# Letter from the Chairman of the Board & President

Dear Shareholder:

The financial markets experienced periods of volatility during the reporting period. Investor sentiment was challenged at times given mixed economic data, uncertainties surrounding future global monetary policy, falling commodity prices and geopolitical issues.

### For the six-month reporting period ended December 31, 2015

The U.S. economy expanded during the reporting period, but the pace was uneven. Looking back, U.S. gross domestic product (GDP), which represents the value of goods and services produced in the country, the broadest measure of economic activity and the principal indicator of economic performance, expanded at a 3.9% annual pace during the second quarter of 2015. Economic activity then decelerated, as GDP grew at a 2.0% annual pace during the third quarter of 2015. Finally, the Commerce Department sinitial reading released after the reporting period had ended showed that fourth quarter 2015 GDP grew at an annual pace of 0.7%.

After nearly a decade of highly accommodative monetary policy, the Federal Reserve (Fed) raised interest rates at its meeting in mid-December 2015. The Fed s action pushed rates from a range between 0% and 0.25% to a range between 0.25% and 0.50%. In its official statement following the meeting, the Fed said, The Committee expects that economic conditions will evolve in a manner that will warrant only gradual increases in the federal funds rate; the federal funds rate is likely to remain, for some time, below levels that are expected to prevail in the longer run.

Economic activity outside the U.S. was mixed during the reporting period. Anemic growth and concerns of deflation in the eurozone caused the European Central Bank (ECB) to announce that beginning in March 2015, it would start a 60 billion-a-month bond-buying program that was expected to run until at least September 2016. In December 2015, continued economic headwinds prompted the ECB to extend its monthly bond-buying program by six months, until at least March 2017.

Commodities and emerging markets dominated the news over the reporting period. Crude oil declined from \$64 to \$37 between June and December, as OPEC continued pumping at close to full capacity and even as U.S. production started to contract. In August 2015, China surprised the markets by allowing its currency to depreciate by nearly 2% against the U.S. dollar, and then spent over \$180 billion in foreign reserves over the course of the fourth quarter to support its currency. Meanwhile, Chinese equity markets continued their sharp sell-off, casting a shadow on global risk assets. Elsewhere in emerging markets, the Brazilian political and economic situation continued to deteriorate, culminating in Standard & Poor s and Fitch downgrading Brazilian foreign currency debt rating to below investment grade.

### Outlook

PIMCO s baseline view sees U.S. economic growth in the range of 2.0% - 2.5% over the next four quarters in line with the average growth rate of the U.S. economy during the current expansion and headline CPI (Consumer Price Index) inflation in a range of 1.5% - 2%. In PIMCO s view, given moderate global recovery and the strong U.S. dollar, there will be little if any boost to aggregate demand from international trade. On the positive side of the ledger, PIMCO believes that the recent budget agreement between Congress and President Obama will provide the

U.S. economy a modest and unexpected fiscal boost from the increase in federal spending. With respect to the Fed, after December s initial rate hike, the market is pricing in two further quarter-point increases in 2016. PIMCO believes there is a risk that the Fed will deliver more rate hikes than the market is currently pricing in.

Overseas, PIMCO s baseline view for the eurozone is economic growth of around 1.5% over the next four quarters, with inflation from roughly zero in 2015 to about 1% in 2016. PIMCO believes that ECB quantitative easing will have a positive impact on loan growth. However, while net exports should benefit from the cumulative weakening of the

euro, it is PIMCO s belief that slower growth from the eurozone s major trading partners may limit the contribution to growth from net exports in 2016. PIMCO sees the prospects of a modest pickup in Japanese growth to about 1% in

2 PIMCO CLOSED-END FUNDS

2016, versus an estimated 0.6% in 2015. In PIMCO s view, headline inflation will remain positive in 2016, but at around 0.5 - 1% is well below the Bank of Japan s target of 2%.

In the following pages of this PIMCO Closed-End Funds Semiannual Report, please find specific details regarding investment performance and a discussion of factors that most affected the Funds performance over the six months ended December 31, 2015.

Thank you for investing with us. We value your trust and will continue to work diligently to meet your investment needs. If you have questions regarding any of your PIMCO Closed-End Funds investments, please contact your financial advisor or call the Funds shareholder servicing agent at (844) 33-PIMCO or (844) 337-4626. We also invite you to visit our website at www.pimco.com to learn more about our views.

Sincerely,

Hans W. Kertess Chairman of the Board Peter G. Strelow President

### **Important Information About the Funds**

We believe that bond funds have an important role to play in a well-diversified investment portfolio. It is important to note, however, that in an environment where interest rates trend upward, rising rates would negatively impact the performance of most bond funds, and fixed-income securities held by a Fund are likely to decrease in value. A number of factors can cause interest rates to rise (e.g., central bank monetary policies, inflation rates, general economic conditions, etc.). Accordingly, changes in interest rates can be sudden, and there is no guarantee that Fund Management will anticipate such movement. As of the date of this report, interest rates in the U.S. are at or near historically low levels. As such, bond funds may currently face an increased exposure to the risks associated with rising interest rates. This is especially true since the Federal Reserve Board has concluded its quantitative easing program and, at its meeting on December 16, 2015, raised interest rates for the first time since 2006 from a target range of 0% to 0.25% to a target range of 0.25% to 0.50%. Further, while the U.S. bond market has steadily grown over the past three decades, dealer inventories of corporate bonds have remained relatively stagnant. As a result, there has been a significant reduction in the ability of dealers to make markets in corporate bonds. All of the factors mentioned above, individually or collectively, could lead to increased volatility and/or lower liquidity in the fixed income markets, which could result in increased losses to a Fund. Bond funds and individual bonds with a longer duration (a measure of the sensitivity of a security s price to changes in interest rates) tend to be more sensitive to changes in interest rates, usually making them more volatile than securities or funds with shorter durations. In addition, in the current low interest rate environment, the market price of the Funds common shares may be particularly sensitive to changes in interest rates or the perception that there will b

The use of derivatives may subject the Funds to greater volatility than investments in traditional securities. The Funds may use derivative instruments for hedging purposes or as part of an investment strategy. Use of these instruments may involve certain costs and risks such as liquidity risk, interest rate risk, market risk, call risk, credit risk, management risk and the risk that a Fund could not close out a position when it would be most advantageous to do so. Certain derivative transactions may have a leveraging effect on a Fund. For example, a small investment in a derivative instrument may have a significant impact on a Fund s exposure to interest rates, currency exchange rates or other investments. As a result, a relatively small price movement in a derivative instrument may cause an immediate and substantial loss or gain, which translates into heightened volatility in a Fund s net asset value NAV. A Fund may engage in such transactions regardless of whether the Fund owns the asset, instrument or components of the index underlying a derivative instrument. A Fund may invest a significant portion of its assets in these types of

instruments. If it does, a Fund s investment exposure could far exceed the value of its portfolio securities and its investment performance could be primarily dependent upon securities it does not directly own. Changes in regulation relating to a mutual fund s use of derivatives and related instruments could potentially limit or impact a Fund s ability to invest in derivatives, limit a Fund s ability to employ certain strategies that use derivatives and adversely affect the value or performance of derivatives and a Fund.

For purposes of applying a Fund s investment policies and restrictions, swap agreements are generally valued by the Fund at market value. In the case of a credit default swap, however, in applying certain of a Fund s investment policies and restrictions, the Fund will value the credit default swap at its notional value or its full exposure value (i.e., the sum of the notional amount for the contract plus the market value), but may value the credit default swap at market value for purposes of applying certain of the Fund s other investment policies and restrictions. For example, a Fund may value credit default swaps at full exposure value for purposes of the Fund s credit quality guidelines (if any) because such value reflects the Fund s actual economic exposure during the term of the credit default swap agreement. In this context, both the notional amount and the market value may be positive or negative depending on whether a Fund is selling or buying protection through the credit default swap. The manner in which certain securities or other instruments are valued by a Fund for purposes of applying investment policies and restrictions may differ from the manner in which those investments are valued by other types of investors.

A Fund s use of leverage creates the opportunity for increased income for the Fund s common shareholders, but also creates special risks. Leverage is a speculative technique that may expose a Fund to greater risk and increased costs. If shorter-term interest rates rise relative to the rate of return on a Fund s portfolio, the interest and other costs to the Fund of leverage could exceed the rate of return on the debt obligations and other investments held by the Fund, thereby reducing return to the Fund s common shareholders. In addition, fees and expenses of any form of leverage used by a Fund will be borne entirely by its common shareholders (and not by preferred shareholders, if any) and will reduce the investment return of the Fund s common shares. There can be no assurance that a Fund s use of leverage will result in a higher yield on its common shares, and it may result in losses. Leverage creates several major types of risks for a Fund s common shareholders, including: (1) the likelihood of greater volatility of net asset value and market price of the Fund s common shares, and of the investment return to the Fund s common shareholders, than a comparable portfolio without leverage; (2) the possibility either that the Fund s common share dividends will fall if

the interest and other costs of leverage rise, or that dividends paid on the Fund s common shares will fluctuate

4 PIMCO CLOSED-END FUNDS

because such costs vary over time; and (3) the effects of leverage in a declining market or a rising interest rate environment, as leverage is likely to cause a greater decline in the net asset value of the Fund s common shares than if the Fund were not leveraged and may result in a greater decline in the market value of the Fund s common shares.

A Fund s investments in and exposure to foreign securities involve special risks. For example, the value of these investments may decline in response to unfavorable political and legal developments, unreliable or untimely information or economic and financial instability. Foreign securities may experience more rapid and extreme changes in value than investments in securities of U.S. issuers. The securities markets of certain foreign countries are relatively small, with a limited number of companies representing a small number of industries. Issuers of foreign securities are usually not subject to the same degree of regulation as U.S. issuers. Reporting, accounting, auditing and custody standards of foreign countries differ, in some cases significantly, from U.S. standards. Also, nationalization, expropriation or other confiscation, a Fund could lose its entire investment in foreign securities. In the event of nationalization, expropriation or other confiscation, a Fund could lose its entire investment in foreign securities. Risks associated with investing in foreign securities may be increased when a Fund invests in emerging markets. For example, if a Fund invests in emerging market debt, it may face increased exposure to interest rate, liquidity, volatility, and redemption risk due to the specific economic, political, geographical, or legal background of the emerging market.

Investments in loans are generally subject to risks similar to those of investments in other types of debt obligations, including, among others, credit risk, interest rate risk, variable and floating rate securities risk, and, as applicable, risks associated with mortgage-related securities. In addition, in many cases loans are subject to the risks associated with below-investment grade securities. In the case of a loan participation or assignment, a Fund generally has no right to enforce compliance with the terms of the loan agreement with the borrower. As a result, a Fund may be subject to the credit risk of both the borrower and the lender that is selling the loan agreement. In the event of the insolvency of the lender selling a loan participation, a Fund may be treated as a general creditor of the lender and may not benefit from any set-off between the lender and the borrower. The Funds may be subject to heightened or additional risks and potential liabilities and costs by investing in mezzanine and other subordinated loans or acting as an originator of loans, including those arising under bankruptcy, fraudulent conveyance, equitable subordination, lender liability, environmental and other laws and regulations, and risks and costs associated with debt servicing and taking foreclosure actions associated with the loans. To the extent that a Fund originates a loan, it may be responsible for all or a substantial portion of the expenses

associated with initiating the loan, irrespective of whether the loan transaction is ultimately consummated or closed. This may include significant legal and due diligence expenses, which will be indirectly borne by a Fund and its shareholders.

Mortgage-related and other asset-backed securities often involve risks that are different from or more acute than risks associated with other types of debt instruments. Generally, rising interest rates tend to extend the duration of fixed rate mortgage-related securities, making them more sensitive to changes in interest rates. As a result, in a period of rising interest rates, if a Fund holds mortgage-related securities, it may experience additional volatility since individual mortgage holders are less likely to exercise prepayment options, thereby putting additional downward pressure on the value of these securities and potentially causing the Fund to lose money. This is known as extension risk. Mortgage-backed securities can be highly sensitive to rising interest rates, such that even small movements can cause an investing Fund to lose value. Mortgage-backed securities, and in particular those not backed by a government guarantee, are subject to credit risk. In addition, adjustable and fixed rate mortgage-related securities are subject to prepayment risk. When interest rates decline, borrowers may pay off their mortgages sooner than expected. This can reduce the returns of the Funds because the Funds may have to reinvest that money at the lower prevailing interest rates. The Funds investments in other asset-backed securities are subject to risks similar to those associated with mortgage-related securities, as well as additional risks associated with the nature of the assets and the servicing of those assets. Payment of principal and interest on asset-backed securities may not have the benefit of any security interest in the related assets.

High-yield bonds (commonly referred to as junk bonds) typically have a lower credit rating than other bonds. Lower-rated bonds generally involve a greater risk to principal than higher-rated bonds. Further, markets for lower-rated bonds are typically less liquid than for higher rated bonds, and public information is usually less abundant in such markets. Thus, high yield investments increase the chance that a Fund will lose money on its investment. The Funds may also invest in bonds and other instruments that are not rated, but which PIMCO considers to be

equivalent to high-yield investments. The Funds may hold defaulted securities that may involve special considerations including bankruptcy proceedings, other regulatory and legal restrictions affecting the Funds ability to trade, and the availability of prices from independent pricing services or dealer quotations. Defaulted securities are often illiquid and may not be actively traded. Sale of securities in bankrupt companies at an acceptable price may be difficult and differences compared to the value of the securities used by the Funds could be material.

### Important Information About the Funds (Cont.)

Variable and floating rate securities generally are less sensitive to interest rate changes but may decline in value if their interest rates do not rise as much, or as quickly, as interest rates in general. Conversely floating rate securities will not generally increase in value if interest rates decline. Inverse floating rate securities may decrease in value if interest rates increase. Inverse floating rate securities may also exhibit greater price volatility than a fixed rate obligation with similar credit quality. When a Fund holds variable or floating rate securities, a decrease (or, in the case of inverse floating rate securities, an increase) in market interest rates will adversely affect the income received from such securities and the NAV of the Funds shares.

The global economic crisis brought several small economies in Europe to the brink of bankruptcy and many other economies into recession and weakened the banking and financial sectors of many European countries. For example, the governments of Greece, Spain, Portugal, and the Republic of Ireland have all experienced large public budget deficits, the effects of which are still yet unknown and may slow the overall recovery of the European economies from the global economic crisis. In addition, due to large public deficits, some European countries may be dependent on assistance from other European governments and institutions or other central banks or supranational agencies such as the International Monetary Fund. Assistance may be dependent on a country s implementation of reforms or reaching a certain level of performance. Failure to reach those objectives or an insufficient level of assistance could result in a deep economic downturn which could significantly affect the value of a Fund s European investments. It is possible that one or more Economic and Monetary Union of the European Union ( EMU ) member countries could abandon the euro and return to a national currency and/or that the euro will cease to exist as a single currency in its current form. The exit of any country out of the euro may have an extremely destabilizing effect on other eurozone countries and their economies and a negative effect on the global economy as a whole. Such an exit by one country may also increase the possibility that additional countries may exit the euro should they face similar financial difficulties.

The Funds may invest in securities and instruments that are economically tied to Russia. Investments in Russia are subject to various risks such as political, economic, legal, market and currency risks. The risks include uncertain political and economic policies, short term market volatility, poor accounting standards, corruption and crime, an inadequate regulatory system, and unpredictable taxation. Investments in Russia are particularly subject to the risk that economic sanctions may be imposed by the United States and/or other countries. Such sanctions which may impact companies in many sectors, including energy, financial services and defense, among others may negatively impact the Funds performance and/or ability to achieve their investment objectives. The Russian securities market is characterized by

limited volume of trading, resulting in difficulty in obtaining accurate prices. The Russian securities market, as compared to U.S. markets, has significant price volatility, less liquidity, a smaller market capitalization and a smaller number of traded securities. There may be little publicly available information about issuers. Settlement, clearing and registration of securities transactions are subject to risks because of registration systems that may not be subject to effective government supervision. This may result in significant delays or problems in registering the transfer of securities. Russian securities laws may not recognize foreign nominee accounts held with a custodian bank, and therefore the custodian may be considered the ultimate owner of securities they hold for their clients. Ownership of securities issued by Russian companies is recorded by companies themselves and by registrars instead of through a central registration system. It is possible that the ownership rights of the Funds could be lost through fraud or negligence. While applicable Russian regulations impose liability on registrars for losses resulting from their errors, it may be difficult for the Funds to enforce any rights it may have against the registrar or issuer of the securities in the event of loss of share registration. Adverse currency exchange rates are a risk and there may be a lack of available currency hedging instruments. Investments in Russia may be subject to the risk of nationalization or expropriation of assets. Oil, natural gas, metals, and timber account for a significant portion of Russia s exports, leaving the country vulnerable to swings in world prices.

The common shares of the Funds trade on the New York Stock Exchange. As with any stock, the price of a Fund s common shares will fluctuate with market conditions and other factors. If you sell your common shares of a Fund, the price received may be more or less than your original investment. Shares of closed-end management investment companies frequently trade at a discount from their net asset value. The common shares of a Fund may trade at a price that is less than the initial offering price and/or the net asset value of such shares. Further, if a Fund s shares trade at a price that is more than the initial offering price and/or the net asset value of such shares, including at a substantial premium and/or for an extended period of time, there is no assurance that any such premium will be sustained for any period of time and will not decrease, or that the shares will not trade at a discount to net asset value thereafter.

Income distributions and capital gain distributions are determined in accordance with income tax regulations which may differ from U.S. GAAP. Differences between tax regulations and U.S. GAAP may cause timing differences between income and capital gain recognition. Further, the character of investment income and capital gains may be different for certain transactions under the two methods of accounting. As a result, income distributions and capital gain distributions declared during a fiscal period may differ significantly from the net investment income (loss) and realized gains (losses) reported on each Fund s annual financial statements presented under U.S. GAAP.

6 PIMCO CLOSED-END FUNDS

If the Fund estimates that a portion of one of its dividend distributions may be comprised of amounts from sources other than net investment income, the Fund will notify shareholders of record of the estimated composition of such distribution through a Section 19 Notice. To determine the sources of the Fund s distributions, the Fund references its accounting records at the time the distribution is paid. If, based on such accounting records, a particular distribution does not include capital gains or paid-in surplus or other capital sources, a Section 19 Notice generally will not be issued. It is important to note that differences exist between a Fund s accounting entries maintained on a day-to-day basis, the Fund s financial statements presented in accordance with U.S. GAAP, and accounting practices under income tax regulations. Examples of such differences may include the treatment of paydowns on mortgage-backed securities purchased at a discount and periodic payments under interest rate swap contracts. A Fund may not issue a Section 19 Notice in situations where the Fund s financial statements prepared later and in accordance with U.S. GAAP or the final tax character of those distributions might later report that the sources of those distributions included capital gains and/or a return of capital. Please visit www.pimco.com for the most recent Section 19 Notice, if applicable, for additional information regarding the composition of distributions. Final determination of a distribution s tax character will be reported on Form 1099 DIV sent to shareholders each January.

The Funds may be subject to various risks in addition to those described above. Some of these risks may include, but are not limited to, the following: asset allocation risk, credit risk, stressed securities risk, distressed and defaulted securities risk, corporate bond risk, market risk, issuer risk, liquidity risk, equity securities and related market risk, mortgage-related and other asset-backed securities risk, extension risk, prepayment risk, privately issued mortgage-related securities risk, mortgage market/ subprime risk, foreign (non-U.S.) investment risk, emerging markets risk, currency risk, redenomination risk, non-diversification risk, management risk, municipal bond risk, inflation-indexed security risk, senior debt risk, loans, participations and assignments risk, reinvestment risk, real estate risk, U.S. Government securities risk, foreign (non-U.S.) government securities risk, valuation risk, segregation and cover risk, focused investment risk, credit default swaps risk, event-linked securities risk, inflation/deflation risk, regulatory risk, tax risk, recent economic conditions risk, market disruptions and geopolitical risk, potential conflicts of interest involving allocation of investment opportunities, repurchase agreements risk, securities lending risk, zero-coupon bond and payment-in-kind securities risk, portfolio turnover risk, smaller company risk, short

sale risk and convertible securities risk. A description of certain of these risks is available in the Notes to Financial Statements of this Report.

On each Fund Summary page in this Shareholder Report, the Average Annual Total Return table measures performance assuming that all dividend and capital gain distributions were reinvested. Total return is calculated by determining the percentage change in NAV or market price (as applicable) in the specified period. Returns do not reflect the deduction of taxes that a shareholder would pay on Fund distributions. Total return for a period of more than one year represents the average annual total return. Performance at market price will differ from results at NAV. Although market price returns tend to reflect investment results over time, during shorter periods returns at market price can also be influenced by factors such as changing views about a Fund, market conditions, supply and demand for the Fund s shares, or changes in the Fund s dividends. Performance shown is net of fees and expenses.

The following table discloses the commencement of operations and diversification status of each fund:

Fund Name	Commencement of Operations	Diversification Status
PCM Fund, Inc.	09/02/93	Diversified
PIMCO Global StocksPlus <sup>®</sup> & Income Fund	05/31/05	Diversified
PIMCO Income Opportunity Fund	11/30/07	Diversified
PIMCO Strategic Income Fund, Inc.	02/24/94	Diversified
PIMCO Dynamic Credit Income Fund	01/31/13	Diversified
PIMCO Dynamic Income Fund	05/30/12	Diversified

An investment in a Fund is not a deposit of a bank and is not guaranteed or insured by the Federal Deposit Insurance Corporation or any other government agency. It is possible to lose money on investments in the Funds.

The Trustees/Directors<sup>1</sup> are responsible generally for overseeing the management of the Funds. The Trustees authorize the Funds to enter into service agreements with the Investment Manager and other service providers in order to provide, and in some cases authorize service providers to procure through other parties, necessary or desirable services on behalf of the Funds. Shareholders are not parties to or third-party beneficiaries of such service agreements. Neither a Fund s original or any subsequent prospectus or Statement of Additional Information (SAI), any press release or shareholder report, any contracts filed as exhibits to a Fund s registration statement, nor any other communications, disclosure documents or regulatory filings from or on behalf of a Fund creates a contract between or among any shareholder of a Fund, on the one hand, and the Fund, a service provider to the

<sup>1</sup> Hereinafter, the terms Trustee or Trustees used herein shall refer to a Director or Directors of applicable Funds.

# Important Information About the Funds (Cont.)

Fund, and/or the Trustees or officers of the Fund, on the other hand. The Trustees (or the Funds and their officers, service providers or other delegates acting under authority of the Trustees) may amend its most recent or use a new prospectus or SAI with respect to a Fund, adopt and disclose new or amended policies and other changes in press releases and shareholder reports and/or amend, file and/or issue any other communications, disclosure documents or regulatory filings, and may amend or enter into any contracts to which a Fund is a party, and interpret the investment objective(s), policies, restrictions and contractual provisions applicable to any Fund, without shareholder input or approval, except in circumstances in which shareholder approval is specifically required by law (such as changes to fundamental investment policies) or where a shareholder approval requirement was specifically disclosed in a Fund s prospectus, SAI or shareholder report and is otherwise still in effect.

PIMCO has adopted written proxy voting policies and procedures ( Proxy Policy ) as required by Rule 206(4)-6 under the Investment Advisers Act of 1940. The Proxy Policy has been adopted by the Funds as the policies and procedures that PIMCO will use when voting proxies on behalf of the Funds. A description of the policies and procedures

that PIMCO uses to vote proxies relating to portfolio securities of each Fund, and information about how each Fund voted proxies relating to portfolio securities held during the most recent twelve-month period ended June 30, are available without charge, upon request, by calling the Funds at (844) 33-PIMCO (844-337-4626), on the Funds website at www.pimco.com, and on the Securities and Exchange Commission s (SEC) website at http://www.sec.gov.

Each Fund files a complete schedule of its portfolio holdings with the SEC for the first and third quarters of its fiscal year on Form N-Q. A copy of each Fund s Form N-Q is available on the SEC s website at http://www.sec.gov and may be reviewed and copied at the SEC s Public Reference Room in Washington, D.C., and is available without charge, upon request by calling the Funds at (844) 33-PIMCO (844-337-4626) and on the Funds website at www.pimco.com. Updated portfolio holdings information about a Fund will be available at www.pimco.com approximately 15 calendar days after such Fund s most recent fiscal quarter end, and will remain accessible until such Fund files a Form N-Q or a shareholder report for the period which includes the date of the information. Information on the operation of the Public Reference Room may be obtained by calling 1-800-SEC-0330.

- \* Cumulative return
- (1) Performance quoted represents past performance. Past performance is not a guarantee or a reliable indicator of future results. Current performance may be lower or higher than performance shown. Investment return and the principal value of an investment will fluctuate. Total return, market price, NAV, market price distribution yield, and NAV distribution yield will fluctuate with changes in market conditions. For performance current to the most recent month-end, visit www.pimco.com or call (844) 33-PIMCO.
- (2) Distribution yields are not performance and are calculated by annualizing the most recent distribution per share and dividing by the NAV or Market Price, as applicable, as of the reported date. Distributions may be comprised of ordinary income, net capital gains, and/or a return of capital (ROC) of your investment in the Fund. Because the distribution rate may include a ROC, it should not be confused with yield or income. If the Fund estimates that a portion of its distribution may be comprised of amounts from sources other than net investment income, the Fund will notify shareholders of the estimated composition of such distribution through a Section 19 Notice. Please refer to the most recent Section 19 Notice, if applicable, for additional information regarding the composition of distributions. Please visit www.pimco.com for most recent Section 19 Notice, if applicable. Final determination of a distribution s tax character will be made on Form 1099 DIV sent to shareholders each January.

(3) Represents total effective leverage outstanding, as a percentage of total managed assets. Total effective leverage consists of preferred shares, reverse repurchase agreements and other borrowings, credit default swap notional and floating rate notes issued in tender option bond transactions, as applicable (collectively Total Effective Leverage ). The Fund may engage in other transactions not included in Total Effective Leverage disclosed above that may give rise to a form of leverage, including certain derivative transactions. For the purpose of calculating Total Effective Leverage outstanding as a percentage of total managed assets, total managed assets refer to total assets (including assets attributable to Total Effective Leverage that may be outstanding) minus accrued liabilities (other than liabilities representing Total Effective Leverage).

#### Investment Objective and Strategy Overview

» PCM Fund s primary investment objective is to achieve high current income. Capital gains from the disposition of investments are a secondary objective of the Fund.

#### Fund Insights

- » For the period from July 1, 2015 through December 31, 2015, the Fund s allocation to high yield corporate bonds was the primary detractor from performance. The asset class sold off amid broad commodity weakness and retail fund outflows late in the reporting period.
- » Within high yield, the Fund s exposure to energy, as well as select names in media and telecommunications, were the key detractors. Exposure to utilities, manufacturing and raw materials credits further dampened returns.
- » The Fund s allocation to commercial mortgage-backed securities was a significant contributor to performance, supported by their attractive carry, the rate of interest earned by holding the respective securities.
- » The Fund s exposure to U.S. interest rates was a significant contributor to performance, due mainly to an emphasis on the intermediate portion of the curve, which provided an attractive carry during a period when rates were mostly flat.
- » The Fund s allocation to non-agency mortgage-backed securities was a modest contributor to returns. The sector continued to benefit from an improving U.S. housing market and limited outstanding supply.

For the purpose of calculating Total Effective Leverage outstanding as a percentage of total managed assets, total managed assets refer to total assets (including assets attributable to Total Effective Leverage that may be outstanding) minus accrued liabilities (other than liabilities representing Total Effective Leverage).

#### Investment Objective and Strategy Overview

» PIMCO Global StocksPLUS<sup>®</sup> & Income Fund s primary investment objective is to seek total return comprised of current income, current gains and long-term capital appreciation.

#### Fund Insights

- » Exposure to the S&P 500 Index and the MSCI EAFE Index through equity index derivatives was a primary detractor from absolute returns. During the reporting period, international equities (as represented by the MSCI EAFE Index) declined -6.01% and U.S. equities (as represented by the S&P 500 Index) were basically flat.
- » The fixed income portfolio that backs the equity index derivatives also detracted from returns, alongside weakness in corporate and emerging market credits.
- » Exposure to high yield corporate bonds had a major negative impact on performance. High yield spreads widened amid broad commodity weakness and retail fund outflows late in the reporting period. Corporate credits associated with energy and raw materials, as well as select names in manufacturing, media and telecommunications, were among the worst performers.
- » Exposure to local and hard currency-denominated Brazilian debt was another significant detractor from returns. During the reporting period, Brazil was negatively impacted by its slowing economy, high inflation and a political crisis.
- » A yield curve-steepening strategy implemented through U.S. dollar interest rate swaps detracted from performance as the swap curve flattened.
- » Exposure to residential non-agency mortgages added modestly to performance, as these securities benefited from an improving housing market and limited supply.
- » A defensive option strategy involving written at-the-money calls and purchased out-of-the-money puts on S&P 500 futures contracts had a positive impact on performance.

#### Investment Objective and Strategy Overview

» PIMCO Income Opportunity Fund s primary investment objective is to seek current income as a primary focus and also capital appreciation.

#### Fund Insights

- » For the period from July 1, 2015 through December 31, 2015, the Fund s allocation to high yield corporate bonds was the primary detractor from performance, as the asset class struggled amid broad commodity weakness and retail fund outflows late in the reporting period.
- » Within high yield, exposure to banking and brokerage, utilities, energy, telecommunications, media, raw materials and manufacturing credits detracted from results.
- » Exposure to local and hard currency-denominated Brazilian debt was a major detractor from returns. Brazil was negatively impacted by its slowing economy, high inflation and a political crisis.
- » The Fund s exposure to U.S. dollar-denominated Russian quasi-sovereign bonds contributed meaningfully to returns. Spreads on these issues continued to retrace much of the widening that occurred during the second half of 2014 as geopolitical tensions in the region eased and investor sentiment improved.
- » The Fund s exposure to U.S. interest rates was modestly positive for performance given the carry, the rate of interest earned by holding the respective securities, associated with such exposure. This positive impact, however, was partially offset by strategies designed to benefit from rising long-term interest rates, as long-term yields fell during the reporting period.
- » The Fund s allocation to securitized credit was a modest contributor to performance. Positive contributions from commercial mortgage-backed securities, structured credit and lower-beta non-agency residential mortgage-backed securities were partially offset by negative contributions from higher-beta non-agency residential mortgage-backed securities.

#### Investment Objective and Strategy Overview

» The primary investment objective of PIMCO Strategic Income Fund, Inc. is to generate a level of income that is higher than that generated by high quality, intermediate-term U.S. debt securities. The Fund also seeks capital appreciation to the extent consistent with this objective.

#### Fund Insights

- » For the period from July 1, 2015 through December 31, 2015, the Fund s allocation to securitized credit was a primary contributor to performance. In particular, the positive contribution from exposure to both agency and non-agency residential mortgage-backed securities boosted returns given an improving U.S. housing market.
- » The Fund s exposure to local and hard currency-denominated Brazilian debt was a major detractor from returns. Brazil was negatively impacted by its slowing economy, high inflation and a political crisis.
- » The Fund s exposure to U.S. interest rates was substantially negative for performance. In particular, strategies designed to benefit from rising long-term interest rates hurt performance as long-term yields fell during the reporting period.
- » The Fund s allocation to high yield corporate bonds modestly detracted from performance. The asset class struggled amid broad commodity weakness and retail fund outflows late in the reporting period.
- » The Fund s exposure to U.S. dollar-denominated Russian quasi-sovereign bonds contributed meaningfully to returns. Spreads on these issues continued to retrace much of the widening that occurred during the second half of 2014 as geopolitical tensions in the region eased and investor sentiment improved.
- » Within investment grade credit, exposure to banking/brokerage and utilities modestly contributed to returns, as balance sheet strengthening and improving profitability in the former and the defensive nature of the latter benefited the Fund.

+ Unaudited

\* Annualized

^ Reflects an amount rounding to less than one cent.

<sup>(a)</sup> Per share amounts based on average number of shares outstanding during the year or period.

(b) Determined in accordance with federal income tax regulations, see Note 2(c) in the Notes to Financial Statements for more information.
(c) Total investment return is calculated assuming a purchase of a share at the market price on the first day and a sale of a share at the market price on the last day of each year reported. Dividends and distributions, if any, are assumed, for purposes of this calculation, to be reinvested at prices obtained under the Funds dividend reinvestment plan. Total investment return does not reflect brokerage commissions in connection with the purchase or sale of Fund shares.

							-											

<sup>(d)</sup> Interest expense primarily relates to participation in borrowing and financing transactions. See Note 5 in the Notes to Financial Statements for more information.

<sup>(e)</sup>Fiscal year end changed from December 31st to June 30th.

<sup>(f)</sup> Fiscal year end changed from March 31st to June 30th.

<sup>(g)</sup>Fiscal year end changed from October 31st to June 30th.

<sup>(h)</sup>Fiscal year end changed from January 31st to June 30th.

<sup>(i)</sup> Total distributions for the period ended June 30, 2015 may be lower than prior fiscal years due to fiscal year end changes resulting in a reduction of the amount of days in the period ended June 30, 2015.

### NOTES TO SCHEDULE OF INVESTMENTS (AMOUNTS IN THOUSANDS\*):

\* A zero balance may reflect actual amounts rounding to less than one thousand.

^ Security is in default.

(a) Interest only security.

(b) Payment in-kind bond security.

(c) Zero coupon bond.

(d) Security is subject to a forbearance agreement entered into by the Fund which forbears the Fund from taking action to, among other things, accelerate and collect payments on the subject note with respect to specified events of default.

### (e) RESTRICTED SECURITIES:

Total Swap Ag	greements				\$	(1,676)	\$	15	\$	0	\$	(1,661)

(1) If the Fund is a seller of protection and a credit event occurs, as defined under the terms of that particular swap agreement, the Fund will either (i) pay to the buyer of protection an amount equal to the notional amount of the swap and take delivery of the referenced obligation or underlying securities comprising the referenced index or (ii) pay a net settlement amount in the form of cash or securities equal to the notional amount of the swap less the recovery value of the referenced obligation or underlying securities comprising the referenced index.

(2) The maximum potential amount the Fund could be required to pay as a seller of credit protection or receive as a buyer of credit protection if a credit event occurs as defined under the terms of that particular swap agreement.

(3) The prices and resulting values for credit default swap agreements on credit indices serve as an indicator of the current status of the payment/performance risk and represent the likelihood of an expected liability (or profit) for the credit derivative should the notional amount of the swap agreement be closed/sold as of the period end. Increasing market values, in absolute terms when compared to the notional amount of the swap, represent a deterioration of the referenced indices credit soundness and a greater likelihood or risk of default or other credit event occurring as defined under the terms of the agreement.

Schedule of Investments PCM Fund, Inc. (Cont.)

#### FINANCIAL DERIVATIVE INSTRUMENTS: OVER THE COUNTER SUMMARY

The following is a summary by counterparty of the market value of OTC financial derivative instruments and collateral pledged as of December 31, 2015:

(j) Securities with an aggregate market value of \$1,703 have been pledged as collateral for financial derivative instruments as governed by International Swaps and Derivatives Association, Inc. master agreements as of December 31, 2015.

	Financial Derivative	Assets	Financial I	Derivative Liab	oilities

NOTES TO SCHEDULE OF INVESTMENTS (AMOUNTS IN THOUSANDS\*, EXCEPT NUMBER OF CONTRACTS AND UNITS):

\* A zero balance may reflect actual amounts rounding to less than one thousand.
 ^ Security is in default.

(a) Interest only security.

(b) Payment in-kind bond security.

(c) Security did not produce income within the last twelve months.

(d) Coupon represents a weighted average yield to maturity.

(e) Zero coupon bond.

(f) Perpetual maturity; date shown, if applicable, represents next contractual call date.

(g) Security is subject to a forbearance agreement entered into by the Fund which forbears the Fund from taking action to, among other things, accelerate and collect payments on the subject note with respect to specified events of default.

<sup>(1)</sup> If the Fund is a buyer of protection and a credit event occurs, as defined under the terms of that particular swap agreement, the Fund will either (i) receive from the seller of protection an amount equal to the notional amount of the swap and deliver the referenced obligation or underlying securities comprising the referenced index or (ii) receive a net settlement amount in the form of cash or securities equal to the notional amount of the swap less the recovery value of the referenced obligation or underlying securities comprising the referenced index.

(2) If the Fund is a seller of protection and a credit event occurs, as defined under the terms of that particular swap agreement, the Fund will either (i) pay to the buyer of protection an amount equal to the notional amount of the swap and take delivery of the referenced obligation or underlying securities comprising the referenced index or (ii) pay a net settlement amount in the form of cash or securities equal to the notional amount of the swap less the recovery value of the referenced obligation or underlying securities comprising the referenced obligation or underlying securities comprising the referenced index.

<sup>(3)</sup> The maximum potential amount the Fund could be required to pay as a seller of credit protection or receive as a buyer of credit protection if a credit event occurs as defined under the terms of that particular swap agreement.

(4) The prices and resulting values for credit default swap agreements on asset-backed securities and credit indices serve as an indicator of the current status of the payment/performance risk and represent the likelihood of an expected liability (or profit) for the credit derivative should the notional amount of the swap agreement be closed/sold as of the period end. Increasing market values, in absolute terms when compared to the notional amount of the swap, represent a deterioration of the referenced indices credit soundness and a greater likelihood or risk of default or other credit event occurring as defined under the terms of the agreement.

#### NOTES TO SCHEDULE OF INVESTMENTS (AMOUNTS IN THOUSANDS\*):

\* A zero balance may reflect actual amounts rounding to less than one thousand.

^ Security is in default.

- (a) Interest only security.
- (b) Payment in-kind bond security.
- (c) Security did not produce income within the last twelve months.
- (d) Coupon represents a weighted average yield to maturity.

(e) Zero coupon bond.

- (f) Perpetual maturity; date shown, if applicable, represents next contractual call date.
- (g) Security is subject to a forbearance agreement entered into by the Fund which forbears the Fund from taking action to, among other things, accelerate and collect payments on the subject note with respect to specified events of default.

(h) RESTRICTED SECURITIES:

Net Exposure represents the net receivable/(payable) that would be due from/to the counterparty in the event of default. Exposure from borrowings and other financing transactions can only be netted across transactions governed under the same master agreement with the same legal entity. See Note 7, Principal Risks, in the Notes to Financial Statements for more information regarding master netting arrangements.

- (1) If the Fund is a seller of protection and a credit event occurs, as defined under the terms of that particular swap agreement, the Fund will either (i) pay to the buyer of protection an amount equal to the notional amount of the swap and take delivery of the referenced obligation or underlying securities comprising the referenced index or (ii) pay a net settlement amount in the form of cash or securities equal to the notional amount of the swap less the recovery value of the referenced obligation or underlying securities comprising the referenced index.
- (2) Implied credit spreads, represented in absolute terms, utilized in determining the market value of credit default swap agreements on corporate or sovereign issues as of period end serve as an indicator of the current status of the payment/performance risk and represent the likelihood or risk of default for the credit derivative. The implied credit spread of a particular referenced entity reflects the cost of buying/selling protection and may include upfront payments required to be made to enter into the agreement. Wider credit spreads represent a deterioration of the referenced entity s credit soundness and a greater likelihood or risk of default or other credit event occurring as defined under the terms of the agreement.
- (3) The maximum potential amount the Fund could be required to pay as a seller of credit protection or receive as a buyer of credit protection if a credit event occurs as defined under the terms of that particular swap agreement.
- (4) The prices and resulting values for credit default swap agreements on credit indices serve as an indicator of the current status of the payment/performance risk and represent the likelihood of an expected liability (or profit) for the credit derivative should the notional amount of the swap agreement be closed/sold as of the period end. Increasing market values, in absolute terms when compared to the notional amount of the swap, represent a deterioration of the referenced indices credit soundness and a greater likelihood or risk of default or other credit event occurring as defined under the terms of the agreement.

(5) Net Exposure represents the net receivable/(payable) that would be due from/to the counterparty in the event of default. Exposure from OTC financial derivative instruments can only be netted across transactions governed under the same master agreement with the same legal entity. See Note 7, Principal Risks, in the Notes to Financial Statements for more information regarding master netting arrangements.

## FAIR VALUE OF FINANCIAL DERIVATIVE INSTRUMENTS

The following is a summary of the fair valuation of the Fund s derivative instruments categorized by risk exposure. See Note 7, Principal Risks, in the Notes to Financial Statements on risks of the Fund.

Fair Values of Financial Derivative Instruments on the Statements of Assets and Liabilities as of December 31, 2015:

### NOTES TO SCHEDULE OF INVESTMENTS (AMOUNTS IN THOUSANDS\*, EXCEPT NUMBER OF CONTRACTS):

(**d**)

<sup>\*</sup> A zero balance may reflect actual amounts rounding to less than one thousand.

<sup>^</sup> Security is in default.

<sup>(</sup>a) Interest only security.

<sup>(</sup>b) Coupon represents a weighted average yield to maturity.

<sup>(</sup>c) Perpetual maturity; date shown, if applicable, represents next contractual call date.

Security is subject to a forbearance agreement entered into by the Fund which forbears the Fund from taking action to, among other things, accelerate and collect payments on the subject note with respect to specified events of default.

## (e) RESTRICTED SECURITIES:

(1) If the Fund is a seller of protection and a credit event occurs, as defined under the terms of that particular swap agreement, the Fund will either (i) pay to the buyer of protection an amount equal to the notional amount of the swap and take delivery of the referenced obligation or underlying securities comprising the referenced index or (ii) pay a net settlement amount in the form of cash or securities equal to the notional amount of the swap less the recovery value of the referenced obligation or underlying securities comprising the referenced index.

(2) Implied credit spreads, represented in absolute terms, utilized in determining the market value of credit default swap agreements on corporate or sovereign issues as of period end serve as an indicator of the current status of the payment/performance risk and represent the likelihood or risk of default for the credit derivative. The implied credit spread of a particular referenced entity reflects the cost of buying/selling protection and may include upfront payments required to be made to enter into the agreement. Wider credit spreads represent a deterioration of the referenced entity s credit soundness and a greater likelihood or risk of default or other credit event occurring as defined under the terms of the agreement.

<sup>(3)</sup> The maximum potential amount the Fund could be required to pay as a seller of credit protection or receive as a buyer of credit protection if a credit event occurs as defined under the terms of that particular swap agreement.

#### NOTES TO CONSOLIDATED SCHEDULE OF INVESTMENTS (AMOUNTS IN THOUSANDS\*):

\* A zero balance may reflect actual amounts rounding to less than one thousand.

^ Security is in default.

(a) Interest only security.

(b) Principal only security.

(c) Payment in-kind bond security.

(d) Security did not produce income within the last twelve months.

(e) Coupon represents a weighted average yield to maturity.

(f) Zero coupon bond.

(g) Perpetual maturity; date shown, if applicable, represents next contractual call date.

(h) Security is subject to a forbearance agreement entered into by the Fund which forbears the Fund from taking action to, among other things, accelerate and collect payments on the subject note with respect to specified events of default.

#### (i) RESTRICTED SECURITIES:

Issuer Description	Acquisition Date	Cost	Market Value	Market Value as Percentage of Net Assets

(4) Net Exposure represents the net receivable/(payable) that would be due from/to the counterparty in the event of default. Exposure from borrowings and other financing transactions can only be netted across transactions governed under the same master agreement with the same legal entity. The Fund and Subsidiary are recognized as two separate legal entities. As such, exposure cannot be netted. See Note 7, Principal Risks, in the Notes to Financial Statements for more information regarding master netting arrangements.

CDX.IG-25 5-Year Index	1.000	12/20/2020	7,000		41		9		1		0
				\$	3,884	\$	(2,711)	\$	176	\$	0

(1) If the Fund is a seller of protection and a credit event occurs, as defined under the terms of that particular swap agreement, the Fund will either (i) pay to the buyer of protection an amount equal to the notional amount of the swap and take delivery of the referenced obligation or underlying securities comprising the referenced index or (ii) pay a net settlement amount in the form of cash or securities equal to the notional amount of the swap less the recovery value of the referenced obligation or underlying securities comprising the referenced index.

(2) The maximum potential amount the Fund could be required to pay as a seller of credit protection or receive as a buyer of credit protection if a credit event occurs as defined under the terms of that particular swap agreement.

(3) The prices and resulting values for credit default swap agreements on credit indices serve as an indicator of the current status of the payment/performance risk and represent the likelihood of an expected liability (or profit) for the credit derivative should the notional amount of the swap agreement be closed/sold as of the period end. Increasing market values, in absolute terms when compared to the notional amount of the swap, represent a deterioration of the referenced indices credit soundness and a greater likelihood or risk of default or other credit event occurring as defined under the terms of the agreement.

#### CREDIT DEFAULT SWAPS ON CREDIT INDICES - SELL PROTECTION (1)

				Ν	otional				Sv	vap A	Agree	ment	s, at Value <sup>(4)</sup>
		Fixed	Maturity	Α	mount	Pr	emiums	Unrea	lized				
Counterparty	Index/Tranches	<b>Receive Rate</b>	Date		(3)	(R	eceived)	Apprec	ciation	As	set	L	iability
BRC	ABX.HE.AAA.6-2 Index	0.110%	05/25/2046	\$	11,822	\$	(2,551)	\$	284	\$	0	\$	(2,267)

(1) If the Fund is a seller of protection and a credit event occurs, as defined under the terms of that particular swap agreement, the Fund will either (i) pay to the buyer of protection an amount equal to the notional amount of the swap and take delivery of the referenced obligation or underlying securities comprising the referenced index or (ii) pay a net settlement amount in the form of cash or securities equal to the notional amount of the swap less the recovery value of the referenced obligation or underlying securities comprising the referenced index.

- (2) Implied credit spreads, represented in absolute terms, utilized in determining the market value of credit default swap agreements on corporate or sovereign issues as of period end serve as an indicator of the current status of the payment/performance risk and represent the likelihood or risk of default for the credit derivative. The implied credit spread of a particular referenced entity reflects the cost of buying/selling protection and may include upfront payments required to be made to enter into the agreement. Wider credit spreads represent a deterioration of the referenced entity s credit soundness and a greater likelihood or risk of default or other credit event occurring as defined under the terms of the agreement.
- (3) The maximum potential amount the Fund could be required to pay as a seller of credit protection or receive as a buyer of credit protection if a credit event occurs as defined under the terms of that particular swap agreement.
- (4) The prices and resulting values for credit default swap agreements on credit indices serve as an indicator of the current status of the payment/performance risk and represent the likelihood of an expected liability (or profit) for the credit derivative should the notional amount of the swap agreement be closed/sold as of the period end. Increasing market values, in absolute terms when compared to the notional amount of the swap, represent a deterioration of the referenced indices credit soundness and a greater likelihood or risk of default or other credit event occurring as defined under the terms of the agreement.

(5) Net Exposure represents the net receivable/(payable) that would be due from/to the counterparty in the event of default. Exposure from OTC derivatives can only be netted across transactions governed under the same master agreement with the same legal entity. The Fund and Subsidiary are recognized as two separate legal entities. As such, exposure cannot be netted. See Note 7, Principal Risks, in the Notes to Financial Statements for more information regarding master netting agreements.

#### FAIR VALUE OF FINANCIAL DERIVATIVE INSTRUMENTS

The following is a summary of the fair valuation of the Fund s derivative instruments categorized by risk exposure. See Note 7, Principal Risks, in the Notes to Financial Statements on risks of the Fund.

Fair Values of Financial Derivative Instruments on the Consolidated Statements of Assets and Liabilities as of December 31, 2015:
