a manner consistent with its investment objective, the value of an investment in the Fund may change quickly and without warning in response to issuer or counterparty defaults and changes in the credit ratings of the Fund's portfolio investments.

n **Currency Exchange Rate Risk.** The Fund invests a significant portion of its assets in investments denominated in non-U.S. currencies, or in securities that provide exposure to such currencies, currency exchange rates or interest rates

16 WisdomTree Trust Prospectus

Table of Contents

denominated in such currencies. Changes in currency exchange rates and the relative value of non-U.S. currencies will affect the value of the Fund's investment and the value of your Fund shares. Currency exchange rates can be very volatile and can change quickly and unpredictably. As a result, the value of an investment in the Fund may change quickly and without warning and you may lose money.

- n **Derivatives Investment Risk.** The Fund will invest in derivatives. Derivatives are subject to a number of risks described elsewhere in this Prospectus, such as interest rate risk, market risk, and credit risk. They also involve the risk that changes in the value of a derivative may not correlate perfectly with the underlying asset, rate or index, or that the counterparty to a derivative contract might default on its obligations. Derivatives can be volatile and may be less liquid than other securities. As a result, the value of an investment in the Fund may change quickly and without warning and you may lose money.

- n **Emerging Markets Risk.** Investments in securities and instruments traded in developing or emerging markets, or that provide exposure to such securities or markets, can involve additional risks relating to political, economic, or regulatory conditions not associated with investments in U.S. securities and instruments or investments in more developed international markets. For example, developing or emerging market governments may, without prior warning, impose capital controls on the ability to transfer currency, securities or other assets. The Fund's ability to access certain developing or emerging markets also may be limited due to a variety of factors, including currency convertibility issues. Such conditions may impact the ability of the Fund to buy, sell or otherwise transfer securities or currency, cause the Fund's returns to differ from those available to domestic investors, adversely affect the trading market and price for Fund shares, and cause the Fund to decline in value.

- n **Foreign Securities Risk.** The Fund invests a significant portion of its assets in non-U.S. securities and instruments, or in securities that provide exposure to such instruments. Investments in non-U.S. securities and instruments involve certain risks that may not be present with investments in U.S. securities, including the risk of loss due to foreign currency fluctuations or to political or economic instability.

- n **Interest Rate Risk.** Interest rate risk is the risk that fixed income securities will decline in value because of changes in interest rates and other factors, such as perception of an issuer's creditworthiness.

- n **Issuer-Specific Risk.** Issuer-specific events, including changes in the financial condition of an issuer, can have a negative impact on the value of the Fund.

- n **Management Risk.** The Fund is actively managed using proprietary investment strategies and processes. There can be no guarantee that these strategies and processes will be successful or that the Fund will achieve its investment objective.

- n **Non-Diversification Risk.** The Fund is considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. To the extent the Fund invests a significant percentage of its assets in a limited number of issuers, the Fund is subject to the risks of investing in those few issuers, and may be more susceptible to a single adverse economic or regulatory occurrence. As a result, changes in the market value of a single security could cause greater fluctuations in the value of Fund shares than would occur in a diversified fund.

- n **Repurchase Agreement Risk.** The Fund's investment in repurchase agreements may be subject to market and credit risk with respect to the collateral securing the repurchase agreements. Investments in repurchase agreements also may be subject to the risk that the market value of the underlying obligations may decline prior to the expiration of the repurchase agreement term.

Table of Contents**Fund Performance**

Historical Fund performance, which varies over time, can provide an indication of the risks of investing in the Fund. The bar chart that follows shows the annual total returns of the Fund for each full calendar year since the Fund commenced operations. The table that follows the bar chart shows the Fund's average annual total returns, both before and after taxes. The table also shows how the Fund's performance compares to the JP Morgan Emerging Markets Index Plus, a relevant broad-based securities index. Index returns do not reflect deductions for fees, expenses or taxes. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after taxes) is not necessarily an indication of how the Fund will perform in the future.

The Fund's year-to-date total return as of September 30, 2011 was (7.56%).

Best and Worst Quarter Returns (for the period reflected in the bar chart above)

	Return	Quarter/Year
Highest Return	7.76%	3/10
Lowest Return	(4.19)%	2/10

After-tax returns are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your tax situation and may differ from those shown. After-tax returns shown are not relevant to investors who hold their Fund shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts. In some cases the return after taxes may exceed the return before taxes due to an assumed tax benefit from any losses on a sale of Fund shares at the end of the measurement period.

Average Annual Total Returns for the periods ending December 31, 2010

	1 Year	Since Inception (5/06/2009)
WisdomTree Dreyfus Emerging Currency Fund		
Return Before Taxes Based on NAV	6.64%	10.43%
Return After Taxes on Distributions	5.85%	9.81%
Return After Taxes on Distributions and Sale of Fund Shares	4.88%	8.72%
JP Morgan Emerging Markets Index Plus (Reflects no deduction for fees, expenses or taxes)	5.68%	9.54%

Management**Investment Adviser and Sub-Adviser**

WisdomTree Asset Management, Inc. serves as the investment adviser to the Fund. The Dreyfus Corporation serves as the sub-adviser to the Fund.

Portfolio Managers

David C. Kwan, a Managing Director, Fixed Income, has been a portfolio manager of the Fund since its inception.

Zandra Zelaya, CFA, a Director, Fixed Income, has been a portfolio manager of the Fund since its inception.

Table of Contents

Buying and Selling Fund Shares

The Fund is an ETF. This means that shares of the Fund are listed on a national securities exchange, such as NYSE Arca, Inc., and trade at market prices. Most investors will buy and sell shares of the Fund through brokers. Because Fund shares trade at market prices rather than NAV, shares may trade at a price greater than NAV (premium) or less than NAV (discount).

The Fund issues and redeems shares at NAV only in large blocks of shares (Creation Units), which only institutions or large investors may purchase or redeem. Currently, Creation Units generally consist of 100,000 shares, though this may change from time to time. Creation Units are not expected to consist of less than 50,000 shares. The Fund generally issues and redeems Creation Units in exchange for a portfolio of money market securities closely approximating the holdings of the Fund or a designated basket of non-U.S. currency and/or an amount of U.S. cash.

Tax Information

The Fund intends to make distributions that may be taxed as ordinary income or capital gains.

Table of Contents**WisdomTree Dreyfus Indian Rupee Fund****Investment Objective**

The Fund seeks to achieve total returns reflective of both money market rates in India available to foreign investors and changes in value of the Indian rupee relative to the U.S. dollar.

Fees and Expenses of the Fund

The following table describes the fees and expenses you may pay if you buy and hold shares of the Fund. The fees are expressed as a percentage of the Fund's average net assets.

Shareholder Fees	None
(fees paid directly from your investment)	
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.45%
Distribution and/or Service (12b-1) Fees	None
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.45%

Example

The following example is intended to help retail investors compare the cost of investing in the Fund with the cost of investing in other funds. It illustrates the hypothetical expenses that such investors would incur over various periods if they invest \$10,000 in the Fund for the time periods indicated and then redeem all of the shares at the end of those periods. This example assumes that the Fund provides a return of 5% a year and that operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

	1 Year	3 Years	5 Years	10 Years
	\$46	\$144	\$252	\$567

Investors may pay brokerage commissions on their purchases and sales of fund shares, which are not reflected in the example.

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or turns over its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in Annual Fund Operating Expenses or in the Example, affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was less than 1% of the average value of its portfolio, excluding the value of portfolio securities received or delivered as a result of in-kind creations or redemptions of the Fund's capital shares.

Principal Investment Strategies of the Fund

The Fund is an actively managed exchange traded fund (ETF) that seeks to achieve its investment objective by investing in short-term securities designed to provide exposure to Indian currency and money market rates. Because the market for money market securities in India generally is less liquid and accessible to foreign investors than corresponding markets in other countries, the Fund intends to achieve exposure to currency markets in India by investing primarily in short-term U.S. money market securities and forward currency contracts and swaps. The combination of U.S. money market securities with forward currency contracts and currency swaps is designed to provide exposure equivalent to money market securities denominated in Indian rupees. A forward currency contract is an agreement to buy or sell a specific currency at a future date at a price set at the time of the contract. A currency swap is an agreement between two parties to exchange one currency for another at a future rate.

Edgar Filing: WisdomTree Trust - Form 497

The Fund also may enter into repurchase agreements with counterparties that are deemed to present acceptable credit risks. A repurchase agreement is a transaction in which the Fund purchases securities or other obligations from a bank or securities dealer and simultaneously commits to resell them to a counterparty at an agreed-upon date or upon demand and at a price reflecting a market rate of interest unrelated to the coupon rate or maturity of the purchased obligations.

In order to attempt to reduce interest rate risk, the Fund generally will maintain a weighted average portfolio maturity of 90 days or less with respect to the money market securities in its portfolio. The Fund will not purchase any security with a remaining maturity of more than 397 calendar days. All U.S. money market securities acquired by the Fund will be rated in the upper two short-term ratings by at least two nationally recognized statistical rating organizations (NRSROs) or, if unrated, deemed to be of equivalent quality. The Fund does not seek to preserve capital in U.S. dollars.

20 WisdomTree Trust Prospectus

Table of Contents

The decision to secure exposure directly or indirectly will be a function of, among other things, market accessibility, credit exposure, and tax ramifications for foreign investors. If the Fund pursues direct investment, eligible investments include short-term securities issued by the government of India and its agencies or instrumentalities, bank debt obligations and time deposits, bankers' acceptances, commercial paper, short-term corporate debt obligations, mortgage-backed securities and asset-backed securities.

The Fund will invest, under normal circumstances, at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in investments whose combined performance is tied economically to India. If, subsequent to an investment, the 80% requirement is no longer met, the Fund's future investments will be made in a manner that will bring the Fund into compliance with this policy. The Trust will provide shareholders with sixty (60) days' prior notice of any change to this policy for the Fund.

Principal Risks of Investing in the Fund

You can lose money on your investment in the Fund. The Fund is subject to the risks described below. Some or all of these risks may adversely affect the Fund's net asset value per share (NAV), trading price, yield, total return and/or ability to meet its objective.

- n **Investment Risk.** As with all investments, an investment in the Fund is subject to investment risk. Investors in the Fund could lose money, including the possible loss of the entire principal amount of an investment, over short or long periods of time.
- n **Market Risk.** The trading prices of currencies, fixed income securities and other instruments fluctuate in response to a variety of factors. The Fund's NAV and market price may fluctuate significantly in response to these factors. As a result, an investor could lose money over short or long periods of time.
- n **Shares of the Fund May Trade at Prices Other Than NAV.** Although it is expected that the market price of the shares of the Fund will approximate the Fund's NAV when purchased and sold in the secondary market, there may be times when the market price of the shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). This risk is heightened in times of market volatility or periods of steep market declines.
- n **Cash Redemption Risk.** Unlike most ETFs, the Fund's investment strategy will require it to effect redemptions, in whole or in part, for cash. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used exclusively.
- n **Counterparty and Issuer Credit Risk.** The financial condition of an issuer of a debt security or other instrument or a counterparty to a derivative or other contract may cause such issuer or counterparty to default, become unable to pay interest or principal due or otherwise fail to honor its obligations. While the Fund attempts to limit credit and counterparty exposure in a manner consistent with its investment objective, the value of an investment in the Fund may change quickly and without warning in response to issuer or counterparty defaults and changes in the credit ratings of the Fund's portfolio investments.
- n **Currency Exchange Rate Risk.** The Fund invests a significant portion of its assets in investments denominated in Indian rupees, or in securities that provide exposure to Indian rupees, currency exchange rates or interest rates denominated in Indian rupees. Changes in currency exchange rates and the relative value of the Indian rupee will affect the value of the Fund's investment and the value of your Fund shares. Currency exchange rates can be very volatile and can change quickly and unpredictably. As a result, the value of an investment in the Fund may change quickly and without warning and you may lose money.
- n **Derivatives Investment Risk.** The Fund will invest in derivatives. Derivatives are subject to a number of risks described elsewhere in this Prospectus, such as interest rate risk, market risk, and credit risk. They also involve the risk that changes in the value of a derivative may not correlate perfectly with the underlying asset, rate or index, or that the counterparty to a derivative contract might default on its obligations. Derivatives can be volatile and may be less liquid than other securities. As a result, the value of an investment in the Fund may change

Edgar Filing: WisdomTree Trust - Form 497

quickly and without warning and you may lose money.

- n **Emerging Markets Risk.** Investments in securities and instruments traded in developing or emerging markets, or that provide exposure to such securities or markets, can involve additional risks relating to political, economic, or regulatory conditions not associated with investments in U.S. securities and instruments or investments in more developed international markets. Such conditions may impact the ability of the Fund to buy, sell or otherwise transfer securities, adversely affect the trading market and price for Fund shares, and cause the Fund to decline in value.

- n **Foreign Securities Risk.** The Fund invests a significant portion of its assets in non-U.S. securities and instruments, or in securities that provide exposure to such instruments. Investments in non-U.S. securities and instruments involve certain risks that may not be present with investments in U.S. securities, including the risk of loss due to foreign currency fluctuations or to political or economic instability.

Table of Contents

- n **Geographic Concentration in India.** Because the Fund concentrates its investments in India, the Fund's performance is expected to be closely tied to social, political, and economic conditions within India and to be more volatile than the performance of more geographically diversified funds. The Indian government has exercised and continues to exercise significant influence over many aspects of the economy. While the government of India is moving to a more liberal approach, it still places restrictions on the capability and capacity of foreign investors to access and trade rupee directly. While the Indian economy generally has experienced growth in recent years, there is no guarantee that this growth will continue. These and other factors could have a negative impact on the Fund's performance and increase the volatility of an investment in the Fund.

- n **Interest Rate Risk.** Interest rate risk is the risk that fixed income securities will decline in value because of changes in interest rates and other factors, such as perception of an issuer's creditworthiness.

- n **Issuer-Specific Risk.** Issuer-specific events, including changes in the financial condition of an issuer, can have a negative impact on the value of the Fund.

- n **Management Risk.** The Fund is actively managed using proprietary investment strategies and processes. There can be no guarantee that these strategies and processes will be successful or that the Fund will achieve its investment objective.

- n **Non-Diversification Risk.** The Fund is considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. To the extent the Fund invests a significant percentage of its assets in a limited number of issuers, the Fund is subject to the risks of investing in those few issuers, and may be more susceptible to a single adverse economic or regulatory occurrence. As a result, changes in the market value of a single security could cause greater fluctuations in the value of Fund shares than would occur in a diversified fund.

- n **Offshore Investor Risk.** In addition to the general risks associated with investing in non-U.S. currencies and non-U.S. currency markets, there are special risks associated with investing in Indian rupee or securities designed to provide exposure to Indian rupee. While the government of India is moving toward a more liberal approach, it still places restrictions on the capability and capacity of foreign investors to access and trade rupee directly. Foreign investors in India still face burdensome taxes on investments in income-producing securities. These limitations and restrictions may impact the availability, liquidity and pricing of securities designed to provide offshore investors with exposure to Indian markets. As a result, returns achieved by offshore investors, such as the Fund, could differ from those available to domestic investors in India.

- n **Repurchase Agreement Risk.** The Fund's investment in repurchase agreements may be subject to market and credit risk with respect to the collateral securing the repurchase agreements. Investments in repurchase agreements also may be subject to the risk that the market value of the underlying obligations may decline prior to the expiration of the repurchase agreement term.

Fund Performance

Historical Fund performance, which varies over time, can provide an indication of the risks of investing in the Fund. The bar chart that follows shows the annual total returns of the Fund for each full calendar year since the Fund commenced operations. The table that follows the bar chart shows the Fund's average annual total returns, both before and after taxes. The table also shows how the Fund's performance compares to the JPMorgan Emerging Markets Index Plus India, a relevant broad-based securities index. Index returns do not reflect deductions for fees, expenses or taxes. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after taxes) is not necessarily an indication of how the Fund will perform in the future.

The Fund's year-to-date total return as of September 30, 2011 was (5.02%).

Table of Contents**Best and Worst Quarter Returns (for the period reflected in the bar chart above)**

	Return	Quarter/Year
Highest Return	7.66%	2/09
Lowest Return	(3.08)%	2/10

WisdomTree Asset Management, Inc. serves as the investment adviser to the Fund. The Dreyfus Corporation serves as the sub-adviser to the Fund.

Portfolio Managers

David C. Kwan, a Managing Director, Fixed Income, has been a portfolio manager of the Fund since its inception.

Zandra Zelaya, CFA, a Director, Fixed Income, has been a portfolio manager of the Fund since its inception.

Buying and Selling Fund Shares

The Fund is an ETF. This means that shares of the Fund are listed on a national securities exchange, such as NYSE Arca, Inc., and trade at market prices. Most investors will buy and sell shares of the Fund through brokers. Because Fund shares trade at market prices rather than NAV, shares may trade at a price greater than NAV (premium) or less than NAV (discount).

The Fund issues and redeems shares at NAV only in large blocks of shares (Creation Units), which only institutions or large investors may purchase or redeem. Currently, Creation Units generally consist of 100,000 shares, though this may change from time to time. Creation Units are not expected to consist of less than 50,000 shares. The Fund generally issues and redeems Creation Units in exchange for a portfolio of money market securities closely approximating the holdings of the Fund or a designated basket of non-U.S. currency and/or an amount of U.S. cash.

Tax Information

The Fund intends to make distributions that may be taxed as ordinary income or capital gains.

Table of Contents**WisdomTree Dreyfus Japanese Yen Fund****Investment Objective**

The Fund seeks to earn current income reflective of money market rates in Japan available to foreign investors. The Fund also seeks to maintain liquidity and preserve capital measured in Japanese yen.

Fees and Expenses of the Fund

The following table describes the fees and expenses you may pay if you buy and hold shares of the Fund. The fees are expressed as a percentage of the Fund's average net assets.

Shareholder Fees	None
(fees paid directly from your investment)	
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.35%
Distribution and/or Service (12b-1) Fees	None
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.35%

Example

The following example is intended to help retail investors compare the cost of investing in the Fund with the cost of investing in other funds. It illustrates the hypothetical expenses that such investors would incur over various periods if they invest \$10,000 in the Fund for the time periods indicated and then redeem all of the shares at the end of those periods. This example assumes that the Fund provides a return of 5% a year and that operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

	1 Year	3 Years	5 Years	10 Years
	\$36	\$113	\$197	\$443

Investors may pay brokerage commissions on their purchases and sales of fund shares, which are not reflected in the example.

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or turns over its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in Annual Fund Operating Expenses or in the Example, affect the Fund's performance. During the most recent fiscal year, there was no portfolio turnover for the Fund since the Fund invested in short-term securities with maturities less than or equal to 365 days, which are excluded from portfolio turnover calculations.

Principal Investment Strategies of the Fund

The Fund is an actively managed exchange traded fund (ETF) that intends to invest primarily in very short-term, investment grade money market securities denominated in Japanese yen. In order to attempt to reduce interest rate risk, the Fund generally will maintain a weighted average portfolio maturity of 60 days or less and will not purchase any security with a remaining maturity of more than 397 calendar days. All money market securities acquired by the Fund will be rated in the upper two short-term ratings by at least two nationally recognized statistical rating organizations (NRSROs) or, if unrated, deemed to be of equivalent quality.

Edgar Filing: WisdomTree Trust - Form 497

The Fund plans to use the annualized rate on the BofA Merrill Lynch Japanese Yen One-Month LIBID Constant Maturity Index as a portfolio benchmark to guide its investment policy. The restrictions placed upon the quality and the maturities of eligible investments and the portfolio in aggregate will be the principal factors contributing to the Fund's ability to preserve capital (measured in yen) and liquidity while pursuing its investment objective. The Fund does not seek to preserve capital in U.S. dollars.

Eligible investments include short-term securities issued by the Japanese government and its agencies or instrumentalities that are denominated in yen, bank debt obligations and time deposits, bankers' acceptances, commercial paper, short-term corporate debt obligations, and mortgage-backed and asset-backed securities. While the Fund does not intend to do so, it reserves the right to pursue its objectives by investing a portion of its assets in U.S. dollar money market securities and derivative investments, such as forward currency contracts and swaps, if this strategy is deemed to be in the best interest of the Fund. The combination of U.S. money market securities with forward currency contracts and currency swaps is designed to provide exposure equivalent to money market securities denominated in yen. A forward currency contract is an agreement to

Table of Contents

buy or sell a specific currency at a future date at a price set at the time of the contract. A currency swap is an agreement between two parties to exchange one currency for another at a future rate. The Fund also may enter into repurchase agreements with counterparties that are deemed to present acceptable credit risks. A repurchase agreement is a transaction in which the Fund purchases securities or other obligations from a bank or securities dealer and simultaneously commits to resell them to a counterparty at an agreed-upon date or upon demand and at a price reflecting a market rate of interest unrelated to the coupon rate or maturity of the purchased obligations. In addition, the Fund may invest a relatively smaller portion of its assets in U.S. money market securities, principally U.S. Treasury obligations, with a remaining maturity consistent with the Fund's next anticipated dividend payment date.

The Fund will invest, under normal circumstances, at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in investments whose combined performance is tied economically to Japan. If, subsequent to an investment, the 80% requirement is no longer met, the Fund's future investments will be made in a manner that will bring the Fund into compliance with this policy. The Trust will provide shareholders with sixty (60) days' prior notice of any change to this policy for the Fund.

Principal Risks of Investing in the Fund

You can lose money on your investment in the Fund. The Fund is subject to the risks described below. Some or all of these risks may adversely affect the Fund's net asset value per share (NAV), trading price, yield, total return and/or ability to meet its objective.

- n **Investment Risk.** As with all investments, an investment in the Fund is subject to investment risk. Investors in the Fund could lose money, including the possible loss of the entire principal amount of an investment, over short or long periods of time.
- n **Market Risk.** The trading prices of currencies, fixed income securities and other instruments fluctuate in response to a variety of factors. The Fund's NAV and market price may fluctuate significantly in response to these factors. As a result, an investor could lose money over short or long periods of time.
- n **Shares of the Fund May Trade at Prices Other Than NAV.** Although it is expected that the market price of the shares of the Fund will approximate the Fund's NAV when purchased and sold in the secondary market, there may be times when the market price of the shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). This risk is heightened in times of market volatility or periods of steep market declines.
- n **Capital Controls Risk.** Economic conditions, such as volatile currency exchange rates and interest rates, political events and other conditions may, without prior warning, lead to foreign government intervention and the imposition of capital controls. Capital controls include the prohibition of, or restrictions on, the ability to transfer currency, securities or other assets. Capital controls may impact the ability of the Fund to buy, sell or otherwise transfer securities or currency, adversely affect the trading market and price for shares of the Fund, and cause the Fund to decline in value.
- n **Cash Redemption Risk.** Unlike most ETFs, the Fund's investment strategy will require it to effect redemptions, in whole or in part, for cash. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used exclusively.
- n **Counterparty and Issuer Credit Risk.** The financial condition of an issuer of a debt security or other instrument or a counterparty to a derivative or other contract may cause such issuer or counterparty to default, become unable to pay interest or principal due or otherwise fail to honor its obligations. While the Fund attempts to limit credit and counterparty exposure in a manner consistent with its investment objective, the value of an investment in the Fund may change quickly and without warning in response to issuer or counterparty defaults and changes in the credit ratings of the Fund's portfolio investments.

n

Edgar Filing: WisdomTree Trust - Form 497

Currency Exchange Rate Risk. The Fund invests a significant portion of its assets in investments denominated in Japanese yen, or in securities that provide exposure to Japanese yen, currency exchange rates or interest rates denominated in Japanese yen. Changes in currency exchange rates and the relative value of Japanese yen will affect the value of the Fund's investment and the value of your Fund shares. Currency exchange rates can be very volatile and can change quickly and unpredictably. As a result, the value of an investment in the Fund may change quickly and without warning and you may lose money.

Derivatives Investment Risk. The Fund may invest in derivatives. Derivatives are subject to a number of risks described elsewhere in this Prospectus, such as interest rate risk, market risk, and credit risk. They also involve the risk that changes in the value of a derivative may not correlate perfectly with the underlying asset, rate or index, or that the counterparty to a derivative contract might default on its obligations. Derivatives can be volatile and may be less liquid than other securities. As a result, the value of an investment in the Fund may change quickly and without warning and you may lose money.

Table of Contents

- n **Foreign Securities Risk.** The Fund invests a significant portion of its assets in non-U.S. securities and instruments, or in securities that provide exposure to such instruments. Investments in non-U.S. securities and instruments involve certain risks that may not be present with investments in U.S. securities, including the risk of loss due to foreign currency fluctuations or to political or economic instability.

- n **Geographic Concentration in Japan.** Because the Fund concentrates its investments in Japan, the Fund's performance is expected to be closely tied to social, political, and economic conditions within Japan and to be more volatile than the performance of more geographically diversified funds.

- n **Interest Rate Risk.** Interest rate risk is the risk that fixed income securities will decline in value because of changes in interest rates and other factors, such as perception of an issuer's creditworthiness.

- n **Issuer-Specific Risk.** Issuer-specific events, including changes in the financial condition of an issuer, can have a negative impact on the value of the Fund.

- n **Low Interest Rate Risk.** Economic conditions throughout the world and in Japan have resulted, and may continue to result, in downward pressure on interest rates and returns on money market instruments and other investments. If this continues to occur, rates may decline to levels where the interest earned by the Fund's investments limits the Fund's ability to make distributions or becomes insufficient to cover the expenses of the Fund. In these circumstances, the Fund may need to use available cash or sell securities out of the Fund to compensate for this shortfall. These circumstances could cause a decline in the NAV of the Fund, could have negative tax consequences and could cause investors to lose money.

- n **Management Risk.** The Fund is actively managed using proprietary investment strategies and processes. There can be no guarantee that these strategies and processes will be successful or that the Fund will achieve its investment objective.

- n **Non-Diversification Risk.** The Fund is considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. To the extent the Fund invests a significant percentage of its assets in a limited number of issuers, the Fund is subject to the risks of investing in those few issuers, and may be more susceptible to a single adverse economic or regulatory occurrence. As a result, changes in the market value of a single security could cause greater fluctuations in the value of Fund shares than would occur in a diversified fund.

- n **Repurchase Agreement Risk.** The Fund's investment in repurchase agreements may be subject to market and credit risk with respect to the collateral securing the repurchase agreements. Investments in repurchase agreements also may be subject to the risk that the market value of the underlying obligations may decline prior to the expiration of the repurchase agreement term.

Fund Performance

Historical Fund performance, which varies over time, can provide an indication of the risks of investing in the Fund. The bar chart that follows shows the annual total returns of the Fund for each full calendar year since the Fund commenced operations. The table that follows the bar chart shows the Fund's average annual total returns, both before and after taxes. The table also shows how the Fund's performance compares to the BofA Merrill Lynch Japanese Yen One-Month LIBID Constant Maturity Index, a relevant broad-based securities index. Index returns do not reflect deductions for fees, expenses or taxes. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after taxes) is not necessarily an indication of how the Fund will perform in the future.

The Fund's year-to-date total return as of September 30, 2011 was 4.97%.

Table of Contents**Best and Worst Quarter Returns (for the period reflected in the bar chart above)**

	Return	Quarter/Year
Highest Return	7.69%	3/09
Lowest Return	(8.26)%	1/09

After-tax returns are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your tax situation and may differ from those shown. After-tax returns shown are not relevant to investors who hold their Fund shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts. In some cases the return after taxes may exceed the return before taxes due to an assumed tax benefit from any losses on a sale of Fund shares at the end of the measurement period.

Average Annual Total Returns for the periods ending December 31, 2010

		Since Inception
	1 Year	(5/21/2008)
WisdomTree Dreyfus Japanese Yen Fund		
Return Before Taxes Based on NAV	14.50%	9.53%
Return After Taxes on Distributions	14.50%	9.50%
Return After Taxes on Distributions and Sale of Fund Shares	9.43%	8.17%
BofA Merrill Lynch Japanese Yen One-Month LIBID Constant Maturity Index* (Reflects no deduction for fees, expenses or taxes)	14.87%	9.97%

* As a result of the merger completed on January 2, 2009 between Bank of America and Merrill Lynch, all references to Merrill Lynch will now be replaced by BofA Merrill Lynch when referring to the Fund's respective performance benchmarks.

Management**Investment Adviser and Sub-Adviser**

WisdomTree Asset Management, Inc. serves as the investment adviser to the Fund. The Dreyfus Corporation serves as the sub-adviser to the Fund.

Portfolio Managers

David C. Kwan, a Managing Director, Fixed Income, has been a portfolio manager of the Fund since its inception.

Zandra Zelaya, CFA, a Director, Fixed Income, has been a portfolio manager of the Fund since its inception.

Buying and Selling Fund Shares

The Fund is an ETF. This means that shares of the Fund are listed on a national securities exchange, such as NYSE Arca, Inc., and trade at market prices. Most investors will buy and sell shares of the Fund through brokers. Because Fund shares trade at market prices rather than NAV, shares may trade at a price greater than NAV (premium) or less than NAV (discount).

The Fund issues and redeems shares at NAV only in large blocks of shares (Creation Units), which only institutions or large investors may purchase or redeem. Currently, Creation Units generally consist of 100,000 shares, though this may change from time to time. Creation Units are not expected to consist of less than 50,000 shares. The Fund generally issues and redeems Creation Units in exchange for a portfolio of money market securities closely approximating the holdings of the Fund or a designated basket of non-U.S. currency and/or an amount of U.S. cash.

Tax Information

The Fund intends to make distributions that may be taxed as ordinary income or capital gains.

Table of Contents**WisdomTree Dreyfus South African Rand Fund****Investment Objective**

The Fund seeks to achieve total returns reflective of both money market rates in South Africa available to foreign investors and changes in value of the South African rand relative to the U.S. dollar.

Fees and Expenses of the Fund

The following table describes the fees and expenses you may pay if you buy and hold shares of the Fund. The fees are expressed as a percentage of the Fund's average net assets.

Shareholder Fees	None
(fees paid directly from your investment)	
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.45%
Distribution and/or Service (12b-1) Fees	None
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.45%

Example

The following example is intended to help retail investors compare the cost of investing in the Fund with the cost of investing in other funds. It illustrates the hypothetical expenses that such investors would incur over various periods if they invest \$10,000 in the Fund for the time periods indicated and then redeem all of the shares at the end of those periods. This example assumes that the Fund provides a return of 5% a year and that operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

	1 Year	3 Years	5 Years	10 Years
	\$ 46	\$ 144	\$ 252	\$ 567

Investors may pay brokerage commissions on their purchases and sales of fund shares, which are not reflected in the example.

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or turns over its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in Annual Fund Operating Expenses or in the Example, affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was less than 1% of the average value of its portfolio, excluding the value of portfolio securities received or delivered as a result of in-kind creations or redemptions of the Fund's capital shares.

Principal Investment Strategies of the Fund

The Fund is an actively managed exchange traded fund (ETF) that seeks to achieve its investment objective by investing in short-term securities designed to provide exposure to South African currency and money market rates. Because the market for money market securities in South Africa generally is less liquid and accessible to foreign investors than corresponding markets in other countries, the Fund intends to achieve exposure to currency markets in South Africa by investing primarily in short-term U.S. money market securities and also in forward currency contracts and swaps. The combination of U.S. money market securities with forward currency contracts and currency swaps is designed to provide exposure equivalent to money market securities denominated in South African rand. A forward currency contract is an agreement to buy or sell a specific currency at a future date at a price set at the time of the contract. A currency swap is an agreement between two parties to

Edgar Filing: WisdomTree Trust - Form 497

exchange one currency for another at a future rate. The Fund also may enter into repurchase agreements with counterparties that are deemed to present acceptable credit risks. A repurchase agreement is a transaction in which the Fund purchases securities or other obligations from a bank or securities dealer and simultaneously commits to resell them to a counterparty at an agreed-upon date or upon demand and at a price reflecting a market rate of interest unrelated to the coupon rate or maturity of the purchased obligations.

In order to attempt to reduce interest rate risk, the Fund generally will maintain a weighted average portfolio maturity of 90 days or less with respect to the money market securities in its portfolio. The Fund will not purchase any security with a remaining maturity of more than 397 calendar days. All U.S. money market securities acquired by the Fund will be rated in

Table of Contents

the upper two short-term ratings by at least two nationally recognized statistical rating organizations (NRSROs) or, if unrated, deemed to be of equivalent quality. The Fund does not seek to preserve capital in U.S. dollars.

The decision to secure exposure directly or indirectly will be a function of, among other things, market accessibility, credit exposure, and tax ramifications for foreign investors. If the Fund pursues direct investment, eligible investments include short-term securities issued by the government of South Africa and its agencies or instrumentalities, bank debt obligations and time deposits, bankers' acceptances, commercial paper, short-term corporate debt obligations, mortgage-backed securities and asset-backed securities.

The Fund will invest, under normal circumstances, at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in investments whose combined performance is tied economically to South Africa. If, subsequent to an investment, the 80% requirement is no longer met, the Fund's future investments will be made in a manner that will bring the Fund into compliance with this policy. The Trust will provide shareholders with sixty (60) days' prior notice of any change to this policy for the Fund.

Principal Risks of Investing in the Fund

You can lose money on your investment in the Fund. The Fund is subject to the risks described below. Some or all of these risks may adversely affect the Fund's net asset value per share (NAV), trading price, yield, total return and/or ability to meet its objective.

- n **Investment Risk.** As with all investments, an investment in the Fund is subject to investment risk. Investors in the Fund could lose money, including the possible loss of the entire principal amount of an investment, over short or long periods of time.
- n **Market Risk.** The trading prices of currencies, fixed income securities and other instruments fluctuate in response to a variety of factors. The Fund's NAV and market price may fluctuate significantly in response to these factors. As a result, an investor could lose money over short or long periods of time.
- n **Shares of the Fund May Trade at Prices Other Than NAV.** Although it is expected that the market price of the shares of the Fund will approximate the Fund's NAV when purchased and sold in the secondary market, there may be times when the market price of the shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). This risk is heightened in times of market volatility or periods of steep market declines.
- n **Cash Redemption Risk.** Unlike most ETFs, the Fund's investment strategy will require it to effect redemptions, in whole or in part, for cash. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used exclusively.
- n **Counterparty and Issuer Credit Risk.** The financial condition of an issuer of a debt security or other instrument or a counterparty to a derivative or other contract may cause such issuer or counterparty to default, become unable to pay interest or principal due or otherwise fail to honor its obligations. While the Fund attempts to limit credit and counterparty exposure in a manner consistent with its investment objective, the value of an investment in the Fund may change quickly and without warning in response to issuer or counterparty defaults and changes in the credit ratings of the Fund's portfolio investments.
- n **Currency Exchange Rate Risk.** The Fund invests a significant portion of its assets in investments denominated in South African rand, or in securities that provide exposure to South African rand, currency exchange rates or interest rates denominated in South African rand. Changes in currency exchange rates and the relative value of South African rand will affect the value of the Fund's investment and the value of your Fund shares. Currency exchange rates can be very volatile and can change quickly and unpredictably. As a result, the value of an investment in the Fund may change quickly and without warning and you may lose money.

n

Edgar Filing: WisdomTree Trust - Form 497

Derivatives Investment Risk. The Fund will invest in derivatives. Derivatives are subject to a number of risks described elsewhere in this Prospectus, such as interest rate risk, market risk, and credit risk. They also involve the risk that changes in the value of a derivative may not correlate perfectly with the underlying asset, rate or index, or that the counterparty to a derivative contract might default on its obligations. Derivatives can be volatile and may be less liquid than other securities. As a result, the value of an investment in the Fund may change quickly and without warning and you may lose money.

n **Emerging Markets Risk.** Investments in securities and instruments traded in developing or emerging markets, or that provide exposure to such securities or markets, can involve additional risks relating to political, economic, or regulatory conditions not associated with investments in U.S. securities and instruments or investments in more developed international markets. For example, developing or emerging market governments may, without prior warning, impose capital controls on the ability to transfer currency, securities or other assets. The Fund's ability to access certain developing or emerging markets also may be limited due to a variety of factors, including currency convertibility issues.

Table of Contents

Such conditions may impact the ability of the Fund to buy, sell or otherwise transfer securities or currency, cause the Fund's returns to differ from those available to domestic investors, adversely affect the trading market and price for Fund shares, and cause the Fund to decline in value.

- n **Foreign Securities Risk.** The Fund invests a significant portion of its assets in non-U.S. securities and instruments, or in securities that provide exposure to such instruments. Investments in non-U.S. securities and instruments involve certain risks that may not be present with investments in U.S. securities, including the risk of loss due to foreign currency fluctuations or to political or economic instability.

- n **Geographic Concentration in South Africa.** Because the Fund concentrates its investments in South Africa, the Fund's performance is expected to be closely tied to social, political, and economic conditions within South Africa and will be more volatile than the performance of more geographically diversified funds. Although South Africa is a developing country with a solid economic infrastructure, certain issues, such as unemployment, access to health care, limited economic opportunity, and other financial constraints, continue to present obstacles to full economic development. Additionally, the South African economy is sensitive to fluctuations in commodity prices and commodity markets. These and other factors could have a negative impact on the Fund's performance and increase the volatility of an investment in the Fund.

- n **Interest Rate Risk.** Interest rate risk is the risk that fixed income securities will decline in value because of changes in interest rates and other factors, such as perception of an issuer's creditworthiness.

- n **Issuer-Specific Risk.** Issuer-specific events, including changes in the financial condition of an issuer, can have a negative impact on the value of the Fund.

- n **Management Risk.** The Fund is actively managed using proprietary investment strategies and processes. There can be no guarantee that these strategies and processes will be successful or that the Fund will achieve its investment objective.

- n **Non-Diversification Risk.** The Fund is considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. To the extent the Fund invests a significant percentage of its assets in a limited number of issuers, the Fund is subject to the risks of investing in those few issuers, and may be more susceptible to a single adverse economic or regulatory occurrence. As a result, changes in the market value of a single security could cause greater fluctuations in the value of Fund shares than would occur in a diversified fund.

- n **Repurchase Agreement Risk.** The Fund's investment in repurchase agreements may be subject to market and credit risk with respect to the collateral securing the repurchase agreements. Investments in repurchase agreements also may be subject to the risk that the market value of the underlying obligations may decline prior to the expiration of the repurchase agreement term.

Fund Performance

Historical Fund performance, which varies over time, can provide an indication of the risks of investing in the Fund. The bar chart that follows shows the annual total returns of the Fund for each full calendar year since the Fund commenced operations. The table that follows the bar chart shows the Fund's average annual total returns, both before and after taxes. The table also shows how the Fund's performance compares to the JPMorgan Emerging Markets Index Plus South Africa, a relevant broad-based securities index. Index returns do not reflect deductions for fees, expenses or taxes. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after taxes) is not necessarily an indication of how the Fund will perform in the future.

The Fund's year-to-date total return as of September 30, 2011 was (14.62)%.

Investment Adviser and Sub-Adviser

WisdomTree Asset Management, Inc. serves as the investment adviser to the Fund. The Dreyfus Corporation serves as the sub-adviser to the Fund.

Portfolio Managers

David C. Kwan, a Managing Director, Fixed Income, has been a portfolio manager of the Fund since its inception.

Zandra Zelaya, CFA, a Director, Fixed Income, has been a portfolio manager of the Fund since its inception.

Buying and Selling Fund Shares

The Fund is an ETF. This means that shares of the Fund are listed on a national securities exchange, such as NYSE Arca, Inc., and trade at market prices. Most investors will buy and sell shares of the Fund through brokers. Because Fund shares trade at market prices rather than NAV, shares may trade at a price greater than NAV (premium) or less than NAV (discount).

The Fund issues and redeems shares at NAV only in large blocks of shares (Creation Units), which only institutions or large investors may purchase or redeem. Currently, Creation Units generally consist of 100,000 shares, though this may change from time to time. Creation Units are not expected to consist of less than 50,000 shares. The Fund generally issues and redeems Creation Units in exchange for a portfolio of money market securities closely approximating the holdings of the Fund or a designated basket of non-U.S. currency and/or an amount of U.S. cash.

Tax Information

The Fund intends to make distributions that may be taxed as ordinary income or capital gains.

Table of Contents**WisdomTree Asia Local Debt Fund****Investment Objective**

The Fund seeks a high level of total return consisting of both income and capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses you may pay if you buy and hold shares of the Fund. The fees are expressed as a percentage of the Fund's average net assets.

Shareholder Fees	None
(fees paid directly from your investment)	
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.55%
Distribution and/or Service (12b-1) Fees	None
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.55%

Example

The following example is intended to help retail investors compare the cost of investing in the Fund with the cost of investing in other funds. It illustrates the hypothetical expenses that such investors would incur over various periods if they invest \$10,000 in the Fund for the time periods indicated and then redeem all of the shares at the end of those periods. This example assumes that the Fund provides a return of 5% a year and that operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

	1 Year	3 Years	5 Years	10 Years
	\$56	\$176	\$307	\$689

Investors may pay brokerage commissions on their purchases and sales of Fund shares, which are not reflected in the example.

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or turns over its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in Annual Fund Operating Expenses or in the Example, affect the Fund's performance.

Principal Investment Strategies of the Fund

The Fund seeks to achieve its investment objective through investment in Local Debt denominated in the currencies of a broad range of Asian countries. Under normal circumstances, the Fund will invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in Local Debt. For these purposes, Local Debt includes fixed income securities, such as bonds, notes or other debt obligations, denominated in local currencies of countries in Asia, as well as certain derivatives and other instruments described herein. The Fund is an actively managed exchange traded fund (ETF).

The Fund intends to focus its investments on bonds and other debt instruments issued by governments (national, state, and local), government agencies and instrumentalities, and government sponsored enterprises. The Fund also may invest in Local Debt issued by supranational organizations such as the European Investment Bank, Asian Development Bank, International Bank for Reconstruction and Development or

Edgar Filing: WisdomTree Trust - Form 497

International Finance Corporation, and development agencies supported by other national governments. The Fund may invest in corporate bonds economically tied to Asian countries. The Fund also may invest in inflation-linked fixed income securities denominated in Asian currencies.

The Fund intends to provide exposure to the developing/emerging market economies in Asia. Specifically, the Fund intends to invest in Local Debt primarily from South Korea, Indonesia, Malaysia, Singapore, Hong Kong, China, India, Thailand, Philippines, and Taiwan. The Fund is permitted to invest in developed market economies, such as Australia and New Zealand. This list may change based on market developments. The Fund uses a structured investment approach that analyzes multiple factors. Countries are grouped into differentiated tiers based on an analysis of these factors. Subject to the Fund's general investment requirement to provide broad country exposure within the region, the Fund generally invests a higher percentage of its assets in countries that have larger and more liquid debt markets and that the Fund's adviser believes are pursuing sustainable fiscal and monetary policies in light of economic and market conditions. The country exposures are

Table of Contents

consistently monitored from a risk perspective and may be modified, reduced or eliminated. The Fund's exposure to any single country generally will be limited to 20% of the Fund's assets. The percentage of Fund assets invested in a specific region, country or issuer will change from time to time.

The universe of Local Debt currently includes securities that are rated investment grade as well as non-investment grade. The Fund intends to provide a broad-based exposure to Local Debt and therefore will invest in both investment grade and non-investment grade securities. Securities rated investment grade generally are considered to be of higher credit quality and subject to lower default risk. Although securities rated below investment grade may offer the potential for higher yields, they generally are subject to a higher potential risk of loss.

The Fund attempts to limit interest rate risk by maintaining an aggregate portfolio duration of between two and eight years under normal market conditions. Aggregate portfolio duration is important to investors as an indication of the Fund's sensitivity to changes in interest rates. Funds with higher durations generally are subject to greater interest rate risk. An aggregate portfolio duration of between two and eight years generally would be considered intermediate. The Fund's actual portfolio duration may be longer or shorter depending on market conditions. The Fund may also invest in short-term money market securities denominated in the currencies of countries in which the Fund invests.

For purposes of the 80% investment policy described above, Local Debt includes investments in derivatives such as forward currency contracts and swaps. The Fund's use of forward contracts and swaps will be underpinned by investments in short-term, high-quality U.S. money market securities and is designed to provide exposure similar to investments in local currency debt. The Fund does not use derivatives to enhance leverage. A forward contract is an agreement to buy or sell a specific currency at a future date at a price set at the time of the contract. A swap is an agreement between two parties to exchange payments based on a reference asset, which may be a currency or rate, but also may be a single asset, a pool of assets or an index of assets. The Fund also may enter into repurchase agreements designed to result in a fixed rate of return for the Fund insulated from market fluctuations during the holding period. The Fund will enter into repurchase agreements with counterparties that are deemed to present acceptable credit risks. A repurchase agreement is a transaction in which the Fund purchases securities or other obligations from a bank or securities dealer and simultaneously commits to resell them to a counterparty at an agreed-upon date or upon demand and at a price reflecting a market rate of interest unrelated to the coupon rate or maturity of the purchased obligations. A futures contract may generally be described as an agreement for the future sale by one party and the purchase by another of a specified security or instrument at a specified price and time. The Fund may invest in interest rate and other futures contracts listed for trading on exchanges in Asia. Assets not invested in Local Debt generally will be invested in investment grade U.S. government securities and money market instruments. The Fund may invest up to 20% of its assets in debt instruments denominated in U.S. dollars issued by Asian governments and government sponsored enterprises.

The decision to secure exposure through direct investment in bonds or indirectly through derivative transactions will be a function of, among other things, market accessibility, credit exposure, tax ramifications and regulatory requirements applicable to U.S. investment companies. If, subsequent to an investment, the 80% requirement is no longer met, the Fund's future investments will be made in a manner that will bring the Fund into compliance with this policy. The Trust will provide shareholders with sixty (60) days' prior notice of any change to this policy for the Fund. In addition, under normal circumstances, the Fund will invest at least 70% of its assets in Fixed Income Securities. Fixed Income Securities include debt instruments, such as bonds, notes and other obligations, denominated in Asian currencies or U.S. dollars; Fixed Income Securities do not include derivatives.

Principal Risks of Investing in the Fund

You can lose money on your investment in the Fund. The Fund is subject to the risks described below. Some or all of these risks may adversely affect the Fund's net asset value per share (NAV), trading price, yield, total return and/or ability to meet its objectives.

- n **Investment Risk.** As with all investments, an investment in the Fund is subject to investment risk. Investors in the Fund could lose money, including the possible loss of the entire principal amount of an investment, over short or long periods of time.
- n **Market Risk.** The trading prices of currencies, fixed income securities and other instruments fluctuate in response to a variety of factors. The Fund's NAV and market price may fluctuate significantly in response to these factors. As a result, an investor could lose money over short or long periods of time.

Edgar Filing: WisdomTree Trust - Form 497

n **Shares of the Fund May Trade at Prices Other Than NAV.** Although it is expected that the market price of the shares of the Fund will approximate the Fund's NAV when purchased and sold in the secondary market, there may be times when the market price of the shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). This risk is heightened in times of market volatility or periods of steep market declines.

Table of Contents

- n **Cash Redemption Risk.** Unlike most ETFs, the Fund's investment strategy will require it to effect redemptions, in whole or in part, for cash. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used exclusively.

- n **Counterparty and Issuer Credit Risk.** The financial condition of an issuer of a debt security or other instrument or a counterparty to a derivative or other contract may cause such issuer or counterparty to default, become unable to pay interest or principal due or otherwise fail to honor its obligations. While the Fund attempts to limit credit and counterparty exposure in a manner consistent with its investment objective, the value of an investment in the Fund may change quickly and without warning in response to issuer or counterparty defaults and changes in the credit ratings of the Fund's portfolio investments.

- n **Currency Exchange Rate Risk.** The Fund invests a significant portion of its assets in investments denominated in non-U.S. currencies, or in securities that provide exposure to such currencies, currency exchange rates or interest rates denominated in such currencies. Changes in currency exchange rates and the relative value of non-U.S. currencies will affect the value of the Fund's investment and the value of your Fund shares. Currency exchange rates can be very volatile and can change quickly and unpredictably. As a result, the value of an investment in the Fund may change quickly and without warning and you may lose money.

- n **Derivatives Investment Risk.** The Fund will invest in derivatives. Derivatives are subject to a number of risks described elsewhere in this Prospectus, such as interest rate risk, market risk, and credit risk. They also involve the risk that changes in the value of a derivative may not correlate perfectly with the underlying asset, rate or index, or that the counterparty to a derivative contract might default on its obligations. Derivatives can be volatile and may be less liquid than other securities. As a result, the value of an investment in the Fund may change quickly and without warning and you may lose money.

- n **Emerging Markets Risk.** Investments in securities and instruments traded in developing or emerging markets, or that provide exposure to such securities or markets, can involve additional risks relating to political, economic, or regulatory conditions not associated with investments in U.S. securities and instruments or investments in more developed international markets. For example, developing or emerging market governments may, without prior warning, impose capital controls on the ability to transfer currency, securities or other assets. The Fund's ability to access certain developing or emerging markets also may be limited due to a variety of factors, including currency convertibility issues. Such conditions may impact the ability of the Fund to buy, sell or otherwise transfer securities or currency, cause the Fund's returns to differ from those available to domestic investors, adversely affect the trading market and price for Fund shares, and cause the Fund to decline in value.

- n **Foreign Securities Risk.** The Fund invests a significant portion of its assets in non-U.S. securities and instruments, or in securities that provide exposure to such instruments. Investments in non-U.S. securities and instruments involve certain risks that may not be present with investments in U.S. securities, including the risk of loss due to foreign currency fluctuations or to political or economic instability.

- n **High Yield Securities Risk.** Higher yielding, high risk debt securities, sometimes referred to as junk bonds, may present additional risk because these securities may be less liquid and present more credit risk than investment grade bonds. The price of high yield securities tends to be more susceptible to issuer-specific operating results and outlook and to real or perceived adverse economic and competitive industry conditions.

- n **Interest Rate Risk.** Interest rate risk is the risk that fixed income securities will decline in value because of changes in interest rates and other factors, such as perception of an issuer's creditworthiness.

- n **Investment in Asia Risk.** The Fund's investments will have significant exposure to Asia. As a result, the Fund will be susceptible to loss due to adverse market, political, regulatory, and geographic events affecting that region. A variety of factors, including currency devaluations, may impact the ability of the Fund to buy, sell or otherwise transfer securities, adversely affect the trading market and price for Fund shares and cause the Fund to decline in value.

Edgar Filing: WisdomTree Trust - Form 497

- n **Issuer-Specific Risk.** Issuer-specific events, including changes in the financial condition of an issuer, can have a negative impact on the value of the Fund.

- n **Management Risk.** The Fund is actively managed using proprietary investment strategies and processes. There can be no guarantee that these strategies and processes will be successful or that the Fund will achieve its investment objective.

- n **Non-Diversification Risk.** The Fund is considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. To the extent the Fund invests a significant percentage of its assets in a limited number of issuers, the Fund is subject to the risks of investing

34 WisdomTree Trust Prospectus

Table of Contents

in those few issuers, and may be more susceptible to a single adverse economic or regulatory occurrence. As a result, changes in the market value of a single security could cause greater fluctuations in the value of Fund shares than would occur in a diversified fund.

n **Repurchase Agreement Risk.** The Fund's investment in repurchase agreements may be subject to market and credit risk with respect to the collateral securing the repurchase agreements. Investments in repurchase agreements also may be subject to the risk that the market value of the underlying obligations may decline prior to the expiration of the repurchase agreement term.

n **Sovereign Debt Risk.** Bonds issued by governments, sometimes referred to as sovereign debt, present risks not associated with investments in other types of bonds. The government or agency issuing the debt may be unable or unwilling to make interest payments and/or repay the principal owed. In such instance, the Fund may have limited recourse against the issuing government or agency. In the past, governments of emerging market countries have refused to honor their payment obligations on issued bonds.

Fund Performance

The Fund commenced operations on March 17, 2011, and therefore does not have performance history for a full calendar year. Once the Fund has completed a full calendar year of operations, a bar chart and table will be included that will provide some indication of the risks of investing in the Fund by showing the variability of the Fund's return based on net assets and comparing the Fund's performance to a broad measure of market performance.

Management

Investment Adviser and Sub-Adviser

WisdomTree Asset Management, Inc. serves as the investment adviser to the Fund. Mellon Capital Management Corporation serves as the sub-adviser to the Fund.

Portfolio Managers

David C. Kwan, a Managing Director, Fixed Income, has been a portfolio manager of the Fund since its inception.

Lisa Mears O'Connor, a Managing Director, Fixed Income, has been a portfolio manager of the Fund since its inception.

Buying and Selling Fund Shares

The Fund is an ETF. This means that shares of the Fund are listed on a national securities exchange, such as NYSE Arca, Inc., and trade at market prices. Most investors will buy and sell shares of the Fund through brokers. Because Fund shares trade at market prices rather than NAV, shares may trade at a price greater than NAV (premium) or less than NAV (discount).

The Fund issues and redeems shares at NAV only in large blocks of shares (Creation Units), which only institutions or large investors may purchase or redeem. Currently, Creation Units generally consist of 100,000 shares, although this may change from time to time. The Fund generally issues and redeems Creation Units in exchange for a portfolio of fixed income securities closely approximating the holdings of the Fund or a designated basket of non-U.S. currency and/or an amount of U.S. cash.

Tax Information

The Fund intends to make distributions that may be taxed as ordinary income or capital gains.

Table of Contents**WisdomTree Australia & New Zealand Debt Fund****(Formerly, WisdomTree Dreyfus New Zealand Dollar Fund)****Investment Objective**

The Fund seeks a high level of total return consisting of both income and capital appreciation.

Fees and Expenses of the Fund

The following table describes the fees and expenses you may pay if you buy and hold shares of the Fund. The fees are expressed as a percentage of the Fund's average net assets.

Shareholder Fees	None
(fees paid directly from your investment)	
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.45%
Distribution and/or Service (12b-1) Fees	None
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.45%

Example

The following example is intended to help retail investors compare the cost of investing in the Fund with the cost of investing in other funds. It illustrates the hypothetical expenses that such investors would incur over various periods if they invest \$10,000 in the Fund for the time periods indicated and then redeem all of the shares at the end of those periods. This example assumes that the Fund provides a return of 5% a year and that operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

	1 Year	3 Years	5 Years	10 Years
	\$ 46	\$ 144	\$ 252	\$ 567

Investors may pay brokerage commissions on their purchases and sales of fund shares, which are not reflected in the example.

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or turns over its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in Annual Fund Operating Expenses or in the Example, affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was less than 1% of the average value of its portfolio, excluding the value of portfolio securities received or delivered as a result of in-kind creations or redemptions of the Fund's capital shares. Due to the change in the Fund's objective and style effective October 25, 2011, the Fund will likely experience portfolio turnover in the future.

Principal Investment Strategies of the Fund

The Fund attempts to achieve its investment objective through investment in Debt Securities denominated in Australian or New Zealand dollars. Under normal circumstances, the Fund will invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in Debt Securities. For these purposes, Debt Securities include fixed income securities, such as bonds, notes or other debt obligations, denominated in Australian or New Zealand dollars, as well as certain derivatives and other instruments described herein. The Fund is an actively managed

Edgar Filing: WisdomTree Trust - Form 497

exchange traded fund (ETF).

The Fund intends to focus its investments on bonds and other debt instruments denominated in Australian and New Zealand dollars issued by governments (national, state and local), government agencies and instrumentalities, government-sponsored enterprises and supranational organizations. For these purposes, supranational organizations include entities such as the European Investment Bank, International Bank for Reconstruction and Development, International Finance Corporation, and other regional development banks. The Fund also may invest in Debt Securities of corporate issuers, although this is not expected to be a focus of the Fund.

The Fund is designed to provide broad exposure to Debt Securities of issuers in Australia and New Zealand. The Fund uses a structured investment approach to allocate its investments between countries (Australia and New Zealand) and sectors (government debt, semi-government debt, supranational organizations). Government debt refers to Debt Securities issued by the Commonwealth of Australia or New Zealand and its various agencies, instrumentalities and government-sponsored enterprises. Semi-government debt refers to Debt Securities issued by the local, state and territory governments of Australia

36 WisdomTree Trust Prospectus

Table of Contents

and New Zealand, typically to finance local infrastructure and operations. As noted, supranational organizations include entities such as the International Bank for Reconstruction and Development and other regional development banks. The Fund's exposure to Australia and New Zealand is based on the relative gross domestic product, or GDP, of each country. Since Australia's economy is much larger than New Zealand's, the Fund's exposure to Australia generally will be higher than its exposure to New Zealand. The Fund invests in three sectors: government debt, semi-government debt and debt of supranational organizations. For purposes of this sector analysis, corporate issuers are included within the category of supranational organizations. The Fund's exposure to each sector is assessed relative to an equal-weighted baseline (e.g., 1/3 each). Sector exposures may be tilted within a narrow range around this baseline in order to take advantage of potential opportunities to enhance risk-adjusted return. The Fund's exposures to each country, sector and individual issuer are monitored from a risk perspective. The percentage of the Fund's assets invested in a specific country, sector or issuer may change, depending on market conditions, as agreed upon by the investment adviser and investment sub-adviser.

The universe of Debt Securities in which the Fund may invest includes securities that are rated investment grade as well as non-investment grade. Securities rated investment grade generally are considered to be of higher credit quality and subject to lower default risk. Although securities rated below investment grade may offer the potential for higher yields, they generally are subject to a higher potential risk of loss.

The Fund attempts to limit interest rate risk by maintaining an aggregate portfolio duration of between three and seven years under normal market conditions. Aggregate portfolio duration is important to investors as an indication of the Fund's sensitivity to changes in interest rates. Funds with higher durations generally are subject to greater interest rate risk. An aggregate portfolio duration of between three and seven years generally would be considered to be intermediate. The Fund's actual portfolio duration may be longer or shorter depending upon market conditions. The Fund may also invest in short-term money market securities denominated in local currencies.

For purposes of the 80% investment policy described above, Debt Securities also include investments in derivatives such as forward currency contracts and swaps. The Fund's use of forward contracts and swaps will be underpinned by investments in short-term, high-quality U.S. money market securities and is designed to provide exposure similar to investments in locally denominated debt. A forward currency contract is an agreement to buy or sell a specific currency at a future date at a price set at the time of the contract. A swap is an agreement between two parties to exchange payments based on a reference asset, which may be a currency or interest rate but also may be a single asset, a pool of assets or an index of assets. The Fund also may enter into repurchase agreements with counterparties that are deemed to present acceptable credit risks. A repurchase agreement is a transaction in which the Fund purchases securities or other obligations from a bank or securities dealer and simultaneously commits to resell them to a counterparty at an agreed-upon date or upon demand and at a price reflecting a market rate of interest unrelated to the coupon rate or maturity of the purchased obligations. Assets not invested in locally denominated debt generally will be invested in investment grade U.S. government securities and money market instruments. The Fund may invest up to 20% of its assets in debt instruments denominated in U.S. dollars issued by the Australian or New Zealand government, government agencies, corporations, regional development banks and supranational issuers.

The decision to secure exposure through direct investment in bonds or indirectly through derivative transactions will be a function of, among other things, market accessibility, credit exposure, tax ramifications and regulatory requirements applicable to U.S. investment companies. If, subsequent to an investment, the 80% requirement is no longer met, the Fund's future investments will be made in a manner that will bring the Fund into compliance with this policy. The Trust will provide shareholders with sixty (60) days prior written notice of any change to this policy for the Fund.

Principal Risks of Investing in the Fund

You can lose money on your investment in the Fund. The Fund is subject to the risks described below. Some or all of these risks may adversely affect the Fund's net asset value per share (NAV), trading price, yield, total return and/or ability to meet its objective.

- n **Investment Risk.** As with all investments, an investment in the Fund is subject to investment risk. Investors in the Fund could lose money, including the possible loss of the entire principal amount of an investment, over short or long periods of time.
- n **Market Risk.** The trading prices of currencies, fixed income securities and other instruments fluctuate in response to a variety of factors. The Fund's NAV and market price may fluctuate significantly in response to these factors. As a result, an investor could lose money over short or long periods of time.

Edgar Filing: WisdomTree Trust - Form 497

n **Shares of the Fund May Trade at Prices Other Than NAV.** Although it is expected that the market price of the shares of the Fund will approximate the Fund's NAV when purchased and sold in the secondary market, there may be times when the market price of the shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). This risk is heightened in times of market volatility or periods of steep market declines.

Table of Contents

- n **Cash Redemption Risk.** Unlike most ETFs, the Fund's investment strategy will require it to effect redemptions, in whole or in part, for cash. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used exclusively.

- n **Counterparty and Issuer Credit Risk.** The financial condition of an issuer of a debt security or other instrument or a counterparty to a derivative or other contract may cause such issuer or counterparty to default, become unable to pay interest or principal due or otherwise fail to honor its obligations. While the Fund attempts to limit credit and counterparty exposure in a manner consistent with its investment objective, the value of an investment in the Fund may change quickly and without warning in response to issuer or counterparty defaults and changes in the credit ratings of the Fund's portfolio investments.

- n **Currency Exchange Rate Risk.** The Fund invests a significant portion of its assets in investments denominated in Australian and New Zealand dollars, or in securities that provide exposure to Australian and New Zealand dollars, currency exchange rates or interest rates denominated in Australian and New Zealand dollars. Changes in currency exchange rates and the relative value of Australian and New Zealand dollars will affect the value of the Fund's investment and the value of your Fund shares. Currency exchange rates can be very volatile and can change quickly and unpredictably. As a result, the value of an investment in the Fund may change quickly and without warning and you may lose money.

- n **Derivatives Investment Risk.** The Fund may invest in derivatives. Derivatives are subject to a number of risks described elsewhere in this Prospectus, such as interest rate risk, market risk, and credit risk. They also involve the risk that changes in the value of a derivative may not correlate perfectly with the underlying asset, rate or index, or that the counterparty to a derivative contract might default on its obligations. Derivatives can be volatile and may be less liquid than other securities. As a result, the value of an investment in the Fund may change quickly and without warning and you may lose money.

- n **Foreign Securities Risk.** The Fund invests a significant portion of its assets in non-U.S. securities and instruments, or in securities that provide exposure to such securities and instruments. Investments in non-U.S. securities and instruments involve certain risks that may not be present with investments in U.S. securities, including the risk of loss due to foreign currency fluctuations or to political or economic instability.

- n **Geographic Concentration in Australia and New Zealand.** Because the Fund concentrates its investments in Australia and New Zealand, the Fund's performance is expected to be closely tied to social, political, and economic conditions within these countries and to be more volatile than the performance of more geographically diversified funds. The economies of Australia and New Zealand are both heavily dependent on the demand for commodity exports, including agricultural products. As a result, both economies are particularly vulnerable to international commodity prices and global economic slowdowns. These and other factors could have a negative impact on the Fund's performance and increase the volatility of an investment in the Fund.

- n **High Yield Securities Risk.** Higher yielding, high risk debt securities, sometimes referred to as junk bonds, may present additional risk because these securities may be less liquid and present more credit risk than investment grade bonds. The price of high yield securities tends to be more susceptible to issuer-specific operating results and outlook and to real or perceived adverse economic and competitive industry conditions.

- n **Interest Rate Risk.** Interest rate risk is the risk that fixed income securities will decline in value because of changes in interest rates and other factors, such as perception of an issuer's creditworthiness.

- n **Management Risk.** The Fund is actively managed using proprietary investment strategies and processes. There can be no guarantee that these strategies and processes will be successful or that the Fund will achieve its investment objective.

Edgar Filing: WisdomTree Trust - Form 497

n **Non-Diversification Risk.** The Fund is considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. To the extent the Fund invests a significant percentage of its assets in a limited number of issuers, the Fund is subject to the risks of investing in those few issuers, and may be more susceptible to a single adverse economic or regulatory occurrence. As a result, changes in the market value of a single security could cause greater fluctuations in the value of Fund shares than would occur in a diversified fund.

Table of Contents**Fund Performance**

Historical Fund performance, which varies over time, can provide an indication of the risks of investing in the Fund. The bar chart that follows shows the annual total returns of the Fund for each full calendar year since the Fund commenced operations. The table that follows the bar chart shows the Fund's average annual total returns, both before and after taxes. The table also shows how the Fund's performance compares to the BofA Merrill Lynch New Zealand Dollar One-Month LIBID Constant Maturity Index, a relevant broad-based securities index. Index returns do not reflect deductions for fees, expenses or taxes. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after taxes) is not necessarily an indication of how the Fund will perform in the future.

The Fund's name and objective changed effective October 25, 2011. Fund performance prior to October 25, 2011 reflects the investment objective and style of the Fund when it was the WisdomTree Dreyfus New Zealand Dollar Fund and focused on short-term, New Zealand dollar-denominated money market instruments.

The Fund's year-to-date total return as of September 30, 2011 was (0.46)%.

Best and Worst Quarter Returns (for the period reflected in the bar chart above)

	Return	Quarter/Year
Highest Return	14.19%	2/09
Lowest Return	(2.55)%	2/10

After-tax returns are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your tax situation and may differ from those shown. After-tax returns shown are not relevant to investors who hold their Fund shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts. In some cases the return after taxes may exceed the return before taxes due to an assumed tax benefit from any losses on a sale of Fund shares at the end of the measurement period.

Average Annual Total Returns for the periods ending December 31, 2010

	1 Year	Since Inception
		(6/25/2008)
WisdomTree Australia & New Zealand Debt Fund		
Return Before Taxes Based on NAV	9.94%	4.67%
Return After Taxes on Distributions	8.64%	3.27%
Return After Taxes on Distributions and Sale of Fund Shares	7.10%	3.50%
BofA Merrill Lynch New Zealand Dollar One-Month LIBID Constant Maturity Index*		
(Reflects no deduction for fees, expenses or taxes)	10.34%	5.38%

* As a result of the merger completed on January 2, 2009 between Bank of America and Merrill Lynch, all references to Merrill Lynch will now be replaced by BofA Merrill Lynch when referring to the Fund's respective performance benchmarks.

Management**Investment Adviser and Sub-Adviser**

WisdomTree Asset Management, Inc. serves as the investment adviser to the Fund. The Dreyfus Corporation serves as the sub-adviser to the Fund.

Table of Contents

Portfolio Managers

David C. Kwan, a Managing Director, Fixed Income, has been a portfolio manager of the Fund since its inception.

Zandra Zelaya, CFA, a Director, Fixed Income, has been a portfolio manager of the Fund since its inception.

Buying and Selling Fund Shares

The Fund is an ETF. This means that shares of the Fund are listed on a national securities exchange, such as NYSE Arca, Inc., and trade at market prices. Most investors will buy and sell shares of the Fund through brokers. Because Fund shares trade at market prices rather than NAV, shares may trade at a price greater than NAV (premium) or less than NAV (discount).

The Fund issues and redeems shares at NAV only in large blocks of shares (Creation Units), which only institutions or large investors may purchase or redeem. Currently, Creation Units generally consist of 100,000 shares, though this may change from time to time. Creation Units are not expected to consist of less than 50,000 shares. The Fund generally issues and redeems Creation Units in exchange for a portfolio of fixed income securities closely approximating the holdings of the Fund or a designated basket of non-U.S. currency and/or an amount of U.S. cash.

Tax Information

The Fund intends to make distributions that may be taxed as ordinary income or capital gains.

Table of Contents**WisdomTree Emerging Markets Local Debt Fund****Investment Objective**

The Fund seeks a high level of total return consisting of both income and capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses you may pay if you buy and hold shares of the Fund. The fees are expressed as a percentage of the Fund's average net assets.

Shareholder Fees	None
(fees paid directly from your investment)	
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.55%
Distribution and/or Service (12b-1) Fees	None
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.55%
Example	

The following example is intended to help retail investors compare the cost of investing in the Fund with the cost of investing in other funds. It illustrates the hypothetical expenses that such investors would incur over various periods if they invest \$10,000 in the Fund for the time periods indicated and then redeem all of the shares at the end of those periods. This example assumes that the Fund provides a return of 5% a year and that operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

	1 Year	3 Years	5 Years	10 Years
	\$56	\$176	\$307	\$689

Investors may pay brokerage commissions on their purchases and sales of Fund shares, which are not reflected in the example.

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or turns over its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in Annual Fund Operating Expenses or in the Example, affect the Fund's performance.

Principal Investment Strategies of the Fund

The Fund attempts to achieve its investment objective through investment in Local Debt denominated in the currencies of emerging market countries. Under normal circumstances, the Fund will invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in Local Debt. For these purposes, Local Debt includes fixed income securities, such as bonds, notes or other debt obligations denominated in local currencies of emerging market countries, as well as other instruments described herein. The Fund is an actively managed exchange traded fund (ETF).

The Fund is designed to provide exposure to Local Debt of issuers from a broad range of emerging market regions and countries. The Fund intends to focus its investment on fixed income securities issued by emerging market governments, government agencies, and corporations. The Fund also may invest in fixed income securities denominated in an emerging market currency and issued by supranational organizations, such as

Edgar Filing: WisdomTree Trust - Form 497

the European Investment Bank, International Bank for Reconstruction and Development, International Finance Corporation, or other regional development banks. The Fund also may invest in debt securities linked to inflation rates outside the U.S., including securities or instruments linked to rates in emerging market countries.

The Fund intends to provide exposure across several geographic regions and countries. The Fund intends to invest in Local Debt from the following regions: Asia, Latin America, Eastern Europe, Africa and the Middle East. Within these regions, the Fund is likely to invest in countries such as: Brazil, Chile, Colombia, Hungary, Indonesia, Malaysia, Mexico, Peru, Philippines, Poland, Russia, South Africa, South Korea, Thailand and Turkey. This list may change based on market developments. The Fund uses a structured investment approach that analyzes multiple factors. Countries are grouped into differentiated tiers based on an analysis of these factors. Subject to the Fund's general investment requirement to provide broad regional and country exposure, the Fund generally invests a higher percentage of its assets in countries that have larger

Table of Contents

and more liquid debt markets and that the Fund's adviser believes are pursuing sustainable fiscal and monetary policies in light of economic and market conditions. The country exposures are consistently monitored from a risk perspective and may be modified, reduced or eliminated. The Fund's exposure to any single country generally will be limited to 20% of the Fund's assets. The percentage of Fund assets invested in a specific region, country or issuer will change from time to time.

The universe of emerging markets local currency debt currently includes securities that are rated investment grade as well as non-investment grade. The Fund intends to provide a broad-based exposure to emerging market debt and therefore will invest in both investment grade and non-investment grade securities. Securities rated investment grade generally are considered to be of higher credit quality and subject to lower default risk. Although securities rated below investment grade may offer the potential for higher yields, they generally are subject to a higher potential risk of loss.

The Fund attempts to limit interest rate risk by maintaining an aggregate portfolio duration of between two and eight years under normal market conditions. Aggregate portfolio duration is important to investors as an indication of the Fund's sensitivity to changes in interest rates. Funds with higher durations generally are subject to greater interest rate risk. An aggregate portfolio duration of between two and eight years generally would be considered to be intermediate. The Fund's actual portfolio duration may be longer or shorter depending upon market conditions. The Fund may also invest in short-term money market securities denominated in the currencies of countries in which the Fund invests.

For purposes of the 80% investment policy described above, Local Debt includes investments in derivatives such as forward currency contracts and swaps. The Fund's use of forward contracts and swaps will be underpinned by investments in short-term, high-quality U.S. money market securities and is designed to provide exposure similar to investments in local currency debt. A forward currency contract is an agreement to buy or sell a specific currency at a future date at a price set at the time of the contract. A swap is an agreement between two parties to exchange payments based on a reference asset, which may be a currency or interest rate but also may be a single asset, a pool of assets or an index of assets. The Fund also may enter into repurchase agreements with counterparties that are deemed to present acceptable credit risks. A repurchase agreement is a transaction in which the Fund purchases securities or other obligations from a bank or securities dealer and simultaneously commits to resell them to a counterparty at an agreed-upon date or upon demand and at a price reflecting a market rate of interest unrelated to the coupon rate or maturity of the purchased obligations. Local Debt also includes fixed income securities denominated in an emerging market currency and issued by a supranational organization or regional development bank. Assets not invested in Local Debt generally will be invested in investment grade U.S. government securities and money market instruments. The Fund may invest up to 20% of its assets in debt instruments denominated in U.S. dollars issued by emerging market governments, government agencies, corporations, regional development banks and supranational issuers, as well as derivatives based on such instruments.

The decision to secure exposure through direct investment in bonds or indirectly through derivative transactions will be a function of, among other things, market accessibility, credit exposure, tax ramifications and regulatory requirements applicable to U.S. investment companies. If, subsequent to an investment, the 80% requirement is no longer met, the Fund's future investments will be made in a manner that will bring the Fund into compliance with this policy. The Trust will provide shareholders with sixty (60) days' prior notice of any change to this policy for the Fund.

Principal Risks of Investing in the Fund

You can lose money on your investment in the Fund. The Fund is subject to the risks described below. Some or all of these risks may adversely affect the Fund's net asset value per share (NAV), trading price, yield, total return and/or ability to meet its objectives.

- n **Investment Risk.** As with all investments, an investment in the Fund is subject to investment risk. Investors in the Fund could lose money, including the possible loss of the entire principal amount of an investment, over short or long periods of time.
- n **Market Risk.** The trading prices of currencies, fixed income securities and other instruments fluctuate in response to a variety of factors. The Fund's NAV and market price may fluctuate significantly in response to these factors. As a result, an investor could lose money over short or long periods of time.
- n **Shares of the Fund May Trade at Prices Other Than NAV.** Although it is expected that the market price of the shares of the Fund will approximate the Fund's NAV when purchased and sold in the secondary market, there may be times when the market price of the shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). This risk is heightened in times of market volatility or

periods of steep market declines.

n **Cash Redemption Risk.** Unlike most ETFs, the Fund's investment strategy will require it to effect redemptions, in whole or in part, for cash. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used exclusively.

42 WisdomTree Trust Prospectus

Table of Contents

- n **Counterparty and Issuer Credit Risk.** The financial condition of an issuer of a debt security or other instrument or a counterparty to a derivative or other contract may cause such issuer or counterparty to default, become unable to pay interest or principal due or otherwise fail to honor its obligations. While the Fund attempts to limit credit and counterparty exposure in a manner consistent with its investment objective, the value of an investment in the Fund may change quickly and without warning in response to issuer or counterparty defaults and changes in the credit ratings of the Fund's portfolio investments.

- n **Currency Exchange Rate Risk.** The Fund invests a significant portion of its assets in investments denominated in non-U.S. currencies, or in securities that provide exposure to such currencies, currency exchange rates or interest rates denominated in such currencies. Changes in currency exchange rates and the relative value of non-U.S. currencies will affect the value of the Fund's investment and the value of your Fund shares. Currency exchange rates can be very volatile and can change quickly and unpredictably. As a result, the value of an investment in the Fund may change quickly and without warning and you may lose money.

- n **Derivatives Investment Risk.** The Fund will invest in derivatives. Derivatives are subject to a number of risks described elsewhere in this Prospectus, such as credit risk, interest rate risk, and market risk. They also involve the risk that changes in the value of a derivative may not correlate perfectly with the underlying asset, rate or index. The counterparty to a derivative contract might default on its obligations. Derivatives can be volatile and may be less liquid than other securities. As a result, the value of an investment in the Fund may change quickly and without warning and you may lose money.

- n **Emerging Markets Risk.** Investments in securities and instruments traded in developing or emerging markets, or that provide exposure to such securities or markets, can involve additional risks relating to political, economic, or regulatory conditions not associated with investments in U.S. securities and instruments or investments in more developed international markets. For example, developing or emerging market governments may, without prior warning, impose capital controls on the ability to transfer currency, securities or other assets. The Fund's ability to access certain developing or emerging markets also may be limited due to a variety of factors, including currency convertibility issues. Such conditions may impact the ability of the Fund to buy, sell or otherwise transfer securities or currency, cause the Fund's returns to differ from those available to domestic investors, adversely affect the trading market and price for Fund shares, and cause the Fund to decline in value.

- n **Foreign Securities Risk.** The Fund invests a significant portion of its assets in non-U.S. securities and instruments, or in securities that provide exposure to such instruments. Investments in non-U.S. securities and instruments involve certain risks that may not be present with investments in U.S. securities, including the risk of loss due to foreign currency fluctuations or to political or economic instability.

- n **High Yield Securities Risk.** Higher yielding, high risk debt securities, sometimes referred to as junk bonds, may present additional risk because these securities may be less liquid and present more credit risk than investment grade bonds. The price of high yield securities tends to be more susceptible to issuer-specific operating results and outlook and to real or perceived adverse economic and competitive industry conditions.

- n **Interest Rate Risk.** Interest rate risk is the risk that fixed income securities will decline in value because of changes in interest rates and other factors, such as perception of an issuer's creditworthiness.

- n **Issuer-Specific Risk.** Issuer-specific events, including changes in the financial condition of an issuer, can have a negative impact on the value of the Fund.

- n **Management Risk.** The Fund is actively managed using proprietary investment strategies and processes. There can be no guarantee that these strategies and processes will be successful or that the Fund will achieve its investment objective.

Edgar Filing: WisdomTree Trust - Form 497

- n **Non-Diversification Risk.** The Fund is considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. To the extent the Fund invests a significant percentage of its assets in a limited number of issuers, the Fund is subject to the risks of investing in those few issuers, and may be more susceptible to a single adverse economic or regulatory occurrence. As a result, changes in the market value of a single security could cause greater fluctuations in the value of Fund shares than would occur in a diversified fund.

- n **Repurchase Agreement Risk.** The Fund's investment in repurchase agreements may be subject to market and credit risk with respect to the collateral securing the repurchase agreements. Investments in repurchase agreements also may be subject to the risk that the market value of the underlying obligations may decline prior to the expiration of the repurchase agreement term.

Table of Contents

Sovereign Debt Risk. Bonds issued by governments, sometimes referred to as sovereign debt, present risks not associated with investments in other types of bonds. The government or agency issuing the debt may be unable or unwilling to make interest payments and/or repay the principal owed. In such instance, the Fund may have limited recourse against the issuing government or agency. In the past, governments of emerging market countries have refused to honor their payment obligations on issued bonds.

Fund Performance

The Fund commenced operations on August 9, 2010, and therefore does not have performance history for a full calendar year. Once the Fund has completed a full calendar year of operations, a bar chart and table will be included that will provide some indication of the risks of investing in the Fund by showing the variability of the Fund's return based on net assets and comparing the Fund's performance to a broad measure of market performance.

Management

Investment Adviser and Sub-Adviser

WisdomTree Asset Management, Inc. serves as the investment adviser to the Fund. Mellon Capital Management Corporation serves as the sub-adviser to the Fund.

Portfolio Managers

David C. Kwan, a Managing Director, Fixed Income, has been a portfolio manager of the Fund since August 2010.

Lisa Mears O'Connor, a Managing Director, Fixed Income, has been a portfolio manager of the Fund since August 2010.

Buying and Selling Fund Shares

The Fund is an ETF. This means that shares of the Fund are listed on a national securities exchange, such as NYSE Arca, Inc., and trade at market prices. Most investors will buy and sell shares of the Fund through brokers. Because Fund shares trade at market prices rather than NAV, shares may trade at a price greater than NAV (premium) or less than NAV (discount).

The Fund issues and redeems shares at NAV only in large blocks of shares (Creation Units), which only institutions or large investors may purchase or redeem. Currently, Creation Units generally consist of 100,000 shares, although this may change from time to time. The Fund generally issues and redeems Creation Units in exchange for a portfolio of fixed income securities closely approximating the holdings of a Fund or a designated basket of non-U.S. currency and/or an amount of U.S. cash.

Tax Information

The Fund intends to make distributions that may be taxed as ordinary income or capital gains.

Table of Contents**WisdomTree Euro Debt Fund****(Formerly, WisdomTree Dreyfus Euro Fund)****Investment Objective**

The Fund seeks a high level of total return consisting of both income and capital appreciation.

Fees and Expenses of the Fund

The following table describes the fees and expenses you may pay if you buy and hold shares of the Fund. The fees are expressed as a percentage of the Fund's average net assets.

Shareholder Fees	None
(fees paid directly from your investment)	
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.35%
Distribution and/or Service (12b-1) Fees	None
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.35%

Example

The following example is intended to help retail investors compare the cost of investing in the Fund with the cost of investing in other funds. It illustrates the hypothetical expenses that such investors would incur over various periods if they invest \$10,000 in the Fund for the time periods indicated and then redeem all of the shares at the end of those periods. This example assumes that the Fund provides a return of 5% a year and that operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

	1 Year	3 Years	5 Years	10 Years
	\$36	\$113	\$197	\$443

Investors may pay brokerage commissions on their purchases and sales of fund shares, which are not reflected in the example.

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or turns over its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in Annual Fund Operating Expenses or in the Example, affect the Fund's performance. During the most recent fiscal year, there was no portfolio turnover for the Fund since the Fund invested in short-term securities with maturities less than or equal to 365 days, which are excluded from portfolio turnover calculations. Due to the change in the Fund's objective and style effective October 19, 2011, the Fund will likely experience portfolio turnover in the future.

Principal Investment Strategies of the Fund

The Fund attempts to achieve its investment objective through investment in Debt Securities denominated in euros. Under normal circumstances, the Fund will invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in Debt Securities. For these purposes, Debt Securities consist of fixed income securities, such as bonds, notes or other debt obligations, denominated in euros, as well as certain derivatives and other instruments described herein. The Fund is an actively managed exchange traded fund (ETF).

Edgar Filing: WisdomTree Trust - Form 497

The Fund intends to focus its investments on bonds and other debt instruments denominated in euros and issued by governments (national, state and local), government agencies and instrumentalities, government-sponsored enterprises and supranational organizations. For these purposes, supranational organizations include entities such as the European Investment Bank, International Bank for Reconstruction and Development, International Finance Corporation, or other regional development banks. The Fund also may invest in Debt Securities of corporate issuers organized in euro area countries or that have significant economic ties to euro area countries, although this is not expected to be a focus of the Fund.

The Fund is designed to provide broad exposure to Debt Securities of issuers in euro area countries. The euro area is a group of 17 members of the European Union that have adopted the euro as their common currency. The euro area currently consists of Austria, Belgium, Cyprus, Estonia, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Malta, the Netherlands, Portugal, Slovakia, Slovenia, and Spain. The Fund's exposure to the euro area countries is monitored from a risk perspective and may be modified, reduced or eliminated at any time. Initially, the Fund does not intend to invest in national, state or local debt of Ireland, Italy, Greece, Portugal, Spain, Estonia, Cyprus or Malta.

Table of Contents

The Fund will seek to concentrate its investments in higher-quality Debt Securities of issuers within the region. This currently includes sizable positions in the sovereign debt of Germany and France with attempted balanced allocations to the sovereign debt of other euro area countries as well as supranational issuers. Subject to the Fund's general investment requirement to provide broad regional and country exposure, the Fund generally invests a higher percentage of its assets in countries that have larger and more liquid debt markets. The Fund's exposure to any single country generally will be limited to 20% of the Fund's assets. The euro area countries in which the Fund invests and the percentage of Fund assets invested in a particular euro area country or issuer will change from time to time, depending on market conditions, as agreed upon by the investment adviser and investment sub-adviser.

The universe of Debt Securities in which the Fund may invest includes securities that are rated "investment grade" as well as "non-investment grade." The Fund, however, will focus its investments on investment grade securities. Securities rated investment grade generally are considered to be of higher credit quality and subject to lower default risk. Although securities rated below investment grade may offer the potential for higher yields, they generally are subject to a higher potential risk of loss.

The Fund attempts to limit interest rate risk by maintaining an aggregate portfolio duration of between three and seven years under normal market conditions. Aggregate portfolio duration is important to investors as an indication of the Fund's sensitivity to changes in interest rates. Funds with higher durations generally are subject to greater interest rate risk. An aggregate portfolio duration of between three and seven years generally would be considered to be "intermediate." The Fund's actual portfolio duration may be longer or shorter depending upon market conditions. The Fund may also invest in short-term money market securities denominated in euros.

For purposes of the 80% investment policy described above, Debt Securities includes investments in derivatives such as forward currency contracts and swaps. The Fund's use of forward contracts and swaps will be underpinned by investments in short-term, high-quality U.S. money market securities and is designed to provide exposure similar to investments in euro-denominated debt. A forward currency contract is an agreement to buy or sell a specific currency at a future date at a price set at the time of the contract. A swap is an agreement between two parties to exchange payments based on a reference asset, which may be a currency or interest rate but also may be a single asset, a pool of assets or an index of assets. The Fund also may enter into repurchase agreements with counterparties that are deemed to present acceptable credit risks. A repurchase agreement is a transaction in which the Fund purchases securities or other obligations from a bank or securities dealer and simultaneously commits to resell them to a counterparty at an agreed-upon date or upon demand and at a price reflecting a market rate of interest unrelated to the coupon rate or maturity of the purchased obligations. Assets not invested in euro-denominated debt generally will be invested in investment grade U.S. government securities and money market instruments. The Fund may invest up to 20% of its assets in debt instruments denominated in U.S. dollars issued by EU governments, government agencies, corporations, regional development banks and supranational issuers.

The decision to secure exposure through direct investment in bonds or indirectly through derivative transactions will be a function of, among other things, market accessibility, credit exposure, tax ramifications and regulatory requirements applicable to U.S. investment companies. If, subsequent to an investment, the 80% requirement is no longer met, the Fund's future investments will be made in a manner that will bring the Fund into compliance with this policy. The Trust will provide shareholders with sixty (60) days' prior written notice of any change to this policy for the Fund. In addition, under normal circumstances, the Fund will invest at least 80% of its assets in Fixed Income Securities. Fixed Income Securities include debt instruments, such as bonds, notes and other obligations, denominated in euros or U.S. dollars; Fixed Income Securities do not include derivatives.

Principal Risks of Investing in the Fund

You can lose money on your investment in the Fund. The Fund is subject to the risks described below. Some or all of these risks may adversely affect the Fund's net asset value per share (NAV), trading price, yield, total return and/or ability to meet its objective.

- n **Investment Risk.** As with all investments, an investment in the Fund is subject to investment risk. Investors in the Fund could lose money, including the possible loss of the entire principal amount of an investment, over short or long periods of time.
- n **Market Risk.** The trading prices of currencies, fixed income securities and other instruments fluctuate in response to a variety of factors. The Fund's NAV and market price may fluctuate significantly in response to these factors. As a result, an investor could lose money over short or long periods of time.

Edgar Filing: WisdomTree Trust - Form 497

n **Shares of the Fund May Trade at Prices Other Than NAV.** Although it is expected that the market price of the shares of the Fund will approximate the Fund's NAV when purchased and sold in the secondary market, there may be times when the market price of the shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). This risk is heightened in times of market volatility or periods of steep market declines.

46 WisdomTree Trust Prospectus

Table of Contents

- n **Cash Redemption Risk.** Unlike most ETFs, the Fund's investment strategy will require it to effect redemptions, in whole or in part, for cash. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used exclusively.

- n **Counterparty and Issuer Credit Risk.** The financial condition of an issuer of a debt security or other instrument or a counterparty to a derivative or other contract may cause such issuer or counterparty to default, become unable to pay interest or principal due or otherwise fail to honor its obligations. While the Fund attempts to limit credit and counterparty exposure in a manner consistent with its investment objective, the value of an investment in the Fund may change quickly and without warning in response to issuer or counterparty defaults and changes in the credit ratings of the Fund's portfolio investments.

- n **Currency Exchange Rate Risk.** The Fund invests a significant portion of its assets in investments denominated in euros, or in securities that provide exposure to euros, currency exchange rates or interest rates denominated in euros. Changes in currency exchange rates and the relative value of the euro will affect the value of the Fund's investment and the value of your Fund shares. Currency exchange rates can be very volatile and can change quickly and unpredictably. As a result, the value of an investment in the Fund may change quickly and without warning and you may lose money.

- n **Derivatives Investment Risk.** The Fund may invest in derivatives. Derivatives are subject to a number of risks described elsewhere in this Prospectus, such as interest rate risk, market risk, and credit risk. They also involve the risk that changes in the value of a derivative may not correlate perfectly with the underlying asset, rate or index, or that the counterparty to a derivative contract might default on its obligations. Derivatives can be volatile and may be less liquid than other securities. As a result, the value of an investment in the Fund may change quickly and without warning and you may lose money.

- n **Euro Investment Risk.** The Fund invests primarily in securities denominated in euros and thus has significant exposure to the euro and events affecting the euro. Recent market events affecting several of the EU member countries have adversely affected the sovereign debt issued by those countries, and ultimately may lead to a decline in the value of the euro.

- n **Foreign Securities Risk.** The Fund invests a significant portion of its assets in non-U.S. securities and instruments, or in securities that provide exposure to such securities and instruments. Investments in non-U.S. securities and instruments involve certain risks that may not be present with investments in U.S. securities, including the risk of loss due to foreign currency fluctuations or to political or economic instability.

- n **Geographic Concentration in Europe.** Because the Fund concentrates its investments in Europe, the Fund's performance is expected to be closely tied to social, political, and economic conditions within Europe and to be more volatile than the performance of more geographically diversified funds. Most developed countries in Western Europe are members of the European Union (EU), and many are also members of the European Monetary Union (EMU), which requires compliance with restrictions on inflation rates, deficits, and debt levels. Unemployment in certain European nations is historically high. In addition, the tight fiscal and monetary controls necessary to join the EMU can significantly affect every country in Europe. These and other factors could have a negative impact on the Fund's performance and increase the volatility of an investment in the Fund.

- n **High Yield Securities Risk.** Higher yielding, high risk debt securities, sometimes referred to as junk bonds, may present additional risk because these securities may be less liquid and present more credit risk than investment grade bonds. The price of high yield securities tends to be more susceptible to issuer-specific operating results and outlook and to real or perceived adverse economic and competitive industry conditions.

- n **Interest Rate Risk.** Interest rate risk is the risk that fixed income securities will decline in value because of changes in interest rates and other factors, such as perception of an issuer's creditworthiness.

Edgar Filing: WisdomTree Trust - Form 497

- n **Issuer-Specific Risk.** Issuer-specific events, including changes in the financial condition of an issuer, can have a negative impact on the value of the Fund.

- n **Management Risk.** The Fund is actively managed using proprietary investment strategies and processes. There can be no guarantee that these strategies and processes will be successful or that the Fund will achieve its investment objective.

- n **Non-Diversification Risk.** The Fund is considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. To the extent the Fund invests a significant percentage of its assets in a limited number of issuers, the Fund is subject to the risks of investing in those few issuers, and may be more susceptible to a single adverse economic or regulatory occurrence. As a result, changes in the market value of a single security could cause greater fluctuations in the value of Fund shares than would occur in a diversified fund.

Table of Contents

Repurchase Agreement Risk. The Fund's investment in repurchase agreements may be subject to market and credit risk with respect to the collateral securing the repurchase agreements. Investments in repurchase agreements also may be subject to the risk that the market value of the underlying obligations may decline prior to the expiration of the repurchase agreement term.

Fund Performance

Historical Fund performance, which varies over time, can provide an indication of the risks of investing in the Fund. The bar chart that follows shows the annual total returns of the Fund for each full calendar year since the Fund commenced operations. The table that follows the bar chart shows the Fund's average annual total returns, both before and after taxes. The table also shows how the Fund's performance compares to the BofA Merrill Lynch Euro Currency One-Month LIBID Constant Maturity Index, a relevant broad-based securities index. Index returns do not reflect deductions for fees, expenses or taxes. All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after taxes) is not necessarily an indication of how the Fund will perform in the future.

The Fund's name and objective changed effective October 19, 2011. Fund performance prior to October 19, 2011 reflects the investment objective and style of the Fund when it was the WisdomTree Dreyfus Euro Fund and focused on short-term, euro-denominated money market instruments.

The Fund's year-to-date total return as of September 30, 2011 was 0.23%.

Best and Worst Quarter Returns (for the period reflected in the bar chart above)

	Return	Quarter/Year
Highest Return	11.41%	3/10
Lowest Return	(9.47)%	2/10

After-tax returns are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Your actual after-tax returns will depend on your tax situation and may differ from those shown. After-tax returns shown are not relevant to investors who hold their Fund shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts. In some cases the return after taxes may exceed the return before taxes due to an assumed tax benefit from any losses on a sale of Fund shares at the end of the measurement period.

Average Annual Total Returns for the periods ending December 31, 2010

WisdomTree Euro Debt Fund	1 Year	Since Inception (5/14/2008)
Return Before Taxes Based on NAV	(6.47)%	(4.39)%
Return After Taxes on Distributions	(6.47)%	(4.72)%
Return After Taxes on Distributions and Sale of Fund Shares	(4.21)%	(3.89)%
BofA Merrill Lynch Euro Currency One-Month LIBID Constant Maturity Index*		
(Reflects no deduction for fees, expenses or taxes)	(6.10)%	(3.73)%

* As a result of the merger completed on January 2, 2009 between Bank of America and Merrill Lynch, all references to Merrill Lynch will now be replaced by BofA Merrill Lynch when referring to the Fund's respective performance benchmarks.

Table of Contents

Management

Investment Adviser and Sub-Adviser

WisdomTree Asset Management, Inc. serves as the investment adviser to the Fund. The Dreyfus Corporation serves as the sub-adviser to the Fund.

Portfolio Managers

David C. Kwan, a Managing Director, Fixed Income, has been a portfolio manager of the Fund since its inception.

Zandra Zelaya, CFA, a Director, Fixed Income, has been a portfolio manager of the Fund since its inception.

Buying and Selling Fund Shares

The Fund is an ETF. This means that shares of the Fund are listed on a national securities exchange, such as NYSE Arca, Inc., and trade at market prices. Most investors will buy and sell shares of the Fund through brokers. Because Fund shares trade at market prices rather than NAV, shares may trade at a price greater than NAV (premium) or less than NAV (discount).

The Fund issues and redeems shares at NAV only in large blocks of shares (Creation Units), which only institutions or large investors may purchase or redeem. Currently, Creation Units generally consist of 100,000 shares, though this may change from time to time. Creation Units are not expected to consist of less than 50,000 shares. The Fund generally issues and redeems Creation Units in exchange for a portfolio of fixed income securities closely approximating the holdings of the Fund or a designated basket of non-U.S. currency and/or an amount of U.S. cash.

Tax Information

The Fund intends to make distributions that may be taxed as ordinary income or capital gains.

Table of Contents

Additional Information About the Funds

Additional Investment Objective Information. Each Fund's investment objective has been adopted as a non-fundamental investment policy and may be changed without a vote of shareholders upon at least 60 days' prior written notice to shareholders.

Additional Information About the Funds' Strategies. The Funds may invest in a variety of swap agreements, including interest rate swaps, inflation-linked swaps, total return swaps, and currency swaps. A swap is an agreement between two parties to exchange payments based on a reference asset, which may be a currency or interest rate, but also may be a single asset, a pool of assets or an index of assets. A currency swap is an agreement between two parties to exchange one currency for another at a future rate. An interest rate swap typically involves the exchange of one interest rate payment for another, such as a floating interest rate payment for a fixed payment. An inflation-linked swap is an agreement between two parties to exchange payments at a future date based on the difference between a fixed payment and a payment linked to the inflation rate at a future date. A total return swap is an agreement between two parties in which one party agrees to make payments of the total return of a reference asset in return for payments equal to a rate of interest on another reference asset.

Temporary Defensive Strategies. Each Fund reserves the right to invest in U.S. government securities, money market instruments, and cash, without limitation, as determined by the Adviser or Sub-Adviser in response to adverse market, economic, political, or other conditions. Each Fund also may hedge or minimize its exposure to one or more foreign currencies in response to such conditions. In the event that a Fund engages in temporary defensive strategies that are inconsistent with its investment strategies, the Fund's ability to achieve its investment objective may be limited.

Additional Information About the Asia Local Debt Fund's, Australia & New Zealand Debt Fund's Emerging Markets Local Debt Fund's and Euro Debt Fund's Strategies. The Funds intend to provide a broad-based exposure to local currency debt and therefore will invest in both investment grade and non-investment grade securities. The degree of credit risk for a particular security may be reflected in its credit rating. Debt instruments rated investment grade generally are subject to less credit risk than non-investment grade instruments. The Funds generally do not expect to have more than 25% of their assets invested in non-investment grade securities. Within the non-investment grade category, some issuers and instruments are considered to be of lower credit quality and at higher risk of default. Although these instruments offer the potential for higher yields, they are considered speculative and generally are subject to a higher potential risk of loss. The Funds will limit their exposure to speculative issuers and securities to no more than 15% of its assets. For these purposes, speculative securities are securities rated B or below by Moody's, or equivalently rated by S&P or Fitch, or, if unrated, determined by WisdomTree Asset Management to be of comparable quality. However, this may change from time to time based on market conditions and the condition of specific issuers and securities.

Additional Risk Information About the Funds

This section provides additional information regarding the principal risks described under "Principal Risks of Investing in the Fund" in the Fund Summaries. Risk information may not be applicable to each Fund. Please consult the Fund Summaries sections to determine which risks are applicable to a particular Fund.

Capital Controls Risk. Economic conditions, such as volatile currency exchange rates and interest rates, political events and other conditions may, without prior warning, lead to intervention by non-U.S. governments and the imposition of capital controls. Capital controls include the prohibition of, or restrictions on, the ability to transfer currency, securities or other assets. Levies may be placed on profits repatriated by foreign entities (such as the Fund). Capital controls may impact the ability of a Fund to buy, sell or otherwise transfer securities or currency, adversely affect the trading market and price for shares of the Fund, and cause the Fund to decline in value.

Counterparty Risk. Each Fund intends to engage in investment transactions or enter into derivative or other contracts with third parties (i.e., counterparties). For example, the Funds intend to enter into forward currency contracts and swap transactions. A Fund bears the risk that the counterparty to such contracts may default on its obligations or otherwise fail to honor its obligations. If a counterparty defaults on its payment obligations the Fund will lose money and the value of an investment in Fund shares may decrease. In addition, the Funds may engage in such investment transactions with a limited number of counterparties, which may increase the Funds' exposure to counterparty credit risk. Listed futures contracts can be traded on futures exchanges without material counterparty credit. After a trade is cleared, the exchange is the ultimate counterparty for all contracts, so the counterparty risk on a listed futures contract ultimately is the creditworthiness of the exchange's clearing corporation.

Cash Redemption Risk. Each Fund's investment strategy will require it to redeem shares for cash or to otherwise include cash as part of its redemption proceeds. The Funds may be required to sell or unwind portfolio investments in order to obtain the cash needed to distribute redemption proceeds. This may cause a Fund to recognize capital gains that it might not have recognized if it had made a redemption in-kind. As a result, the Funds may pay out higher annual capital gain distributions than if the in-kind redemption process was used.

Edgar Filing: WisdomTree Trust - Form 497

Commodity Country Risk. The Commodity Currency Fund invests a significant portion of its assets in investments designed to provide exposure to both the currencies and money market rates available to foreign investors in selected

50 WisdomTree Trust Prospectus

Table of Contents

commodity-producing countries. As the demand for, or price of, such commodities increases, money tends to flow into the country. This generally lifts the country's economic prospects and supports the value of its currency. Conversely, declines in the demand for, or value of, such commodities historically have contributed to declines in the relative value of these countries' currencies. Such declines may occur quickly and without warning and may negatively impact the value of the Commodity Currency Fund and your investment.

Credit Risk. The financial condition of an issuer of a debt security or other issuer may cause it to default or become unable to pay interest or principal due on the security. A Fund cannot collect interest and principal payments on a security if the issuer defaults. Recent events in the financial sector have resulted in increased concerns about credit risk and exposure. Well-known financial institutions have experienced significant liquidity and other problems and have defaulted on their debt. The degree of credit risk for a particular debt security or other issuer may be reflected in its credit rating. A credit rating is a measure of a bond issuer's ability to make timely payments of interest and principal. Rating agencies (such as Moody's Investors Service, Inc., Standard & Poor's Corporation, or Fitch) assign letter designations typically ranging from AAA to A- (lower default risk) through CCC to C (higher default risk) or D (in default). A credit rating of BBB or higher generally is considered investment grade. Credit ratings are subjective, do not remove market risk, and represent the opinions of the rating agencies as to the quality of the securities they rate. Credit ratings can change quickly and may not accurately reflect the risk of an issuer. Generally, investment risk and price volatility increase as the credit rating of a security declines. While each Fund attempts to limit credit exposure in a manner consistent with its respective investment objective, the value of an investment in a Fund may change quickly and without warning in response to issuer defaults and changes in the credit ratings of the Fund's portfolio investments.

Currency Exchange Rate Risk. Each Fund invests a significant portion of its assets in investments denominated in non-U.S. currencies, or in securities that provide exposure to such currencies, currency exchange rates or interest rates denominated in such currencies. Changes in currency exchange rates and the relative value of non-U.S. currencies will affect the value of a Fund's investment and the value of the Fund shares. Because a Fund's NAV is determined on the basis of U.S. dollars, the U.S. dollar value of your investment in a Fund may go down if the value of the local currency of the non-U.S. markets in which the Fund invests depreciates against the U.S. dollar. This is true even if the local currency value of securities in a Fund's holdings goes up. Conversely, the dollar value of your investment in a Fund may go up if the value of the local currency appreciates against the U.S. dollar.

The value of the U.S. dollar measured against other currencies is influenced by a variety of factors. These factors include interest rates, national debt levels and trade deficits, changes in balances of payments and trade, domestic and foreign interest and inflation rates, global or regional political, economic or financial events, monetary policies of governments, actual or potential government intervention, and global energy prices. Political instability, the possibility of government intervention and restrictive or opaque business and investment policies may also reduce the value of a country's currency. Government monetary policies and the buying or selling of currency by a country's government may also influence exchange rates. Currency exchange rates can be very volatile and can change quickly and unpredictably. As a result, the value of an investment in a Fund may change quickly and without warning and you may lose money.

Derivatives Investment Risk. Each Fund may invest in derivatives. Derivatives are financial instruments that derive their performance from an underlying asset, index, interest rate or currency exchange rate, such as forward currency contracts, futures contracts and currency, interest rate swaps, total return swaps, and credit-linked notes. A forward currency contract is an agreement to buy or sell a specific currency at a future date at a price set at the time of the contract. A non-deliverable forward currency contract is a contract where there is no physical settlement of two currencies at maturity. Rather, based on the movement of the currencies, a net cash settlement will be made by one party to the other. A futures contract is a standardized contract traded on a recognized exchange in which two parties agree to exchange either a specified financial asset or the cash equivalent of said asset of standardized quantity and quality for a price agreed upon today (the future price or the strike price) with delivery occurring at a specified future date. A currency swap is an agreement between two parties to exchange one currency for another at a future rate. An interest rate swap involves the exchange of a floating interest rate payment for a fixed interest payment. A total return swap is an agreement between two parties in which one party agrees to make payments of the total return of a reference asset in return for payments equal to a rate of interest on another reference asset. A credit-linked note is a type of structured note whose value is linked to an underlying reference asset or entity. Credit-linked notes typically provide periodic payments of interest as well as payment of principal upon maturity. Derivatives are subject to a number of risks described elsewhere in this Prospectus, such as credit risk, interest rate risk, and market risk. They also involve the risk that changes in the value of a derivative may not correlate perfectly with the underlying asset, rate or index. The counterparty to a derivative contract might default on its obligations. Derivatives can be volatile and may be less liquid than other securities. As a result, the value of an investment in a Fund may change quickly and without warning and you may lose money.

Emerging Markets Risk. Investments in securities and instruments traded in developing or emerging markets or that provide exposure to such securities or markets, can involve additional risks relating to political, economic, or regulatory conditions not associated with investments in U.S. securities and instruments. For example, developing and emerging markets may be subject to (i) greater market volatility, (ii) lower trading volume and liquidity, (iii) greater social, political and economic uncertainty, (iv) governmental controls on foreign investments and limitations on repatriation of invested capital, (v) lower disclosure, corporate governance, auditing and financial reporting standards, (vi) fewer protections of property rights,

Table of Contents

(vii) restrictions on the transfer of securities or currency, and (viii) settlement and trading practices that differ from U.S. markets. Each of these factors may impact the ability of each Fund (except for the Japanese Yen Fund, Australia & New Zealand Debt Fund, and Euro Debt Fund) to buy, sell or otherwise transfer securities, adversely affect the trading market and price for Fund shares, and cause the Fund to decline in value.

Euro Investment Risk. The Euro Debt Fund invests primarily in securities denominated in euros, the official currency of the European Union (EU), and thus has significant exposure to the euro and events affecting the euro. Recent market events affecting several of the EU member countries have adversely affected the sovereign debt issued by those countries, and ultimately may lead to a decline in the value of the euro. A significant decline in the value of the euro may produce unpredictable effects on trade and commerce generally and could lead to increased volatility in financial markets worldwide. The adviser and sub-adviser closely monitor the value of the euro and events that may adversely affect the value of the euro, and will make changes to the Fund's investment program to the extent necessary to seek to mitigate any adverse effects on the Fund.

Foreign Securities Risk. Each Fund invests a significant portion of its assets in non-U.S. securities and instruments, or in securities that provide exposure to such securities and instruments. Investments in non-U.S. securities and instruments involve certain risks that may not be present with investments in U.S. securities. For example, investments in non-U.S. securities may be subject to risk of loss due to foreign currency fluctuations or to political or economic instability. There may be less information publicly available about a non-U.S. issuer than a U.S. issuer. Non-U.S. issuers may be subject to different accounting, auditing, financial reporting and investor protection standards than U.S. issuers. Investments in non-U.S. securities may be subject to withholding or other taxes and may be subject to additional trading, settlement, custodial, and operational risks. With respect to certain countries, there is the possibility of government intervention and expropriation or nationalization of assets. Because legal systems differ, there is also the possibility that it will be difficult to obtain or enforce legal judgments in certain countries.

High Yield Securities Risk. Each Fixed Income Fund may invest a limited portion of its assets in securities rated lower than Baa by Moody's, or equivalently rated by S&P or Fitch. Such securities are sometimes referred to as high yield securities or junk bonds. Investing in these securities involves special risks in addition to the risks associated with investments in higher-rated fixed income securities. While offering a greater potential for capital appreciation and higher yields, high yield securities typically entail higher price volatility and may be less liquid than securities with higher ratings. High yield securities may be regarded as predominately speculative with respect to the issuer's continuing ability to meet principal and interest payments. Issuers of securities in default may fail to resume principal or interest payments, in which case the Funds may lose their entire investment.

Geographic Concentration in Japan. Because the Japanese Yen Fund concentrates its investments in Japan, the Fund's performance is expected to be closely tied to social, political, and economic conditions within Japan and to be more volatile than the performance of more geographically diversified funds. Economic growth in Japan is heavily dependent on international trade, government support, and consistent government policy. Slowdowns in the economies of key trading partners such as the United States, China and countries in Southeast Asia could have a negative impact on the Japanese economy as a whole. These and other factors could have a negative impact on the Fund's performance and increase the volatility of an investment in the Fund.

Investment in Asia Risk. The Asia Local Debt Fund's investments will have significant exposure to Asia. The Commodity Currency Fund, Emerging Currency Fund, and Emerging Markets Local Debt Fund also may have significant exposure to Asia. As a result, the Funds will be susceptible to loss due to adverse market, political, regulatory, and geographic events affecting that region. While certain Asian economies are exemplars of growth and development others have been and continue to be subject, to some extent, to over-extension of credit, currency devaluations and restrictions, high unemployment, high inflation, decreased exports and economic recessions. Each of these factors may impact the ability of the Funds to buy, sell or otherwise transfer securities, adversely affect the trading market and price for Fund shares and cause the Funds to decline in value.

Interest Rate Risk. The market value of fixed income securities, and financial instruments related to fixed income securities, will change in response to changes in interest rates and may change in response to other factors, such as perception of an issuer's creditworthiness. As interest rates rise, the value of certain fixed income securities is likely to decrease. Similarly, if interest rates decline, the value of fixed income securities is likely to increase. While securities with longer maturities tend to produce higher yields, the prices of longer maturity securities tend to be more sensitive to changes in interest rates and thus subject to greater volatility than securities with shorter maturities. The average portfolio maturity of a Fund is the average of all the current maturities of the individual securities in the Fund's portfolio. Average portfolio maturity is important to investors as an indication of the Fund's sensitivity to changes in interest rates. Funds with longer portfolio maturities generally are subject to greater interest rate risk.

Investment Risk. As with all investments, an investment in the Funds is subject to investment risk. Investors in the Funds could lose money, including the possible loss of the entire principal amount of an investment, over short or long periods of time. An investment in the Funds is not a bank deposit and it is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.

Edgar Filing: WisdomTree Trust - Form 497

Issuer-Specific Risk. Changes in the financial condition of an issuer or counterparty, changes in specific economic or political conditions that affect a particular type of security or issuer, and changes in general economic or political conditions can affect a security's or instrument's value. The value of securities of smaller, less well-known issuers can be more volatile than that of larger issuers. Issuer-specific events can have a negative impact on the value of the Funds.

52 WisdomTree Trust Prospectus

Table of Contents

Low Interest Rate Risk. Financial crisis, recession, and deflation could contribute to declines in U.S. and international interest rates. Recent events in the financial sector have resulted, and may continue to result, in downward pressure on interest rates and returns on money market instruments and other investments. If this continues to occur, rates may decline to levels where the interest earned by the Japanese Yen Fund's investments limits the Fund's ability to make distributions or becomes insufficient to cover the expenses of the Fund. In these circumstances, the Fund may need to use available cash or sell securities out of the Fund to compensate for this shortfall. In addition, in order to invest in higher quality, more liquid investments, the Fund may need to accept lower returns on investment. These circumstances could cause a decline in the NAV of the Fund, could have negative tax consequences and could cause investors to lose money.

Market Risk. The trading prices of currencies, fixed income securities and other instruments fluctuate in response to a variety of factors. These factors include events impacting the entire market or specific market segments, such as political, market and economic developments, as well as events that impact specific issuers. A Fund's NAV and market price, like security and commodity prices generally, may fluctuate significantly in response to these and other factors. As a result, an investor could lose money over short or long periods of time.

Management Risk. The Funds are actively managed using proprietary investment strategies and processes. There can be no guarantee that these strategies and processes will produce the intended results and no guarantee that the Funds will achieve their investment objective or outperform other investment strategies over the short- or long-term market cycles.

Non-Diversification Risk. Although the Funds intend to invest in a variety of securities and instruments, the Funds will be considered to be non-diversified, which means that they may invest more of their assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. As a result, the Funds may be more exposed to the risks associated with and developments affecting an individual issuer or a smaller number of issuers than a fund that invests more widely. This may increase a Fund's volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund's performance.

Offshore Investor Risk. The opportunity for offshore investors, such as the Funds, to access certain markets can be limited due to a variety of factors including government regulations, adverse tax treatment, and currency convertibility issues. These limitations and restrictions may impact the availability, liquidity and pricing of securities designed to provide offshore investors with exposure to such markets. As a result, returns achieved by offshore investors, such as the Funds, could differ from those available to domestic investors in the selected countries.

Repurchase Agreement Risk. The Funds will enter into repurchase agreements only with counterparties that are deemed to present acceptable credit risks, and the collateral securing the repurchase agreements generally will be limited to U.S. government securities and cash. If the market value of the underlying obligations of a repurchase agreement declines, the counterparty must provide additional collateral so that at all times the value of the collateral is greater than the repurchase price of the underlying obligations. Nonetheless, should a counterparty become insolvent or otherwise default, there could be a delay before a Fund is able to liquidate the collateral, which would subject the collateral and the Fund to market risk during that period.

Shares of the Funds May Trade at Prices Other Than NAV. As with all ETFs, Fund shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of the shares of each Fund will approximate the Fund's NAV, there may be times when the market price and the NAV vary significantly. Thus, you may pay more (or less) than NAV intra-day when you buy shares of a Fund in the secondary market, and you may receive more (or less) than NAV when you sell those shares in the secondary market.

Sovereign Debt Risk. The Fund's investments in sovereign debt, which includes securities issued or guaranteed by a foreign sovereign government, present risks not associated with investments in other types of bonds. The issuer of the sovereign debt that controls the repayment of the debt may be unable or unwilling to repay principal or interest payments when due, and the Funds may have limited recourse against the issuing government or agency in the event of a default. During periods of economic uncertainty, the market prices of sovereign debt, and a Fund's NAV, may be more volatile than prices of U.S. bonds. In the past, governments of certain emerging market countries have encountered difficulties in servicing their debt obligations, withheld payments of principal and interest, refused to honor their payment obligations on their sovereign debt, and restructured their indebtedness. The restructuring of sovereign debt may involve obtaining additional credit to finance outstanding obligations and the reduction or rescheduling of payments of interest and principal. As a holder of such sovereign debt, the Funds may be asked to participate in the restructuring of such sovereign indebtedness. There can be no assurance that such restructurings will result in the full repayment of the issuer's sovereign debt.

Portfolio Holdings Information

Information about the Funds' daily portfolio holdings is available at www.wisdomtree.com. In addition, each Fund discloses its complete portfolio holdings as of the end of its fiscal year (August 31) and its second fiscal quarter (February 28) in its reports to shareholders. Each Fund files its complete portfolio holdings as of the end of its first and third fiscal quarters (November 30 and May 31, respectively) with the SEC on

Edgar Filing: WisdomTree Trust - Form 497

Form N-Q no later than 60 days after the relevant fiscal period. You can find the SEC filings on the SEC's website, www.sec.gov. A summarized description of the Funds' policies and procedures with respect to the disclosure of the Funds' portfolio holdings is available in the Trust's Statement of Additional Information (SAI).

WisdomTree Trust Prospectus **53**

Table of Contents**Management****Investment Adviser**

As investment adviser, WisdomTree Asset Management, Inc. (WisdomTree Asset Management) has overall responsibility for the general management and administration of the Trust. WisdomTree Investments, Inc. (WisdomTree Investments) is the parent company of WisdomTree Asset Management. WisdomTree Asset Management provides an investment program for each Fund. WisdomTree Asset Management also arranges for sub-advisory, transfer agency, custody, fund administration, and all other non-distribution related services necessary for the Funds to operate.

For the fiscal year ended August 31, 2011, the Funds paid advisory fees to WisdomTree Asset Management in the following amounts:

Name of Fund	Management Fee
WisdomTree Dreyfus Brazilian Real Fund	0.45%
WisdomTree Dreyfus Chinese Yuan Fund	0.45%
WisdomTree Dreyfus Commodity Currency Fund	0.55%
WisdomTree Dreyfus Emerging Currency Fund	0.55%
WisdomTree Dreyfus Indian Rupee Fund	0.45%
WisdomTree Dreyfus Japanese Yen Fund	0.35%
WisdomTree Dreyfus South African Rand Fund	0.45%
WisdomTree Asia Local Debt Fund	0.55%
WisdomTree Australia & New Zealand Debt Fund	0.45%
WisdomTree Emerging Markets Local Debt Fund	0.55%
WisdomTree Euro Debt Fund	0.35%

Under the Investment Advisory Agreement for each Fund, WisdomTree Asset Management agrees to pay all expenses of each Fund, except compensation and expenses of the Independent Trustees, counsel to the Independent Trustees and the Trust's Chief Compliance Officer (CCO), interest expenses and taxes, brokerage expenses and other expenses connected with the execution of portfolio transactions, any distribution fees or expenses, legal fees or expenses and extraordinary expenses. Pursuant to a separate contractual arrangement, WisdomTree Asset Management arranges for the provision of CCO services with respect to each Fund, and is liable and responsible for, and administers payments to the CCO, the Independent Trustees and counsel to the Independent Trustees. WisdomTree Asset Management receives a fee of up to 0.0044% of each Fund's assets for providing such services and paying such expenses. WisdomTree Asset Management provides CCO services to the Trust.

The basis for the Board of Trustees' approval of the Funds' Investment Advisory Agreement is available in the Trust's Annual Report to Shareholders for the period ending August 31, 2011.

WisdomTree Asset Management is a registered investment adviser with offices located at 380 Madison Avenue, 21st Floor, New York, NY 10017 and is a leader in ETF management.

Sub-Advisers

The sub-adviser to the Funds (except for the WisdomTree Asia Local Debt Fund and WisdomTree Emerging Markets Local Debt Fund) is The Dreyfus Corporation (Dreyfus). Dreyfus was founded in 1947 and is located at 200 Park Avenue, New York, New York 10166. As of November 30, 2011, Dreyfus had assets under management totaling approximately \$398 billion. Dreyfus is a wholly-owned indirect subsidiary of The Bank of New York Mellon (BNY Mellon).

The sub-adviser to the WisdomTree Asia Local Debt Fund and WisdomTree Emerging Markets Local Debt Fund is Mellon Capital Management Corporation (Mellon Capital). Mellon Capital is a leading innovator in the investment industry and manages global quantitative-based investment strategies for institutional and private investors. As of November 30, 2011, Mellon Capital had assets under management totaling approximately \$214 billion, including overlay strategies and assets managed as dual employees of BNY Mellon and Dreyfus. Mellon Capital is a wholly-owned indirect subsidiary of BNY Mellon. Mellon Capital is a registered investment adviser with offices located at 50 Fremont Street, San Francisco, CA 94105.

Edgar Filing: WisdomTree Trust - Form 497

Dreyfus is responsible for the day-to-day management of each Fund (except for the WisdomTree Asia Local Debt Fund and WisdomTree Emerging Markets Local Debt Fund) and Mellon Capital is responsible for the day-to-day management of the WisdomTree Asia Local Debt Fund and WisdomTree Emerging Markets Local Debt Fund. The sub-advisers choose each Fund's portfolio investments and place orders to buy and sell the Fund's portfolio investments.

54 WisdomTree Trust Prospectus

Table of Contents

WisdomTree Asset Management pays Dreyfus a fee equal to one-half of the fee paid to WisdomTree Asset Management for providing advisory services to each Fund (except for the WisdomTree Asia Local Debt Fund and WisdomTree Emerging Markets Local Debt Fund). WisdomTree Asset Management pays Mellon Capital a fee equal to one-half of the fee paid to WisdomTree Asset Management for providing advisory services to the WisdomTree Emerging Markets Local Debt Fund, and a fee of up to 0.15% of the WisdomTree Asia Local Debt Fund's net assets for providing sub-advisory services to the Fund. This fee is reduced if certain asset thresholds are met.

The basis for the Board of Trustees' approval of the Funds' Investment Sub-Advisory Agreements is available in the Trust's Annual Report to Shareholders for the period ended August 31, 2011.

WisdomTree Asset Management, as the investment adviser for the Funds, may hire one or more sub-advisers to oversee the day-to-day activities of the Funds. The sub-advisers are subject to oversight by WisdomTree Asset Management. WisdomTree Asset Management and the Trust have obtained an exemptive order from the SEC that permits WisdomTree Asset Management, with the approval of the Independent Trustees of the Trust, to retain unaffiliated investment sub-advisers for the WisdomTree Asia Local Debt Fund, WisdomTree Commodity Currency Fund and WisdomTree Emerging Markets Local Debt Fund without submitting the sub-advisory agreement to a vote of the Fund's shareholders. The Trust will notify shareholders in the event of any change in the identity of such sub-adviser or sub-advisers. WisdomTree Asset Management has ultimate responsibility for the investment performance of the Funds due to its responsibility to oversee each sub-adviser and recommend their hiring, termination and replacement. WisdomTree Asset Management is not required to disclose fees paid to any sub-adviser retained pursuant to the order.

Portfolio Managers

Each sub-adviser utilizes teams of investment professionals acting together to manage the assets of each Fund. The teams meet regularly to review portfolio holdings and to discuss purchase and sale activity. The teams adjust holdings in each Fund's portfolio as they deem appropriate in the pursuit of the Fund's investment objective.

The individual members of the team who are primarily responsible for the day-to-day management of each Fund's portfolio (except WisdomTree Asia Local Debt Fund and WisdomTree Emerging Markets Local Debt Fund) are listed below.

David C. Kwan has been a Managing Director of Mellon Capital since 2000. He has also been the Head of the Fixed Income Management Group since 1994. Mr. Kwan has direct oversight responsibility for the management of each Fund. He received his M.B.A. from the University of California at Berkeley in 1990. Mr. Kwan has 20 years of investment experience.

Zandra Zelaya, CFA, has been a Director, Fixed Income, at Mellon Capital since November 2009. From November 2007 to November 2009 she was a Vice President, Fixed Income, at Mellon Capital. Ms. Zelaya joined Mellon Capital in 1997 as a fixed income associate. Throughout the years she has held various positions in the Fixed Income Management Group including Senior Portfolio Manager from 2002 to 2006 and Assistant Vice President from 2006 to November 2007. Ms. Zelaya has attained the Chartered Financial Analyst (CFA) designation. She graduated with a B.S. from California State University, Hayward. Ms. Zelaya has 15 years of investment experience.

Mr. Kwan and Ms. Zelaya manage the Funds in their capacity as dual employees of The Dreyfus Corporation. Mr. Kwan and Ms. Zelaya have been employees of Dreyfus since 2005. Each Portfolio Manager has managed each Fund since inception.

The individual members of the team who are primarily responsible for the day-to-day management of the WisdomTree Asia Local Debt Fund and WisdomTree Emerging Markets Local Debt Fund are listed below.

David C. Kwan has been a Managing Director of Mellon Capital since 2000. He has also been the Head of the Fixed Income Management Group since 1994. Mr. Kwan has direct oversight responsibility for the management of the Funds. He received his M.B.A. from the University of California at Berkeley in 1990. Mr. Kwan has 21 years of investment experience and has been managing the Fund since its inception.

Lisa Mears O'Connor, CFA, has been a Managing Director of Mellon Capital since 2010. She manages Mellon Capital's active fixed income team. Ms. Mears O'Connor has direct oversight responsibility for the Funds. She received her M.B.A. from the University of California at Berkeley in 2002. Ms. Mears O'Connor attained the Chartered Financial Analyst (CFA) designation in 1998. Ms. Mears O'Connor has over 18 years of investment experience and has been managing the Fund since its inception.

The Trust's SAI provides additional information about the Portfolio Managers' compensation, other accounts managed by the Portfolio Managers, and the Portfolio Managers' ownership of shares in the Funds for which they are Portfolio Managers.

Additional Information on Buying and Selling Shares

Most investors will buy and sell shares of the Funds through brokers. Shares of the Funds trade on national securities exchanges and elsewhere during the trading day and can be bought and sold throughout the trading day like other shares of publicly traded securities. When buying or selling shares through a broker, most investors will incur customary brokerage commissions and charges. Shares of the Funds trade under the trading symbols listed on the cover of this Prospectus and in each Fund's Summary section.

Share Trading Prices

As with other types of securities, the trading prices of shares in the secondary market can be affected by market forces such as supply and demand, economic conditions and other factors. The price you pay or receive when you buy or sell your shares in the secondary market may be more or less than the NAV of such shares.

The approximate value of shares of each Fund is disseminated every 15 seconds throughout the trading day by the national securities exchange on which such Fund is listed or by other information providers. This approximate value should not be viewed as a real time update of the NAV, because the approximate value may not be calculated in the same manner as the NAV, which is computed once per day. The approximate value generally is determined by using amortized cost for securities with remaining maturities of 60 days or less, current market quotations and/or price quotations obtained from broker-dealers that may trade in the portfolio securities held by the Funds. The Funds are not involved in, or responsible for, the calculation or dissemination of the approximate value and make no warranty as to its accuracy.

Determination of Net Asset Value

The NAV of each Fund's shares is calculated each day the New York Stock Exchange is open for trading as of the close of regular trading, generally 4:00 p.m., New York time. NAV per share is calculated by dividing a Fund's net assets by the number of Fund shares outstanding.

In calculating its NAV, each Fund generally values its assets on the basis of market quotations, last sale prices, or estimates of value furnished by a pricing service or brokers who make markets in such instruments. Debt obligations with maturities of 60 days or less are valued at amortized cost, which approximates fair value.

Fair value pricing is used by the Funds when reliable market valuations are not readily available or are not deemed to reflect current market values. For these purposes, a price based on amortized cost is considered a market valuation. Securities that may be valued using fair value pricing may include, but are not limited to, securities for which there are no current market quotations or whose issuer is in default or bankruptcy, securities subject to corporate actions (such as mergers or reorganizations), securities subject to non-U.S. investment limits or currency controls, and securities affected by significant events. An example of a significant event is an event occurring after the close of the market in which a security trades but before a Fund's next NAV calculation time that may materially affect the value of a Fund's investment (e.g., government action, natural disaster, or significant market fluctuation). When fair-value pricing is employed, the prices of securities used by a Fund to calculate its NAV may differ from quoted or published prices for the same securities.

Transactions in Fund shares will be priced at NAV only if you purchase or redeem shares directly from a Fund in Creation Units. Fund shares are purchased or sold on a national securities exchange at market prices, which may be higher or lower than NAV.

Dividends and Distributions

The Australia & New Zealand Debt Fund and the Euro Debt Fund intend to pay out dividends on a monthly basis. The Japanese Yen Fund intends to pay out dividends on a quarterly basis. Each of the Brazilian Real Fund, Chinese Yuan Fund, Commodity Currency Fund, Emerging Currency Fund, Indian Rupee Fund, and South African Rand Fund intend to pay out dividends on an annual basis.

Each Fund intends to distribute its net realized capital gains, if any, to investors annually. The Funds may occasionally be required to make supplemental distributions at some other time during the year. Distributions in cash may be reinvested automatically in additional whole shares only if the broker through whom you purchased shares makes such option available. Your broker is responsible for distributing the income and capital gain distributions to you.

Book Entry

Edgar Filing: WisdomTree Trust - Form 497

Shares of the Funds are held in book-entry form, which means that no stock certificates are issued. The Depository Trust Company (DTC) or its nominee is the record owner of all outstanding shares of each Fund.

Investors owning shares of the Funds are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all shares of the Funds. Participants include DTC, securities brokers and dealers, banks, trust companies, clearing corporations, and other institutions that directly or indirectly maintain a custodial relationship with

56 WisdomTree Trust Prospectus

Table of Contents

DTC. As a beneficial owner of shares, you are not entitled to receive physical delivery of stock certificates or to have shares registered in your name, and you are not considered a registered owner of shares. Therefore, to exercise any right as an owner of shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any securities that you hold in book entry or street name form. Your broker will provide you with account statements, confirmations of your purchases and sales, and tax information.

Delivery of Shareholder Documents Householding

Householding is an option available to certain investors of the Funds. Householding is a method of delivery, based on the preference of the individual investor, in which a single copy of certain shareholder documents can be delivered to investors who share the same address, even if their accounts are registered under different names. Householding for the Funds is available through certain broker-dealers. If you are interested in enrolling in householding and receiving a single copy of prospectuses and other shareholder documents, please contact your broker-dealer. If you are currently enrolled in householding and wish to change your householding status, please contact your broker-dealer.

Frequent Purchases and Redemptions of Fund Shares

The Funds have adopted policies and procedures with respect to frequent purchases and redemptions of Creation Units of Fund shares. Since the Funds are ETFs, only a few institutional investors (known as Authorized Participants) are authorized to purchase and redeem shares directly with the Funds. Because purchase and redemption transactions with Authorized Participants are an essential part of the ETF process and help keep ETF trading prices in line with NAV, each Fund accommodates frequent purchases and redemptions of Creation Units by Authorized Participants. Frequent purchases and redemptions for cash may increase portfolio transaction costs and may lead to realization of capital gains. Frequent in-kind creations and redemptions do not give rise to these concerns. Each Fund reserves the right to reject any purchase order at any time. Each Fund reserves the right to impose restrictions on disruptive, excessive, or short-term trading and may reject purchase orders in such instances.

Investments by Registered Investment Companies

Section 12(d)(1) of the Investment Company Act of 1940 restricts investments by registered investment companies in the securities of other investment companies, including shares of each Fund. Registered investment companies are permitted to invest in the Funds beyond the limits set forth in section 12(d)(1), subject to certain terms and conditions set forth in an SEC exemptive order issued to the WisdomTree Trust, including that such investment companies enter into an agreement with the Funds.

Table of Contents

Additional Tax Information

The following discussion is a summary of some important U.S. federal income tax considerations generally applicable to investments in the Funds. Your investment in a Fund may have other tax implications. Please consult your tax advisor about the tax consequences of an investment in Fund shares, including the possible application of foreign, state and local tax laws.

Each Fund intends to qualify each year as a regulated investment company. A regulated investment company is not subject to tax at the fund level on income and gains from investments that are distributed to shareholders. However, a Fund's failure to qualify as a regulated investment company would result in fund-level taxation, and consequently, a reduction in income available for distribution to shareholders.

Unless your investment in shares is made through a tax-exempt entity or tax-deferred retirement account, such as an individual retirement account, you need to be aware of the possible tax consequences when:

- n A Fund makes distributions,
- n You sell shares, and
- n You purchase or redeem Creation Units (for institutional investors only).

Taxes on Distributions

For federal income tax purposes, distributions of investment income are generally taxable as ordinary income. Taxes on distributions of capital gains (if any) are determined by how long a Fund owned the investments that generated them, rather than how long a shareholder has owned his or her Fund shares. Distributions of net capital gains (the excess of net long-term capital gains from the sale of investments that a Fund owned for more than one year over net short-term capital losses) that are properly designated by the Fund as capital gain dividends (Capital Gain Dividends) will be taxable as long-term capital gains. Long-term capital gain rates have been temporarily reduced in general, to 15% with lower rates applying to taxpayers in the 10% and 15% rate brackets for taxable years beginning before January 1, 2013. Distributions of gains from the sale of investments that a Fund owned for one year or less will be taxable as ordinary income.

For taxable years beginning before January 1, 2013, distributions of investment income designated by a Fund as derived from qualified dividend income are taxed at the rates applicable to long-term capital gains, provided holding period and other requirements are met at both the shareholder and the Fund level. The Funds do not, however, expect a significant portion of their distributions to be derived from qualified dividend income. Distributions are taxable even if they are paid from income or gains earned by a Fund before your investment (and thus were included in the price you paid for your shares).

For taxable years beginning on or after January 1, 2013, U.S. individuals with income exceeding \$200,000 (\$250,000 if married and filing jointly), will be subject to a 3.8% Medicare contribution tax on their net investment income, which includes interest, dividends and capital gains (including capital gains realized upon a sale or exchange of Fund shares).

Unlike many ETFs, the redemption of shares from the Funds generally incorporates a payment of cash by the Funds in addition to, or in place of, the delivery of a basket of securities. To meet this requirement, a Fund may be required to sell portfolio securities in order to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize capital gains that it might not have incurred if it had completely satisfied the redemption in-kind. As a result, the Funds may be less tax efficient than if the in-kind redemption process was used.

If a shareholder is neither a lawful permanent resident nor a citizen of the United States or if a shareholder is a foreign entity, the Fund's ordinary income dividends (which include distributions of net short-term capital gains) generally will be subject to a 30% U.S. withholding tax, unless a lower treaty rate applies. However, for taxable years beginning before January 1, 2012, certain distributions designated by the Fund as either interest-related dividends or short-term gain dividends and paid to a foreign shareholder would be eligible for an exemption from U.S. withholding tax.

Also, beginning in 2014, a 30% U.S. withholding tax will be imposed on dividends and on proceeds from the sale of Fund shares paid to foreign shareholders if certain disclosure requirements are not satisfied.

Edgar Filing: WisdomTree Trust - Form 497

The Funds (or a financial intermediary such as a broker through which a shareholder owns Fund shares) generally are required to withhold and to remit to the U.S. Treasury a percentage of the taxable distributions and the sale or redemption proceeds paid to any shareholder who fails to properly furnish a correct taxpayer identification number, who has under-reported dividend or interest income, or who fails to certify that he, she or it is not subject to such withholding.

Taxes When Fund Shares Are Sold

Any capital gain or loss realized upon a sale of Fund shares is generally treated as a long-term gain or loss if the shares have been held for more than one year. Any capital gain or loss realized upon a sale of Fund shares held for one year or less is

Table of Contents

generally treated as a short-term gain or loss, except that any capital loss on a sale of shares held for six months or less is treated as long-term capital loss to the extent that capital gain dividends were paid with respect to such shares. The ability to deduct capital losses may be limited depending on your circumstances.

Taxes on Creation and Redemption of Creation Units

An Authorized Participant having the U.S. dollar as its functional currency for U.S. federal tax purposes that exchanges debt or money market securities or non-U.S. currency for Creation Units generally will recognize a gain or loss equal to the difference between the market value of the Creation Units at the time of the exchange and the sum of the exchanger's aggregate basis in the debt or money market securities or non-U.S. currency surrendered plus the amount of cash paid for such Creation Units. A person who redeems Creation Units for debt or money market securities or non-U.S. currency will generally recognize a gain or loss equal to the difference between the exchanger's basis in the Creation Units and the sum of the aggregate U.S. dollar market value of the securities or non-U.S. currency plus the amount of any cash received for such Creation Units. The Internal Revenue Service, however, may assert that a loss that is realized by an Authorized Participant upon an exchange of securities or non-U.S. currency for Creation Units cannot be currently deducted under the rules governing wash sales, or on the basis that there has been no significant change in economic position.

Gain or loss recognized by an Authorized Participant upon an issuance of Creation Units in exchange for non-U.S. currency will generally be treated as ordinary income or loss. Gain or loss recognized by an Authorized Participant upon an issuance of Creation Units in exchange for debt or money market securities, or upon a redemption of Creation Units, may be capital or ordinary gain or loss depending on the circumstances. Any capital gain or loss realized upon an issuance of Creation Units in exchange for debt or money market securities will generally be treated as long-term capital gain or loss if the debt or money market securities have been held for more than one year. Any capital gain or loss realized upon the redemption of a Creation Unit will generally be treated as long-term capital gain or loss if the Fund shares comprising the Creation Unit have been held for more than one year. Otherwise, such capital gains or losses are treated as short-term capital gains or losses.

A person subject to U.S. federal income tax who receives non-U.S. currency upon a redemption of Creation Units and does not immediately convert the non-U.S. currency into U.S. dollars may, upon a later conversion of the non-U.S. currency into U.S. dollars, recognize as ordinary gains or losses any gains or losses resulting from fluctuations in the value of the non-U.S. currency relative to the U.S. dollar since the date of the redemption.

Persons exchanging securities or non-U.S. currency for Creation Units should consult their own tax advisors with respect to the tax treatment of any creation or redemption transaction. If you purchase or redeem Creation Units, you will be sent a confirmation statement showing how many shares you purchased or redeemed and at what price.

Foreign Investments by the Funds

Interest and other income received by a Fund with respect to foreign securities may give rise to withholding and other taxes imposed by foreign countries. Tax conventions between certain countries and the United States may reduce or eliminate such taxes. If as of the close of a taxable year more than 50% of the total assets of a Fund consist of stock or securities of foreign corporations, the Fund intends to pass through to investors the amount of foreign income and similar taxes (including withholding taxes) paid by the Fund during that taxable year. This means that investors will be considered to have received as additional income their respective shares of such foreign taxes, but may be entitled to either a corresponding tax deduction in calculating taxable income, or, subject to certain limitations, a credit in calculating federal income tax.

Foreign Currency Investments by the Funds

As described above, each Fund intends to qualify as a regulated investment company as defined in Section 851 of the Internal Revenue Code of 1986, as amended (the Code). One of the requirements that must be satisfied for a Fund to qualify as a regulated investment company is that at least 90% of the Fund's gross income each taxable year must be derived from dividends, interest, payments with respect to securities loans, and gains from the sale or other disposition of stock, securities or foreign currencies, or other income derived with respect to its business of investing in such stock or securities or currencies and net income derived from an interest in a qualified publicly traded partnership (the 90% Test). Gains from the sale or other disposition of foreign currencies and other income (including but not limited to gains from options, futures or forward contracts) derived from investing in stock, securities, or foreign currencies generally are included as qualifying income in applying the 90% Test. It should be noted, however, that for purposes of the 90% Test, the Secretary of the Treasury is authorized to issue regulations that would exclude from qualifying income foreign currency gains which are not directly related to a regulated investment company's principal business of investing in stock or securities (or options and futures with respect to stock or securities). No regulations have been issued pursuant to this authorization. It is possible, however, that such regulations may be issued in the future and that such regulations could have a negative impact on a Fund's ability to qualify as a regulated investment company.

Edgar Filing: WisdomTree Trust - Form 497

Under the Code, special rules are provided for certain transactions in a foreign currency other than the taxpayer's functional currency (i.e., unless certain special rules apply, currencies other than the U.S. dollar). In general, foreign currency gains or

WisdomTree Trust Prospectus **59**

Table of Contents

losses from forward contracts, from futures contracts that are not regulated futures contracts, and from unlisted options will be treated as ordinary income or loss under the Code. Also, certain foreign exchange gains derived with respect to foreign fixed-income securities are subject to special treatment. In general, any such gains or losses will increase or decrease the amount of a Fund's investment company taxable income available to be distributed to shareholders as ordinary income, rather than increasing or decreasing the amount of the Fund's net capital gains. Additionally, if such losses exceed other investment company taxable income during a taxable year, the Fund would not be able to make any ordinary dividend distributions.

Distribution

ALPS Distributors, Inc. (the Distributor) serves as the distributor of Creation Units for each Fund on an agency basis. The Distributor does not maintain a secondary market in shares of the Funds. The Distributor's principal address is 1290 Broadway, Suite 1100, Denver, Colorado 80203. The Distributor has no role in determining the policies of any Fund or the securities that are purchased or sold by any Fund.

Premium/Discount Information

Information regarding how often shares of each Fund traded on the Listing Exchange at a price above (i.e., at a premium) or below (i.e., at a discount) the net asset value of the Fund during the past calendar year and most recent calendar quarter can be found at www.wisdomtree.com.

Additional Notices

Shares of the Trust are not sponsored, endorsed, or promoted by any listing exchange (the Exchange). The Exchange makes no representation or warranty, express or implied, to the owners of the shares of any Fund. The Exchange is not responsible for, nor has it participated in, the determination of the timing of, prices of, or quantities of the shares of any Fund to be issued, nor in the determination or calculation of the equation by which the shares are redeemable. The Exchange has no obligation or liability to owners of the shares of any Fund in connection with the administration, marketing, or trading of the shares of the Fund. Without limiting any of the foregoing, in no event shall the Exchange have any liability for any lost profits or indirect, punitive, special, or consequential damages even if notified of the possibility thereof.

WisdomTree Investments, WisdomTree Asset Management and the Funds make no representation or warranty, express or implied, to the owners of shares of the Funds or any member of the public regarding the advisability of investing in securities generally or in the Funds particularly. WisdomTree Investments is the licensor of certain trademarks, service marks and trade names of the Funds.

Financial Highlights

The financial highlights table is intended to help you understand the Funds' financial performance since inception. The total return in the table represents the rate that an investor would have earned (or lost) on an investment in the respective Fund (assuming reinvestment of all dividends and distributions). This information has been derived from the financial statements audited by Ernst & Young LLP, an independent registered public accounting firm, whose report, along with the Funds' financial statements, are included in the Funds' Annual Report, which is available upon request.

Table of Contents**GENERAL DESCRIPTION OF THE TRUST AND THE FUNDS**

The Trust was organized as a Delaware statutory trust on December 15, 2005 and is authorized to issue multiple series or portfolios. The Trust is an open-end management investment company, registered under the Investment Company Act of 1940, as amended (the "1940 Act"). The offering of the Trust's shares is registered under the Securities Act of 1933, as amended (the "Securities Act").

WisdomTree Asset Management, Inc. ("WisdomTree Asset Management" or the "Adviser") serves as the investment adviser to each Fund. Mellon Capital Management Corporation ("Mellon Capital") serves as the investment sub-adviser to the Managed Futures Strategy Fund and Global Real Return Fund (each, an "Alternative Fund" and together, the "Alternative Funds"). Mellon Capital also serves as the investment sub-adviser to the Emerging Markets Local Debt Fund and Asia Local Debt Fund. The Dreyfus Corporation ("Dreyfus") serves as the investment sub-adviser to the Australia & New Zealand Debt Fund and Euro Debt Fund (collectively, with the Emerging Markets Local Debt Fund and Asia Local Debt Fund, the "Fixed Income Funds"). Dreyfus also serves as the investment sub-adviser to each of the Brazilian Real Fund, Chinese Yuan Fund, Commodity Currency Fund, Emerging Currency Fund, Indian Rupee Fund, Japanese Yen Fund, and South African Rand Fund (each, a "Currency Income Fund" and together, the "Currency Income Funds"). Mellon Capital and Dreyfus may each be referred to throughout this SAI as a "Sub-Adviser" and together, as the "Sub-Advisers". ALPS Distributors, Inc. ("Distributor") is the distributor of the shares of each Fund.

The Funds are actively managed exchange traded funds ("ETFs"). Each Fund issues and redeems shares at net asset value per share ("NAV") only in large blocks of shares ("Creation Units"). Currently, Creation Units generally consist of 100,000 shares for each Fund (except for the Managed Futures Strategy Fund whose Creation Units generally consist of 200,000 shares), though this may change from time to time. Creation Units are not expected to consist of less than 50,000 shares. These transactions are usually in exchange for a basket of securities and an amount of cash. As a practical matter, only institutions or large investors purchase or redeem Creation Units. Except when aggregated in Creation Units, shares of each Fund are not redeemable securities.

Shares of each Fund are listed on a national securities exchange, such as the NYSE Arca, Inc. (the "Listing Exchange"), and trade throughout the day on the Listing Exchange and other secondary markets at market prices that may differ from NAV. As in the case of other publicly traded securities, brokers' commissions on transactions will be based on negotiated commission rates at customary levels.

The Trust reserves the right to adjust the prices of shares in the future to maintain convenient trading ranges for investors. Any adjustments would be accomplished through stock splits or reverse stock splits, which would have no effect on the net assets of the applicable Fund.

INVESTMENT STRATEGIES AND RISKS

The investment objectives and general investment policies of each Fund are described in each Fund's Prospectus. Additional information concerning the Funds is set forth below. Portfolio turnover rates for each Fund are disclosed in each Fund's Prospectus. There has been no significant variation in the portfolio turnover rates of any Fund over the two fiscal years ended August 31, 2010 and August 31, 2011.

PRINCIPAL INVESTMENT STRATEGIES**Alternative Funds*****Managed Futures Strategy Fund***

The Fund seeks to achieve positive total returns in rising or falling markets that are not directly correlated to broad market equity or fixed income returns. The Fund is managed using a quantitative, rules-based strategy designed to provide returns that correspond to the performance of the Diversified Trends Indicator (the "Benchmark"). The Benchmark is a widely used indicator designed to capture the economic benefit derived from rising or declining price trends in the markets for commodity, currency and U.S. Treasury futures.

As a matter of general policy, the Fund will invest under normal circumstances at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in managed futures. For these purposes, managed futures are investments in commodity and currency-linked instruments, as well as U.S. government securities and money market instruments, that taken together have economic characteristics similar or equivalent to those of the listed commodity, currency and financial futures contracts described in the Prospectus. If, subsequent to an investment, the 80% requirement is no longer met, the Fund's future investments will be made in a manner that will bring the Fund into compliance with this policy. The Trust will provide shareholders with sixty (60) days' prior notice of any change to this policy for the Fund.

Table of Contents

The Fund seeks to gain exposure to commodity markets, in whole or in part, through investments in a subsidiary organized in the Cayman Islands (the WisdomTree Managed Futures Strategy Subsidiary). The WisdomTree Managed Futures Strategy Subsidiary is wholly-owned and controlled by the Fund. The Fund's investment in the WisdomTree Managed Futures Strategy Subsidiary may not exceed 25% of the Fund's total assets at each quarter-end of the Fund's fiscal year. The Fund's investment in the WisdomTree Managed Futures Strategy Subsidiary is expected to provide the Fund with exposure to commodity returns within the limits of the federal tax requirements applicable to investment companies, such as the Fund. Unlike the Fund, the WisdomTree Managed Futures Strategy Subsidiary is not an investment company registered under the 1940 Act, and therefore may invest in commodities and commodity-linked derivatives to a greater extent than the Fund. The WisdomTree Managed Futures Strategy Subsidiary, however, is required under its private letter ruling to invest in commodity-linked derivatives in a manner consistent with the limitations in Section 18(f) of the 1940 Act and related Securities and Exchange Commission (SEC) guidance limit the amount of leverage an investment company, and in this case the WisdomTree Managed Futures Strategy Subsidiary, can obtain. The WisdomTree Managed Futures Strategy Subsidiary is otherwise subject to the same general investment policies and investment restrictions as the Fund. Except as noted, references to the investment strategies of the Fund include the investment strategies of the WisdomTree Managed Futures Strategy Subsidiary. The WisdomTree Managed Futures Strategy Subsidiary is advised by WisdomTree Asset Management and sub-advised by Mellon Capital.

Additional Description of the Benchmark. The Benchmark is a rules-based indicator designed to capture rising and falling price trends in the commodity, currency and U.S. Treasury markets through long and short positions on U.S. listed futures contracts. The Benchmark consists of U.S. listed futures contracts on 16 tangible commodities and eight financial futures. The 16 commodity futures contracts are: light crude oil, natural gas, RBOB gas, heating oil, soybeans, corn, wheat, gold, silver, copper, live cattle, lean hogs, coffee, cocoa, cotton and sugar. The eight financial futures contracts are: the Australian dollar, British pound, Canadian dollar, euro, Japanese yen, Swiss franc, U.S. Treasury notes and U.S. Treasury bonds. Each contract is sometimes referred to as a Component of the Benchmark.

Components that are similar in nature (such as gold and silver) are aggregated into Sectors. There are ten commodity Sectors in the Benchmark: Energy, Grains, Precious Metals, Industrial Metals, Livestock, Natural Gas, Coffee, Cocoa, Cotton, and Sugar. Each financial futures contract is considered to be its own Sector. As a result, there are eight financial Sectors in the Benchmark: the Australian dollar, British pound, Canadian dollar, euro, Japanese yen, Swiss franc, U.S. Treasury notes and U.S. Treasury bonds.

In order to capture both rising and falling price trends, each Sector in the Benchmark (other than the Energy Sector) is positioned as either long or short (the Energy Sector is positioned as either long or flat (i.e., no exposure)). This determination is made on a monthly basis using an algorithm that compares the Sector's monthly return to the Sector's recent weighted moving average returns. If the Sector's returns are above its moving average returns, the Sector is positioned as long throughout the following month. If the Sector's returns are below its moving average returns, the Sector is positioned as short throughout the following month (with the sole exception of the Energy Sector, which would be positioned as flat). All Components within a Sector are held in the same direction. The value of a Sector and the value of the Benchmark should increase if a long position increases in value or if a short position decreases in value. For example, if a Sector is long in the Benchmark and the value of its Components goes up intra-month, the return of the Sector (and therefore the Benchmark) should increase. If a Sector is short in the Benchmark, and the value of its Components goes down intra-month, the return of the Sector (and therefore the Benchmark) should increase.

The Energy Sector and its Components may never be positioned short within the Benchmark. The Benchmark's methodology provides that, due to significant levels of continuous consumption, limited reserves and other factors, the Energy Sector can only be long or flat (i.e., no exposure) within the Benchmark. If the Energy Sector is flat then the weighting of the other Sectors and Components within the Benchmark is increased on a pro rata basis. As a result, when the Energy Sector is flat, financial futures will represent approximately 60% of the weight of the Benchmark and commodities will represent approximately 40% of the weight of the Benchmark. When the Energy Sector is long, financial futures and commodity futures each represent 50% of the weight of the Benchmark.

The Benchmark is weighted in one of two ways on a monthly basis. If the Energy Sector is long, the Benchmark is weighted evenly (i.e., 50/50) between commodity futures contracts and financial futures contracts. If the Energy Sector is flat, financial futures represent approximately 60% of the weight of the Benchmark and commodity futures represent approximately 40% of the Benchmark. At the beginning of each year, each Component and Sector has a Base Weight depending on whether the Energy Sector is long or flat. If the Energy Sector is flat, then the Base Weight of the other Sectors and Components within the Benchmark is increased on a pro rata basis. Commodity Sector weights are based on, but not exactly proportional to, historical world production levels. Commodity Sectors that have higher historical production levels are weighted higher in the Benchmark. Weightings of the financial futures Sectors are based on, but not directly proportional to, historical gross domestic product (GDP). Larger economic regions (i.e., Europe as measured by the euro) should get a higher weighting than smaller regions (i.e., Australia as measured by the Australian dollar).¹

Edgar Filing: WisdomTree Trust - Form 497

¹ The Sector (and Component) Base Weights in the Benchmark when the Energy Sector is long are as follows: Energy 14.50% (light crude 8.50%, RBOB 3.0%, heating oil 3.0%); Grains 11.50% (soybeans 5.0%, corn 4.0%, wheat 2.50%); Precious Metals 5.25% (Gold 3.50%, Silver 1.75%); Industrial Metals 5.0% (copper 5.0%); Livestock 5.0% (live cattle 3.0%, lean hogs 2.0%); Natural Gas 4.25%; Coffee 1.5%; Cocoa 1.0%; Cotton 1.0%; Sugar 1.0%; euro 13.0%; Japanese yen 12.0%; U.S. Treasury Note 7.50%; U.S. Treasury Bond 7.50%; British pound 5.0%, Swiss franc 2.0%; Australian dollar 2.0%; and Canadian dollar 1.0%. The Sector (and Component) Base Weights in the Benchmark when the Energy Sector is flat are as follows: Energy 0% (light crude 0%, RBOB 0%, heating oil 0%); Grains 13.45% (soybeans 5.85%, corn 4.68%, wheat 2.92%); Precious Metals 6.14% (gold 4.09%, silver 2.05%); Industrial Metals 5.85% (copper 5.85%); Livestock 5.85% (live cattle 3.51%, lean hogs 2.34%); Natural Gas 4.97%; Coffee 1.75%; Cocoa 1.17%; Cotton 1.17%; Sugar 1.17%; euro 15.20%; Japanese yen 14.04%; U.S. Treasury Note 8.77%; U.S. Treasury Bond 8.77%; British pound 5.85%; Swiss franc 2.34%; Australian dollar 2.34%; and Canadian dollar 1.17%.

Table of Contents

The weight of each Component and Sector in the Benchmark changes throughout each month based upon performance. At the end of each month, each Sector is reset back to its applicable Base Weight depending on whether the Energy Sector is long or flat. Within Sectors that have multiple Components, the weight of each Component relative to the others is allowed to fluctuate throughout the year and Component weights are reset back to their respective Base Weights only at year-end.

Global Real Return Fund

The Fund seeks to provide protection against inflation and to generate income. Inflation is defined as an increase in the general price level of goods and services over time. The Fund invests in a combination of inflation-linked securities and debt instruments from issuers in the United States, developed markets and emerging markets throughout the world. The Fund has targeted exposure to commodities, such as gold, and employs commodity strategies structured to provide returns that exceed inflation rates. The Fund is managed using a structured investment approach that considers, among other things, country and currency exposure, sector allocation, investment exposure and risk.

Investments in Inflation-Linked Bonds and Other Instruments. As noted above, the Fund invests in fixed income securities and other instruments linked to inflation rates in the U.S. and in developed and emerging market countries throughout the world. The Fund's U.S. investments are focused on inflation-protected securities, such as U.S. Treasury Inflation Protected Securities (TIPS), and floating-rate securities. Outside the United States, the Fund seeks broad-based exposure to both developed and emerging economies. The Fund focuses its investments outside the U.S. in countries that are leading exporters of commodities, such as Australia, Brazil, Canada, Chile, Mexico, and South Africa. In order to provide broad-based exposure across developed and emerging markets, the Fund also invests in issuers from countries such as France, Germany, Italy, Israel, Korea, Poland, Sweden, Turkey and the United Kingdom. This list may change from time to time based on market and other conditions. Country, sector and issuer exposure and risk are reviewed on an ongoing basis and the Fund's portfolio is rebalanced quarterly. The Fund's exposure to any single non-U.S. currency generally is limited to 10% of the Fund's assets.

The Fund intends to focus its investments in inflation-linked bonds and other debt instruments issued by governments, government agencies and instrumentalities, government-sponsored enterprises and supranational organizations. For these purposes, supranational organizations include entities such as the European Investment Bank, International Bank for Reconstruction and Development, International Finance Corporation, and other regional development banks. The Fund may also invest up to 20% in debt securities issued by corporations. Inflation-linked bonds are structured to provide protection against inflation by preserving purchasing power. In a typical inflation-linked bond, the principal amount of the bond and the cash flow generated by the bond (i.e., interest) is adjusted upward in response to increases in inflation rates. The U.S. Consumer Price Index, or CPI, is a commonly used measure of U.S. inflation rates. Bonds tied to inflation rates outside the U.S. generally are linked to regional or country measures comparable to the CPI that measure inflation rates in non-U.S. markets. As inflation rises, upward adjustments to the principal amount or income paid on the bond increase the value of the bond and help preserve purchasing power in response to inflation. Conversely, some types of inflation-linked bonds may be adjusted downward in response to deflation (i.e., a decrease in the prices of goods and services over time).

The Fund may invest in floating- and variable-rate bonds. Floating- and variable-rate bonds are bonds that have a variable payment feature tied to a reference rate, such as the federal funds rate or the London Interbank Offering Rate (LIBOR). Floating- and variable-rate bonds generally are less sensitive to interest rate increases because when market rates rise, the payments made by such bonds increase. Conversely, a decrease in market interest rates will adversely affect the income received from such securities and may cause the value of such bonds to decrease.

The Fund may invest in derivatives, such as swaps, forward currency contracts and futures contracts designed to provide protection from changes in inflation rates. A total return swap is an agreement between two parties to exchange payments at a future date based on the return of a reference asset, such as a bond or equity index. An inflation-linked swap is an agreement between two parties to exchange payments at a future date based on the difference between a fixed payment and a payment linked to an inflation rate or value at a future date. An interest rate swap is a transaction in which two parties typically exchange payments based on the difference between a floating interest rate payment and a fixed interest rate payment. A cross-currency swap is an agreement to exchange one currency for another at a future date. A forward currency contract is an agreement to buy or sell a specific currency at a future date at a price set at the time of the contract. A futures contract is a standardized contract traded on a recognized exchange in which two parties agree to exchange either a

Table of Contents

specified financial asset or the cash equivalent of said asset of standardized quantity and quality for a price agreed today (the futures price or the strike price) with delivery occurring at a specified future date. The Fund may also enter into repurchase agreements with counterparties that are deemed to present acceptable credit risks. A repurchase agreement is a transaction in which the Fund purchases securities or other obligations from a bank or securities dealer (or its affiliate) and simultaneously commits to resell them to a counterparty at an agreed-upon date or upon demand and at a price reflecting a market rate of interest unrelated to the coupon rate or maturity of the purchased obligations.

The average duration of the fixed income portion of the Fund's portfolio will vary based on economic fundamentals and market conditions. During most scenarios, fixed income portfolio duration will not exceed 10 years. Duration is an important indication of the Fund's sensitivity to changes in interest rates. Funds with higher durations generally are subject to greater interest rate risk. While the Fund intends to invest a relatively large percentage of its assets in investment grade securities, the Fund also may invest in non-investment grade securities. Securities rated investment grade generally are considered to be of higher credit quality and subject to lower default risk. Although securities rated below investment grade may offer the potential for higher yields, they generally are subject to higher potential risk of loss.

While inflation-linked securities offer protection against inflation, they are sensitive to changes in real interest rates. Real interest rates are interest rates that have been adjusted to remove the cost of inflation. Protracted increases in real interest rates would likely have a negative impact on the value of inflation-linked securities and the value of the Fund. The Fund may purchase or sell futures contracts on U.S. Treasury securities or other U.S. government or non-U.S. government (state, territory or local) obligations to help minimize this risk.

The Fund may invest a portion of its assets in fixed income securities that are not linked to inflation, such as U.S. government obligations. The Fund also may invest in money market instruments (including repurchase agreements) with remaining maturities of one year or less, as well as cash and cash equivalents. A repurchase agreement is a transaction where a party purchases securities and simultaneously commits to resell them at an agreed-upon date at a price reflecting a market rate of interest unrelated to the coupon rate or maturity of the securities.

Investments in Commodities. The Fund intends to have targeted exposure to commodities and commodity strategies. The commodity exposure is diversified across a number of sectors (such as gold and other precious metals, energy, industrial metals, livestock, and agriculture) utilizing systematic, rules-based strategies. Within these strategies, the Fund may take or gain exposure to long or short positions in commodities and related investments. To be long means to hold or be exposed to a commodity or instrument with the expectation that its value will increase over time. To be short means to sell or be exposed to a commodity or instrument with the expectation that it will fall in value. The Fund will benefit if it has a long position in a commodity or instrument that increases in value or a short position in a commodity or instrument that decreases in value. Conversely, the Fund will be adversely impacted if it holds a long position in a commodity or instrument that declines in value and a short position in a commodity or instrument that increases in value.

The Fund seeks to gain exposure to commodity markets, in whole or in part, through investments in a subsidiary organized in the Cayman Islands (the WisdomTree Global Real Return Subsidiary). The WisdomTree Global Real Return Subsidiary is wholly-owned and controlled by the Fund. The Fund's investment in the WisdomTree Global Real Return Subsidiary may not exceed 25% of the Fund's total assets at each quarter-end of the Fund's fiscal year. The Fund's investment in the WisdomTree Global Real Return Subsidiary is expected to provide the Fund with exposure to commodity returns within the limits of the federal tax requirements applicable to regulated investment companies, such as the Fund. Unlike the Fund, the WisdomTree Global Real Return Subsidiary is not an investment company registered under the 1940 Act, and therefore may invest in commodities and commodity-linked derivatives to a greater extent than the Fund. The WisdomTree Global Real Return Subsidiary, however, is required under its private letter ruling to invest in commodity-linked derivatives in a manner consistent with the limitations in Section 18(f) of the 1940 Act. Section 18(f) of the 1940 Act and related SEC guidance limit the amount of leverage an investment company, and in this case the WisdomTree Global Real Return Subsidiary, can obtain. The WisdomTree Global Real Return Subsidiary is otherwise subject to the same general investment policies and investment restrictions as the Fund. The WisdomTree Global Real Return Subsidiary intends to achieve exposure to commodities through investment in a combination of listed commodity futures, commodity index swaps and structured notes that provide commodity returns. A listed commodity future is a financial instrument in which a party agrees to pay a fixed price for a designated commodity at a specified future date. Listed commodity futures are traded at market prices on exchanges pursuant to terms common to all market participants. A commodity index swap is an agreement between two parties to exchange cash flows or returns (or differences in return) on a commodity index. A structured note is a debt instrument in which the return is tied to a reference asset or rate, such as a commodity or commodity index. Except as noted, references to the investment strategies and risks of the Fund include the investment strategies and risks of the WisdomTree Global Real Return Subsidiary.

Other Investments. The Fund generally will not invest more than 30% of the value of its assets in or through derivative instruments. The Fund will not invest more than 35% of its assets in bonds, notes or other debt obligations, such as government or corporate bonds, denominated in U.S. or non-U.S. currencies of issuers in emerging markets. Under normal market conditions, the Fund generally will not invest more than 20% of its assets in corporate bonds (or derivatives based on such bonds). The Fund will invest only in corporate bonds that the Adviser or Sub-Adviser deems to be sufficiently liquid. The Fund's investment in corporate bonds generally will be limited to bonds with \$200 million or more par value outstanding and a significant volume traded (as determined by the Fund). The Fund may invest up to 5% of its assets in corporate

Edgar Filing: WisdomTree Trust - Form 497

bonds with less than \$200 million par amount outstanding only if such bonds are sufficiently liquid (as determined by the Fund).

Table of Contents

Fixed Income Funds

Asia Local Debt Fund

The Fund seeks to achieve a high level of total return consisting of both income and capital appreciation. The Fund seeks to achieve its investment objective through investment in Local Debt denominated in the currencies of a broad range of Asian countries. Under normal circumstances, the Fund will invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in Local Debt. For these purposes, Local Debt includes fixed income securities, such as bonds, notes or other debt obligations, denominated in local currencies of countries in Asia, as well as certain derivatives and other instruments described herein.

The Fund intends to focus its investments on bonds and other debt instruments issued by governments (national, state, and local), government agencies and instrumentalities, and government sponsored enterprises. The Fund also may invest in Local Debt issued by supranational organizations such as the European Investment Bank, Asian Development Bank, International Bank for Reconstruction and Development or International Finance Corporation, and development agencies supported by other national governments. The Fund may invest in corporate bonds economically tied to Asian countries. The Fund also may invest in inflation-linked fixed income securities denominated in Asian currencies.

The Fund intends to provide exposure to the developing/emerging market economies in Asia. Specifically, the Fund intends to invest in Local Debt primarily from South Korea, Indonesia, Malaysia, Singapore, Hong Kong, China, India, Thailand, Philippines, and Taiwan. The Fund is permitted to invest in developed market economies, such as Australia and New Zealand. This list may change based on market developments. The Fund uses a structured investment approach that analyzes multiple factors. Countries are grouped into differentiated tiers based on an analysis of these factors. Subject to the Fund's general investment requirement to provide broad country exposure within the region, the Fund generally invests a higher percentage of its assets in countries that have larger and more liquid debt markets and that the Fund's adviser believes are pursuing sustainable fiscal and monetary policies in light of economic and market conditions. The country exposures are consistently monitored from a risk perspective and may be modified, reduced or eliminated. The Fund's exposure to any single country generally will be limited to 20% of the Fund's assets. The percentage of Fund assets invested in a specific region, country or issuer will change from time to time.

The universe of Local Debt currently includes securities that are rated investment grade as well as non-investment grade. The Fund intends to provide a broad-based exposure to Local Debt and therefore will invest in both investment grade and non-investment grade securities. Securities rated investment grade generally are considered to be of higher credit quality and subject to lower default risk. Although securities rated below investment grade may offer the potential for higher yields, they are considered speculative and generally are subject to higher potential risk of loss. The Fund expects that it will have 75% or more of its assets invested in investment grade securities, and no more than 25% of its assets invested in non-investment grade securities. The Fund will limit its exposure to speculative issuers and securities to no more than 15% of its assets. For these purposes, speculative securities are securities rated B or below by Moody's, or equivalently rated by S&P or Fitch, or, if unrated, determined by WisdomTree Asset Management to be of comparable quality. However, this may change from time to time based on market conditions and the condition of specific issuers and securities.

The Fund attempts to limit interest rate risk by maintaining an aggregate portfolio duration of between two and eight years under normal market conditions. Aggregate portfolio duration is important to investors as an indication of the Fund's sensitivity to changes in interest rates. Funds with higher durations generally are subject to greater interest rate risk. An aggregate portfolio duration of between two and eight years generally would be considered intermediate. The Fund's actual portfolio duration may be longer or shorter depending on market conditions. The Fund may also invest in short-term money market securities denominated in the currencies of countries in which the Fund invests.

For purposes of the 80% investment policy described above, Local Debt includes investments in derivatives such as forward currency contracts, interest rate swaps, inflation-linked swaps, total return swaps and credit-linked notes. The Fund's use of forward contracts and swaps will be underpinned by investments in short-term, high-quality U.S. money market securities and is designed to provide exposure similar to investments in local currency debt. The Fund also may enter into repurchase agreements designed to result in a fixed rate of return for the Fund insulated from market fluctuations during the holding period. The Fund will enter into repurchase agreements with counterparties that are deemed to present acceptable credit risks. The Fund does not use derivatives to enhance leverage. The Fund may invest in interest rate and other futures contracts listed for trading on exchanges in Asia. Assets not invested in Local Debt generally will be invested in investment grade U.S. government securities and money market instruments. The Fund may invest up to 20% of its assets in debt instruments denominated in U.S. dollars issued by Asian governments and government sponsored enterprises.

Table of Contents

The decision to secure exposure through direct investment in bonds or indirectly through derivative transactions will be a function of, among other things, market accessibility, credit exposure, tax ramifications and regulatory requirements applicable to U.S. investment companies. If, subsequent to an investment, the 80% requirement is no longer met, the Fund's future investments will be made in a manner that will bring the Fund into compliance with this policy. The Trust will provide shareholders with sixty (60) days' prior notice of any change to this policy for the Fund. In addition, under normal circumstances, the Fund will invest at least 70% of its assets in Fixed Income Securities. Fixed Income Securities include debt instruments, such as bonds, notes and other obligations, denominated in Asian currencies or U.S. dollars; Fixed Income Securities do not include derivatives.

The Fund generally will not invest more than 30% of the value of its assets in or through derivative transactions. The Fund generally will not invest more than 20% of its assets in debt instruments denominated in U.S. dollars. Under normal market conditions, the Fund generally will not invest more than 20% of its assets in corporate bonds (or derivatives based on such bonds). The Fund will invest only in corporate bonds that the Adviser or Sub-Adviser deems to be sufficiently liquid. The Fund's investment in corporate bonds generally will be limited to bonds with \$200 million or more par value outstanding and a significant volume traded (as determined by the Fund). The Fund may invest up to 5% of its assets in corporate bonds with less than \$200 million par amount outstanding only if such bonds are sufficiently liquid (as determined by the Fund).

Emerging Markets Local Debt Fund

The Emerging Markets Local Debt Fund seeks to achieve a high level of total return consisting of both income and capital appreciation. The Fund seeks to achieve its investment objective through investment in Local Debt denominated in local currencies of emerging market countries. Under normal circumstances, the Fund will invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in Local Debt. For these purposes, Local Debt includes fixed income securities, such as bonds, notes or other debt obligations denominated in local currencies of emerging market countries, as well as certain derivatives and other instruments described herein.

The Fund is designed to provide exposure to Local Debt of issuers from a broad range of emerging market regions and countries. The Fund intends to focus its investment on fixed income securities issued by emerging market governments, government agencies, and corporations. The Fund also may invest in fixed income securities denominated in an emerging market currency and issued by supranational organizations, such as the European Investment Bank, International Bank for Reconstruction and Development, International Finance Corporation, or other regional development banks. The Fund may invest in debt securities linked to inflation rates outside the U.S., including securities or instruments linked to rates in emerging market countries.

The Fund intends to provide exposure across several geographic regions and countries. In general, emerging market countries are characterized by developing commercial and financial infrastructure with significant potential for economic growth and increased capital market participation by foreign investors. The Adviser and Sub-Adviser look at a variety of commonly used factors when determining whether a country is an emerging market. In general, the Adviser and Sub-Adviser consider a country to be an emerging market if:

- (1) it is either (a) classified by the World Bank in the lower middle or upper middle income designation for one of the past 3 years (i.e., per capita gross national product of less than U.S. \$9,385), or (b) classified by the World Bank as high income in each of the last three years, but with a currency that has been primarily traded on a non-delivered basis by offshore investors (e.g., Korea and Taiwan);
- (2) the country's debt market is considered relatively accessible by foreign investors in terms of capital flow and settlement considerations; and
- (3) the country has issued the equivalent of \$5 billion in local currency sovereign debt.

The criteria used to evaluate whether a country is an emerging market will change from time to time based on economic and other events.

The Fund intends to invest in Local Debt from the following regions: Asia, Latin America, Eastern Europe, Africa and the Middle East. Within these regions, the Fund is likely to invest in countries such as: Brazil, Chile, Colombia, Hungary, Indonesia, Malaysia, Mexico, Peru, Philippines, Poland, Russia, South Africa, South Korea, Thailand and Turkey. This list may change based on market developments. The Fund uses a structured investment approach that analyzes multiple factors. Countries are grouped into differentiated tiers based on an analysis of these factors. Subject to the Fund's general investment requirement to provide broad regional and country exposure, the Fund generally invests a higher percentage of its assets in countries that have larger and more liquid debt markets and that the Adviser believes are pursuing sustainable fiscal and monetary policies in light of economic and market conditions. The country exposures are consistently monitored from a risk perspective and may be modified, reduced or eliminated. The Fund's exposure to any single country generally will be limited to 20% of the Fund's net assets. The

Edgar Filing: WisdomTree Trust - Form 497

percentage of Fund assets invested in a specific region, country or issuer will change from time to time.

Table of Contents

The universe of emerging markets local currency debt currently includes securities that are rated investment grade as well as non-investment grade. The Fund intends to provide a broad-based exposure to emerging market debt and therefore will invest in both investment grade and non-investment grade securities. Securities rated investment grade generally are considered to be of higher credit quality and subject to lower default risk. Although securities rated below investment grade may offer the potential for higher yields, they are considered speculative and generally are subject to higher potential risk of loss. The Fund generally does not expect to have more than 25% of its net assets invested in non-investment grade securities. The Fund will limit its exposure to speculative issuers and securities to no more than 15% of its assets. For these purposes, speculative securities are securities rated B or below by Moody's, or equivalently rated by S&P or Fitch, or, if unrated, determined by WisdomTree Asset Management to be of comparable quality. However, this may change from time to time based on market conditions and the condition of specific issuers and securities. The Fund attempts to limit interest rate risk by maintaining an aggregate portfolio duration of between two and eight years under normal market conditions. Aggregate portfolio duration is important to investors as an indication of the Fund's sensitivity to changes in interest rates. Funds with higher durations generally are subject to greater interest rate risk. An aggregate portfolio duration between two and eight years would generally be considered to be intermediate. The Fund's actual portfolio duration may be longer or shorter depending upon market conditions. The Fund may also invest in short-term U.S. money market securities and forward currency contracts and swaps designed to provide exposure to securities denominated in the currencies in which the Fund invests.

For purposes of the Fund's 80% investment policy described above, Local Debt includes investments in derivatives such as forward currency contracts, interest rate swaps, inflation-linked swaps, total return swaps and credit-linked notes. The Fund's use of forward contracts and swaps will be underpinned by investments in short-term, high-quality U.S. money market securities and is designed to provide exposure similar to investments in local currency debt. The Fund generally will not invest more than 5% of its assets in credit-linked notes. Credit-linked notes typically provide periodic payments of interest as well as payment of principal upon maturity. The Fund also may enter into repurchase agreements with counterparties that are deemed to present acceptable credit risks. Local Debt includes fixed income securities that are denominated in a non-U.S. currency and settled in U.S. dollars. Local Debt also includes fixed income securities denominated in an emerging market currency and issued by supranational organizations, international agencies and non-U.S. governments (state, territory or local governments) and agencies and regional development banks. Assets not invested in Local Debt generally will be invested in investment grade U.S. government securities and money market instruments. The Fund generally will not invest more than 30% of the value of its assets in or through derivative transactions. The Fund generally will not invest more than 20% of its assets in debt instruments denominated in U.S. dollars and issued by emerging market governments, government agencies, corporations, supranational issuers and regional development banks (or derivatives based on such instruments). Under normal market conditions, the Fund generally will not invest more than 20% of its assets in corporate bonds (or derivatives based on such bonds). The Fund's investment in corporate bonds generally will be limited to bonds with \$200 million or more par value outstanding and a significant volume traded (as determined by the Fund). The Fund may invest up to 5% of its assets in corporate bonds with less than \$200 million par amount outstanding only if such bonds are sufficiently liquid (as determined by the Fund).

The decision to secure exposure through direct investment in bonds or indirectly through derivative transactions will be a function of, among other things, market accessibility, credit exposure, tax ramifications and regulatory requirements applicable to U.S. investment companies. If, subsequent to an investment, the 80% requirement is no longer met, the Fund's future investments will be made in a manner that will bring the Fund into compliance with this policy. The Trust will provide shareholders with sixty (60) days' prior notice of any change to this policy for the Fund.

Australia & New Zealand Debt Fund

The Australia & New Zealand Debt Fund seeks a high level of total return consisting of both income and capital appreciation. The Fund seeks to achieve its investment objective through investment in Debt Securities denominated in Australian or New Zealand dollars. Under normal circumstances, the Fund will invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in Debt Securities. For purposes of this Fund, Debt Securities include fixed income securities, such as bonds, notes or other debt obligations, denominated in Australian or New Zealand dollars, as well as certain derivatives and other instruments described herein.

The Fund intends to focus its investments on bonds and other debt instruments denominated in Australian and New Zealand dollars issued by governments (national, state and local), government agencies and instrumentalities, government-sponsored enterprises and supranational organizations. For these purposes, supranational organizations include entities such as the European Investment Bank, International Bank for Reconstruction and Development, International Finance Corporation, and other regional development banks.

Table of Contents

The Fund also may invest in Debt Securities of corporate issuers organized in Australia or New Zealand or that have economic ties to Australia or New Zealand, although this is not expected to be a focus of the Fund. The Fund will invest only in corporate bonds that the Adviser or Sub-Adviser deems to be sufficiently liquid. The Fund's investment in corporate bonds generally will be limited to bonds with \$200 million or more par value outstanding and a significant volume traded (as determined by the Fund). The Fund may invest up to 5% of its assets in corporate bonds with less than \$200 million par amount outstanding only if (i) such bonds are sufficiently liquid (as determined by the Fund), (ii) such investment is consistent with the Fund's goal of providing exposure to a broad range of Debt Securities denominated in Australian or New Zealand dollars, and (iii) such investment is deemed by the Adviser or Sub-Adviser to be in the best interest of the Fund.

The Fund is designed to provide broad exposure to Debt Securities of issuers in Australia and New Zealand. The Fund uses a structured investment approach to allocate its investments between countries (Australia and New Zealand) and sectors (government debt, semi-government debt, supranational organizations). Government debt refers to Debt Securities issued by the Commonwealth of Australia or New Zealand and its various agencies, instrumentalities and government-sponsored enterprises. Semi-government debt refers to Debt Securities issued by the local, state and territory governments of Australia and New Zealand, typically to finance local infrastructure and operations. As noted, supranational organizations include entities such as the International Bank for Reconstruction and Development and other regional development banks. The Fund's exposure to Australia and New Zealand is based on the relative gross domestic product, or GDP, of each country. Since Australia's economy is much larger than New Zealand's, the Fund's exposure to Australia generally will be higher than its exposure to New Zealand. The Fund invests in three sectors: government debt, semi-government debt and debt of supranational organizations. For purposes of this sector analysis, corporate issuers are included within the category of supranational organizations. The Fund's exposure to each sector is assessed relative to an equal-weighted baseline (e.g., 1/3 each). Sector exposures may be tilted within a narrow range around this baseline in order to take advantage of potential opportunities to enhance risk-adjusted return. The Fund's exposures to each country, sector and individual issuer are monitored from a risk perspective. The percentage of the Fund's assets invested in a specific country, sector or issuer may change, depending on market conditions, as agreed upon by the investment adviser and investment sub-adviser.

The universe of Debt Securities in which the Fund may invest includes securities that are rated investment grade as well as non-investment grade. The Fund expects to have 75% or more of its assets invested in investment grade bonds, though this percentage may change from time to time in accordance with market conditions and the debt ratings assigned to countries and issuers. Securities rated investment grade generally are considered to be of higher credit quality and subject to lower default risk. Although securities rated below investment grade may offer the potential for higher yields, they generally are subject to a higher potential risk of loss. The Fund will limit its exposure to speculative issuers and securities to no more than 10% of its assets. For these purposes, speculative securities are securities rated BB or below by Moody's, or equivalently rated by S&P or Fitch, or, if unrated, determined by WisdomTree Asset Management to be of comparable quality. However, this may change from time to time based on market conditions and the conditions of specific issuers and securities.

The Fund attempts to limit interest rate risk by maintaining an aggregate portfolio duration of between three and seven years under normal market conditions. Aggregate portfolio duration is important to investors as an indication of the Fund's sensitivity to changes in interest rates. Funds with higher durations generally are subject to greater interest rate risk. An aggregate portfolio duration of between three and seven years generally would be considered to be intermediate. The Fund's actual portfolio duration may be longer or shorter depending upon market conditions. The Fund may also invest in short-term money market securities denominated in local currencies.

For purposes of the 80% investment policy described above, Debt Securities also include investments in derivatives such as forward currency contracts, interest rate swaps, total return swaps and credit-linked notes. The Fund's use of forward contracts and swaps will be underpinned by investments in short-term, high-quality U.S. money market securities and is designed to provide exposure similar to investments in locally denominated debt. The Fund's investments in credit-linked notes will be limited to notes providing exposure to Fixed Income Securities denominated in Australian or New Zealand dollars. The Fund's overall investment in credit-linked notes will not exceed 25% of the Fund's assets. Under normal circumstances, the Fund will invest no more than 20% of the value of the Fund's net assets in derivative instruments. The Fund also may enter into repurchase agreements with counterparties that are deemed to present acceptable credit risks.

Assets not invested in locally denominated debt generally will be invested in investment grade U.S. government securities and money market instruments. The Fund may invest up to 20% of its assets in debt instruments denominated in U.S. dollars issued by the Australian or New Zealand government, government agencies, corporations, regional development banks and supranational issuers. The decision to secure exposure through direct investment in bonds or indirectly through derivative transactions will be a function of, among other things, market accessibility, credit exposure, tax ramifications and regulatory requirements applicable to U.S. investment companies. If, subsequent to an investment, the 80% requirement is no longer met, the Fund's future investments will be made in a manner that will bring the Fund into compliance with this policy. The Trust will provide shareholders with sixty (60) days' prior written notice of any change to this policy for the Fund.

The Fund's name and objective changed effective October 25, 2011. Prior to October 25, 2011, the investment objective and style of the former WisdomTree Dreyfus New Zealand Dollar Fund focused on short-term, New Zealand dollar-denominated money market instruments.

Table of Contents***Euro Debt Fund***

The Euro Debt Fund seeks a high level of total return consisting of both income and capital appreciation. The Fund seeks to achieve its investment objective through investment in Debt Securities denominated in euros. Under normal circumstances, the Fund will invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in Debt Securities. For these purposes, Debt Securities consist of fixed income securities, such as bonds, notes or other debt obligations, denominated in euros, as well as certain derivatives and other instruments described herein.

The Fund intends to focus its investments on bonds and other debt instruments denominated in euros and issued by governments (national, state and local), government agencies and instrumentalities, government-sponsored enterprises and supranational organizations. For these purposes, supranational organizations include entities such as the European Investment Bank, International Bank for Reconstruction and Development, International Finance Corporation, or other regional development banks.

The Fund also may invest in Debt Securities of corporate issuers organized in euro area countries or that have significant economic ties to euro area countries, although this is not expected to be a focus of the Fund. The Fund will invest only in corporate bonds that the Adviser or Sub-Adviser deems to be sufficiently liquid. The Fund's investment in corporate bonds generally will be limited to bonds with \$200 million or more par value outstanding and a significant volume traded (as determined by the Fund). The Fund may invest up to 5% of its assets in corporate bonds with less than \$200 million par amount outstanding only if (i) such bonds are sufficiently liquid (as determined by the Fund), (ii) such investment is consistent with the Fund's goal of providing exposure to a broad range of Debt Securities denominated in euros, and (iii) such investment is deemed by the Adviser or Sub-Adviser to be in the best interest of the Fund.

The Fund is designed to provide broad exposure to Debt Securities of issuers in euro area countries. The euro area is a group of 17 members of the European Union that have adopted the euro as their common currency. The euro area currently consists of Austria, Belgium, Cyprus, Estonia, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Malta, the Netherlands, Portugal, Slovakia, Slovenia, and Spain. The Fund's exposure to the euro area countries is monitored from a risk perspective and may be modified, reduced or eliminated at any time. Initially, the Fund does not intend to invest in national, state or local debt of Ireland, Italy, Greece, Portugal, Spain, Estonia, Cyprus or Malta.

The Fund will seek to concentrate its investments in higher-quality Debt Securities of issuers within the region. This currently includes sizable positions in the sovereign debt of Germany and France with attempted balanced allocations to the sovereign debt of other euro area countries as well as supranational issuers. Subject to the Fund's general investment requirement to provide broad regional and country exposure, the Fund generally invests a higher percentage of its assets in countries that have larger and more liquid debt markets. The Fund's exposure to any single country generally will be limited to 20% of the Fund's assets. The euro area countries in which the Fund invests and the percentage of Fund assets invested in a particular euro area country or issuer will change from time to time, depending on market conditions, as agreed upon by the Adviser and Sub-Adviser.

The universe of Debt Securities in which the Fund may invest includes securities that are rated investment grade as well as noninvestment grade. However, the Fund expects to have 75% or more of its assets invested in investment grade bonds, though this percentage may change from time to time in accordance with market conditions and the debt ratings assigned to countries and issuers. Securities rated investment grade generally are considered to be of higher credit quality and subject to lower default risk. Although securities rated below investment grade may offer the potential for higher yields, they generally are subject to a higher potential risk of loss. The Fund will limit its exposure to speculative issuers and securities to no more than 10% of its assets. For these purposes, speculative securities are securities rated BB or below by Moody's, or equivalently rated by S&P or Fitch, or, if unrated, determined by WisdomTree Asset Management to be of comparable quality. However, this may change from time to time based on market conditions and the condition of specific issuers and securities.

The Fund attempts to limit interest rate risk by maintaining an aggregate portfolio duration of between three and seven years under normal market conditions. Aggregate portfolio duration is important to investors as an indication of the Fund's sensitivity to changes in interest rates. Funds with higher durations generally are subject to greater interest rate risk. An aggregate portfolio duration of between three and seven years generally would be considered to be intermediate. The Fund's actual portfolio duration may be longer or shorter depending upon market conditions. The Fund may also invest in short-term money market securities denominated in euros.

For purposes of the 80% investment policy described above, Debt Securities includes investments in derivatives such as forward currency contracts, interest rate swaps, inflation-linked swaps, total return swaps and credit-linked notes. The Fund's use of forward contracts and swaps will be underpinned by investments in short-term, high-quality U.S. money market securities and is designed to provide exposure similar to investments in euro-denominated debt. Under normal circumstances, the Fund will invest no more than 20% of the value of the Fund's assets in derivative instruments. The Fund also may enter into repurchase agreements with counterparties that are deemed to present acceptable credit risks.

Table of Contents

Assets not invested in euro-denominated debt generally will be invested in investment grade U.S. government securities and money market instruments. The Fund may invest up to 20% of its assets in debt instruments denominated in U.S. dollars issued by EU governments, government agencies, corporations, regional development banks and supranational issuers.

The decision to secure exposure through direct investment in bonds or indirectly through derivative transactions will be a function of, among other things, market accessibility, credit exposure, tax ramifications and regulatory requirements applicable to U.S. investment companies. If, subsequent to an investment, the 80% requirement is no longer met, the Fund's future investments will be made in a manner that will bring the Fund into compliance with this policy. The Trust will provide shareholders with sixty (60) days' prior written notice of any change to this policy for the Fund. In addition, under normal circumstances, the Fund will invest at least 80% of its assets in Fixed Income Securities. Fixed Income Securities include debt instruments, such as bonds, notes and other obligations, denominated in euros or U.S. dollars; Fixed Income Securities do not include derivatives.

The Fund's name and objective changed effective October 19, 2011. Prior to October 19, 2011, the investment objective and style of the former WisdomTree Dreyfus Euro Fund focused on short-term, euro-denominated money market instruments.

Currency Income Funds

The *Japanese Yen Fund* seeks to (i) earn current income reflective of money market rates available to foreign investors in Japan, and (ii) maintain liquidity and preserve capital measured in Japanese yen. The Japanese Yen Fund intends to invest primarily in very short-term, investment grade money market securities denominated in Japanese yen. Eligible investments include short-term securities issued by the Japanese government (state, territory or local governments) and its agencies or instrumentalities that are denominated in yen, bank debt obligations and time deposits, bankers' acceptances, commercial paper, short-term corporate debt obligations and mortgage-backed and asset-backed securities. The Fund also may enter into repurchase agreements with counterparties that are deemed to present acceptable credit risks.

Each of the *Brazilian Real Fund*, *Chinese Yuan Fund*, *Indian Rupee Fund*, and *South African Rand Fund* seeks to (i) achieve total returns reflective of money market rates available to foreign investors in the specified countries or regions, and (ii) provide exposure to changes in the value of a designated non-U.S. currency (or currencies) relative to the U.S. dollar. Because the market for money market securities in these countries generally is less liquid and accessible to foreign investors than corresponding markets in more developed economies, each of these Funds intends to achieve exposure to the non-U.S. market designated by its name by investing primarily in short-term U.S. money market securities and forward currency contracts and currency swaps. The combination of U.S. money market securities with forward currency contracts and currency swaps is designed to provide exposure equivalent to money market securities denominated in a non-U.S. currency. Each of these Funds also may enter into repurchase agreements with counterparties that are deemed to present acceptable credit risks.

The *Commodity Currency Fund* seeks to (i) achieve total returns reflective of money market rates available to foreign investors in selected commodity-producing countries, and (ii) provide exposure to changes in the value of a designated non-U.S. currency or currencies relative to the U.S. dollar. The term "commodity currency" generally is used to describe the currency of a country whose economic success is commonly identified with the production and export of commodities (such as precious metals, oil, agricultural products or other raw materials) and whose value is closely linked to the value of such commodities. As the demand for, or price of, such commodities increases, money tends to flow into the country. This generally lifts the country's economic prospects and supports the value of its currency. For example, Canada is commonly recognized as a leading producer and exporter of oil and natural gas. Increases in the price of oil and gas historically have had a positive influence on the value of the Canadian dollar relative to other currencies. Similarly, a significant portion of the economies of Australia and South Africa are tied to mining and production of industrial and precious metals, such as iron ore and gold. Increases in the prices of such metals historically have provided support to the value of the Australian dollar and South African rand relative to other currencies. Conversely, declines in the demand for, or value of, such commodities historically have contributed to declines in the relative value of these countries' currencies. The Fund is designed to provide exposure to both the currencies and money market rates available to foreign investors in selected commodity-producing countries. The Fund intends to invest in commodity-producing countries such as Australia, Brazil, Canada, Chile, Colombia, Indonesia, Malaysia, New Zealand, Norway, Peru, Russia, and South Africa. This list may change based on market developments. In addition to seeking broad exposure across countries and currencies, the Fund intends to seek exposure across currencies correlated to each of the key commodity groups: industrial metals, precious metals, energy, agriculture and livestock. The Fund generally will invest only in currencies that float relative to other currencies. The value of a floating currency is largely determined by supply and demand and prevailing market rates. In contrast, the value of a fixed currency generally is set by a government or central bank at an official exchange rate. The Fund generally does not intend to invest in the currencies of notable commodity producers, such as Saudi Arabia and the United Arab Emirates, since they are fixed or otherwise closely linked to the U.S. dollar. The Fund will only invest in currencies that it deems to be sufficiently liquid and accessible.

Table of Contents

Because the market for money market securities in some of the countries above may be less liquid and accessible to foreign investors than corresponding markets in more developed economies, the Fund intends to achieve exposure to selected commodity-producing countries available to U.S. investors by investing primarily in short-term U.S. money market securities and forward currency contracts and currency swaps. The combination of U.S. money market securities with forward currency contracts and currency swaps is designed to create a position economically similar to a money market instrument denominated in each of the selected currencies. The Fund also may enter into repurchase agreements with counterparties that are deemed to present acceptable credit risks.

The *Emerging Currency Fund* seeks to (i) achieve total returns reflective of money market rates available to foreign investors in selected emerging market countries, and (ii) provide exposure to changes in the value of designated non-U.S. currencies relative to the U.S. dollar. The Fund seeks to achieve its investment objective by investing in short-term securities and instruments designed to provide exposure to the currencies and money market rates of selected emerging market countries. The Fund seeks to provide exposure to currencies and money market rates from emerging and developing economies in three regions of the world: (i) Asia, (ii) Latin America and (iii) Europe, the Middle East and Africa. The Fund intends to invest in markets such as: Brazil, Chile, China, the Czech Republic, Hungary, India, Indonesia, Malaysia, Mexico, Peru, Philippines, Poland, Russia, South Africa, South Korea, Taiwan, Thailand, and Turkey. This list may change based on market developments. The Fund attempts to achieve exposure to the most liquid currencies within each of the three broad regions, while at the same time maintaining geographic and economic diversity across these regions. The specific set of currencies is selected on the annual assessment date each year (typically in July) and generally remains the same throughout the year. The selected currencies are equally weighted in terms of U.S. dollar value at the annual assessment date. The Fund is rebalanced quarterly in order to maintain this equal weighting. In order to maintain geographic diversity, the Fund's exposure to each of the three broad geographic regions is limited to 45% of its total asset value on the annual assessment date and at each quarterly rebalancing. More frequent rebalancings may occur in response to significant market events. A significant event might include, for example, market conditions that significantly disrupt liquidity or result in the reclassification of a currency (from emerging to developed, for example). Currencies that generally would be considered liquid may be ineligible for investment or dropped from the Fund as a result of government action or other market events if the Fund's adviser believes doing so would be in the best interest of the Fund.

Because the market for money market securities in the selected emerging markets generally is less liquid and accessible to foreign investors than corresponding markets in more developed countries, the Fund intends to achieve exposure to these markets by investing primarily in short-term U.S. money market securities and forward currency contracts and swaps. The combination of U.S. money market securities with forward currency contracts and currency swaps is designed to create a position economically similar to a money market security denominated in each of the selected currencies. In aggregate, the Fund's investments should create exposure that is economically similar to a basket of money market securities denominated in each of the selected currencies. The Fund also may enter into repurchase agreements with counterparties that are deemed to present acceptable credit risks.

All Funds

As a matter of general policy, each Fixed Income Fund, Currency Income Fund and the Global Return Fund will invest under normal circumstances at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in investments whose combined performances are tied economically to the particular country, geographic region or basket of currencies suggested by the Fund's name. As a matter of general policy, the Managed Futures Strategy Fund will invest under normal circumstances at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in managed futures, as described above. If, subsequent to an investment, the 80% requirement is no longer met, the Fund's future investments will be made in a manner that will bring the Fund into compliance with this policy. The Trust will provide shareholders with 60 days' prior notice of any change to this policy for the Fund. A Fund's investment in derivatives will be included in its net assets when determining whether a Fund satisfies the 80% test described above.

All U.S. money market securities acquired by the Funds will be rated in the upper two short-term ratings by at least two NRSROs or, if unrated, deemed to be of equivalent quality. A First Tier security is (i) a rated security that has received a short-term rating from the NRSROs in the highest short-term rating category for debt obligations (within which there may be sub-categories or gradations

Table of Contents

indicating relative standing); (ii) an unrated security that is of comparable quality to a security, as determined by the Fund's board of directors; (iii) a security issued by a registered investment company that is a money market fund; or (iv) a security issued by the U.S. government or any of its agencies or instrumentalities. A Second Tier security is a rated security that has received a short-term rating other than a first tier rating from an NRSRO for debt obligations (within which there may be sub-categories or gradations indicating relative standing) or is an unrated security that is of comparable quality. Each Fund intends to limit its overall exposure to Second Tier money market securities to 5% of total assets. Any security originally issued as a long-term obligation will be rated A or higher (or the equivalent) at the time of purchase by at least two NRSROs or, if unrated, deemed to be of equivalent quality.

Each Fund intends to qualify each year as a regulated investment company (a "RIC") under Subchapter M of the Internal Revenue Code of 1986, as amended (the "Code"), so that it will not be subject to federal income tax on income and gains that are timely distributed to Fund shareholders. Each Fund will invest its assets, and otherwise conduct its operations, in a manner that is intended to satisfy the qualifying income, diversification and distribution requirements necessary to establish and maintain RIC qualification under Subchapter M.

In addition to satisfying the above-referenced RIC diversification requirements, no portfolio security held by a Fund (other than U.S. government securities and non-U.S. government securities) will represent more than 30% of the weight of a Fund and the five highest weighted portfolio securities of a Fund (other than U.S. government securities and/or non-U.S. government securities) will not in the aggregate account for more than 65% of the weight of a Fund. For these purposes, a Fund may treat repurchase agreements collateralized by U.S. government securities or non-U.S. government securities as U.S. or non-U.S. government securities, as applicable.

Each Fund is considered "non-diversified," as such term is used in the 1940 Act.

Weighted Average Portfolio Maturity. In order to reduce interest rate risk, each Currency Income Fund (with the exception of the Japanese Yen Fund) generally expects to maintain a weighted average portfolio maturity of 90 days or less (60 days or less for the Japanese Yen Fund) with respect to the money market securities in their respective portfolios. This may change from time to time. The "average weighted portfolio maturity" of a Fund is the average of all the current maturities of the individual securities in the Fund's portfolio adjusted by the dollar amount of such securities held by the Fund. Average portfolio maturity is important to investors as an indication of the Fund's sensitivity to changes in interest rates. Funds with longer average portfolio maturities generally are subject to greater interest rate risk. Each Currency Income Fund may engage in forward currency contracts and swap transactions. The use of such contracts and transactions may extend the weighted average maturity of such Fund's entire portfolio beyond 90 days. In particular, the Chinese Yuan Fund currently intends to invest in forward currency contracts and swaps, generally with a weighted average term of up to 180 days. Such transactions increase a Fund's exposure to interest rate risk.

GENERAL RISKS

An investment in a Fund should be made with an understanding that the value of a Fund's portfolio securities may fluctuate in accordance with changes in the financial condition of an issuer or counterparty, changes in specific economic or political conditions that affect a particular security or issuer and changes in general economic or political conditions. Each Fund is actively managed using proprietary investment strategies and processes. There can be no guarantees that these strategies and processes will produce the intended results. A Fund may not outperform other investment strategies over short- or long-term market cycles and the Fund may decline in value. Fund shares may trade above or below their net asset value. An investor in a Fund could lose money over short or even long periods of time.

Although each Currency Income Fund invests in short-term U.S. and/or non-U.S. money market securities, the Currency Income Funds do not seek to maintain a constant NAV and are not traditional money market funds. Each Fixed Income Fund also invests in intermediate and long-term U.S. and/or non-U.S. money market securities. The price of the securities and other investments held by the Funds, and thus the value of a Fund's portfolio, is expected to fluctuate in accordance with general economic conditions, interest rates, political events and other factors.

Each Fund is actively managed using proprietary investment strategies and processes. There can be no guarantees that these strategies and processes will produce the intended results. The Funds may not outperform other investment strategies over short- or long-term market cycles and the Funds may decline in value.

Investor perceptions may also impact the value of Fund investments and the value of an investment in Fund shares. These investor perceptions are based on various and unpredictable factors, including expectations regarding government, economic, monetary and fiscal policies, inflation and interest rates, economic expansion or contraction, and global or regional political, economic or banking crises. Issuer-specific conditions may also affect the value of a Fund investment. The financial condition of an issuer of a security or counterparty to a contract may cause it to default or become unable to pay interest or principal due on the security or contract. A Fund cannot collect interest and principal payments if the issuer or counterparty defaults. Accordingly, the value of an investment in a Fund may change in response to issuer defaults and changes in the credit ratings of the Fund's portfolio securities.

Edgar Filing: WisdomTree Trust - Form 497

Events in the financial sector have resulted, and may continue to result, in an unusually high degree of volatility in the financial markets, both domestic and foreign. Both domestic and foreign fixed income and equity markets have been experiencing extreme volatility and turmoil. Issuers that have exposure to the real estate, mortgage and credit markets have been particularly affected and well-known financial institutions have experienced significant liquidity and other problems. Some of these institutions have declared bankruptcy or defaulted on their debt. It is uncertain whether or for how long these conditions will continue. These events and possible continuing market turbulence may have an adverse effect on Fund performance.

Table of Contents

Although all of the Funds attempt to invest in liquid securities and instruments, there can be no guarantees that a liquid market for such securities and instruments will be maintained. The price at which securities may be sold and the value of a Fund's shares will be adversely affected if trading markets for a Fund's portfolio holdings are limited.

Authorized Participants should refer to the section herein entitled "Creation and Redemption of Creation Unit Aggregations" for additional information that may impact them.

BORROWING. Although the Funds do not intend to borrow money, each Fund may do so to the extent permitted by the 1940 Act. Under the 1940 Act, a fund may borrow up to 33% of its net assets. The Funds will borrow only for short-term or emergency purposes.

Borrowing will tend to exaggerate the effect on net asset value of any increase or decrease in the market value of a Fund's portfolio. Money borrowed will be subject to interest costs that may or may not be recovered by earnings on the securities purchased. A Fund also may be required to maintain minimum average balances in connection with a borrowing or to pay a commitment or other fee to maintain a line of credit; either of these requirements would increase the cost of borrowing over the stated interest rate.

CAPITAL CONTROL RISK. Economic conditions, such as volatile currency exchange rates and interest rates, political events and other conditions may, without prior warning, lead to government intervention and the imposition of capital controls. Countries use these controls to restrict volatile movements of capital entering (inflows) and exiting (outflows) their country to respond to certain economic conditions. Such controls are mainly applied to short-term capital transactions to counter speculative flows that threaten to undermine the stability of the exchange rate and deplete foreign exchange reserves. Capital controls include the prohibition of, or restrictions on, the ability to transfer currency, securities or other assets. Levies may be placed on profits repatriated by foreign entities (such as the Funds). Capital controls may impact the ability of a Fund to create and redeem Creation Units, adversely affect the trading market for shares of the Fund, and cause a Fund to trade at prices materially different from its NAV. A Fund may change its creation or redemption procedures without notice in response to the imposition of capital controls. There can be no assurance a country in which a Fund invests will not impose a form of capital control to the possible detriment of a Fund and its shareholders.

CURRENCY EXCHANGE RATE RISK. Investments denominated in non-U.S. currencies and investments in securities or derivatives that provide exposure to such currencies, currency exchange rates or interest rates are subject to non-U.S. currency risk. Changes in currency exchange rates and the relative value of non-U.S. currencies will affect the value of a Fund's investment and the value of your Fund shares. Because each Fund's NAV is determined on the basis of U.S. dollars, the U.S. dollar value of your investment in the Fund may go down if the value of the local currency of the non-U.S. markets in which the Fund invests depreciates against the U.S. dollar. This is true even if the local currency value of securities in the Fund's holdings goes up. Conversely, the U.S. dollar value of your investment in the Fund may go up if the value of the local currency appreciates against the U.S. dollar.

The value of the U.S. dollar against other currencies is influenced by a variety of factors. These factors include national debt levels and trade deficits, changes in balances of payments and trade, domestic and foreign interest and inflation rates, global or regional political, economic or financial events, monetary policies of governments, actual or potential government intervention, and global energy prices. Political instability, the possibility of government intervention and restrictive or opaque business and investment policies may also reduce the value of a country's currency. Government monetary policies and the buying or selling of currency by a country's government may also influence exchange rates.

Currencies of emerging or developing market countries may be subject to significantly greater risks than currencies of developed countries. Many developing market countries have experienced steady declines or even sudden devaluations of their currencies relative to the U.S. dollar. Some non-U.S. market currencies may not be traded internationally, may be subject to strict limitations on foreign investment and may be subject to frequent and unannounced government intervention. Government intervention and currency controls can decrease the value and significantly increase the volatility of an investment in non-U.S. currency. Although the currencies of some developing market countries may be convertible into U.S. dollars, the achievable rates may differ from those experienced by domestic investors because of foreign investment restrictions, withholding taxes, lack of liquidity or other reasons.

FOREIGN SECURITIES RISK. Each Fund (except for the Managed Futures Strategy Fund) invests a significant portion of its assets in non-U.S. securities and instruments, or in instruments that provide exposure to such securities and instruments. Investments in non-U.S. securities involve certain risks that may not be present with investments in U.S. securities. For example, investments in non-U.S. securities may be subject to risk of loss due to foreign currency fluctuations or to political or economic instability. There may be less information publicly available about a non-U.S. issuer than a U.S. issuer. Non-U.S. issuers may be subject to different accounting, auditing, financial reporting and investor protection standards than U.S. issuers. Investments in non-U.S. securities may be subject to withholding or other taxes and may be subject to additional trading, settlement, custodial, and operational risks (including restrictions on the transfers of securities). With respect to certain countries, there is the possibility of government intervention and expropriation or nationalization of assets. Because legal systems differ, there is also the possibility that it will be difficult to obtain or enforce legal judgments in certain countries. Since foreign exchanges may be open

Edgar Filing: WisdomTree Trust - Form 497

on days when a Fund does not price its shares, the value of the securities in a Fund's portfolio may change on

Table of Contents

days when shareholders will not be able to purchase or sell a Fund's shares. Conversely, Fund shares may trade on days when foreign exchanges are closed. Each of these factors can make investments in a Fund more volatile and potentially less liquid than other types of investments. In addition, a Fund may change its creation or redemption procedures without notice in connection with restrictions on the transfer of securities. For more information on creation and redemption procedures, see "Creation and Redemption of Creation Unit Aggregations" herein.

HIGH YIELD RISK. Each Fixed Income Fund and the Global Real Return Fund may invest a limited portion of its assets in securities rated lower than Baa by Moody's, or equivalently rated by S&P or Fitch. Such securities are sometimes referred to as "high yield securities" or "junk bonds." Investing in these securities involves special risks in addition to the risks associated with investments in higher-rated fixed income securities. While offering a greater potential for capital appreciation and higher yields, high yield securities typically entail higher price volatility and may be less liquid than securities with higher ratings. High yield securities may be regarded as predominately speculative with respect to the issuer's continuing ability to meet principal and interest payments. Issuers of securities in default may fail to resume principal or interest payments, in which case the Funds may lose their entire investment.

LACK OF DIVERSIFICATION. Although each Fund intends to invest in a variety of securities and instruments, the Funds are considered "non-diversified" as such term is used in the 1940 Act. Each Fund is considered to be "non-diversified" and is not limited by the 1940 Act with regard to the percentage of its assets that may be invested in the securities of a single issuer. As a result, each of the Funds may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were classified as a diversified fund. Therefore, each Fund may be more exposed to the risks associated with and developments affecting an individual issuer or a small number of issuers than a fund that invests more widely, which may have a greater impact on the Fund's volatility and performance.

Each Fund does, however, intend to maintain the level of diversification necessary to qualify as a RIC under Subchapter M of the Code. The Subchapter M diversification tests generally require that (i) a Fund invest no more than 25% of its total assets in securities (other than securities of the U.S. government or other RICs) of any one issuer or two or more issuers that are controlled by a Fund and that are engaged in the same, similar or related trades or businesses, and (ii) at least 50% of a Fund's total assets consist of cash and cash items, U.S. government securities, securities of other RICs and other securities, with investments in such other securities limited in respect of any one issuer to an amount not greater than 5% of the value of the Fund's total assets and 10% of the outstanding voting securities of such issuer. These tax requirements are generally applied at the end of each quarter of a Fund's taxable year.

TAX RISK. To qualify for the favorable U.S. federal income tax treatment accorded to RICs, a Fund must, among other things, derive in each taxable year at least 90% of its gross income from certain prescribed sources. The U.S. Treasury Department has authority to issue regulations that would exclude foreign currency gains from qualifying income if such gains are not directly related to a Fund's business of investing in stock or securities. Accordingly, regulations may be issued in the future that could treat some or all of a Fund's foreign currency gains as non-qualifying income, which might jeopardize the Fund's status as a RIC for all years to which the regulations are applicable. If for any taxable year a Fund does not qualify as a RIC, all of its taxable income (including its net capital gain) for that year would be subject to tax at regular corporate rates without any deduction for distributions to shareholders, and such distributions would be taxable to shareholders as dividend income to the extent of the Fund's current and accumulated earnings and profits.

The Fund may also obtain exposure to the commodities markets by entering into commodity-linked derivative instruments, such as listed futures contracts, forward currency contracts, swaps, and structured notes. Income from certain commodity-linked derivative instruments in which the Fund invests may not be considered qualifying income under the 90% test noted above. The Fund intends to invest in such commodity-linked derivative instruments indirectly through the WisdomTree Subsidiary. To the extent the Fund makes direct investments in commodity-linked derivative instruments, it will seek to restrict the resulting income from such instruments so that, when combined with its other non-qualifying income, the Fund's non-qualifying income is less than 10% of its gross income. Failure to comply with this restriction would have significant negative tax consequences to Fund shareholders.

A discussion of some of the other risks associated with an investment in a Fund is contained in each Fund's Prospectus.

SPECIFIC INVESTMENT STRATEGIES

A description of certain investment strategies and types of investments used by some or all of the Funds is set forth below.

MONEY MARKET INSTRUMENTS. Each Fund may invest a portion of its assets in high-quality money market instruments on an ongoing basis to provide liquidity or for other reasons. The instruments in which the Funds may invest include: (i) short-term obligations issued by the U.S. government; (ii) negotiable certificates of deposit (CDs), fixed time deposits and bankers' acceptances of U.S. and foreign banks and similar institutions; (iii) commercial paper; and (iv) repurchase agreements. CDs are short-term negotiable obligations of commercial banks. Time deposits are non-negotiable deposits maintained in banking institutions for specified periods of time at stated interest rates. Bankers' acceptances

Edgar Filing: WisdomTree Trust - Form 497

are time drafts drawn on commercial banks by borrowers, usually in connection with international transactions. High-quality instruments are typically those rated in the top two short- or long-term ratings categories by at least one Nationally Recognized Statistical Rating Organization or judged by the Adviser or Sub-Adviser to be of comparable quality.

Table of Contents

FIXED INCOME SECURITIES. Each Fund invests in fixed income securities, such as U.S. Treasury notes and bonds. Fixed income securities change in value in response to interest rate changes and other factors, such as the perception of the issuer's creditworthiness. For example, the value of fixed income securities will generally decrease when interest rates rise, which may cause the value of the Fund to decrease. In addition, investments in fixed income securities with longer maturities will fluctuate more in response to interest rate changes.

U.S. GOVERNMENT SECURITIES. Each Fund may purchase short-term obligations issued or guaranteed by the U.S. Treasury or the agencies or instrumentalities of the U.S. government. Each Fixed Income Fund, the Managed Futures Strategy Fund, and the Global Real Return Fund may also purchase intermediate and long-term obligations issued or guaranteed by the U.S. Treasury or the agencies or instrumentalities of the U.S. government. U.S. government securities are obligations of, or guaranteed by, the U.S. government, its agencies or government-sponsored enterprises. U.S. government securities are subject to market and interest rate risk, and may be subject to varying degrees of credit risk. U.S. government securities include inflation-indexed fixed income securities, such as U.S. Treasury Inflation Protected Securities (TIPS). U.S. government securities include zero coupon securities, which tend to be subject to greater market risk than interest-paying securities of similar maturities.

NON-U.S. GOVERNMENT SECURITIES. Each Fund may invest in short-term securities issued or guaranteed by non-U.S. governments, agencies and instrumentalities. The Emerging Markets Local Debt Fund may also purchase intermediate and long-term obligations issued or guaranteed by non-U.S. governments, agencies and instrumentalities. Non-U.S. government securities include direct obligations, as well as obligations guaranteed by a foreign government including state, territory or local governments.

BANK DEPOSITS AND OBLIGATIONS. Each Fund may invest in deposits and other obligations of U.S. and non-U.S. banks and financial institutions. Deposits and obligations of banks and financial institutions include certificates of deposit, time deposits, and bankers' acceptances. Certificates of deposit and time deposits represent an institution's obligation to repay funds deposited with it that earn a specified interest rate. Certificates of deposit are negotiable certificates, while time deposits are non-negotiable deposits. A banker's acceptance is a time draft drawn on and accepted by a bank that becomes a primary and unconditional liability of the bank upon acceptance. Investments in obligations of non-U.S. banks and financial institutions may involve risks that are different from investments in obligations of U.S. banks. These risks include future unfavorable political and economic developments, seizure or nationalization of foreign deposits, currency controls, interest limitations or other governmental restrictions that might affect the payment of principal or interest on the securities held in the Fund.

COMMERCIAL PAPER. Each Fund may invest in commercial paper. Commercial paper is an unsecured short-term promissory note with a fixed maturity of no more than 270 days issued by corporations, generally to finance short-term business needs. The commercial paper purchased by the Currency Income Funds and Global Real Return Fund generally will be rated in the upper two short-term ratings by at least two NRSROs or, if unrated, deemed to be of equivalent quality by the Adviser or the Sub-Adviser. If a security satisfies the rating requirement upon initial purchase and is subsequently downgraded, a Fund is not required to dispose of the security. In the event of such an occurrence, the Adviser or the Sub-Adviser will determine what action, including potential sale, is in the best interest of the Fund. The Currency Income Funds and Global Real Return Fund may also purchase unrated commercial paper provided that such paper is determined to be of comparable quality by the Adviser or the Sub-Adviser. Commercial paper issues in which each Fund may invest include securities issued by corporations without registration under the Securities Act in reliance on the exemption from such registration afforded by Section 3(a)(3) thereof, and commercial paper issued in reliance on the so-called private placement exemption from registration, which is afforded by Section 4(2) of the Securities Act (Section 4(2) paper). Section 4(2) paper is restricted as to disposition under the federal securities laws in that any resale must similarly be made in an exempt transaction. Section 4(2) paper is normally resold to other institutional investors through or with the assistance of investment dealers who make a market in Section 4(2) paper, thus providing liquidity.

CORPORATE DEBT OBLIGATIONS. Each Fixed Income Fund and the Global Real Return Fund may invest in corporate debt obligations. The Currency Income Funds may invest in corporate debt obligations with less than 397 calendar days remaining to maturity. Corporate debt obligations are interest bearing securities in which the corporate issuer has a contractual obligation to pay interest at a stated rate on specific dates and to repay principal periodically or on a specified maturity date. The Currency Income Funds and the Global Real Return Fund will be limited to obligations rated at the time of purchase in the top three long-term rating categories by at least one NRSRO, or if unrated, deemed to be of equivalent quality. The Fixed

Table of Contents

Income Funds may invest in rated and unrated debt, subject to the credit quality restrictions set forth in the description of the Funds' Principal Investment Strategies herein. If a security satisfies the rating requirement upon initial purchase and is subsequently downgraded, a Fund is not required to dispose of the security. In the event of such an occurrence, WisdomTree Asset Management or the Sub-Adviser will determine what action, including potential sale, is in the best interest of the Fund.

FLOATING AND ADJUSTABLE RATE NOTES. Each Fund may purchase floating-rate and adjustable rate obligations, such as demand notes, bonds, and commercial paper. The Global Real Return Fund may invest a relatively large percentage of its assets in these instruments. Variable- and floating-rate securities generally are less sensitive to interest rate changes but may decline in value if their interest rates do not rise as much, or as quickly, as interest rates in general. Conversely, floating-rate securities will not generally increase in value if interest rates decline. When the Fund holds variable- or floating-rate securities, a decrease (or, in the case of inverse floating-rate securities, an increase) in market interest rates will adversely affect the income received from such securities and the net asset value of the Fund's shares.

These securities may bear interest at a rate that resets based on standard money market indices or are remarketed at current market rates. They may permit the holder to demand payment of principal at any time or at specified intervals not exceeding 397 days. The issuer of such obligations may also have the right to prepay, in its discretion, the principal amount of the obligations plus any accrued interest. The reset date of securities held by each Fund may not be longer than 397 days (and therefore would be considered to be within each Fund's general maturity restriction of 397 days). Given that most floating-rate securities reset their interest rates prior to their final maturity date, each Fund uses the period to the next reset date to calculate the securities contribution to the average portfolio maturity of the Fund.

MORTGAGE-BACKED AND ASSET-BACKED SECURITIES. Each Currency Income Fund, each Fixed Income Fund, and the Global Real Return Fund may invest in mortgage-backed and asset-backed securities. Mortgage-backed securities are secured (or backed) by pools of commercial or residential mortgages. Asset-backed securities are secured (or backed) by other types of assets, such as automobile loans, installment sale contracts, credit card receivables or other similar assets. Mortgage-backed and asset-backed securities are issued by entities such as Ginnie Mae, Fannie Mae, the Federal Home Loan Mortgage Corporation, commercial banks, trusts, special purpose entities, finance companies, finance subsidiaries of industrial companies, savings and loan associations, mortgage banks and investment banks. Investing in mortgage-backed and asset-backed securities is subject to credit risk and interest rate risk. They are also subject to the risk of prepayment, which can change the nature and extent of the Fund's interest rate risk. The market for mortgage-backed securities may not be liquid under all interest rate scenarios, which may prevent the Fund from selling such securities held in its portfolio at times or prices that it desires.

MORTGAGE DOLLAR ROLL TRANSACTIONS. The Global Real Return Fund may enter into mortgage dollar roll transactions with selected banks and broker-dealers. In a dollar roll, the Fund sells mortgage-backed securities and simultaneously contracts to repurchase substantially similar (same type, coupon and maturity) securities on a specified future day. The Fund will only enter into covered rolls. A covered roll is a specific type of dollar roll for which there is an offsetting cash or cash equivalent security position which matures on or before the forward settlement date of the dollar roll transaction. Covered rolls are not treated as a borrowing or other senior security and will be excluded from the calculation of the Fund's borrowings and other senior securities. For financial reporting and tax purposes, the Fund treats mortgage dollar rolls as two separate transactions: one involving the purchase of a security and a separate transaction involving a sale. The Fund does not currently intend to enter into mortgage dollar roll transactions that are accounted for as financing.

INFLATION-LINKED BONDS. The Global Real Return Fund currently invests a relatively large percentage of its assets in inflation indexed bonds. Inflation-indexed bonds are fixed income securities whose principal value is periodically adjusted according to the rate of inflation. Repayment of the original bond principal upon maturity (as adjusted for inflation) is guaranteed in the case of U.S. Treasury inflation-indexed bonds. However, the current market value of the bonds is not guaranteed, and will fluctuate with market conditions. Investments in other inflation-linked bonds may not provide a similar guarantee and the principal amount repaid could be less than the original principal if inflation falls over the period.

The value of inflation-indexed bonds is expected to change in response to changes in real interest rates. Real interest rates in turn are tied to the relationship between nominal interest rates and the rate of inflation. Therefore, if the rise in inflation exceeds the rise in nominal rates, real rates are likely to decline, leading to an increase in the market value of the bonds. Conversely, if the rise in nominal interest rates outpaces the pickup in the rate of inflation, real interest might rise, generating a decline in the market value of the inflation-linked security.

The periodic adjustment of U.S. inflation-indexed bonds generally is tied to the Consumer Price Index for Urban Consumers (CPI-U), which is calculated monthly by the U.S. Bureau of Labor Statistics. The CPI-U is a measurement of changes in the cost of living, made up of components such as housing, food, transportation and energy. Inflation-indexed bonds issued by a foreign government are generally adjusted to reflect a comparable country or regional inflation measure calculated by that government. There can be no assurance that the CPI-U or any foreign inflation index will accurately measure the real rate of inflation in the prices of goods and services. Moreover, there can be no assurance that the rate of inflation in a foreign country will be correlated to the rate of inflation in the United States. Any increase in the principal amount of an inflation-indexed bond will be considered taxable ordinary income, even though investors do not receive their principal until maturity.

Table of Contents

Inflation-linked bonds held by the Fund may experience an increase in original issue value due to inflation-linked adjustments. The inflation-linked growth in the value of these bonds may be reflected in the Fund's gross income. While inflation-adjusted growth does not result in cash payments to the Fund, the Fund may be required to make distributions to shareholders for any increase in value in excess of the cash actually received by the Fund during the taxable year. The Fund may be required to sell portfolio securities to make these distribution payments. This may lead to higher transaction costs, losses from sale during unfavorable market conditions and higher capital gains taxes. If deflation-linked adjustments decrease the value of inflation-linked bonds held by the Fund, income distributions previously made by the Fund during the taxable year may be deemed a return of capital.

SUPRANATIONAL SECURITIES. Each Fund may invest in securities issued by supranational entities. A supranational entity is formed by two or more central governments to promote economic development for the member countries. Supranational entities finance their activities by issuing bond debt and are usually considered part of the sub-sovereign debt market. Some well-known examples of supranational entities are the World Bank, International Monetary Fund, European Investment Bank, Asian Development Bank, Inter-American Development Bank and other regional multilateral development banks. These securities are subject to varying degrees of credit risk and interest rate risk.

SOVEREIGN DEBT OBLIGATIONS. Each Fund may invest in sovereign debt obligations. Sovereign debt obligations involve special risks that are not present in corporate debt obligations. The foreign issuer of the sovereign debt or the foreign governmental authorities that control the repayment of the debt may be unable or unwilling to repay principal or interest when due, and the Fund may have limited recourse in the event of a default. During periods of economic uncertainty, the market prices of sovereign debt, and the Fund's net asset value, to the extent it invests in such securities, may be more volatile than prices of debt obligations of U.S. issuers. In the past, certain foreign countries have encountered difficulties in servicing their debt obligations, withheld payments of principal and interest and declared moratoria on the payment of principal and interest on their sovereign debt. A sovereign debtor's willingness or ability to repay principal and pay interest in a timely manner may be affected by, among other factors, its cash flow situation, the extent of its foreign currency reserves, the availability of sufficient foreign exchange, the relative size of the debt service burden, the sovereign debtor's policy toward principal international lenders and local political constraints. Sovereign debtors may also be dependent on expected disbursements from foreign governments, multilateral agencies and other entities to reduce principal and interest arrearages on their debt. The failure of a sovereign debtor to implement economic reforms, achieve specified levels of economic performance or repay principal or interest when due may result in the cancellation of third party commitments to lend funds to the sovereign debtor, which may further impair such debtor's ability or willingness to service its debts.

DERIVATIVES. Each Fund may use derivative instruments as part of its investment strategies. The Brazilian Real Fund, Chinese Yuan Fund, Commodity Currency Fund, Emerging Currency Fund, Indian Rupee Fund, South African Rand Fund, and Alternative Funds will likely have a greater portion of their assets invested through derivative instruments than the other Funds. The Emerging Markets Local Debt Fund and the Asia Local Debt Fund expect that no more than 30% of the value of their respective net assets will be invested in derivative instruments. Each of the Australia & New Zealand Debt Fund and the Euro Debt Fund, under normal circumstances, will invest no more than 20% of the value of its net assets in derivative instruments. The Japanese Yen Fund does not intend to use derivatives to a significant extent, though it reserves the right to do so. The Funds will not use derivatives to increase leverage and investments in derivatives will be fully collateralized.

Generally, derivatives are financial contracts whose value depends upon, or is derived from, the value of an underlying asset, reference rate or index, and may relate to bonds, interest rates, currencies, commodities, and related indexes. Examples of derivative instruments include listed futures contracts, forward currency contracts, non-deliverable forward currency contracts, currency, interest rate and total return swaps, currency options, futures contracts, options on futures contracts, swap agreements and credit-linked notes.

With respect to certain kinds of derivative transactions entered into by the Funds that involve obligations to make future payments to third parties, including, but not limited to, futures, forward contracts, swap contracts, the purchase of securities on a when-issued or delayed delivery basis, or reverse repurchase agreements, under applicable federal securities laws, rules, and interpretations thereof, the Fund must set aside (referred to sometimes as asset segregation) liquid assets, or engage in other measures to cover open positions with respect to such transactions. For example, with respect to forward foreign currency exchange contracts and futures contracts that are not contractually required to cash-settle, the Fund must cover its open positions by setting aside liquid assets equal to the contracts' full notional value, except that deliverable foreign currency exchange contracts for currencies that are liquid will be treated as the equivalent of cash settled contracts. As such, the Fund may set aside liquid assets in an amount equal to the Fund's daily marked-to-market (net) obligation (i.e., the Fund's daily net liability if any) rather than the full notional amount under such deliverable forward foreign currency exchange contracts. With respect to forward foreign currency exchange contracts and futures contracts that are contractually required to cash-settle, the Fund may set aside liquid assets in an amount equal to the Fund's daily marked-to-market (net) obligation rather than the notional value. The Fund reserves the right to modify its asset segregation policies in the future.

Table of Contents

The Managed Futures Strategy Fund intends to use listed futures contracts, forward currency contracts and swaps as a significant part of its investment strategy. To the extent the Fund uses futures and options, it will do so only in accordance with Rule 4.5 of the Commodity Exchange Act (CEA). The Trust, on behalf of the Global Real Return Fund and Managed Futures Strategy Fund, has filed a notice of eligibility for exclusion from the definition of the term commodity pool operator or CPO in accordance with Rule 4.5 of the CEA so that each Fund is not subject to registration or regulation as a CPO under the CEA. The WisdomTree Global Real Return Subsidiary and the WisdomTree Managed Futures Strategy Subsidiary also have filed a notice of eligibility for exclusion from the definition of CPO in accordance with Rule 4.13(a)(4) of the CEA so that it too is not subject to registration or regulation as a CPO under the CEA.

Structured Notes. Each Alternative Fund may invest in notes, sometimes called structured notes, linked to the performance of commodities or commodity indexes. Commodity-linked structured notes provide exposure, which may include long and/or short exposure, to the investment returns of commodities markets without investing directly in the underlying physical commodities. The performance of these notes is determined by the price movement of the commodities underlying the note. Structured notes may be used to enhance leverage. Leverage is a technique used to multiply gains or losses. These notes are subject to the credit risk of the issuing party and may be less liquid than other types of securities. This means that the Fund may lose money if the issuer of the note defaults and that the Fund may not be able to readily close out its investment in such notes without incurring losses. The Fund may not invest more than 30% of its assets in swap transactions and structured notes.

Credit-Linked Notes. Each Fund may invest in credit-linked notes. A credit-linked note is a type of structured note whose value is linked to an underlying reference asset. Credit-linked notes typically provide periodic payments of interest as well as payment of principal upon maturity. The value of the periodic payments and the principal amount payable upon maturity are tied (positively or negatively) to a reference asset, such as an index, government bond, interest rate or currency exchange rate. The ongoing payments and principal upon maturity typically will increase or decrease depending on increases or decreases in the value of the reference asset. A credit-linked note typically is issued by a special purpose trust or similar entity and is a direct obligation of the issuing entity. The entity, in turn, invests in bonds or derivative contracts in order to provide the exposure set forth in the credit-linked note. The periodic interest payments and principal obligations payable under the terms of the note typically are conditioned upon the entity's receipt of payments on its underlying investment. If the underlying investment defaults, the periodic payments and principal received by the Fund will be reduced or eliminated. The buyer of a credit-linked note assumes the risk of default by the issuer and the underlying reference asset or entity. Generally, investors in credit-linked notes assume the risk of default by the issuer and the reference entity in return for a potentially higher yield on their investment or access to an investment that they could not otherwise obtain. In the event the issuer defaults or there is a credit event that relates to the reference asset, the recovery rate is generally less than the Fund's initial investment and the Fund may lose money.

Foreign Currency Transactions. Each Fund may engage in foreign currency transactions. Each Fund may invest directly in foreign currencies in the form of bank and financial institution deposits, certificates of deposit, and bankers' acceptances denominated in a specified non-U.S. currency. Each Fund may enter into foreign currency exchange transactions. Each Fund will conduct its foreign currency exchange transactions either on a spot (i.e., cash) basis at the spot rate prevailing in the foreign currency exchange market, or by entering into forward currency contracts to purchase or sell foreign currencies or forward currency swaps to exchange cash flows based on the notional difference among two or more currencies.

Foreign exchange transactions involve a significant degree of risk and the markets in which foreign exchange transactions are effected are highly volatile, highly specialized and highly technical. Significant changes, including changes in liquidity and prices, can occur in such markets within very short periods of time, often within minutes. If a Fund utilizes foreign exchange transactions at an inappropriate time, such transactions may not serve their intended purpose. The Fund could experience losses if the value of any currency forwards, options and futures positions is poorly correlated with its other investments or if it could not close out its positions because of an illiquid market. In addition, the Fund will incur transaction costs, including trading commissions, in connection with certain foreign currency transactions.

Each Fund may buy or sell government bonds, commercial paper, corporate debt obligations, notes and other fixed income securities denominated in currencies other than the U.S. dollar. Any security or instrument denominated in a currency other than the U.S. dollar is subject to foreign currency risk.

Forward Currency Contracts. Each Fund may enter into forward currency contracts. A forward currency contract is a privately negotiated contract to purchase or sell a specific currency at a future date (usually less than one year) at a price set at the time of the contract. These contracts generally are traded directly between currency traders (usually large commercial banks) and their customers. Each Fund may enter into forward currency contracts in order to lock in the exchange rate between the currency it

Table of Contents

will deliver and the currency it will receive for the duration of the contract. The settlement of the contracts may occur with the physical delivery of a specified amount of currency equivalent to the market value of the contract. This is sometimes referred to as a deliverable forward contract. A non-deliverable forward contract is a forward contract where there is no physical settlement of two currencies at maturity. Non-deliverable forward contracts are contracts between parties in which one party agrees to make periodic payments to another party, or counterparty, based on the change in market value or level of a specified currency. In return, the counterparty agrees to make periodic payments to the first party based on the return of a different specified currency. Non-deliverable forward contracts will usually be done on a net basis, each Fund receiving or paying only the net amount of the two payments. The net amount of the excess, if any, of each Fund's obligations over its entitlements with respect to each non-deliverable forward contract is accrued on a daily basis and an amount of cash or highly liquid securities having an aggregate value at least equal to the accrued excess is maintained in an account at the Trust's custodian bank. The risk of loss with respect to non-deliverable forward contracts generally is limited to the net amount of payments that a Fund is contractually obligated to make or receive. Each Fund may invest in a combination of forward currency contracts and U.S. dollar-denominated money market securities in an attempt to obtain an investment result that is similar to a direct investment in a foreign currency-denominated instrument. This investment technique, if successful, creates a synthetic position in the particular foreign currency instrument the Fund is trying to duplicate. Forward contracts are subject to the risk that the counterparty will default on its obligations.

Futures Contracts and Options on Futures Contracts. Each Fund may use futures contracts and related options: (i) to attempt to gain exposure to foreign currencies, and (ii) to attempt to gain exposure to a particular market, instrument or index.

Futures Contracts. A futures contract is a standardized contract traded on a recognized exchange in which two parties agree to exchange either a specified financial asset or the cash equivalent of said asset of standardized quantity and quality for a price agreed to today (the futures price or the strike price) with delivery occurring at a specified future date. Each Fund's investments in listed futures contracts will be backed by investments in U.S. government securities in an amount equal to the exposure of such contracts. Each Fund may take long or short positions in listed futures contracts.

Each Fund may transact in listed currency futures contracts and listed U.S. Treasury futures contracts. The Alternative Funds also may transact in listed commodity futures contracts. When a Fund purchases a listed futures contract, it agrees to purchase a specified reference asset (i.e., commodity, currency or Treasury security) at a specified future date. When the Fund sells a listed futures contract, it agrees to sell a specified reference asset (i.e., commodity, currency or Treasury security) at a specified future date. The price at which the purchase and sale will take place is fixed when the Fund enters into the contract. The exchange clearing corporation is the ultimate counterparty for all exchange listed contracts, so credit risk is limited to the creditworthiness of the exchange's clearing corporation. Margin deposits are posted as performance bonds with the clearing broker and, in turn, with the exchange clearing corporation.

Each Fund may buy and sell index futures contracts with respect to any index traded on a recognized exchange or board of trade. An index futures contract is a bilateral agreement pursuant to which two parties agree to take or make delivery of an amount of cash equal to a specified dollar amount times the difference between the index value at the close of trading of the contract and the price at which the futures contract is originally struck. No physical delivery of the securities comprising the index is made. Instead, settlement in cash must occur upon the termination of the contract, with the settlement being the difference between the contract price, and the actual level of the stock index at the expiration of the contract. Generally, contracts are closed out prior to the expiration date of the contract.

When a Fund purchases or sells a futures contract, the Fund is required to cover its position in order to limit the risk associated with the use of leverage and other related risks. To cover its position, the Fund will maintain with its custodian bank (and marked-to-market on a daily basis) a segregated account consisting of cash or liquid securities that, when added to any amounts deposited with a futures commission merchant as margin, are equal to the market value of the futures contract or otherwise cover its position in a manner consistent with the 1940 Act or the rules and SEC interpretations thereunder. If the Fund continues to engage in the described securities trading practices and properly segregates assets, the segregated account will function as a practical limit on the amount of leverage which the Fund may undertake and on the potential increase in the speculative character of the Fund's outstanding portfolio securities. Additionally, such segregated accounts will generally ensure the availability of adequate funds to meet the obligations of the Fund arising from such investment activities.

There are significant risks associated with a Fund's use of futures contracts, including the following: (1) the success of a strategy may depend on the Adviser's ability to predict movements in the prices of individual commodities, currencies or securities, fluctuations in markets and movements in interest rates; (2) there may be an imperfect or no correlation between the changes in market value of the commodities, currencies or securities and the prices of futures contracts; (3) although the Fund intends to enter into futures contracts only if there is an active market for such contracts, there is no assurance that an active market will exist for the contracts at any particular time; (4) trading restrictions or limitations may be imposed by an exchange; and (5) government regulations may restrict trading in futures contracts.

Table of Contents

Risks Associated with Commodity Futures Contracts. There are additional risks associated with transactions in commodity futures that are not applicable to other types of futures contracts.

Storage. Unlike the financial futures markets, in the commodity futures markets there are costs of physical storage associated with purchasing the underlying commodity. The price of the commodity futures contract will reflect the storage costs of purchasing the physical commodity, including the time value of money invested in the physical commodity. To the extent that the storage costs for an underlying commodity change while the Fund is invested in futures contracts on that commodity, the value of the futures contracts may change proportionately. The Fund intends to roll out of futures contracts prior to settlement and does not intend to deliver or accept physical commodities upon settlement of such transactions.

Reinvestment. In the commodity futures markets, producers of the underlying commodity may decide to hedge the price risk of selling the commodity by selling futures contracts today to lock in the price of the commodity at delivery tomorrow. In order to induce speculators to purchase the other side of the same futures contract, the commodity producer generally must sell the futures contract at a lower price than the expected future spot price. Conversely, if most hedgers in the futures market are purchasing futures contracts to hedge against a rise in prices, then speculators will only sell the other side of the futures contract at a higher futures price than the expected future spot price of the commodity. The changing nature of the hedgers and speculators in the commodity markets will influence whether futures prices are above or below the expected future spot price, which can have significant implications for the Fund. If the nature of hedgers and speculators in futures markets has shifted when it is time for the Fund to reinvest the proceeds of a maturing contract in a new futures contract, the Fund might reinvest at higher or lower futures prices, or choose to pursue other investments.

Other Economic Factors. The commodities which underlie commodity futures contracts may be subject to additional economic and non-economic variables, such as drought, floods, weather, livestock disease, embargoes, tariffs, and international economic, political and regulatory developments. These factors may have a larger impact on commodity prices and commodity-linked instruments, including futures contracts, than on traditional securities. Certain commodities are also subject to limited pricing flexibility because of supply and demand factors. Others are subject to broad price fluctuations as a result of the volatility of the prices for certain raw materials and the instability of supplies of other materials. These additional variables may create additional investment risks which subject the Fund's investments to greater volatility than investments in traditional securities.

Options Contracts. Each Fund reserves the right to buy or sell options on listed futures contracts, though the Managed Futures Strategy Fund does not intend to do so. An option on a futures contract gives the purchaser the right, in exchange for payment of a premium, to assume a position in a futures contract at a specified exercise price during the term of the option. A put option gives the purchaser of the option the right to sell, and the writer of the option the obligation to buy, the underlying security or instrument at any time during the option period. A call option on a security gives the purchaser of the option the right to buy, and the writer of the option the obligation to sell, the underlying security or instrument at any time during the option period. A premium is paid to the writer of an option as consideration for undertaking the obligation in the contract.

Each Fund may purchase and write options on an exchange or over the counter (OTC). OTC options differ from exchange-traded options in several respects. They are transacted directly with dealers and not with a clearing corporation, and therefore entail the risk of non-performance by the dealer. OTC options are available for a greater variety of securities and for a wider range of expiration dates and exercise prices than are available for exchange-traded options. Because OTC options are not traded on an exchange, pricing is done normally by reference to information from a market maker. It is the SEC's position that OTC options are generally illiquid.

When a Fund purchases or sells an options contract, the Fund is required to cover its position in order to limit the risk associated with the use of leverage and other related risks. To cover its position, the Fund will maintain with its custodian bank (and mark-to-market on a daily basis) a segregated account consisting of cash or liquid securities that, when added to any amounts deposited as margin, are equal to the market value of the options contract or otherwise cover its position in a manner consistent with the 1940 Act or the rules and SEC interpretations thereunder. If the Fund continues to engage in the described securities trading practices and properly segregates assets, the segregated account will function as a practical limit on the amount of leverage which the Fund may undertake and on the potential increase in the speculative character of the Fund's outstanding portfolio securities. Additionally, such segregated accounts will generally ensure the availability of adequate funds to meet the obligations of the Fund arising from such investment activities.

Table of Contents

There are significant risks associated with a Fund's use of options contracts, including the following: (1) the success of a strategy may depend on the Adviser's ability to predict movements in the prices of individual commodities, currencies or securities, fluctuations in markets and movements in interest rates; (2) there may be an imperfect or no correlation between the changes in market value of the commodities, currencies or securities and the price of options; (3) although the Fund intends to enter into options contracts only if there is an active market for such contracts, there is no assurance that an active market will exist for the contracts at any particular time; (4) trading restrictions or limitations may be imposed by an exchange; and (5) government regulations may restrict trading in options contracts.

Currency Options. Each Fund may buy or sell put and call options on foreign currencies either on exchanges or in the over-the-counter market. A put option on a foreign currency gives the purchaser of the option the right to sell a foreign currency at the exercise price until the option expires. A call option on a foreign currency gives the purchaser of the option the right to purchase the currency at the exercise price until the option expires.

Swap Agreements. Each Fund may enter into swap agreements, including interest rate swaps, currency swaps, commodity index swaps, inflation-linked swaps and total return swaps. A typical interest rate swap involves the exchange of a floating interest rate payment for a fixed interest payment. A typical foreign currency swap involves the exchange of cash flows based on the notional difference among two or more currencies (e.g., the U.S. dollar and the euro). Commodity index swaps and total return swaps involve the exchange of payments based on the value of an index or return on an underlying reference asset. Inflation-linked swaps are typically an agreement between two parties to exchange payments at a future date based on the difference between a fixed payment and a payment linked to the inflation rate at future date. Swap agreements can be structured to provide for periodic payments over the term of the swap contract or a single payment at maturity (also known as a "bullet swap"). Swap agreements may be used to hedge or achieve exposure to, for example, commodities, currencies, and interest rates without actually purchasing such commodities, currencies or securities. Swap agreements will tend to shift a Fund's investment exposure from one type of investment to another or from one payment stream to another. Depending on their structure, swap agreements may increase or decrease a Fund's exposure to long- or short-term interest rates (in the United States or abroad), commodities, and foreign currencies, and may increase or decrease the overall volatility of the Fund's investments and its share price. Swaps may be used to enhance leverage. Leverage is a technique used to multiply gains or losses. A Fund may not invest more than 30% of its assets in swap transactions and structured notes. When a Fund purchases or sells a swap contract, the Fund is required to "cover" its position in order to limit the risk associated with the use of leverage and other related risks. To cover its position, the Fund will maintain with its custodian bank (and mark-to-market on a daily basis) a segregated account consisting of cash or liquid securities that, when added to any amounts deposited as margin, are equal to the market value of the swap contract or otherwise "cover" its position in a manner consistent with the 1940 Act or the rules and SEC interpretations thereunder. If the Fund continues to engage in the described securities trading practices and properly segregates assets, the segregated account will function as a practical limit on the amount of leverage which the Fund may undertake and on the potential increase in the speculative character of the Fund's outstanding portfolio securities. Additionally, such segregated accounts will generally ensure the availability of adequate funds to meet the obligations of the Fund arising from such investment activities.

Currency, Interest Rate and Total Return Swaps. Each Fund may enter into swap agreements, including interest rate swaps, currency swaps and total return swaps. A typical interest rate swap involves the exchange of a floating interest rate payment for a fixed interest rate payment. A typical foreign currency swap involves the exchange of cash flows based on the notional difference among two or more currencies (e.g., the U.S. dollar and the non-U.S. currencies). A typical total return swap involves the payment of the total return on a reference asset in return for payments equal to a rate of interest on another reference asset. The total return includes appreciation or depreciation on the reference asset, plus any interest or dividend payments. Swap agreements may be used to achieve exposure to, for example, currencies, interest rates, and money market securities without actually purchasing such currencies or securities. Each Fund will use swap agreements to invest in a market without owning or taking physical custody of the underlying securities in circumstances in which direct investment is restricted for legal reasons or is otherwise impracticable. Swap agreements will tend to shift a Fund's investment exposure from one type of investment to another or from one payment stream to another. Depending on their structure, swap agreements may increase or decrease a Fund's exposure to long-term or short-term interest rates (in the United States or abroad), foreign currencies, corporate borrowing rates, or other factors, and may increase or decrease the overall volatility of the Fund's investments and its share price.

Table of Contents

SHORT SALE TRANSACTIONS. Each Fund may engage in short sale transactions. A short sale involves the sale by a Fund of a listed futures contract, security or commodity that it does not own at a specified price on a future date. A Fund entering into a short sale transaction would generally expect the trading price of the subject listed futures contract, security or commodity to be lower on the specified future date than the price at which it agreed to sell the security or commodity. The Fund would hope to acquire the listed futures contract, security or commodity at a lower price on such date, thereby realizing a gain equal to the difference in the acquisition price and the sale price (less any costs). The Fund may also enter into a short derivative position through a futures contract or swap agreement. If the price of the listed futures contract, security, commodity or derivative subject to a short sale transaction increases during the period covered by the contract, then the Fund will incur a loss equal to the increase in price from the time that the short sale was entered (plus any costs). Because it requires little or no money to enter into a short sale transaction, a Fund could potentially lose more money than the actual cost of entering into the transaction.

Also, there is the risk that the third party to the short sale may fail to honor its contract terms, causing a loss to a Fund. Each Fund engaging in short sale transactions may be subject to expenses related to short sales that are not typically associated with investing in securities directly, such as costs of borrowing and margin account maintenance costs associated with the Fund's open short positions. These expenses negatively impact the performance of the Fund. A Fund's investment performance may also suffer if the Fund is required to close out a short position earlier than it had intended. Each Fund is required to segregate cash and other assets on its books to cover its short sale obligations. This means that such cash and other assets may not be available to meet the Fund's needs for immediate cash or other liquidity.

INVESTMENT IN THE WISDOMTREE SUBSIDIARIES. The Global Real Return Fund and the Managed Futures Strategy Fund intend to achieve commodity exposure through investment in the WisdomTree Global Real Return Subsidiary and WisdomTree Managed Futures Strategy Subsidiary, respectively (each a WisdomTree Subsidiary and together, the WisdomTree Subsidiaries). Each Fund's investment in its WisdomTree Subsidiary may not exceed 25% of the Fund's total assets at each quarter-end of the Fund's fiscal year. Each WisdomTree Subsidiary may invest in commodity-linked derivatives including futures, forwards, option and swap contracts, notes, and other investments intended to serve as margin or collateral or otherwise support the WisdomTree Subsidiary's derivatives positions. The WisdomTree Subsidiaries are not registered under the 1940 Act. Each Fund, as the sole shareholder of its respective WisdomTree Subsidiary, will not have all of the protections offered to investors in registered investment companies. However, because each Fund wholly owns and controls its respective WisdomTree Subsidiary, and the Funds and WisdomTree Subsidiaries are managed by the Adviser and Sub-Adviser together, it is unlikely that the WisdomTree Subsidiaries will take action contrary to the interests of the Funds or the Funds' shareholders. The Board has oversight responsibility for the investment activities of each Fund, including its investment in its respective WisdomTree Subsidiary, and the Fund's role as the sole shareholder of its respective WisdomTree Subsidiary.

Table of Contents

Changes in the laws of the United States and/or the Cayman Islands, under which the Funds and the WisdomTree Subsidiaries are organized, respectively, could result in the inability of the Funds and/or the WisdomTree Subsidiaries to operate as described in this SAI and could negatively affect the Funds and their shareholders. For example, the Cayman Islands does not currently impose any income, corporate or capital gains tax, estate duty, inheritance tax, gift tax or withholding tax on the WisdomTree Subsidiaries. If Cayman Islands law changes such that the WisdomTree Subsidiaries must pay Cayman Islands taxes, Fund shareholders would likely suffer decreased investment returns.

REPURCHASE AGREEMENTS. Each Fund may enter into repurchase agreements with counterparties that are deemed to present acceptable credit risks. A repurchase agreement is a transaction in which a Fund purchases securities or other obligations from a bank or securities dealer (or its affiliate) and simultaneously commits to resell them to a counterparty at an agreed-upon date or upon demand and at a price reflecting a market rate of interest unrelated to the coupon rate or maturity of the purchased obligations. This is designed to result in a fixed rate of return for the Fund insulated from market fluctuations during the holding period. Because they are collateralized by securities, including mortgage-backed securities, repurchase agreements are subject to market and credit risk. As discussed herein, a Fund may not invest more than 10% of its net assets in illiquid securities. A repurchase agreement maturing in more than seven days may be considered an illiquid security. A Fund maintains custody of the underlying obligations prior to their repurchase, either through its regular custodian or through a special tri-party custodian or sub-custodian that maintains separate accounts for both the Fund and its counterparty. Thus, the obligation of the counterparty to pay the repurchase price on the date agreed to or upon demand is, in effect, secured by such obligations.

Repurchase agreements carry certain risks not associated with direct investments in securities, including a possible decline in the market value of the underlying obligations. If their value becomes less than the repurchase price, plus any agreed-upon additional amount, the counterparty must provide additional collateral so that at all times the collateral is at least equal to the repurchase price plus any agreed-upon additional amount. The difference between the total amount to be received upon repurchase of the obligations and the price that was paid by a Fund upon acquisition is accrued as interest and included in its net investment income. Repurchase agreements involving obligations other than U.S. government securities (such as commercial paper and corporate bonds) may be subject to special risks and may not have the benefit of certain protections in the event of the counterparty's insolvency. If the seller or guarantor becomes insolvent, the Fund may suffer delays, costs and possible losses in connection with the disposition of collateral.

REVERSE REPURCHASE AGREEMENTS. Each Fund may enter into reverse repurchase agreements, which involve the sale of securities held by a Fund subject to its agreement to repurchase the securities at an agreed-upon date or upon demand and at a price reflecting a market rate of interest. Reverse repurchase agreements are subject to each Fund's limitation on borrowings and may be entered into only with banks or securities dealers or their affiliates. While a reverse repurchase agreement is outstanding, a Fund will maintain the segregation, either on its records or with the Trust's custodian, of cash or other liquid securities, marked to market daily, in an amount at least equal to its obligations under the reverse repurchase agreement. Reverse repurchase agreements involve the risk that the buyer of the securities sold by a Fund might be unable to deliver them when that Fund seeks to repurchase. If the buyer of securities under a reverse repurchase agreement files for bankruptcy or becomes insolvent, the buyer or trustee or receiver may receive an extension of time to determine whether to enforce a Fund's obligation to repurchase the securities, and the Fund's use of the proceeds of the reverse repurchase agreement may effectively be restricted pending such decision.

INVESTMENT COMPANY SECURITIES. Each Fund may invest in the securities of other investment companies (including money market funds and Underlying ETFs). The 1940 Act generally prohibits a fund from acquiring more than 3% of the outstanding voting shares of an investment company and limits such investments to no more than 5% of the fund's total assets in any single investment company and no more than 10% in any combination of two or more investment companies. Each Fund may purchase or otherwise invest in shares of affiliated ETFs. Each Fund may invest in affiliated money market funds and Underlying ETFs.

ILLIQUID SECURITIES. Although the Funds do not intend to do so, as a matter of policy, each Fund may invest up to an aggregate amount of 10% (15% for the Australia & New Zealand Debt Fund, Euro Debt Fund, and each of the Alternative Funds) of its net assets in illiquid securities. Illiquid securities include securities subject to contractual or other restrictions on resale and other instruments that lack readily available markets. The inability of a Fund to dispose of illiquid or not readily marketable investments readily or at a reasonable price could impair a Fund's ability to raise cash for redemptions or other purposes. The liquidity of securities purchased by a Fund which are eligible for resale pursuant to Rule 144A will be monitored by each Fund on an ongoing basis. In the event that such a security is deemed to be no longer liquid, a Fund's holdings will be reviewed to determine what action, if any, is required to ensure that the retention of such security does not result in a Fund having more than 10% (15% for the Australia & New Zealand Debt Fund, Euro Debt Fund, and Alternative Funds) of its assets invested in illiquid or not readily marketable securities.

FINANCIAL SECTOR INVESTMENTS. Each Fund may engage in transactions with or invest in companies that are considered to be in the financial sector, including commercial banks, brokerage firms, diversified financial services, a variety of firms in all segments of the insurance industry (such as multi-line, property and casualty, and life insurance) and real estate-related companies. There can be no guarantee that these strategies may be successful. A Fund may lose money as a result of defaults or downgrades within the financial sector.

Table of Contents

Events in the financial sector have resulted in increased concerns about credit risk and exposure. Well-known financial institutions have experienced significant liquidity and other problems and have defaulted on their debt obligations. Issuers that have exposure to real estate, mortgage and credit markets have been particularly affected. It is uncertain whether or how long these conditions will continue. These events and possible continuing market turbulence may have an adverse effect on Fund performance.

Rule 12d3-1 under the 1940 Act limits the extent to which a fund may invest in the securities of any one company that derives more than 15% of its revenues from brokerage, underwriting or investment management activities. A fund may purchase securities of an issuer that derived more than 15% of its gross revenues in its most recent fiscal year from securities-related activities, subject to the following conditions: (1) the purchase cannot cause more than 5% of the fund's total assets to be invested in securities of that issuer; (2) for any equity security, the purchase cannot result in the fund owning more than 5% of the issuer's outstanding securities in that class; and (3) for a debt security, the purchase cannot result in the fund owning more than 10% of the outstanding principal amount of the issuer's debt securities.

In applying the gross revenue test, an issuer's own securities-related activities must be combined with its ratable share of securities-related revenues from enterprises in which it owns a 20% or greater voting or equity interest. All of the above percentage limitations, as well as the issuer's gross revenue test, are applicable at the time of purchase. With respect to warrants, rights, and convertible securities, a determination of compliance with the above limitations shall be made as though such warrant, right, or conversion privilege had been exercised. The Funds will not be required to divest their holdings of a particular issuer when circumstances subsequent to the purchase cause one of the above conditions to not be met. The purchase of a general partnership interest in a securities-related business is prohibited.

NON-U.S. SECURITIES. The Funds invest a significant portion of their assets in non-U.S. securities and, in the case of the Alternative Funds, instruments that provide exposure to such securities or instruments. Investments in non-U.S. securities involve certain risks that may not be present in investments in U.S. securities. For example, non-U.S. securities may be subject to currency risks or to foreign government taxes. There may be less information publicly available about a non-U.S. issuer than about a U.S. issuer, and a foreign issuer may or may not be subject to uniform accounting, auditing and financial reporting standards and practices comparable to those in the U.S. Other risks of investing in such securities include political or economic instability in the country involved, the difficulty of predicting international trade patterns and the possibility of imposition of exchange controls. There may be less information publicly available about a non-U.S. issuer than about a U.S. issuer, and a foreign issuer may or may not be subject to uniform accounting, auditing and financial reporting standards and practices comparable to those in the U.S. Investments in non-U.S. securities may be subject to withholding or other taxes and may be subject to additional trading, settlement, custodial, and operational risks. Other risks of investing in such securities include political or economic instability in the country involved, the difficulty of predicting international trade patterns and the possibility of imposition of exchange controls. The prices of such securities may be more volatile than those of domestic securities. With respect to certain foreign countries, there is a possibility of expropriation of assets or nationalization, imposition of withholding taxes on dividend or interest payments, difficulty in obtaining and enforcing judgments against foreign entities or diplomatic developments which could affect investment in these countries. Losses and other expenses may be incurred in converting between various currencies in connection with purchases and sales of foreign securities. Since foreign exchanges may be open on days when a Fund does not price its shares, the value of the securities in a Fund's portfolio may change on days when shareholders will not be able to purchase or sell a Fund's shares. Conversely, Fund shares may trade on days when foreign exchanges are closed. Each of these factors can make investments in the Fund more volatile and potentially less liquid than other types of investments.

Set forth below for certain markets in which the Funds may invest are brief descriptions of some of the conditions and risks in each such market.

Investments in Asia. The Asia Local Debt Fund may invest in fixed income securities issued by governments of Asian countries and/or corporations economically tied to Asia. The Emerging Markets Local Debt Fund may invest in fixed income securities issued by governments, government agencies and corporations in Asia. The Commodity Currency Fund and the Emerging Currency Fund may invest in short-term money market securities denominated in currencies of countries in Asia. Many countries in the region have historically faced political uncertainty, corruption, military intervention, and social unrest. Examples include military threats in Korea and Taiwan, the ethnic, sectarian, and separatist violence found in Indonesia, and the nuclear arms threats between India and Pakistan. To the extent that such events continue in the future, they can be expected to have an unpredictable effect on economic and securities market conditions in the region.

The economies of many Asian countries are heavily dependent on international trade and are accordingly affected by protective trade barriers and the economic conditions of their trading partners, principally, the U.S., Japan, China, and the European Union. The recent global economic crisis has impacted Asia, significantly lowering its exports and foreign investments, which are driving forces of its economic growth. Current economic conditions are also significantly affecting consumer confidence and local stock markets.

In addition to general risks affecting Asian countries, certain Asian countries, including China, Hong Kong, and Taiwan, are subject to additional risks that are based on each country's history, economy and geography. Certain risks associated with investments in these countries are discussed below.

Table of Contents

Investments in Australia. The Asia Local Debt Fund, Australia & New Zealand Debt Fund, and Commodity Currency Fund may invest in securities denominated in Australian dollars and/or investments designed to provide exposure to Australian dollars and money market rates. The Global Real Return Fund may invest in fixed income securities and other instruments linked to inflation rates issued by governments, government instrumentalities, government-sponsored enterprises and supranational organizations and/or debt securities issued by corporations in Australia. The economy of Australia is heavily dependent on the demand for natural resources and agricultural products. Conditions that weaken demand for such products worldwide could have a negative impact on the Australian economy as a whole. These and other factors could have a negative impact on a Fund's performance.

Investments in Brazil. The Brazilian Real Fund seeks to achieve its investment objective by investing in short-term money market securities denominated in Brazilian real and/or investments designed to provide exposure to Brazilian currency and money market rates. The Emerging Currency Fund and the Commodity Currency Fund may also pursue this investment objective to a lesser extent as part of their overall investment strategies. The Emerging Markets Local Debt Fund may invest in fixed income securities issued by the Brazilian government and/or corporations domiciled in Brazil. The Global Real Return Fund may invest in fixed income securities and other instruments linked to inflation rates issued by governments, government instrumentalities, government-sponsored enterprises and supranational organizations and/or debt securities issued by corporations in Brazil. Investing in Brazil involves certain considerations not typically associated with investing in securities of U.S. companies or the U.S. government, including: (i) investment and repatriation controls, which could affect a Fund's ability to operate, and to qualify for the favorable tax treatment afforded to regulated investment companies for U.S. federal income tax purposes, (ii) fluctuations in the rate of exchange between the Brazilian real and the U.S. dollar, (iii) the generally greater price volatility and lesser liquidity that characterize Brazilian securities markets, as compared with U.S. markets, (iv) the effect that a trade deficit could have on economic stability and the Brazilian government's economic policy, (v) high rates of inflation, (vi) governmental involvement in and influence on the private sector, (vii) Brazilian accounting, auditing and financial standards and requirements, which differ from those in the United States, and (viii) political and other considerations, including changes in applicable Brazilian tax laws. These and other factors could have a negative impact on a Fund's performance.

Investments in Canada. The Commodity Currency Fund may invest in short-term money market securities denominated in Canadian dollars and/or investments designed to provide exposure to Canadian dollars and money market rates. The Global Real Return Fund may invest in fixed income securities and other instruments linked to inflation rates issued by governments, government instrumentalities, government-sponsored enterprises and supranational organizations and/or debt securities issued by corporations in Canada. The U.S. is Canada's largest trading partner and foreign investor. As a result, changes to the U.S. economy may significantly affect the Canadian economy. The economy of Canada is also heavily dependent on the demand for natural resources and agricultural products. Canada is the largest producer of zinc and uranium, and is a global source of many other natural resources, such as gold, nickel, aluminum, and lead. Conditions that weaken demand for such products worldwide could have a negative impact on the Canadian economy as a whole. These and other factors could have a negative impact on a Fund's performance.

Investments in Chile. The Emerging Currency Fund and the Commodity Currency Fund may invest in short-term money market securities denominated in Chilean pesos and/or investments designed to provide exposure to Chilean pesos and money market rates. The Emerging Markets Local Debt Fund may invest in fixed income and money market securities issued by the Chilean government and/or corporations domiciled in Chile. The Global Real Return Fund may invest in fixed income securities and other instruments linked to inflation rates issued by governments, government instrumentalities, government-sponsored enterprises and supranational organizations and/or debt securities issued by corporations in Chile. Investing in Chile involves certain considerations not typically associated with investing in securities of U.S. companies or the U.S. government. The Chilean economy is subject to risks of social unrest, high unemployment, governmental control and heavy regulation of the labor industry. Historically, Chile has experienced periods of political instability, and certain sectors and regions of Chile have experienced high unemployment. Any recurrence of these events may cause downturns in the Chilean market and adversely impact investments in the Fund. Heavy regulation of labor and product markets is pervasive in Chile and may stifle Chilean economic growth or contribute to prolonged periods of recession. Chile is located in a part of the world that has historically been prone to natural disasters such as earthquakes and volcanoes and is economically sensitive to environmental events. Any such event could result in a significant adverse impact on the Chilean economy. The Chilean economy is affected by the economies of other Central and South American countries, some of which have experienced high interest rates, economic volatility, inflation, currency devaluations and high unemployment rates. Any adverse economic event in one country can have a significant effect on other countries of this region. In addition, commodities (such as oil, gas and minerals) represent a significant percentage of the region's exports, and many economies in this region, including Chile's, are particularly sensitive to fluctuations in commodity prices. These and other factors could have a negative impact on a Fund's performance.

Investments in China and Hong Kong. The Chinese Yuan Fund seeks to achieve its investment objective by investing in short-term money market securities denominated in Chinese yuan and/or investments designed to provide exposure to Chinese currency and money market rates. The Emerging Currency Fund may utilize a similar strategy in regard to the Chinese yuan with the broader investment strategy of the Fund. The Asia Local Debt Fund may invest in fixed income securities issued by governments and/or corporations economically tied to China and Hong Kong. The Emerging Markets Local Debt Fund may invest in fixed income securities issued by governments, government agencies and corporations in China. In addition to the aforementioned risks of investing in non-U.S. securities, investing in securities listed and traded in

Edgar Filing: WisdomTree Trust - Form 497

China involves special considerations not typically associated with investing in countries with more democratic governments or more established economies, securities or currency markets. Such risks may include: (i) the risk of nationalization or expropriation of assets or confiscatory taxation; (ii) greater social, economic and political uncertainty (including the risk of war); (iii) dependency on exports and the corresponding importance of

Table of Contents

international trade; (iv) increasing competition from Asia's other low-cost emerging economies; (v) currency exchange rate fluctuations and the lack of available currency hedging instruments; (vi) higher rates of inflation; (vii) controls on foreign investment and limitations on repatriation of invested capital and on the Fund's ability to exchange local currencies for U.S. dollars; (viii) greater governmental involvement in and control over the economy; (ix) the risk that the Chinese government may decide not to continue to support the economic reform programs implemented since 1978 and could return to the prior, completely centrally planned, economy; (x) the fact that Chinese companies, particularly those located in China, may be smaller, less seasoned and newly organized; (xi) the differences in, or lack of, auditing and financial reporting standards which may result in unavailability of material information about issuers, particularly in China; (xii) the fact that statistical information regarding the economy of China may be inaccurate or not comparable to statistical information regarding the U.S. or other economies; (xiii) the less extensive, and still developing, regulation of the securities markets, business entities and commercial transactions; (xiv) the fact that the settlement period of securities transactions in foreign markets may be longer; (xv) the willingness and ability of the Chinese government to support the Chinese and Hong Kong economies and markets is uncertain; (xvi) the risk that it may be more difficult, or impossible, to obtain and/or enforce a judgment than in other countries; (xvii) the rapidity and erratic nature of growth, particularly in China, resulting in inefficiencies and dislocations; (xviii) the risk that, because of the degree of interconnectivity between the economies and financial markets of China and Hong Kong, any sizable reduction in the demand for goods from China, or an economic downturn in China, could negatively affect the economy and financial market of Hong Kong as well; and (xix) the risk that certain companies in the Fund's Index may have dealings with countries subject to sanctions or embargoes imposed by the U.S. Government or identified as state sponsors of terrorism.

Investments in Hong Kong are also subject to certain political risks. Following the establishment of the People's Republic of China by the Communist Party in 1949, the Chinese government renounced various debt obligations incurred by China's predecessor governments, which obligations remain in default, and expropriated assets without compensation. There can be no assurance that the Chinese government will not take similar action in the future. An investment in the Fund involves risk of a total loss. China has committed by treaty to preserve Hong Kong's autonomy and its economic, political and social freedoms for 50 years from the July 1, 1997 transfer of sovereignty from Great Britain to China. However, if China would exert its authority so as to alter the economic, political or legal structures or the existing social policy of Hong Kong, investor and business confidence in Hong Kong could be negatively affected, which in turn could negatively affect markets and business performance. These and other factors could have a negative impact on the Fund's performance.

Investments in Colombia. The Commodity Currency Fund and the Emerging Currency Fund may invest in short-term money market, and the Emerging Markets Local Debt Fund may invest in short-term money market and fixed income securities, issued by the Colombian government and/or corporations domiciled in Colombia. The Colombian economy is subject to risks of social unrest, high unemployment, governmental control and heavy regulation of the labor industry. Historically, Colombia has experienced periods of political instability, and certain sectors and regions of Colombia have experienced high unemployment. Any recurrence of these events may cause downturns in the Colombian market and adversely impact investments in the Fund. Heavy regulation of labor and product markets is pervasive in Colombia and may stifle Colombian economic growth or contribute to prolonged periods of recession. Colombia is located in a part of the world that has historically been prone to natural disasters such as earthquakes and volcanoes and is economically sensitive to environmental events. Any such event could result in a significant adverse impact on the Colombian economy. The Colombian economy is affected by the economies of other Central and South American countries, some of which have experienced high interest rates, economic volatility, inflation, currency devaluations and high unemployment rates. Any adverse economic event in one country can have a significant effect on other countries of this region. In addition, commodities (such as oil, gas and minerals) represent a significant percentage of the region's exports and many economies in this region, including Colombia's, are particularly sensitive to fluctuations in commodity prices. These and other factors could have a negative impact on a Fund's performance.

Investments in Czech Republic. The Emerging Currency Fund may invest in short-term money market securities denominated in the Czech crown and/or investments designed to provide exposure to the Czech crown and money market rates. Investing in the Czech Republic involves certain considerations not typically associated with investing in securities of U.S. companies or the U.S. government. The Czech Republic may experience effects of declining exports, especially to EU countries, inflation and increasing taxes. A significant portion of the workforce in Eastern Europe is unionized and certain regions and sectors of these countries have experienced very high unemployment rates and periods of labor and social unrest. Despite significant recent reform and privatization, Eastern European governments continue to control a large share of economic activity in the region. Government spending in these countries remains high compared to that of other European countries.

Investments in Emerging Markets. The Brazilian Real Fund, the Chinese Yuan Fund, the Emerging Currency Fund, the Indian Rupee Fund and the South African Rand Fund each invests substantially all of its assets in short-term money market securities denominated in the currency of a market or markets considered to be emerging or developing or in securities that provide exposure to such markets. The Emerging Markets Local Debt Fund also invests substantially all of its assets in fixed income securities denominated in the currency of emerging or developing markets or in securities that provide exposure to such markets. The Asia Local Debt Fund invests primarily in fixed income securities of Asian markets, many of which are considered to be emerging or developing or in securities that provide exposure to such markets. The Commodity Currency Fund may also pursue this investment objective to a lesser extent as part of its overall investment strategies. These Funds are sometimes referred to herein as Emerging Markets Funds. In addition, the Global Real Return Fund may invest in fixed

Table of Contents

income and money market securities considered to be emerging or developing or in securities that provide exposure to such markets. Investing in developing markets may be subject to additional risks not associated with more developed economies. Such risks may include: (i) the risk that government and quasi-government entities may not honor their obligations, (ii) greater market volatility, (iii) lower trading volume and liquidity, (iv) greater social, political and economic uncertainty, (v) governmental controls on foreign investments and limitations on repatriation of invested capital, (vi) the risk that governments and companies may be held to lower disclosure, corporate governance, auditing and financial reporting standards than companies in more developed markets, and (vii) the risk that there may be less protection of property rights than in other countries. Some emerging markets have experienced and may continue to experience high inflation rates, currency devaluations and economic recessions. Each of these factors may cause a Fund to decline in value. Unanticipated political or social developments may result in sudden and significant investment losses, and may affect the ability of governments and government agencies in these markets to meet their debt obligations. These and other factors could have a negative impact on a Fund's performance and increase the volatility of an investment in a Fund.

Investments in Euro Area Countries. The Euro Debt Fund may invest in Debt Securities denominated in euros that have significant economic ties to euro area countries. The Global Real Return Fund may invest in fixed income securities and other instruments linked to inflation rates issued by governments, government instrumentalities, government-sponsored enterprises and supranational organizations and/or debt securities issued by corporations in euro area countries. The euro area is a group of 17 members of the EU that have adopted the euro as their common currency. The euro area currently consists of Austria, Belgium, Cyprus, Estonia, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Malta, the Netherlands, Portugal, Slovakia, Slovenia, and Spain. Most developed countries in Western Europe are members of the European Union (EU), and many are also members of the European Monetary Union (EMU), which requires compliance with restrictions on inflation rates, deficits, and debt levels. The tight fiscal and monetary controls necessary to comply with EMU membership may significantly affect every country in Europe. These controls limit EMU member countries' ability to implement domestic monetary policies that address regional economic conditions. In addition, unemployment in certain European nations is historically high. Other issues facing the EU and its members that may affect the region's economic stability include the adoption, abandonment, or amendment of a constitutional treaty, the proposed enlargement of membership, and the need for fiscal and democratic accountability among members. The large public budget deficits accrued by the governments of Greece, Ireland, Spain, and Portugal may slow the overall recovery of Europe's economy. Any EMU government in need of assistance from other EMU nations may be required to implement specific economic reforms or meet specific performance levels as a condition upon their receipt of assistance. A failure on the part of EMU countries facing large public budget deficits to make required reforms or achieve stated objectives may result in an economic downturn that affects the value of all European Debt Securities.

In addition to the conditions discussed above, Eastern Europe, including Slovakia and Slovenia, has recently experienced long-term unemployment, inflation, and declining exports. A significant portion of the workforce in Eastern Europe is unionized and certain regions and sectors of these countries have experienced very high unemployment rates and periods of labor and social unrest. Despite recent reform and privatization, Eastern European governments continue to control a large share of economic activity in the region. Government spending in these countries remains high compared to that of other European countries. In addition, the tight fiscal and monetary controls necessary to comply with EMU membership may significantly affect the economy of Eastern Europe. This economic transition may result in political decisions within Slovakia and Slovenia that affect each government's ability to regulate markets as well as subsidize and privatize its industries.

Investments in Hungary. The Emerging Currency Fund may invest in short-term money market securities, and the Emerging Markets Local Debt Fund may invest in short-term money market and fixed income securities, issued by the Hungarian government and/or corporations domiciled in Hungary. Hungary is subject to a considerable degree of economic, political and social instability, which could adversely affect investments in the Fund. Hungary has experienced currency devaluations, substantial rates of inflation, defaults on debt, widespread corruption or economic recessions, causing a negative effect on the economies and securities markets of the country. A significant portion of the workforce in Eastern Europe is unionized, and certain regions and sectors of these countries have experienced very high unemployment rates and periods of labor and social unrest. Despite significant recent reform and privatization, Eastern European governments continue to control a large share of economic activity in the region. Government spending in these countries remains high compared to that of other European countries. Investment in Hungary is uncomplicated, although it is subject to government licensing in security-sensitive areas. Such business licensing is a problem, as regulations are not applied consistently. These and other factors could have a negative impact on a Fund's performance.

Investments in India. The Indian Rupee Fund seeks to achieve its investment objective by investing in short-term money market securities denominated in Indian rupee and/or investments designed to provide exposure to Indian currency and money market rates. The Asia Local Debt Fund may invest in fixed income securities issued by governments and/or corporations economically tied to India. Investments in India involve special considerations not typically associated with investing in countries with more established economies or currency markets. The Emerging Currency Fund may also pursue this investment objective to a lesser extent as part of its overall investment strategy. Political and economic conditions and changes in regulatory, tax, or economic policy in India could significantly affect the market in that country and in surrounding or related countries and have a negative impact on the Fund's performance. Economic and political structures in India may lack the stability of those of more developed nations. Unanticipated political or social developments in India and surrounding regions may affect the value of the Fund's

Table of Contents

investments and the value of Fund shares. The Indian government has exercised and continues to exercise significant influence over many aspects of the economy, and the number of public sector enterprises in India is substantial. Although the government has recently begun to institute economic reform policies, there can be no assurance that it will continue to pursue such policies, or, if it does, that such policies will succeed. While the government of India is moving to a more liberal approach, it still places restrictions on the capability and capacity of foreign investors to access and trade rupee directly. Foreign investors in India still face burdensome taxes on investments in income producing securities as well as potentially high levels of inflation. The laws relating to limited liability of corporate shareholders, fiduciary duties of officers and directors, and the bankruptcy of state enterprises are generally less well developed than or different from laws in the U.S. These and other factors may decrease the value and liquidity of the Fund's investments, and therefore the value and liquidity of an investment in the Fund.

Investments in Indonesia. The Commodity Currency Fund and the Emerging Currency Fund may invest in short-term money market securities denominated in Indonesian rupiah and/or investments designed to provide exposure to Indonesian rupiah and money market rates. The Emerging Markets Local Debt Fund may invest in money market and fixed income securities issued by the Indonesian government and/or corporations domiciled in Indonesia. The Asia Local Debt Fund may invest in fixed income securities issued by Indonesian governments and/or corporations economically tied to Indonesia. Southeast Asia is heavily dependent on exports and is thus particularly vulnerable to any weakening in global demand for these products. As the current global economic crisis intensifies, the economies of Southeast Asian countries could be severely impacted once the effects of this crisis fully unfold. Indonesia has restored financial stability and pursued sober fiscal policies since the 1997-1998 Asian financial crisis, but many economic development problems remain, including high unemployment, a fragile banking sector, endemic corruption, inadequate infrastructure, a poor investment climate, and unequal resource distribution among regions. These problems may limit the country's ability to contain the increasingly severe and negative impact of the current global economic crisis on its economy. Economic growth of Indonesia has slowed as a result of the current global economic crisis and could be more severely impacted once the full effects of the crisis fully unfold. Keys to future growth remain internal reform, peaceful resolution of internal conflicts, building up the confidence of international and domestic investors, and strong global economic growth. These and other factors could have a negative impact on a Fund's performance.

Investments in Japan. The Japanese Yen Fund seeks to achieve its investment objective by investing in short-term money market securities denominated in Japanese yen and/or investments designed to provide exposure to Japanese currency and money market rates. The Japanese economy is characterized by government intervention and protectionism, an unstable financial services sector, and relatively high unemployment. Economic growth is heavily dependent on international trade, government support and consistent government policy. Slowdowns in the economies of key trading partners such as the United States, China and countries in Southeast Asia could have a negative impact on the Japanese economy as a whole. These and other factors could have a negative impact on a Fund's performance.

Investments in Malaysia. The Commodity Currency Fund and the Emerging Currency Fund may invest in short-term money market securities, and the Emerging Markets Local Debt Fund may invest in short-term money market and fixed income securities, issued by the Malaysian government and/or corporations domiciled in Malaysia. The Asia Local Debt Fund may invest in fixed income securities issued by the Malaysian government and/or corporations economically tied to Malaysia. The Malaysian economy is dependent on the economies of Southeast Asia and the United States as key trading partners. Reduction in spending by these countries on Malaysian products and services or negative changes in any of these economies may cause an adverse impact in the Malaysian economy. Certain Asian economies experience over-extension of credit, currency devaluations and restrictions, rising unemployment, high inflation, decreased exports and economic recessions. Economic events in any one country can have a significant effect on the entire Asian region as well as on major trading partners outside Asia and any adverse event in the Asian markets may have a significant adverse effect on the Malaysian economy. The United States is a significant trading and investment partner of Malaysia. A decrease in U.S. imports, new trade regulations, changes in the U.S. dollar exchange rates or a recession in the U.S. may have an adverse impact on the Malaysian economy. These and other factors could have a negative impact on a Fund's performance.

Investments in Mexico. The Emerging Currency Fund may invest in short-term money market securities denominated in Mexican pesos and/or investments designed to provide exposure to Mexican pesos and money market rates. The Emerging Markets Local Debt Fund may invest in short-term money market and fixed income securities issued by the Mexican government and/or corporations domiciled in Mexico. The Global Real Return Fund may invest in fixed income securities and other instruments linked to inflation rates issued by governments, government instrumentalities, government-sponsored enterprises and supranational organizations and/or debt securities issued by corporations in Mexico. Investing in Mexico involves certain considerations not typically associated with investing in securities of U.S. companies or the U.S. government. The Mexican economy may be significantly affected by the economies of other Central and South American countries. High interest, inflation, and unemployment rates characterize the economies in some Central and South American countries. Currency devaluations in any Central and South American country can have a significant effect on the entire region. Because commodities such as oil and gas, minerals, and metals represent a significant percentage of the region's exports, the economies of Central and South American countries are particularly sensitive to fluctuations in commodity prices. As a result, the economies in many Central and South American countries can experience significant volatility. The United States is Mexico's largest trade and investment partner and the Mexican economy is significantly affected by developments in the U.S. economy. Since the implementation of the North American Free Trade Agreement (NAFTA) in 1994 among Canada, the U.S. and Mexico, total two-way merchandise trade

Table of Contents

between the United States and Mexico has increased. To further this relationship, the three NAFTA countries entered into The Security and Prosperity Partnership of North America in March 2005, which may further affect Mexico's dependency on the U.S. economy. Any downturn in U.S. or Canadian economic activity is likely to have an adverse impact on the Mexican economy. Mexico has begun a process of privatization of certain entities and industries. Historically, investors in some newly privatized entities have suffered losses due to the inability of the newly privatized companies to adjust quickly to a competitive environment or to changing regulatory and legal standards. There is no assurance that such losses will not recur. Mexico has historically experienced acts of violence, terrorism, significant criminal activity and strained international relations related to border disputes, historical animosities, the drug trade and other defense concerns. These situations may cause uncertainty in the Mexican market and adversely affect the performance of the Mexican economy.

Certain political and currency instability risks have contributed to a high level of price volatility in the Mexican equity and currency markets and could adversely affect investments in the Funds. Mexico has been destabilized by local insurrections and social upheavals in certain regions, particularly the State of Chiapas. Recurrence of these conditions may adversely impact the Mexican economy. Some of the government's challenges include the upgrade of infrastructure, the modernization of the tax system and labor laws, and the reduction of income inequality. In addition, Mexico has had one political party dominating government until the elections of 2000. Recently, Mexican elections have been contentious and have been very closely decided. Changes in political parties or other Mexican political events may affect the economy and cause instability. Mexico has, in recent history, experienced substantial economic instability resulting from, among other things, periods of very high inflation and significant devaluations of the Mexican currency, the peso. These and other factors could have a negative impact on a Fund's performance.

Investments in New Zealand. The Australia & New Zealand Debt Fund seeks to achieve its investment objective by investing in short-term money market securities denominated in New Zealand dollars and/or investments designed to provide exposure to New Zealand currency and money market rates. The Asia Local Debt Fund and Commodity Currency Fund each may also acquire such investments to a lesser extent as part of its overall investment strategies. Investing in New Zealand involves certain considerations not typically associated with investing in securities of U.S. companies or the U.S. government. New Zealand is generally considered to be a developed market, and investments in New Zealand generally do not have risks associated with them that are present with investments in developing or emerging markets. The health of the economy is strongly tied to commodity exports and has historically been vulnerable to global slowdowns. New Zealand is a country heavily dependent on free trade, particularly in agricultural products. This makes New Zealand particularly vulnerable to international commodity prices and global economic slowdowns. Its principal export industries are agriculture, horticulture, fishing and forestry. These and other factors could have a negative impact on a Fund's performance.

Investments in Norway. The Commodity Currency Fund may invest in very short-term money market securities denominated in Norwegian kroner and/or investments designed to provide exposure to Norwegian kroner and money market rates. The Norwegian economy is an example of a mixed economy, a prosperous capitalist welfare state featuring a combination of free market activity and large state ownership in certain key sectors. The state has large ownership positions in key industrial sectors, such as the strategic petroleum sector (Statoil), hydroelectric energy production (Statkraft), aluminum production (Norsk Hydro), the largest Norwegian bank (DnB NOR), and telecommunications provider (Telenor). Through these big companies, the government controls approximately 30% of the stock values at the Oslo Stock Exchange. The Norwegian economy is dependent on the economies of Europe as key trading partners. The EMU requires compliance with restrictions on inflation rates, deficits, interest rates, debt levels and fiscal and monetary controls, each of which may significantly affect every country in Europe. Decreasing imports or exports, changes in governmental regulations on trade, changes in the exchange rate of the euro and recessions in EU economies may have a significant adverse effect on the economies of EU members and their trading partners. The Norwegian economy is dependent on the export of natural resources and natural resource products, and any negative changes in these sectors could have an adverse impact on the Norwegian economy. Norway has an extensive social welfare system and a highly unionized workforce. These conditions may result in increased production costs and higher governmental spending and may stifle Norwegian economic growth or cause prolonged periods of recession. These and other factors could have a negative impact on a Fund's performance.

Investments in Peru. The Commodity Currency Fund and the Emerging Currency Fund may invest in short-term money market securities, and the Emerging Markets Local Debt Fund may invest in short-term money market and fixed income securities, issued by the Peruvian government and/or corporations domiciled in Peru. The Peruvian economy is subject to risks of social unrest, high unemployment, governmental control and heavy regulation of the labor industry. Historically, Peru has experienced periods of political instability and certain sectors and regions of Peru have experienced high unemployment. Any recurrence of these events may cause downturns in the Peruvian market and adversely impact investments in the Fund. Heavy regulation of labor and product markets is pervasive in Peru and may stifle Peruvian economic growth or contribute to prolonged periods of recession. The Peruvian economy is affected by the economies of other Central and South American countries, some of which have experienced high interest rates, economic volatility, inflation, currency devaluations and high unemployment rates. Any adverse economic event in one country can have a significant effect on other countries of this region. In addition, commodities (such as oil, gas and minerals) represent a significant percentage of the region's exports, and many economies in this region, including Peru's, are particularly sensitive to fluctuations in commodity prices. Peru's main exports are copper, gold, zinc, textiles, and fish meal; its major trade partners are the United States, China, Brazil, and Chile. These and other factors could have a negative impact on a Fund's performance.

Table of Contents

Investments in the Philippines. The Emerging Currency Fund may invest in short-term money market securities, and the Emerging Markets Local Debt Fund may invest in short-term money market and fixed income securities, issued by the Philippine government and/or corporations domiciled in the Philippines. The Asia Local Debt Fund may invest in fixed income and money market securities issued by the Philippine government and/or corporations economically tied to the Philippines. The Philippines economy is heavily dependent on exports and subject to high interest rates, economic volatility, inflation, currency devaluations, high unemployment rates and high level of debt and public spending. As an emerging country, the Philippines economy is susceptible to economic, political and social instability; unanticipated economic, political or social developments could impact economic growth. The Philippines is subject to natural disaster risk. These and other factors could have a negative impact on a Fund's performance.

Investments in Poland. The Emerging Currency Fund may invest in short-term money market securities, and the Emerging Markets Local Debt Fund may invest in short-term money market and fixed income securities, issued by the Polish government and/or corporations domiciled in Poland. Poland is considered to have one of the healthiest economies of the post-communist countries and is currently one of the fastest growing countries within the EU. Since the fall of the communist government, Poland has steadfastly pursued a policy of liberalizing the economy and today stands out as a successful example of the transition from a centrally planned economy to a primarily capitalistic market economy. Poland is the only member of the European Union to have avoided a decline in GDP during the late 2000s recession. In 2009 Poland had the greatest GDP growth in the EU. As of November 2009 the Polish economy had not entered the global recession of the late 2000s nor had it even contracted. Investment in securities of Polish issuers involves risks not typically associated with investments in securities of issuers in developed countries. Such heightened risks include, among others, a relatively short history of democracy, expropriation and/or nationalization of assets, confiscatory taxation, less publicly available financial and other information, and potential difficulties in enforcing contractual obligations. In addition, Poland faces many economic development problems, including high unemployment, inadequate infrastructure, endemic corruption, poverty, and intensifying global competition from neighboring countries.

The securities market of Poland is considered an emerging market characterized by a small number of listed companies and a relatively illiquid secondary trading market, particularly for corporate bonds. These factors, coupled with restrictions on foreign investment and other factors, limit the supply of securities available for investment by the Fund. This will affect the rate at which the Fund is able to invest in Poland, the purchase and sale prices for such securities and the timing of purchases and sales. The government in Poland may also restrict or control to varying degrees the ability of foreign investors to invest in securities of issuers located or operating in Poland. Moreover, governmental approval or special licenses prior to investments by foreign investors may be required and may limit the amount of investments by foreign investors in a particular industry and/or issuer.

The government of Poland may also withdraw or decline to renew a license that enables the Fund to invest in Poland. Any one of these factors could cause a decline in the value of the Fund.

The Polish government may exercise substantial influence over many aspects of the private sector and may own or control many companies. Future government actions could have a significant effect on the economic conditions in Poland, which could have a negative impact on private sector companies. There is also the possibility of diplomatic developments that could adversely affect investments in Poland. The market for Polish securities is directly influenced by the flow of international capital and economic and market conditions of certain countries, especially emerging market countries in Eastern Europe. Adverse economic conditions or developments in other emerging market countries have at times significantly affected the availability of credit in the Polish economy and resulted in considerable outflows of funds and declines in the amount of foreign currency invested in Poland. These and other factors could have a negative impact on a Fund's performance.

Investments in Russia. The Commodity Currency Fund and the Emerging Currency Fund may invest in short-term money market securities denominated in Russian rubles and/or investments designed to provide exposure to Russian rubles and money market rates. The Emerging Markets Local Debt Fund may invest in money market and fixed income securities issued by the Russian government and/or corporations domiciled in Russia. Investments in Russia involve special considerations not typically associated with investing in countries with more established economies or currency markets. On an ongoing basis, Russia's government has been faced with the daunting task of stabilizing its domestic economy, while transforming it into a modern and efficient structure able to compete in international markets and respond to the needs of its citizens. However, to date, many of the country's economic reform initiatives have floundered as the proceeds of IMF and other economic assistance have been squandered or stolen. Instability, geopolitical tensions, poor accounting standards, inept management, pervasive corruption, insider trading and crime, and inadequate regulatory protection for the rights of investors all pose a significant risk, particularly to foreign investors. Compared to most national stock markets, the Russian securities market suffers from a variety of problems not encountered in more developed markets, which, among other things, may make obtaining accurate prices on portfolio securities more difficult than in more developed markets. Because of the recent formation of the Russian securities market as well as the underdeveloped state of the banking and telecommunications systems, settlement, clearing and registration of securities transactions are subject to significant risks. The Russian economy is heavily dependent upon the export of a range of commodities including most industrial metals, forestry products, oil, and gas. Accordingly, it is strongly affected by international commodity prices and is particularly vulnerable to any weakening in global demand for these products. As the current global economic crisis causes the commodity prices, especially the price of oil, to tumble, many sectors in the Russian economy have

Edgar Filing: WisdomTree Trust - Form 497

fallen into turmoil, threatening to push the whole economy into significant slowdown and even recession. Foreign investors also face a high degree of currency risk when investing in Russian securities and a lack of available currency hedging instruments. There is the risk the

Table of Contents

government may impose capital controls on foreign portfolio investments in the event of extreme financial or political crisis. Such capital controls would prevent the sale of a portfolio of foreign assets and the repatriation of investment income and capital. Such risks have led to heightened scrutiny of Russian liquidity conditions, which in turn creates a heightened risk of the repatriation of ruble assets by nervous foreign investors. The current economic turmoil in Russia and the effects of the current global economic crisis on the Russian economy can cause flight from the Russian ruble into United States dollars and other currencies and can force the Russian central bank to spend reserves to maintain the value of the ruble. If the Russian central bank falters in its defense of the ruble, there could be additional pressure on Russia's banks and its currency. These and other factors could have a negative impact on a Fund's performance.

Investments in Singapore. The Asia Local Debt Fund may invest in fixed income securities issued by the government and/or corporations economically tied to Singapore. The economy of Singapore is heavily dependent on international trade and export. Conditions that weaken demand for such products worldwide or in the Asian region could have a negative and significant impact on the Singaporean economy as a whole. In addition, the economy of Singapore may be particularly vulnerable to external market changes because of its smaller size. These and other factors could have a negative impact on the Fund's performance.

Investments in South Africa. The South African Rand Fund seeks to achieve its investment objective by investing in short-term money market securities denominated in South African rand and/or investments designed to provide exposure to South African currency and money market rates. The Emerging Currency Fund and the Commodity Currency Fund may also pursue this investment objective to a lesser extent as part of their overall investment strategies. The Emerging Markets Local Debt Fund may invest in fixed income and money market securities issued by the South African government and/or corporations domiciled in South Africa. The Global Real Return Fund may invest in fixed income securities and other instruments linked to inflation rates issued by governments, government instrumentalities, government-sponsored enterprises and supranational organizations and/or debt securities issued by corporations in South Africa. Investing in South Africa involves special considerations not typically associated with investing in countries with more established economies or currency markets. Although South Africa is a developing country with a solid economic infrastructure (in some regards rivaling other developed countries), certain issues, such as unemployment, access to health care, limited economic opportunity, and other financial constraints, continue to present obstacles to full economic development. Disparities of wealth, the pace and success of democratization and capital market development and religious and racial disaffection have also led to social and political unrest. South Africa's currency has recently fluctuated significantly and may be vulnerable to significant devaluation. There can be no assurance that initiatives by the government to address these issues will achieve the desired results. These and other factors could have a negative impact on the Fund's performance and increase the volatility of an investment in the Fund.

Investments in South Korea. The Emerging Currency Fund may invest in short-term money market securities, and the Emerging Markets Local Debt Fund may invest in short-term money market and fixed income securities, and the Asia Local Debt Fund may be invested in fixed income securities issued by the South Korean government and/or corporations domiciled in South Korea. The economy of South Korea is heavily dependent on exports and the demand for certain finished goods. South Korea's main industries include electronics, automobile production, chemicals, shipbuilding, steel, textiles, clothing, footwear, and food processing. Conditions that weaken demand for such products worldwide or in other Asian countries could have a negative impact on the South Korean economy as a whole. Relations with North Korea could also have a significant impact on the economy of South Korea. These and other factors could have a negative impact on a Fund's performance.

Investments in Taiwan. The Emerging Currency Fund may invest in short-term securities and instruments designed to provide exposure to the currency and money market rates of Taiwan. The Asia Local Debt Fund may invest in fixed income and money market securities issued by the government and/or corporations economically tied to Taiwan. Certain Asian economies have experienced over-extension of credit, currency devaluations and restrictions, high unemployment, high inflation, decreased exports and economic recessions. Economic events in any one country can have a significant economic effect on the entire Asian region as well as on major trading partners outside Asia, and any adverse event in the Asian markets may have a significant adverse effect on the economy in Taiwan.

Investments in Thailand. The Emerging Currency Fund may invest in short-term money market securities, and the Emerging Markets Local Debt Fund may invest in short-term money market and fixed income securities, issued by the Thai government and/or corporations domiciled in Thailand. The Asia Local Debt Fund may invest in fixed income and money market securities issued by the Thai government and/or corporations economically tied to Thailand. The Thai economy is dependent on commodity prices and trade with the economies of Asia, Europe and the United States. Reduction in spending by these economies on Thai products and services or negative changes in any of these economies may cause an adverse impact on the Thai economy. Certain Asian economies have experienced over-extension of credit, currency devaluations and restrictions, high unemployment, high inflation, decreased exports and economic recessions. Economic events in any one country can have a significant economic effect on the entire Asian region as well as on major trading partners outside Asia, and any adverse event in the Asian markets may have a significant adverse effect on the Thai economy. The United States is Thailand's largest export market and third largest supplier, after Japan and China. Decreasing U.S. imports, new trade regulations, changes in the U.S. dollar exchange rates or a recession in the United States may have an adverse impact on the Thai economy.

Edgar Filing: WisdomTree Trust - Form 497

Thailand has historically experienced acts of terrorism and strained international relations related to border disputes, historical animosities and other defense concerns. These situations may cause uncertainty in the Thai market and adversely affect the Thai economy. Economic and political instability have contributed to high price volatility in the Thai equity and currency markets, which could affect investments in the Fund.

Table of Contents

The Thai economy has experienced periods of substantial inflation, currency devaluations and economic recessions, any of which may have a negative effect on the Thai economy and securities markets. Thailand has at times been destabilized by frequent government turnover and significant political changes, including military coups. Recurrence of these conditions, unanticipated or sudden changes in the political structure or other Thai political events may result in sudden and significant investment losses. These and other factors could have a negative impact on a Fund's performance.

Investments in Turkey. The Emerging Currency Fund may invest in short-term money market securities, and the Emerging Markets Local Debt Fund may invest in short-term money market and fixed income securities, issued by the Turkish government and/or corporations domiciled in Turkey. The Global Real Return Fund may invest in fixed income securities and other instruments linked to inflation rates issued by governments, government instrumentalities, government-sponsored enterprises and supranational organizations and/or debt securities issued by corporations in Turkey. The Turkish economy is dependent on trade with certain key trading partners. Reduction in spending by these economies on Turkish products and services or negative changes in any of these economies may cause an adverse impact on the Turkish economy.

Turkey has begun a process of privatization of certain entities and industries. Historically, investors in some newly privatized entities have suffered losses due to the inability of the newly privatized company to adjust quickly to a competitive environment or to changing regulatory and legal standards, or in some cases due to re-nationalization of such privatized entities. There is no assurance that such losses will not recur. The United States is a significant trading partner of and investor in Turkey. A decrease in U.S. imports, new trade regulations, changes in the U.S. dollar exchange rates or a recession in the U.S. may have an adverse impact on the Turkish economy.

Turkey has historically experienced acts of terrorism and strained international relations related to border disputes, historical animosities and other defense concerns. These situations may cause uncertainty in the Turkish market and adversely affect the performance of the Turkish economy.

Historically, Turkey's national politics have been unpredictable and subject to influence by the military, and its government may be subject to sudden change. Disparities of wealth, the pace and success of democratization and capital market development and religious and racial disaffection have also led to social and political unrest. Unanticipated or sudden political or social developments may result in sudden and significant investment losses. Turkey has experienced periods of substantial inflation, currency devaluations and severe economic recessions, any of which may have a negative effect on the Turkish economy and securities market. Turkey has experienced a high level of debt and public spending, which may stifle Turkish economic growth, contribute to prolonged periods of recession or lower Turkey's sovereign debt rating. These and other factors could have a negative impact on a Fund's performance.

SECURITIES LENDING. Each Alternative Fund may lend portfolio securities to certain creditworthy borrowers, including the Fund's securities lending agent. Loans of portfolio securities provide the Fund with the opportunity to earn additional income on the Fund's portfolio securities. All securities loans will be made pursuant to agreements requiring the loans to be continuously secured by collateral in cash, money market instruments, or money market funds at least equal at all times to the market value of the loaned securities. The borrower pays to the Fund an amount equal to any dividends or interest received on loaned securities. The Fund retains all or a portion of the interest received on investment of cash collateral or receives a fee from the borrower. Lending portfolio securities involves risks of delay in recovery of the loaned securities or in some cases loss of rights in the collateral should the borrower fail financially. Furthermore, because of the risks of delay in recovery, the Fund may lose the opportunity to sell the securities at a desirable price. The Fund will generally not have the right to vote securities while they are being loaned. Each Fund reserves the right to lend portfolio securities, though only the Alternative and Fixed Income Funds are likely to engage in securities lending.

FUTURE DEVELOPMENTS. The Board may, in the future, authorize each Fund to invest in securities contracts and investments other than those listed in this SAI and in each Fund's Prospectus, provided they are consistent with each Fund's investment objective and do not violate any fundamental investment restrictions or policies.

PROXY VOTING POLICY

The Trust has adopted as its proxy voting policies for each Fund the proxy voting guidelines of each Fund's respective Sub-Adviser (referred to together in this section as Mellon Capital). The Trust has delegated to Mellon Capital the authority and responsibility for voting proxies on the portfolio securities held by each Fund. The remainder of this section discusses each Fund's proxy voting guidelines and the respective roles of Mellon Capital in implementing such guidelines.

Table of Contents

Mellon Capital, through its participation in The Bank of New York Mellon ("BNY Mellon") Corporation's Proxy Policy Committee ("PPC"), has adopted a Proxy Voting Policy, related procedures, and voting guidelines which are applied to those client accounts over which it has been delegated the authority to vote proxies. In voting proxies, Mellon Capital seeks to act solely in the best financial and economic interest of each client. Mellon Capital will carefully review proposals that would limit shareholder control or could affect the value of a client's investment. It will generally oppose proposals designed to insulate an issuer's management unnecessarily from the wishes of a majority of shareholders. It will generally support proposals designed to provide management with short-term insulation from outside influences so as to enable management to negotiate effectively and otherwise achieve long-term goals. On questions of social responsibility where economic performance does not appear to be an issue, Mellon Capital will attempt to ensure that management reasonably responds to the social issues. Responsiveness will be measured by management's efforts to address the proposal including, where appropriate, assessment of the implications of the proposal to the ongoing operations of the company. The PPC will pay particular attention to repeat issues where management has failed in its commitment in the intervening period to take action on issues. Mellon Capital recognizes its duty to vote proxies in the best interests of its clients. Mellon Capital seeks to avoid material conflicts of interest through its participation in the PPC, which applies detailed, pre-determined proxy voting guidelines (the "Voting Guidelines") in an objective and consistent manner across client accounts, based on internal and external research and recommendations provided by a third party vendor, and without consideration of any client relationship factors. Further, Mellon Capital and its affiliates engage a third party to vote all proxies for BNY Mellon securities and affiliated mutual fund securities.

Proxy voting proposals are reviewed, categorized, analyzed and voted in accordance with the Voting Guidelines. These guidelines are reviewed periodically and updated as necessary to reflect new issues and any changes in our policies on specific issues. Items that can be categorized under the Voting Guidelines will be voted in accordance with any applicable guidelines or referred to the PPC, if the applicable guidelines so require. Proposals that cannot be categorized under the Voting Guidelines will be referred to the PPC for discussion and vote. Additionally, the PPC may review any proposal where it has identified a particular company, industry or issue for special scrutiny. With regard to voting proxies of foreign companies, Mellon Capital may weigh the cost of voting and potential inability to sell the securities (which may occur during the voting process) against the benefit of voting the proxies to determine whether or not to vote.

In evaluating proposals regarding incentive plans and restricted stock plans, the PPC typically employs a shareholder value transfer model. This model seeks to assess the amount of shareholder equity flowing out of the company to executives as options are exercised. After determining the cost of the plan, the PPC evaluates whether the cost is reasonable based on a number of factors, including industry classification and historical performance information. The PPC generally votes against proposals that permit the repricing or replacement of stock options without shareholder approval.

A complete copy of the Proxy Voting Policy may be obtained by calling 1-866-909-9473 or by writing to: WisdomTree Trust, c/o ALPS Distributors, Inc., 1290 Broadway, Suite 1100, Denver, Colorado 80203.

The Trust is required to disclose annually each Fund's complete proxy voting record on Form N-PX covering the period from July 1 of one year through June 30 of the next year and to file Form N-PX with the SEC no later than August 31 of each year. The current Form N-PX for the Funds is available at no charge upon request by calling 1-866-909-9473. The Funds' Form N-PX is also available on the SEC's website at www.sec.gov.

PORTFOLIO HOLDINGS DISCLOSURE POLICY

The Trust has adopted a Portfolio Holdings Policy (the "Policy") designed to govern the disclosure of Fund portfolio holdings and the use of material non-public information about Fund holdings. The Policy applies to all officers, employees, and agents of the Funds, including the Adviser and each Sub-Adviser (together, the "Advisers"). The Policy is designed to ensure that the disclosure of information about each Fund's portfolio holdings is consistent with applicable legal requirements and otherwise in the best interest of each Fund.

The Funds are considered to be actively managed ETFs. As such, each Fund is required by the SEC to disclose on the Funds' website at the start of each Business Day (defined below) the identities and quantities of the securities and other assets held by each Fund that will form the basis of the Fund's calculation of its NAV on that Business Day. The portfolio holdings so disclosed will be based on information as of the close of business on the prior Business Day and/or trades that have been completed prior to the opening of business on that Business Day and that are expected to settle on that Business Day.

A "Business Day" with respect to each Fund is any day on which the Listing Exchange is open for business. As of the date of this SAI, the NYSE Arca observes the following holidays: New Year's Day, Martin Luther King, Jr. Day, Presidents' Day, Good Friday, Memorial Day (observed), Independence Day, Labor Day, Thanksgiving Day and Christmas Day.

Table of Contents

As ETFs, information about each Fund's portfolio holdings is made available on a daily basis in accordance with the provisions of any Order of the SEC applicable to the Funds, regulations of the Funds' Listing Exchange and other applicable SEC regulations, orders and no-action relief. Such information typically reflects all or a portion of a Fund's anticipated portfolio holdings as of the next Business Day. A Business Day with respect to the Fund is any day on which the Listing Exchange is open for business. This information is used in connection with the Creation and Redemption process and is disseminated on a daily basis through the facilities of the Listing Exchange, the National Securities Clearing Corporation (NSCC) and/or third-party service providers.

Each Fund may disclose on the Funds' website at the start of each Business Day the identities and quantities of the securities and other assets held by the Fund that will form the basis of the Fund's calculation of its NAV on that Business Day. The portfolio holdings so disclosed will be based on the information as of the close of business on the prior Business Day and/or trades that have been completed prior to the opening of business on that Business Day and that are expected to settle on that Business Day.

Daily access to each Fund's portfolio holdings with no lag time is permitted to personnel of the Advisers, the Funds' Distributor and the Funds' administrator, custodian and accountant and other agents or service providers of the Trust who have need of such information in connection with the ordinary course of their respective duties to the Funds. The Funds' Chief Compliance Officer may authorize disclosure of portfolio holdings.

Each Fund may disclose its complete portfolio holdings or a portion of its portfolio holdings online at www.wisdomtree.com. Online disclosure of such holdings is publicly available at no charge.

Each Fund will disclose its complete portfolio holdings schedule in public filings with the SEC on a quarterly basis, based on the Fund's fiscal year, within sixty (60) days of the end of the quarter, and will provide that information to shareholders, as required by federal securities laws and regulations thereunder.

No person is authorized to disclose a Fund's portfolio holdings or other investment positions except in accordance with the Policy. The Trust's Board reviews the implementation of the Policy on a periodic basis.

INVESTMENT LIMITATIONS

The following fundamental investment policies and limitations supplement those set forth in each Fund's Prospectus. Unless otherwise noted, whenever a fundamental investment policy or limitation states a maximum percentage of a Fund's assets that may be invested in any security or other asset, or sets forth a policy regarding quality standards, such standard or percentage limitation will be determined immediately after and as a result of the Fund's acquisition of such security or other asset. Accordingly, other than with respect to a Fund's limitations on borrowings, any subsequent change in values, net assets, or other circumstances will not be considered when determining whether the investment complies with the Fund's investment policies and limitations.

Each Fund's fundamental investment policies cannot be changed without the approval of the holders of a majority of that Fund's outstanding voting securities as defined under the 1940 Act. Each Fund, however, may change the non-fundamental investment policies described below and its investment objective without a shareholder vote provided that it obtains Board approval and notifies its shareholders with at least sixty (60) days' prior written notice of any such change.

Fundamental Policies. The following investment policies and limitations are fundamental and may NOT be changed without shareholder approval.

Each Fund, as a fundamental investment policy, may not:

Senior Securities

Issue senior securities, except as permitted under the 1940 Act.

Borrowing

Borrow money, except as permitted under the 1940 Act.

Underwriting

Edgar Filing: WisdomTree Trust - Form 497

Act as an underwriter of another issuer's securities, except to the extent that each Fund may be considered an underwriter within the meaning of the Securities Act in the disposition of portfolio securities.

Table of Contents

Concentration

All Funds except Commodity Currency Fund, Emerging Markets Local Debt Fund, Asia Local Debt Fund and Alternative Funds:

Purchase the securities of any issuer (other than securities issued or guaranteed by the U.S. government or any of its agencies or instrumentalities) if, as a result, more than 25% of the Fund's total assets would be invested in the securities of companies whose principal business activities are in the same industry.

Commodity Currency Fund, Emerging Markets Local Debt Fund, Asia Local Debt Fund and Alternative Funds only:

Purchase the securities of any issuer (other than securities issued or guaranteed by the U.S. government, or any non-U.S. government, or their respective agencies or instrumentalities) if, as a result, more than 25% of the Fund's total assets would be invested in the securities of companies whose principal business activities are in the same industry. For these purposes, the components of the Managed Futures Strategy Fund's Benchmark (e.g., gold, silver, natural gas) are considered to be separate industries.

Real Estate

Purchase or sell real estate unless acquired as a result of ownership of securities or other instruments (but this shall not prevent the Fund from investing in securities or other instruments backed by real estate, real estate investment trusts or securities of companies engaged in the real estate business).

Commodities

Purchase or sell physical commodities unless acquired as a result of ownership of securities or other instruments (but this shall not prevent each Fund from purchasing or selling options and futures contracts or from investing in securities or other instruments backed by physical commodities).

Loans

Lend any security or make any other loan except as permitted under the 1940 Act. This means that no more than 33 1/3% of its total assets would be lent to other parties. This limitation does not apply to purchases of debt securities or to repurchase agreements, or to acquisitions of loans, loan participations or other forms of debt instruments, permissible under each Fund's investment policies.

Non-Fundamental Policies. The following investment policy is not fundamental and may be changed without shareholder approval.

All Funds except Emerging Markets Local Debt Fund and Asia Local Debt Fund:

Each Fund has adopted a non-fundamental investment policy to invest, under normal circumstances, at least 80% of the value of its net assets, plus the amount of any borrowings for investment purposes, in investments that are tied economically to the particular country or geographic region suggested by the Fund's name, including certain derivatives described herein and in the Fund's Prospectus.

Asia Local Debt Fund only:

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in Local Debt. For these purposes, Local Debt includes fixed income securities, such as bonds, notes or other debt obligations, denominated in local currencies of countries in Asia, as well as certain derivatives and other instruments described herein and in the Fund's Prospectus.

Australia & New Zealand Debt Fund only:

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in Debt Securities. For these purposes, Debt Securities include fixed income securities, such as bonds, notes or other debt obligations, denominated in Australian or New Zealand dollars, as well as certain derivatives and other instruments described herein and in the Fund's Prospectus.

Euro Debt Fund only:

Edgar Filing: WisdomTree Trust - Form 497

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in Debt Securities. For these purposes, Debt Securities consist of fixed income securities, such as bonds, notes or other debt obligations, denominated in euros, as well as certain derivatives and other instruments described herein and in the Fund's Prospectus.

Emerging Markets Local Debt Fund only:

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in Local Debt. For these purposes, Local Debt includes fixed income securities, such as bonds, notes or other debt obligations, denominated in local currencies of emerging market countries, as well as other instruments described herein and in the Fund's Prospectus.

Managed Futures Strategy Fund only:

Under normal circumstances, the Fund will invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in managed futures. For these purposes, managed futures are investments in commodity and currency-linked instruments, as well as U.S. government securities and money market instruments, that taken together have economic characteristics similar or equivalent to those of listed commodity, currency and financial futures contracts described herein and in the Fund's Prospectus.

Table of Contents

If, subsequent to an investment, the 80% requirement for a Fund is no longer met, the Fund's future investments will be made in a manner that will bring the Fund into compliance with this policy.

CONTINUOUS OFFERING

The method by which Creation Unit Aggregations of shares are created and traded may raise certain issues under applicable securities laws. Because new Creation Unit Aggregations of shares are issued and sold by the Funds on an ongoing basis, at any point a distribution, as such term is used in the Securities Act, may occur. Broker-dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner which could render them statutory underwriters and subject them to the prospectus delivery requirement and liability provisions of the Securities Act.

For example, a broker-dealer firm or its client may be deemed a statutory underwriter if it takes Creation Unit Aggregations after placing an order with the Funds' Distributor, breaks them down into constituent shares, and sells such shares directly to customers, or if it chooses to couple the creation of a supply of new shares with an active selling effort involving solicitation of secondary market demand for shares. A determination of whether one is an underwriter for purposes of the Securities Act must take into account all the facts and circumstances pertaining to the activities of the broker-dealer or its client in the particular case, and the examples mentioned above should not be considered a complete description of all the activities that could lead to a categorization as an underwriter.

Broker-dealer firms should also note that dealers who are not underwriters but are effecting transactions in shares, whether or not participating in the distribution of shares, generally are required to deliver a prospectus. This is because the prospectus delivery exemption in Section 4(3) of the Securities Act is not available in respect of such transactions as a result of Section 24(d) of the 1940 Act. Firms that incur a prospectus delivery obligation with respect to shares of the Funds are reminded that, pursuant to Rule 153 under the Securities Act, a prospectus delivery obligation under Section 5(b)(2) of the Securities Act owed to an exchange member in connection with the sale on the Listing Exchange is satisfied by the fact that the prospectus is available at the Listing Exchange upon request. The prospectus delivery mechanism provided in Rule 153 is only available with respect to transactions on an exchange.

MANAGEMENT OF THE TRUST

Board Responsibilities. The Board of Trustees is responsible for overseeing the management and affairs of the Funds and the Trust. The Board has considered and approved contracts, as described herein, under which certain companies provide essential management and administrative services to the Trust. Like most ETFs, the day-to-day business of the Trust, including the day-to-day management of risk, is performed by third-party service providers, such as the Adviser, Sub-Advisers, Distributor and Administrator. The Board is responsible for overseeing the Trust's service providers and, thus, has oversight responsibility with respect to the risk management performed by those service providers. Risk management seeks to identify and eliminate or mitigate the potential effects of risks, i.e., events or circumstances that could have material adverse effects on the business, operations, shareholder services, investment performance or reputation of the Trust or Funds. Under the overall supervision of the Board and the Audit Committee (discussed in more detail below), the service providers to the Funds employ a variety of processes, procedures and controls to identify risks relevant to the operations of the Trust and the Funds to lessen the probability of their occurrence and/or to mitigate the effects of such events or circumstances if they do occur. Each service provider is responsible for one or more discrete aspects of the Trust's business (e.g., the Sub-Advisers are responsible for the day-to-day management of the Funds' portfolio investments) and, consequently, for managing the risks associated with that activity.

The Board's role in risk management oversight begins before the inception of a Fund, at which time the Fund's Adviser presents the Board with information concerning the investment objectives, strategies and risks of the Fund. Additionally, the Fund's Adviser and Sub-Adviser provide the Board with an overview of, among other things, its investment philosophy, brokerage practices and compliance infrastructure. Thereafter, the Board oversees the risk management of the Fund's operations, in part, by requesting periodic reports from and otherwise communicating with various personnel of the Fund and its service providers, including the Trust's Chief Compliance Officer and the Fund's independent accountants. The Board and, with respect to identified risks that relate to its scope of expertise, the Audit Committee, oversee efforts by management and service providers to manage risks to which the Fund may be exposed.

The Board is responsible for overseeing the nature, extent and quality of the services provided to the Funds by the Adviser and Sub-Advisers and receives information about those services at its regular meetings. In addition, on at least an annual basis, in connection with its consideration of whether to renew any Advisory Agreements and Sub-Advisory Agreements with the Adviser and Sub-Advisers, respectively, the Board meets with the Adviser and Sub-Adviser to review such services. Among other things, the Board regularly considers the Adviser's and Sub-Advisers' adherence to each Fund's investment restrictions and compliance with various Fund policies and procedures and with applicable securities regulations. The Board also reviews information about each Fund's performance and investments.

Table of Contents

The Trust's Chief Compliance Officer meets regularly with the Board to review and discuss compliance and other issues. At least annually, the Trust's Chief Compliance Officer provides the Board with a report reviewing the adequacy and effectiveness of the Trust's policies and procedures and those of its service providers, including the Adviser and Sub-Advisers. The report addresses the operation of the policies and procedures of the Trust and each service provider since the date of the last report; material changes to the policies and procedures since the date of the last report; any recommendations for material changes to the policies and procedures; and material compliance matters since the date of the last report.

The Board receives reports from the Trust's service providers regarding operational risks, portfolio valuation and other matters. Annually, the independent registered public accounting firm reviews with the Audit Committee its audit of the Trust's financial statements, focusing on major areas of risk encountered by the Trust and noting any significant deficiencies or material weaknesses in the Trust's internal controls.

The Board recognizes that not all risks that may affect the Funds can be identified, that it may not be practical or cost-effective to eliminate or mitigate certain risks, that it may be necessary to bear certain risks (such as investment-related risks) to achieve each Fund's goals, and that the processes, procedures and controls employed to address certain risks may be limited in their effectiveness. Moreover, despite the periodic reports the Board receives and the Board's discussions with the service providers to the Funds, it may not be made aware of all of the relevant information of a particular risk. Most of the Trust's investment management and business affairs are carried out by or through the Funds' Adviser, Sub-Advisers and other service providers, each of which has an independent interest in risk management but whose policies and methods by which one or more risk management functions are carried out may differ from the Trust's and each other's in the setting of priorities, the resources available or the effectiveness of relevant controls. As a result of the foregoing and other factors, the Board's risk management oversight is subject to substantial limitations.

Members of the Board and Officers of the Trust. Set forth below are the names, birth years, positions with the Trust, terms of office, and principal occupations and other directorships for a minimum of the last five years of the persons currently serving as members of the Board and as Executive Officers of the Trust. Also included below is the term of office for each of the Executive Officers of the Trust. The members of the Board serve as Trustees for the life of the Trust or until retirement or removal, or if their office is terminated pursuant to the Trust's Declaration of Trust.

The Chairman of the Board of Trustees, Victor Ugolyn, is not an interested person of the Funds as that term is defined in the 1940 Act. The Board of Trustees is comprised of a super-majority (75%) of trustees who are not interested persons of the Funds (i.e., independent trustees). There is an Audit Committee and a Governance and Nominating Committee of the Board, each of which is chaired by an independent trustee and comprised solely of independent trustees. The Committee chair for each is responsible for running the Committee meeting, formulating agendas for those meetings, and coordinating with management to serve as a liaison between the independent trustees and management on matters within the scope of the responsibilities of the Committee as set forth in its Board-approved charter. The Funds have determined that this leadership structure is appropriate given the specific characteristics and circumstances of the Funds. The Funds made this determination in consideration of, among other things, the fact that the independent trustees of the Funds constitute a super-majority of the Board, the assets under management of the Funds, the number of Funds overseen by the Board, the total number of trustees on the Board, and the fact that an independent trustee serves as Chairman of the Board.

* Chair of the Audit Committee.

** Chair of the Governance and Nominating Committee.

*** Elected by and serves at the pleasure of the Board.

+ As of March 31, 2012.

Audit Committee. Each independent trustee is a member of the Trust’s Audit Committee (the Audit Committee). The principal responsibilities of the Audit Committee are the appointment, compensation and oversight of the Trust’s independent auditors, including the resolution of disagreements regarding financial reporting between Trust management and such independent auditors. The Audit Committee’s responsibilities include, without limitation, to (i) oversee the accounting and financial reporting processes of the Trust and its internal control over financial reporting and, as the Committee deems appropriate, inquire into the internal control over financial reporting of certain third-party service providers; (ii) oversee the quality and integrity of the Funds’ financial statements and the independent audits thereof; (iii) oversee, or, as appropriate, assist Board oversight of, the Trust’s compliance with legal and regulatory requirements that relate to the Trust’s accounting and financial reporting, internal control over financial reporting and independent audits; (iv) approve prior to appointment the engagement of the Trust’s independent auditors and, in connection therewith, review and evaluate the qualifications, independence and performance of the Trust’s independent auditors; and (v) act as a liaison between the Trust’s independent auditors and the full Board. The Board of the Trust has adopted a written charter for the Audit Committee. The independent trustees’ independent legal counsel assists the Audit Committee in connection with these duties. During the fiscal year ended August 31, 2011, the Audit Committee held six meetings.

Governance and Nominating Committee. Each independent trustee is also a member of the Trust’s Governance and Nominating Committee. The principal responsibilities of the Governance and Nominating Committee are to (i) oversee Fund governance matters and (ii) identify individuals qualified to serve as independent trustees of the Trust and to recommend its nominees for consideration by the full Board. While the Governance and Nominating Committee is solely responsible for the selection and nomination of the Trust’s independent trustees, it may consider nominations for the office of Trustee made by Trust stockholders as it deems appropriate. The Governance and Nominating Committee considers nominees recommended by shareholders if such nominees are submitted in accordance with Rule 14a-8 of the Securities Exchange Act of 1934 (the 1934 Act), in conjunction with a shareholder meeting to consider the election of Trustees. Trust stockholders who wish to recommend a nominee should send nominations to the Secretary of the Trust that include biographical information and set forth the qualifications of the proposed nominee. During the fiscal year ended August 31, 2011, the Governance and Nominating Committee held two meetings.

Individual Trustee Qualifications

The Trust has concluded that each of the Trustees should serve on the Board because of his or her ability to review and understand information about the Trust and the Funds provided by management, to identify and request other information he or she may deem relevant to the performance of the Trustees’ duties, to question management and other service providers regarding material factors bearing on the management and administration of the Funds, and to exercise his or her business judgment in a manner that serves the best interests of the Funds’ shareholders.

Edgar Filing: WisdomTree Trust - Form 497

The Trust has concluded that each of the Trustees should serve as a Trustee based on his or her own experience, qualifications, attributes and skills as described below.

Table of Contents

The Trust has concluded that Mr. Steinberg should serve as trustee of the Funds because of the experience he has gained as president, chief executive officer, and director of WisdomTree Investments, his knowledge of and experience in the financial services industry, and the experience he has gained serving as trustee of the Trust since 2005.

The Trust has concluded that Mr. Barton should serve as trustee of the Funds because of the experience he gained working both as a practicing attorney and in a business capacity for several public companies, and the experience he has gained serving as trustee of the Trust since 2006.

The Trust has concluded that Ms. Massaro should serve as trustee of the Funds because of the experience she has gained as a law professor, dean and advisor at various universities, and the experience she has gained serving as trustee of the Trust since 2006.

The Trust has concluded that Mr. Ugolyn should serve as trustee of the Funds because of the experience he gained as chief executive officer of a firm specializing in financial services, his experience in and knowledge of the financial services industry, his service as chairman for another mutual fund family, and the experience he has gained serving as trustee of the Trust since 2006.

Fund Shares Owned by Board Members. The following table shows the dollar amount range of each Trustee's beneficial ownership of shares of the Funds and each other series of the Trust as of the end of the most recently completed calendar year. Dollar amount ranges disclosed are established by the SEC. Beneficial ownership is determined in accordance with Rule 16a-1(a)(2) under the 1934 Act. The Trustees and officers of the Trust own less than 1% of the outstanding shares of the Trust.
