Approximate date of proposed public offering: From time to time after the effective date of this Registration Statement.

If any securities being registered on this form will be offered on a delayed or continuous basis in reliance on Rule 415 under the Securities Act of 1933, as amended, other than securities offered in connection with a dividend reinvestment plan, check the following box.

It is proposed that this filing will become effective (check appropriate box)

When declared effective pursuant to section 8(c)

If appropriate, check the following box:

This [post-effective] amendment designates a new effective date for a previously foiled [post-effective amendment] [registration statement].

This form is filed to register additional securities for an offering pursuant to Rule 462(b) under the Securities Act and the Securities Act registration number of the earlier effective registration statement for the same offering is _____.

CALCULATION OF REGISTRATION FEE UNDER THE SECURITIES ACT OF 1933

Title of Securities Being Registered	Proposed Maximum Aggregate Offering Price (1)	Amount of Registration Fee (2)
Common Shares of Beneficial Interest (3)		
Preferred Shares of Beneficial Interest (3)		
Notes (3)		
Subscription Rights for Common Shares (3)		
Subscription Rights for Preferred Shares (3)		
Subscription Rights for Common Shares and Preferred Shares (3)		
Total	\$200,000,000	\$23,180.00

- (1) Estimated pursuant to Rule 457(o) solely for the purpose of determining the registration fee. The proposed maximum offering price per security will be determined, from time to time, by the Registrant in connection with the sale by the Registrant of the securities registered under this registration statement.
- (2) The Registrant claims a credit of \$23,180.00 for fees attributable to securities previously registered and unsold under the Registrant's registration statement on Form N-2 filed by the Registrant on December 28, 2012 (File No. 333-185735) pursuant to the offset provision of Rule 457(p).
- (3) There is being registered hereunder an indeterminate principal amount of common or preferred shares, notes, or subscription rights to purchase common shares, preferred shares or common and preferred shares as may be sold, from time to time. In no event will the aggregate offering price of all securities issued from time to time pursuant to this registration statement exceed \$200,000,000.

THE REGISTRANT HEREBY AMENDS THIS REGISTRATION STATEMENT ON SUCH DATE OR DATES AS MAY BE NECESSARY TO DELAY ITS EFFECTIVE DATE UNTIL THE REGISTRANT SHALL FILE A FURTHER AMENDMENT WHICH SPECIFICALLY STATES THAT THIS REGISTRATION STATEMENT SHALL THEREAFTER BECOME EFFECTIVE IN ACCORDANCE WITH SECTION 8(a) OF THE SECURITIES ACT OF 1933 OR UNTIL THE REGISTRATION STATEMENT SHALL BECOME EFFECTIVE ON SUCH DATE AS THE SECURITIES AND EXCHANGE COMMISSION, ACTING PURSUANT TO SAID SECTION 8(a), MAY DETERMINE.

Investment Objectives. GAMCO Natural Resources, Gold & Income Trust (the Fund) is a non-diversified, closed-end management investment company registered under the Investment Company Act of 1940, as amended (the 1940 Act). The Fund's primary investment objective is to provide a high level of current income from interest, dividends and option premiums. The Fund's secondary investment objective is to seek capital appreciation consistent with the Fund's strategy and its primary objective. Gabelli Funds, LLC (the Investment Adviser) serves as investment adviser to the Fund. Under normal market conditions, the Fund will attempt to achieve its objectives by investing at least 80% of its assets in securities of companies principally engaged in the natural resources and gold industries. The Fund will invest at least 25% of its assets in the securities of companies principally engaged in the exploration, production or distribution of natural resources, such as base metals, metals, paper, food, agriculture, forestry products, water, gas, oil, sustainable energy and other commodities as well as related transportation companies and equipment manufacturers. The Fund will invest at least 25% of its assets in the securities of companies principally engaged in the exploration, mining, fabrication, processing, distribution or trading of gold or the financing, managing, controlling or operating of companies engaged in gold-related activities. The Fund may invest in the securities of companies located anywhere in the world. As part of its investment strategy, the Fund intends to provide current income from short-term gains earned through an option strategy which will normally consist of writing (selling) call options on equity

securities in its portfolio (covered calls), but may, in amounts up to 15% of the Fund's assets, consist of writing uncovered call options on securities not held by the Fund and indices comprised of Natural Resources Companies or Gold Companies (each as defined in this prospectus (this Prospectus) or exchange-traded funds comprised of such issuers and writing put options on securities of Natural Resource Companies or Gold Companies. When the Fund sells a covered call option, it generates current income from short-term gains in the form of the premium paid by the buyer of the call option, but the Fund forgoes the opportunity to participate in any increase in the value of the underlying equity security above the exercise price of the option. See Investment Objectives and Policies. No assurances can be given that the Fund's investment objectives will be achieved.

The Fund was organized as a Delaware statutory trust on June 26, 2008, and commenced its investment operations on January 27, 2011. An investment in the Fund is not appropriate for all investors.

We may offer, from time to time, in one or more offerings, our common and/or fixed rate preferred shares, each with a par value \$0.001 per share (together, shares), our promissory notes (notes), and/or our subscription rights to purchase our common and/or fixed rate preferred shares, which we refer to collectively as the securities. Securities may be offered at prices and on terms to be set forth in one or more supplements to this Prospectus (each, a Prospectus Supplement). You should read this Prospectus and the applicable Prospectus Supplement carefully before you invest in our securities.

Our securities may be offered directly to one or more purchasers, through agents designated from time to time by us, or to or through underwriters or dealers. The Prospectus Supplement relating to the offering will identify any agents or underwriters involved in the sale of our securities, and will set forth any applicable purchase price, fee, commission or discount arrangement between us and our agents or underwriters, or among our underwriters, or the basis upon which such amount may be calculated. The Prospectus Supplement relating to any sale of preferred shares will set forth the liquidation preference and information about the dividend period, dividend rate, any call protection or non-call period and other matters. The Prospectus Supplement relating to any sale of notes will set forth the principal amount, interest rate, interest payment dates, prepayment protection (if any) and other matters. The Prospectus Supplement relating to any offering of subscription rights will set forth the number of common and/or preferred shares issuable upon the exercise of each right and the other terms of such rights offering. We may offer subscription rights for common shares, preferred shares or common and preferred shares. We may not sell any of our securities through agents, underwriters or dealers without delivery of a Prospectus Supplement describing the method and terms of the particular offering of our securities. Our common shares are listed on the New York Stock Exchange (the NYSE) under the symbol GNT. On March 28, 2017, the last reported sale price of our common shares was \$6.88. The net asset value of the Fund's common shares at the close of business on March 28, 2017, was \$7.20 per share.

Shares of closed-end funds often trade at a discount from net asset value. This creates a risk of loss for an investor purchasing shares in a public offering.

Investing in the Fund's securities involves risks. See Risk Factors and Special Considerations beginning on page 37 for factors that should be considered before investing in securities of the Fund.

Neither the Securities and Exchange Commission nor any state securities commission has approved or disapproved these securities or determined if this Prospectus is truthful or complete. Any representation to the contrary is a criminal offense.

This Prospectus may not be used to consummate sales of securities by us through agents, underwriters or dealers unless accompanied by a Prospectus Supplement.

Table of Contents

This Prospectus, together with an applicable Prospectus Supplement, sets forth concisely the information about the Fund that a prospective investor should know before investing. You should read this Prospectus, together with an applicable Prospectus Supplement, which contains important information about the Fund, before deciding whether to invest in the securities, and retain it for future reference. A Statement of Additional Information, dated _____, 2017, containing additional information about the Fund, has been filed with the Securities and Exchange Commission and is incorporated by reference in its entirety into this Prospectus. You may request a free copy of our annual and semiannual reports, request a free copy of the Statement of Additional Information, the table of contents of which is on page 85 of this Prospectus, request other information about us and make shareholder inquiries by calling (800) GABELLI (422-3554) or by writing to the Fund, or obtain a copy (and other information regarding the Fund) from the Securities and Exchange Commission's web site (<http://www.sec.gov>).

Our securities do not represent a deposit or obligation of, and are not guaranteed or endorsed by, any bank or other insured depository institution, and are not federally insured by the Federal Deposit Insurance Corporation, the Federal Reserve Board, or any other government agency.

You should rely only on the information contained or incorporated by reference in this Prospectus and any applicable Prospectus Supplement. The Fund has not authorized anyone to provide you with different information. The Fund is not making an offer to sell these securities in any state where the offer or sale is not permitted. You should not assume that the information contained in this Prospectus and any applicable Prospectus Supplement is accurate as of any date other than the date of this Prospectus or the date of the applicable Prospectus Supplement.

PROSPECTUS SUMMARY

This is only a summary. This summary may not contain all of the information that you should consider before investing in our securities. You should review the more detailed information contained in this prospectus (this Prospectus), including the section titled Risk Factors and Special Considerations beginning on page 37, the applicable Prospectus Supplement and the Statement of Additional Information, dated , 2017 (the SAI).

The Fund

GAMCO Natural Resources, Gold & Income Trust is a closed-end, non-diversified management investment company organized as a Delaware statutory trust on June 26, 2008. Throughout this Prospectus, we refer to GAMCO Natural Resources, Gold & Income Trust as the Fund or as we. See The Fund.

The Fund's outstanding common shares, par value \$0.001 per share, are listed on the New York Stock Exchange (the NYSE) under the symbol GNT. On March 28, 2017, the last reported sale price of our common shares was \$6.88. The net asset value of the Fund's common shares at the close of business on March 28, 2017 was \$7.20 per share. As of December 31, 2016, the Fund had outstanding 20,864,818 common shares.

The Offering

We may offer, from time to time, in one or more offerings, our common and/or fixed rate preferred shares, \$0.001 par value per share, our notes, or our subscription rights to purchase our common or fixed rate preferred shares or both, which we refer to collectively as the securities. The securities may be offered at prices and on terms to be set forth in one or more supplements to this Prospectus (each a Prospectus Supplement). The offering price per common share of the Fund will not be less than the net asset value per common share at the time we make the offering, exclusive of any underwriting commissions or discounts; however, transferable rights offerings that meet certain conditions may be offered at a price below the then current net asset value per common share of the Fund. You should read this Prospectus and the applicable Prospectus Supplement carefully before you invest in our securities. Our securities may be offered directly to one or more purchasers, through agents designated from time to time by us, or through underwriters or dealers. The Prospectus Supplement relating to the offering will identify any agents, underwriters or dealers involved in the sale of our securities, and will set forth any applicable purchase price, fee, commission or discount arrangement between us and our agents or underwriters, or among our underwriters, or the basis upon which such amount may be calculated. The Prospectus Supplement relating to any sale of preferred shares will set forth the liquidation preference and information about the dividend period, dividend rate, any call protection or non-call period and other matters. The Prospectus Supplement relating to any sale of notes will set forth the principal amount, interest rate, interest payment dates, prepayment protection (if any), and other matters. The Prospectus Supplement relating to any offering of subscription rights will set forth the number of common and/or preferred shares issuable upon the exercise of each right and the other terms of such rights offering.

While the aggregate number and amount of securities we may issue pursuant to this registration statement is limited to \$200,000,000 of securities, our Board of Trustees (the Board) may, without any action by the shareholders, amend our Agreement and Declaration of Trust from time to time to increase or decrease the aggregate number of shares or the number of shares of any class or series that we have authority to issue. We may not sell any of our securities through agents, underwriters or dealers without delivery of a Prospectus Supplement describing the method and

Edgar Filing: GAMCO Natural Resources, Gold & Income Trust - Form N-2
terms of the particular offering.

Table of Contents**Investment Objectives and Policies**

The Fund's primary investment objective is to provide a high level of current income from interest, dividends and option premiums. The Fund's secondary investment objective is to seek capital appreciation consistent with the Fund's strategy and its primary objective.

To meet the objective of providing a high level of current income, the Fund intends to invest in income producing securities such as equity securities, convertible securities and other securities and earn short-term gains from a strategy of writing covered call options on equity securities in its portfolio. The Fund will seek dividend income through investments in equity securities such as common stock or convertible preferred stock. The Fund will seek interest income through investments in convertible or corporate bonds.

Under normal market conditions, the Fund will attempt to achieve its objectives by investing at least 80% of its assets, which includes the amount of any borrowings for investment purposes, in securities of companies principally engaged in the natural resources and gold industries. The Fund will invest at least 25% of its assets in the securities of companies principally engaged in the exploration, production or distribution of natural resources, such as base metals, metals, paper, food, agriculture, forestry products, water, gas, oil, sustainable energy and other commodities as well as related transportation companies and equipment manufacturers (Natural Resources Companies). Related transportation companies and equipment manufacturers, such as agriculture transportation vehicles and farm equipment manufacturers, are vital components of the natural resource industry and are therefore included within the definition of Natural Resources Companies. The Fund will invest at least 25% of its assets in the securities of companies principally engaged in the exploration, mining, fabrication, processing, distribution or trading of gold or the financing, managing, controlling or operating of companies engaged in gold-related activities (Gold Companies). Companies principally engaged in the financing, managing, controlling or operating of companies engaged in gold-related activities include companies that own or receive royalties on the production of gold; such companies are vital components of the gold industry and are therefore included within the definition of Gold Companies.

The Fund may invest without limitation in the securities of domestic and foreign issuers. The Fund expects that its assets will usually be invested in several countries. To the extent that the natural resources and gold industries are concentrated in any given geographic region, such as Europe, North America or Asia, a relatively high proportion of the Fund's assets may be invested in that particular region.

Principally engaged, as used in this prospectus, means a company that derives at least 50% of its revenues or earnings from or devotes at least 50% of its assets to the indicated businesses. Equity securities may include common stocks, preferred stocks, convertible securities, warrants, depository receipts and equity interests in trusts and other entities. Other Fund investments may include investment companies, including exchange traded funds, securities of issuers subject to reorganization, derivative instruments, debt (including obligations of the U.S. government) and money market instruments. As part of its investment strategy, the Fund intends to provide current income from short-term gains earned through an option strategy which will normally consist of writing (selling) call options on equity securities in its portfolio (covered calls), but may, in amounts up to 15% of the Fund's assets, consist of writing uncovered call options on securities not held by the Fund and indices comprised of Natural Resources Companies or Gold Companies or exchange-traded funds comprised of such issuers and writing put options on securities of Natural Resource Companies or Gold Companies. When the Fund sells a call option, it generates current income from short-term gains in the form of the premium paid by the buyer of the call option, but the Fund forgoes the opportunity to participate in any increase in the value of the underlying

equity security above the exercise price of the option. When the Fund sells a put option, it generates current income from short-term gains in the form of the premium paid by the buyer of the put option, but the Fund will have the obligation to buy the underlying security at the exercise price if the price of the security decreases below the exercise price of the option. Any premiums received by the Fund from writing options may result in short-term capital gains.

Table of Contents

The Fund may invest up to 20% of its assets in convertible securities, i.e., securities (bonds, debentures, notes, stocks and other similar securities) that are convertible into common stock or other equity securities, and income securities, i.e., nonconvertible debt or equity securities having a history of regular payments or accrual of income to holders. Under normal market conditions, the Fund may invest up to 35% of its assets in fixed-income securities, not including short-term discounted Treasury Bills or certain short-term securities of U.S. government sponsored instrumentalities. The Fund may invest up to 25% of its assets in junk bonds such as convertible debt securities (which generally are rated lower than investment grade) and fixed-income securities that are rated lower than investment grade, or not rated but of similar quality as determined by the Investment Adviser.

No assurance can be given that the Fund will achieve its investment objectives. See Investment Objectives and Policies.

The Fund is intended for investors seeking long term growth of capital. It is not intended for those who wish to play short term swings in the stock market.

Gabelli Funds, LLC (the Investment Adviser) serves as investment adviser to the Fund. The Investment Adviser's investment philosophy with respect to selecting investments in the natural resources and gold industries is to emphasize quality, value and favorable prospects for growth, as determined by such factors as asset quality, balance sheet leverage, management ability, reserve life, cash flow, and commodity hedging exposure. In addition, in making stock selections, the Investment Adviser looks for securities that it believes may provide attractive yields as well as capital gains potential and that allow the Fund to generate current income from short-term gains from writing covered calls on such stocks.

No assurances can be given that the Fund's objectives will be achieved. The Fund's investment objectives and its policies of investing at least 25% of its assets in normal circumstances in Natural Resources Companies and in Gold Companies are fundamental policies that cannot be changed without the affirmative vote of a majority, as defined in the 1940 Act, of the outstanding voting securities (voting together as a single class) of the Fund (which for this purpose and under the 1940 Act means the lesser of (i) 67% of the shares represented at a meeting at which more than 50% of the outstanding shares are represented or (ii) more than 50% of the outstanding shares). If the Fund issues and has outstanding preferred shares, the affirmative vote of the holders of a majority, as defined in the 1940 Act, of the outstanding preferred shares of the Fund voting as a separate class (which for this purposes and under the 1940 Act means the lesser of (i) 67% of the preferred shares, as a single class, represented at a meeting at which more than 50% of the Fund's outstanding preferred shares are represented or (ii) more than 50% of the outstanding preferred shares) would also be required to change a fundamental policy. Unless specifically stated as such, no other policy of the Fund is fundamental and each policy may be changed by the Board without shareholder approval. The percentage and ratings limitations stated herein and in the SAI apply only at the time of investment and are not considered violated as a result of subsequent changes to the value, or downgrades to the ratings, of the Fund's portfolio investments.

Table of Contents**Preferred Shares**

The terms of any series of preferred shares may be fixed by the Board and may materially limit and/or qualify the rights of holders of the Fund's common shares. If the Fund's Board determines that it may be advantageous to the holders of the Fund's common shares for the Fund to utilize leverage, the Fund may issue series of fixed rate preferred shares (Fixed Rate Preferred Shares). Any Fixed Rate Preferred Shares issued by the Fund will pay distributions at a fixed rate. Leverage creates a greater risk of loss as well as a potential for more gains for the common shares than if leverage were not used. See Risk Factors and Special Considerations Special Risk Factors to Holders of Common Shares Leverage Risk. The Fund may also determine in the future to issue other forms of senior securities, such as securities representing debt, subject to the limitations of the 1940 Act. The Fund may also engage in investment management techniques which will not be considered senior securities if the Fund establishes a segregated account with cash or other liquid assets or sets aside assets on the accounting records equal to the Fund's obligations in respect of such techniques. The Fund may also borrow money, to the extent permitted by the 1940 Act.

Dividends and Distributions

Preferred Shares Distributions. In accordance with the Fund's Governing Documents (as defined below) and as required by the 1940 Act, all preferred shares of the Fund must have the same seniority with respect to distributions. Accordingly, no complete distribution due for a particular dividend period will be declared or paid on any series of preferred shares of the Fund for any dividend period, or part thereof, unless full cumulative dividends and distributions due through the most recent dividend payment dates for all series of outstanding preferred shares of the Fund are declared and paid. If full cumulative distributions due have not been declared and made on all outstanding preferred shares of the Fund, any distributions on such preferred shares will be made as nearly pro rata as possible in proportion to the respective amounts of distributions accumulated but unmade on each such series of preferred shares on the relevant dividend payment date. As used herein, Governing Documents means the Fund's Agreement and Declaration of Trust and By-Laws, together with any amendments or supplements thereto, including any Statement of Preferences establishing a series of preferred shares.

The Fund's annualized distributions on its preferred shares may contain a return of capital. Preferred shareholders who receive the payment of a distribution consisting of a return of capital may be under the impression that they are receiving net profits when they are not. Shareholders should not assume that the source of a distribution from the Fund is net profit. In addition, the amount treated as a tax-free return of capital will reduce a shareholder's adjusted tax basis in its shares, thereby increasing the shareholder's potential taxable gain or reducing the potential taxable loss on the sale of the shares.

Distributions on Fixed Rate Preferred Shares, at the applicable annual rate of the per share liquidation preference, are cumulative from the original issue date and are payable, when, as and if declared by the Board, out of funds legally available therefor.

The Fund had no outstanding preferred shares during the fiscal year ended December 31, 2016.

Common Shares Distributions. The Fund makes regular monthly cash distributions of all or a portion of its investment company taxable income (which includes ordinary income and short term capital gains) to its common shareholders. The Fund also makes annual distributions of its net capital gain (which is the excess of net long-term capital gains over net short-term capital losses). Various factors will affect the level of the Fund's investment company taxable income, such as its asset mix, and use of covered call strategies. To permit the Fund to maintain more stable monthly distributions, the Fund may from time to time distribute less than the entire amount of income earned in a particular period, which would be available to supplement future

distributions. As a result, the distributions paid by the Fund for any particular monthly period may be more or less than the amount of income actually earned by the Fund during that period.

Table of Contents

The Fund's distribution policy, including its policy to make regular monthly cash distributions, may be modified from time to time by the Board as it deems appropriate, including in light of market and economic conditions and the Fund's current, expected and historical earnings and investment performance. Common shareholders are expected to be notified of any such modifications by press release or in the Fund's periodic shareholder reports. Because the Fund's income will fluctuate and the Fund's distribution policy may be changed by the Board at any time, there can be no assurance that the Fund will pay distributions or dividends at a particular rate.

In the event that for any taxable year the total distributions on the Fund's shares exceed the Fund's current and accumulated earnings and profits, the excess distributions will generally be treated as a tax-free return of capital to the extent of the shareholder's tax basis in the shares (reducing the basis accordingly) and as capital gains thereafter. In determining the extent to which a distribution will be treated as being made from the Fund's earnings and profits, earnings and profits will be allocated on a pro rata basis first to distributions with respect to preferred shares, and then to the Fund's common shares. ***Distributions sourced from paid-in capital should not be considered as dividend yield or the total return from an investment in the Fund. Preferred or common shareholders who periodically receive the payment of a dividend or other distribution which may consist of a return of capital may be under the impression that they are receiving net profits when they are not. Shareholders should not assume that the source of a distribution from the Fund is net profit.*** In addition, the amount treated as a tax-free return of capital will reduce a shareholder's adjusted tax basis in its shares, thereby increasing the shareholder's potential taxable gain or reducing the potential taxable loss on the sale of the shares.

During the fiscal year ended December 31, 2016, the Fund paid an aggregate of \$17,502,676 in distributions to its common shareholders.

Indebtedness

Under applicable state law and our Agreement and Declaration of Trust, we may borrow money without prior approval of holders of common and preferred shares. We may issue debt securities, including notes, or other evidence of indebtedness and may secure any such notes or borrowings by mortgaging, pledging or otherwise subjecting as security our assets to the extent permitted by the 1940 Act or rating agency guidelines. Any borrowings, including without limitation any notes, will rank senior to the preferred shares and the common shares. The Prospectus Supplement will describe the interest payment provisions relating to notes. Interest on notes will be payable when due as described in the related Prospectus Supplement. If we do not pay interest when due, it will trigger an event of default and we will be restricted from declaring dividends and making other distributions with respect to our common shares and preferred shares.

Use of Proceeds

The Fund will use the net proceeds from the offering to purchase portfolio securities in accordance with its Investment Objectives and Policies. The Investment Adviser anticipates that the investment of the proceeds will be made as appropriate investment opportunities are identified, which is expected to substantially be completed within three months; however, changes in market conditions could result in the Fund's anticipated investment period extending to as long as six months. Depending on market conditions and operations, a portion of the proceeds may be used to pay distributions. See "Use of Proceeds."

Table of Contents**Exchange Listing**

The Fund's outstanding common shares have been listed and traded on the NYSE under the trading or ticker symbol GNT since January 27, 2011. See Description of the Securities. The Fund's common shares have historically traded at a discount to the Fund's net asset value. Since the Fund commenced trading on the NYSE, the Fund's common shares have traded at a discount to net asset value as high as 18.29% and as low as 0%. Any series of Fixed Rate Preferred Shares or subscription rights issued by the Fund would also likely be listed on the NYSE.

Risk Factors and Special Considerations

Risk is inherent in all investing. Therefore, before investing in the Fund's securities, you should consider the risks carefully.

Total Return Risk. The Fund utilizes several investment management techniques in an effort to generate positive total return. The risks of these techniques, such as option writing, concentration in certain industries, and investing in emerging markets, are described in the following paragraphs. Taken together these and other techniques represent a risk that the Fund will experience a negative total return even in market environments that are generally positive and that the Fund's returns, both positive and negative, may be more volatile than if the Fund did not utilize these investment techniques. See Risk Factors and Special Considerations General Risks Total Return Risk.

Industry Risks. The Fund's investments will be concentrated in the natural resources industries and gold industries. Because the Fund is concentrated in these industries, it may present more risks than if it were broadly diversified over numerous industries and sectors of the economy. A downturn in the natural resources or gold industries would have a larger impact on the Fund than on an investment company that does not concentrate in such industries.

Under normal market conditions the Fund will invest at least 25% of its assets in securities of Natural Resources Companies. A downturn in the indicated natural resources industries would have a larger impact on the Fund than on an investment company that does not invest significantly in such industries. Such industries can be significantly affected by the supply of and demand for the indicated commodities and related services, exploration and production spending, government regulations, world events and economic conditions. The base metals, metals, paper, food and agriculture, forestry products, water, gas, oil, sustainable energy and other commodities industries can be significantly affected by events relating to international political developments, the success of exploration projects, commodity prices, and tax and government regulations. The stock prices of Natural Resources Companies may also experience greater price volatility than other types of common stocks. Securities issued by Natural Resources Companies are sensitive to changes in the prices of, and in supply and demand for, the indicated commodities. The value of securities issued by Natural Resources Companies may be affected by changes in overall market movements, changes in interest rates, or factors affecting a particular industry or commodity, such as weather, embargoes, tariffs, policies of commodity cartels and international economic, political and regulatory developments. The Investment Adviser's judgments about trends in the prices of these securities and commodities may prove to be incorrect. It is possible that the performance of securities of Natural Resources Companies may lag the performance of other industries or the broader market as a whole.

Under normal market conditions the Fund will invest at least 25% of its assets in securities of Gold Companies. Securities of Gold Companies may experience greater volatility than companies

not involved in the gold industries. Investments related to gold are considered speculative and are affected by a variety of worldwide economic, financial and political factors. The price of gold may fluctuate sharply, including substantial decreases, over short periods of time due to changes in inflation or expectations regarding inflation in various

Table of Contents

countries, the availability of supplies of gold, changes in industrial and commercial demand, gold sales by governments, central banks or international agencies, investment speculation, monetary and other economic policies of various governments and government restrictions on private ownership of gold. The Investment Adviser's judgments about trends in the prices of securities of Gold Companies may prove to be incorrect. It is possible that the performance of securities of Gold Companies may lag the performance of other industries or the broader market as a whole. See Risk Factors and Special Considerations General Risks Industry Risks.

Supply and Demand Risk. A decrease in the production of or exploration of, gold, base metals, metals, paper, food and agriculture, forestry products, gas, oil and other commodities or a decrease in the volume of such commodities available for transportation, mining, processing, storage or distribution may adversely impact the financial performance of the Fund's investments. Production declines and volume decreases could be caused by various factors, including catastrophic events affecting production, depletion of resources, labor difficulties, environmental proceedings, increased regulations, equipment failures and unexpected maintenance problems, import supply disruption, increased competition from alternative energy sources or commodity prices. Sustained declines in demand for the indicated commodities could also adversely affect the financial performance of Natural Resources Companies and Gold Companies over the long-term. Factors which could lead to a decline in demand include economic recession or other adverse economic conditions, higher fuel taxes or governmental regulations, increases in fuel economy, consumer shifts to the use of alternative fuel sources, changes in commodity prices, or weather. See Risk Factors and Special Considerations General Risks Industry Risks Supply and Demand Risk.

Depletion and Exploration Risk. Many Natural Resources Companies and Gold Companies are either engaged in the production or exploration of particular commodities or are engaged in transporting, storing, distributing and processing such commodities. To maintain or increase their revenue level, these companies or their customers need to maintain or expand their reserves through exploration of new sources of supply, the development of existing sources, acquisitions, or long-term contracts to acquire reserves. The financial performance of Natural Resources Companies and Gold Companies may be adversely affected if they, or the companies to whom they provide products or services, are unable to cost effectively acquire additional products or reserves sufficient to replace the natural decline. See Risk Factors and Special Considerations General Risks Industry Risks Depletion and Exploration Risk.

Regulatory Risk. Natural Resources Companies and Gold Companies may be subject to extensive government regulation in virtually every aspect of their operations, including how facilities are constructed, maintained and operated, environmental and safety controls, and in some cases the prices they may charge for the products and services they provide. Various governmental authorities have the power to enforce compliance with these regulations and the permits issued under them, and violators are subject to administrative, civil and criminal penalties, including civil fines, injunctions or both. Stricter laws, regulations or enforcement policies could be enacted in the future, which would likely increase compliance costs and may adversely affect the financial performance of Natural Resources Companies and Gold Companies. See Risk Factors and Special Considerations General Risks Industry Risks Regulatory Risk.

Table of Contents

Commodity Pricing Risk. The operations and financial performance of Natural Resources Companies and Gold Companies may be directly affected by the prices of the indicated commodities, especially those Natural Resources Companies and Gold Companies for whom the commodities they own are significant assets. Commodity prices fluctuate for several reasons, including changes in market and economic conditions, levels of domestic production, impact of governmental regulation and taxation, the availability of transportation systems and, in the case of oil and gas companies in particular, conservation measures and the impact of weather. Volatility of commodity prices, which may lead to a reduction in production or supply, may also negatively affect the performance of Natural Resources Companies and Gold Companies which are solely involved in the transportation, processing, storing, distribution or marketing of commodities. Volatility of commodity prices may also make it more difficult for Natural Resources Companies and Gold Companies to raise capital to the extent the market perceives that their performance may be directly or indirectly tied to commodity prices. See Risk Factors and Special Considerations General Risks Industry Risks Commodity Pricing Risk.

Catastrophe Risk. The operations of Natural Resources Companies and Gold Companies are subject to many hazards inherent in the development of energy infrastructure and the acquisition, exploration, production, mining, processing (including fractionating), refining, transportation (including trans-loading), storage, servicing or marketing of natural resources, including, but not limited to, crude oil, refined products, petrochemicals, natural gas, natural gas liquids, coal, metals and renewable energy sources, including damage to production equipment, pipelines, storage tanks or related equipment and surrounding properties caused by hurricanes, tornadoes, floods, fires and other natural disasters or by acts of terrorism; inadvertent damage from construction or other equipment; leaks of natural gas, natural gas liquids, crude oil, refined petroleum products or other hydrocarbons; and fires and explosions. These risks could result in substantial losses due to personal injury or loss of life, severe damage to and destruction of property and equipment and pollution or other environmental damage, and might result in the curtailment or suspension of their related operations. Not all Natural Resources Companies or Gold Companies are fully insured against all risks inherent to their businesses. If a significant accident or event occurs that is not fully insured, it could adversely affect a Natural Resources Company's or Gold Company's operations and financial condition. See Risk Factors and Special Considerations General Risks Industry Risks Catastrophe Risk.

Interest Rate Risk for Natural Resources Companies and Gold Companies. The prices of the equity and debt securities of the Natural Resources Companies and Gold Companies that the Fund holds in its portfolio are susceptible in the short term to decline when interest rates rise. Rising interest rates could limit the capital appreciation of securities of certain investments as a result of the increased availability of alternative investments with yields comparable to those investments. Rising interest rates could adversely affect the financial performance of Natural Resources Companies and Gold Companies generally by increasing their cost of capital. This may reduce their ability to execute acquisitions or expansion projects in a cost-effective manner. The risk of rising interest rates may be more pronounced because certain rates are near historical lows. See Risk Factors and Special Considerations General Risks Industry Risks Interest Rate Risk for Natural Resources Companies and Gold Companies.

Risks Associated with Covered Calls and Other Option Transactions. There are several risks associated with transactions in options on securities. For example, there are significant differences between the securities and options markets that could result in an imperfect correlation between these markets, causing a given covered call option transaction not to achieve its objectives. A

decision as to whether, when and how to use covered calls (or other

Table of Contents

options) involves the exercise of skill and judgment, and even a well-conceived transaction may be unsuccessful because of market behavior or unexpected events. The use of options may require the Fund to sell portfolio securities at inopportune times or for prices other than current market values, may limit the amount of appreciation the Fund can realize on an investment, or may cause the Fund to hold a security it might otherwise sell. As the writer of a covered call option, the Fund forgoes, during the option's life, the opportunity to profit from increases in the market value of the security covering the call option above the exercise price of the call option, but has retained the risk of loss should the price of the underlying security decline. Although such loss would be offset in part by the option premium received, in a situation in which the price of a particular stock on which the Fund has written a covered call option declines rapidly and materially or in which prices in general on all or a substantial portion of the stocks on which the Fund has written covered call options decline rapidly and materially, the Fund could sustain material depreciation or loss in its net assets to the extent it does not sell the underlying securities (which may require it to terminate, offset or otherwise cover its option position as well).

There can be no assurance that a liquid market will exist when the Fund seeks to close out an option position. If the Fund were unable to close out a covered call option that it had written on a security, it would not be able to sell the underlying security unless the option expired without exercise. Reasons for the absence of a liquid secondary market for exchange-traded options include the following: (i) there may be insufficient trading interest; (ii) restrictions may be imposed by an exchange on opening transactions or closing transactions or both; (iii) trading halts, suspensions or other restrictions may be imposed with respect to particular classes or series of options; (iv) unusual or unforeseen circumstances may interrupt normal operations on an exchange; (v) the trading facilities may not be adequate to handle current trading volume; or (vi) the relevant exchange could discontinue the trading of options. In addition, the Fund's ability to terminate over-the-counter (OTC) options may be more limited than with exchange-traded options and may involve the risk that counterparties participating in such transactions will not fulfill their obligations. See Risk Factors and Special Considerations General Risks Risks Associated with Covered Calls and Other Options Transactions.

Limitation on Covered Call Writing Risk. The number of covered call options the Fund can write is limited by the number of shares of the corresponding common stock the Fund holds. Furthermore, the Fund's covered call options and other options transactions will be subject to limitations established by each of the exchanges, boards of trade or other trading facilities on which such options are traded. As a result, the number of covered call options that the Fund may write or purchase may be affected by options written or purchased by it and other investment advisory clients of the Investment Adviser. See Risk Factors and Special Considerations General Risks Risks Associated with Covered Calls and Other Option Transactions Limitation on Covered Call Writing Risk.

Risks Associated with Uncovered Calls. There are special risks associated with uncovered option writing which expose the Fund to potentially significant loss. As the writer of an uncovered call option, the Fund has no risk of loss should the price of the underlying security decline, but bears unlimited risk of loss should the price of the underlying security increase above the exercise price until the Fund covers its exposure. As with writing uncovered calls, the risk of writing uncovered put options is substantial. The writer of an uncovered put option bears a risk of loss if the value of the underlying instrument declines below the exercise price. Such loss could be substantial if there is a significant decline in the value of the underlying instrument. See Risk Factors and Special Considerations General Risks Risks Associated with Uncovered Calls.

Table of Contents

Equity Risk. Investing in the Fund involves equity risk, which is the risk that the securities held by the Fund will fall in market value due to adverse market and economic conditions, perceptions regarding the industries in which the issuers of securities held by the Fund participate and the particular circumstances and performance of particular companies whose securities the Fund holds. An investment in the Fund represents an indirect economic stake in the securities owned by the Fund, which are for the most part traded on securities exchanges or in the OTC markets. The market value of these securities, like other market investments, may move up or down, sometimes rapidly and unpredictably. The net asset value of the Fund may at any point in time be worth less than the amount at the time the shareholder invested in the Fund, even after taking into account any reinvestment of distributions. See Risk Factors and Special Considerations General Risks Equity Risk.

Common Stock Risk. Common stock of an issuer in the Fund's portfolio may decline in price for a variety of reasons, including if the issuer fails to make anticipated dividend payments because, among other reasons, the issuer of the security experiences a decline in its financial condition. Common stock in which the Fund will invest is structurally subordinated as to income and residual value to preferred stock, bonds and other debt instruments in a company's capital structure, in terms of priority to corporate income, and therefore will be subject to greater dividend risk than preferred stock or debt instruments of such issuers. In addition, while common stock has historically generated higher average returns than fixed income securities, common stock has also experienced significantly more volatility in those returns. See Risk Factors and Special Considerations General Risks Common Stock Risk.

Distribution Risk for Equity Income Portfolio Securities. The Fund intends to invest in the shares of issuers that pay dividends or other distributions. Such dividends or other distributions are not guaranteed and an issuer may forgo paying dividends or other distributions at any time and for any reason. See Risk Factors and Special Considerations General Risks Distribution Risk for Equity Income Portfolio Securities.

Commodities-Linked Equity Derivative Instrument Risk. The Fund may invest in structured notes that are linked to one or more underlying commodities. Such structured notes provide exposure to the investment returns of physical commodities without actually investing directly in physical commodities. Such structured notes in which the Fund may invest are hybrid instruments that have substantial risks, including risk of loss of all or a significant portion of their principal value. Because the payments on these notes are linked to the price change of the underlying commodities, these investments are subject to market risks that relate to the movement of prices in the commodities markets. They may also be subject to additional special risks that do not affect traditional equity and debt securities that may be greater than or in addition to the risks of derivatives in general, including risk of loss of interest, risk of loss of principal, lack of liquidity and risk of greater volatility. See Risk Factors and Special Considerations General Risks Commodities-Linked Equity Derivative Instrument Risk.

Interest Rate Risk. During periods of declining interest rates, the issuer of a preferred stock or fixed income security may be able to exercise an option to prepay principal earlier than scheduled, forcing the Fund to reinvest in lower yielding securities. This is known as call or prepayment risk. During periods of rising interest rates, the average life of certain types of securities may be extended because of slower than expected principal payments. This may prolong the length of time the security pays a below market interest rate, increase the security's duration and reduce the value of the security. This is known as extension risk. See Risk Factors and Special Considerations General Risks Interest Rate Risk.

Table of Contents

Foreign Securities Risk. Investing in securities of foreign companies (or foreign governments), which are generally denominated in foreign currencies, may involve certain risks and opportunities not typically associated with investing in domestic companies. Foreign companies generally are not subject to the same accounting, auditing and financial standards and requirements as those applicable to U.S. companies.

Investing in securities of companies in emerging markets may entail special risks relating to potential political and economic instability and the risks of expropriation, nationalization, confiscation or the imposition of restrictions on foreign investment, the lack of hedging instruments and restrictions on repatriation of capital invested. Emerging securities markets are substantially smaller, less developed, less liquid and more volatile than the major securities markets. The limited size of emerging securities markets and limited trading volume compared to the volume of trading in U.S. securities could cause prices to be erratic for reasons apart from factors that affect the quality of the securities. For example, limited market size may cause prices to be unduly influenced by traders who control large positions. Adverse publicity and investors' perceptions, whether or not based on fundamental analysis, may decrease the value and liquidity of portfolio securities, especially in these markets. Many emerging market countries have experienced substantial, and in some periods extremely high, rates of inflation for many years. Inflation and rapid fluctuations in inflation rates and corresponding currency devaluations have had and may continue to have negative effects on the economies and securities markets of certain emerging market countries.

The Fund may invest in companies whose securities are denominated or quoted in currencies other than U.S. dollars or have significant operations or markets outside of the United States. In such instances, the Fund will be exposed to currency risk, including the risk of fluctuations in the exchange rate between U.S. dollars (in which the Fund's shares are denominated) and such foreign currencies, the risk of currency devaluations and the risks of non-exchangeability and blockage. As non-U.S. securities may be purchased with and payable in currencies of countries other than the U.S. dollar, the value of these assets measured in U.S. dollars may be affected favorably or unfavorably by changes in currency rates and exchange control regulations. Fluctuations in currency rates may adversely affect the ability of the Investment Adviser to acquire such securities at advantageous prices and may also adversely affect the performance of such assets.

For more details on certain pronounced risks with foreign investing, see Risk Factors and Special Considerations General Risks Foreign Securities Risk.

Income Risk. The income shareholders receive from the Fund is expected to be based primarily on income from short-term gains that the Fund earns from its investment strategy of writing covered calls and dividends and other distributions received from its investments. If the Fund's covered call strategy fails to generate sufficient income from short-term gains or the distribution rates or yields of the Fund's holdings decrease, shareholders' income from the Fund could decline. See Risk Factors and Special Considerations General Risks Income Risk.

Table of Contents

Non-Investment Grade Securities. The Fund may invest in fixed income securities rated below investment grade by recognized statistical rating agencies or unrated securities of comparable quality. The prices of these lower grade securities are more sensitive to negative developments, such as a decline in the issuer's revenues or a general economic downturn, than are the prices of higher grade securities. Securities of below investment grade quality—those securities rated below Baa by Moody's Investors Service, Inc. (Moody's) or below BBB by Standard & Poor's Rating Services (S&P)—are predominantly speculative with respect to the issuer's capacity to pay interest and repay principal when due and therefore involve a greater risk of default and are commonly referred to as junk bonds. See Risk Factors and Special Considerations General Risks Non-Investment Grade Securities.

Interest Rate Risk for Fixed Income Securities. The primary risk associated with fixed income securities is interest rate risk. A decrease in interest rates will generally result in an increase in the value of a fixed income security, while increases in interest rates will generally result in a decline in its value. This effect is generally more pronounced for fixed rate securities than for securities whose income rate is periodically reset. Market interest rates are currently significantly below historical average rates, which may increase the risk that these rates will rise in the future. Further, while longer term fixed rate securities may pay higher interest rates than shorter term securities, longer term fixed rate securities, like fixed rate securities, also tend to be more sensitive to interest rate changes and, accordingly, tend to experience larger changes in value as a result of interest rate changes. An increase in market interest rates will also generally result in a decrease in the price of any of the Fund's outstanding preferred shares.

U.S. Government Securities and Credit Rating Downgrade Risk. The Fund may invest in direct obligations of the government of the United States or its agencies. Obligations issued or guaranteed by the U.S. government, its agencies, authorities and instrumentalities and backed by the full faith and credit of the U.S. guarantee only that principal and interest will be timely paid to holders of the securities. These entities do not guarantee that the value such obligations will increase, and, in fact, the market values of such obligations may fluctuate. In addition, not all U.S. government securities are backed by the full faith and credit of the United States; some are the obligation solely of the entity through which they are issued. There is no guarantee that the U.S. government would provide financial support to its agencies and instrumentalities if not required to do so by law.

The events surrounding negotiations regarding the U.S. federal government debt ceiling and deficit reduction could adversely affect the Fund's ability to achieve its investment objectives. In 2011, S&P lowered its long term sovereign credit rating on the U.S. to AA+ from AAA. The downgrade by S&P increased volatility in both stock and bond markets, resulting in higher interest rates and higher Treasury yields, and increased the costs of all kinds of debt. Repeat occurrences of similar events could have significant adverse effects on the U.S. economy generally and could result in significant adverse impacts on issuers of securities held by the Fund itself. The Investment Adviser cannot predict the effects of similar events in the future on the U.S. economy and securities markets or on the Fund's portfolio. The Investment Adviser monitors developments and seeks to manage the Fund's portfolio in a manner consistent with achieving the Fund's investment objectives, but there can be no assurance that it will be successful in doing so and the Investment Adviser may not timely anticipate or manage existing, new or additional risks, contingencies or developments. See Risk Factors and Special Considerations General Risks U.S. Government Securities and Credit Rating Downgrade Risk.

Table of Contents

Derivative Transactions. The Fund may participate in certain derivative transactions. Such transactions entail certain execution, market, liquidity, counterparty, correlation, volatility, hedging and tax risks. Participation in the options or futures markets and in currency exchange transactions involves investment risks and transaction costs to which the Fund would not be subject absent the use of these strategies. If the Investment Adviser's prediction of movements in the direction of the securities, foreign currency or interest rate markets is inaccurate, the consequences to the Fund may leave the Fund in a worse position than if it had not used such strategies. See Risk Factors and Special Considerations General Risks Special Risks Related to Investment in Derivatives.

Leverage Risk. The Fund may use financial leverage for investment purposes by issuing preferred shares and/or notes. As provided in the 1940 Act and subject to certain exceptions, the Fund may issue senior securities (which may be stock, such as preferred shares, and/or securities representing debt) only if immediately after such issuance the value of the Fund's total assets, less certain ordinary course liabilities, exceeds 300% of the amount of the debt outstanding and exceeds 200% of the amount of preferred shares and debt outstanding.

If the Fund does use leverage, the Fund's capital structure would create special risks not associated with unleveraged funds having a similar investment objectives and policies. These include the possibility of greater loss and the likelihood of higher volatility of the net asset value of the Fund and the asset coverage for the preferred shares. Such volatility may increase the likelihood of the Fund having to sell investments in order to meet its obligations to make distributions on the preferred shares or principal or interest payments on debt securities, or to redeem preferred shares or repay debt, when it may be disadvantageous to do so. The use of leverage magnifies both the favorable and unfavorable effects of price movements in the investments made by the Fund. To the extent that the Fund determines to employ leverage in its investment operations, the Fund will be subject to substantial risk of loss. The Fund cannot assure you that borrowings or the issuance of preferred shares will result in a higher yield or return to the holders of the common shares. Also, if the Fund utilizes leverage, a decline in net asset value could affect the ability of the Fund to make common share distributions and such a failure to make distributions could result in the Fund ceasing to qualify as a regulated investment company (a RIC) under the Internal Revenue Code of 1986, as amended (the Code).

The issuance of preferred shares or notes causes the net asset value and market value of the common shares to become more volatile. If the interest rate on the notes or the dividend rate on the preferred shares approaches the net rate of return on the Fund's investment portfolio, the benefit of leverage to the holders of the common shares would be reduced. If the interest rates on the notes or the dividend rate on the preferred shares plus the management fee annual rate of 1.00% exceeds the net rate of return on the Fund's portfolio, the leverage will result in a lower rate of return to the holders of common shares than if the Fund had not issued preferred shares or notes.

Any decline in the net asset value of the Fund's investments would be borne entirely by the holders of common shares. Therefore, if the market value of the Fund's portfolio declines, the leverage will

result in a greater decrease in net asset value to the holders of common shares than if the Fund were not leveraged. This greater net asset value decrease will also tend to cause a greater decline in the market price for the common shares. The Fund might be in danger of failing to maintain the required asset coverage of the notes or preferred shares or of losing its ratings on the preferred shares or notes or, in an extreme case, the Fund's current investment income might not be sufficient to meet the distribution requirements on the preferred shares or notes. In order to counteract such an event, the Fund might need to liquidate investments in order to fund redemption of some or all of the preferred shares or notes.

Table of Contents

In addition, the Fund would pay (and the holders of common shares will bear) all costs and expenses relating to the issuance and ongoing maintenance of the preferred shares or notes, including any additional advisory fees on the incremental assets attributable to such preferred shares or notes. Holders of preferred shares and notes may have different interests than holders of common shares and at times may have disproportionate influence over the Fund's affairs. As provided in the 1940 Act and subject to certain exceptions, the Fund may issue senior securities (which may be stock, such as preferred shares, and/or securities representing debt, such as notes) only if immediately after such issuance the value of the Fund's total assets, less certain ordinary course liabilities, exceeds 300% of the amount of the debt outstanding and exceeds 200% of the amount of preferred shares and debt outstanding, which is referred to as the asset coverage required by the 1940 Act. In the event the Fund fails to maintain an asset coverage of 100% for any notes outstanding for certain periods of time, the 1940 Act requires that either an event of default be declared or that the holders of such notes have the right to elect a majority of the Fund's Trustees until asset coverage recovers to 110%. In addition, holders of preferred shares, voting separately as a single class, have the right to elect two members of the Board at all times and in the event dividends become in arrears for two full years would have the right (subject to the rights of noteholders) to elect a majority of the Trustees until the arrearage is completely eliminated. In addition, preferred shareholders have class voting rights on certain matters, including changes in fundamental investment restrictions and conversion of the Fund to open-end status, and accordingly can veto any such changes. Further, interest on notes will be payable when due as described in a Prospectus Supplement and if the Fund does not pay interest when due, it will trigger an event of default and the Fund expects to be restricted from declaring dividends and making other distributions with respect to common shares and preferred shares. Upon the occurrence and continuance of an event of default, the holders of a majority in principal amount of a series of outstanding notes or the trustee will be able to declare the principal amount of that series of notes immediately due and payable upon written notice to the Fund. The 1940 Act also generally restricts the Fund from declaring distributions on, or repurchasing, common or preferred shares unless notes have an asset coverage of 300% (200% in case of declaring distributions on preferred shares). The Fund's common shares are structurally subordinated as to income and residual value to any preferred shares or notes in the Fund's capital structure, in terms of priority to income and payment in liquidation. See Risk Factors and Special Considerations Special Risks to Holders of Common Shares Leverage Risk and Description of the Securities Preferred Shares Asset Maintenance Requirements and Description of the Securities Notes Limitations.

Market Discount Risk. The Fund is a non-diversified, closed-end management investment company. Whether investors will realize gains or losses upon the sale of additional securities of the Fund will depend upon the market price of the securities at the time of sale, which may be less or more than the Fund's net asset value per share or the liquidation value of any Fund preferred shares issued. The Fund cannot predict whether any such securities will trade at, below or above net asset value or at, below or above their public offering price. The risk of a market price discount from net asset value is separate and in addition to the risk that net asset value itself may decline. The Fund's securities are designed primarily for long term investors, and investors in the shares should not view the Fund as a vehicle for trading purposes. See Risk Factors and Special Considerations General Risks Market Discount Risk.

Table of Contents

Special Risks to Holders of Preferred Shares. Prior to an offering, there will be no public market for Fixed Rate Preferred Shares. In the event any series of Fixed Rate Preferred Shares are issued, we expect to apply to list such shares on a national securities exchange, which will likely be the NYSE. However, during an initial period, which is not expected to exceed 30 days after the date of its initial issuance, such shares may not be listed on any securities exchange. During such period, the underwriters may make a market in such shares, although they will have no obligation to do so. Consequently, an investment in such shares may be illiquid during such period. Fixed Rate Preferred Shares may trade at a premium to or discount from liquidation value for various reasons, including changes in interest rates, perceived credit quality and other factors. See Risk Factors and Special Considerations Special Risks to Holders of Preferred Shares.

Special Risks to Holders of Notes. An investment in our notes is subject to special risks. Our notes are not likely to be listed on an exchange or automated quotation system. We cannot assure you that any market will exist for our notes or if a market does exist, whether it will provide holders with liquidity. Broker-dealers that maintain a secondary trading market for the notes are not required to maintain this market, and the Fund is not required to redeem notes if an attempted secondary market sale fails because of a lack of buyers. To the extent that our notes trade, they may trade at a price either higher or lower than their principal amount depending on interest rates, the rating (if any) on such notes and other factors. See Risk Factors and Special Considerations Special Risks to Holders of Notes.

Special Risk to Holders of Subscription Rights. There is a risk that changes in market conditions may result in the underlying common or preferred shares purchasable upon exercise of the subscription rights being less attractive to investors at the conclusion of the subscription period. This may reduce or eliminate the value of the subscription rights. Investors who receive subscription rights may find that there is no market to sell rights they do not wish to exercise. If investors exercise only a portion of the rights, the number of common or preferred shares issued may be reduced, and the common or preferred shares may trade at less favorable prices than larger offerings for similar securities. See Risk Factors and Special Considerations Special Risk to Holders of Subscription Rights.

Dilution. Shareholders who do not exercise their subscription rights may, at the completion of such an offering, own a smaller proportional interest in the Fund than if they exercised their subscription rights. As a result of such an offering, a shareholder may experience dilution in net asset value per share if the subscription price per share is below the net asset value per share on the expiration date. If the subscription price per share is below the net asset value per share of the Fund's shares on the expiration date, a shareholder will experience an immediate dilution of the aggregate net asset value of such shareholder's shares if the shareholder does not participate in such an offering and the shareholder will experience a reduction in the net asset value per share of such shareholder's shares whether or not the shareholder participates in such an offering. The Fund cannot state precisely the extent of this dilution (if any) if the shareholder does not exercise such shareholder's subscription rights because the Fund does not know what the net asset value per share will be when the offer expires or what proportion of the subscription rights will be exercised.

Long Term Objective; Not a Complete Investment Program. The Fund is intended for investors seeking long term growth of capital. The Fund is not meant to provide a vehicle for those who wish to play short term swings in the stock market. An investment in shares of the Fund should not be considered a complete investment program. Each shareholder should take into account the Fund's investment objectives as well as the shareholder's other investments when considering an investment in the Fund. See Risk Factors and Special Considerations General Risks Long Term

Edgar Filing: GAMCO Natural Resources, Gold & Income Trust - Form N-2

Objective; Not a Complete Investment Program.

Table of Contents

Portfolio Turnover Risk. The investment policies of the Fund, including its strategy of writing covered call options on securities in its portfolio, may result in portfolio turnover that is higher than that of many investment companies. Increased portfolio turnover rates will result in higher costs from brokerage commissions, dealer-mark-ups and other transaction costs and may also decrease the after-tax return to individual investors in the Fund to the extent it results in a decrease in the portion of the Fund's distributions that is attributable to long-term capital gain. See Risk Factors and Special Considerations General Risks Portfolio Turnover Risk.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. The Investment Adviser will apply investment techniques and risk analyses in making investment decisions for the Fund, but there can be no guarantee that these will produce the desired results. See Risk Factors and Special Considerations General Risks Management Risk.

Non-Diversified Status. The Fund is classified as a non-diversified investment company under the 1940 Act, which means the Fund is not limited by the 1940 Act in the proportion of its assets that may be invested in the securities of a single issuer. As a non-diversified investment company, the Fund may invest in the securities of individual issuers to a greater degree than a diversified investment company. As a result, the Fund may be more vulnerable to events affecting a single issuer and therefore, subject to greater volatility than a fund that is more broadly diversified. Accordingly, an investment in the Fund may present greater risk to an investor than an investment in a diversified company.

Dependence on Key Personnel. The Fund is dependent upon the expertise of Vincent Hugonnard-Roche as the sole option strategist on the Fund's portfolio management team. If the Fund were to lose the services of Mr. Roche, it could be temporarily adversely affected until a suitable replacement could be found. See Risk Factors and Special Considerations General Risks Dependence on Key Personnel.

Market Disruption and Geopolitical Risk. The occurrence of events similar to those in recent years may result in market volatility, may have long term effects on the U.S. and worldwide financial markets, and may cause further economic uncertainties in the U.S. and worldwide. Any such event(s) could have a significant adverse impact on the value and risk profile of the Fund's portfolio. The Fund does not know how long the securities markets may be affected by similar events and cannot predict the effects of similar events in the future on the U.S. economy and securities markets. There can be no assurance that similar events and other market disruptions will not have other material and adverse implications. See Risk Factors and Special Considerations General Risks Market Disruption and Geopolitical Risk.

Economic Events and Market Risk. Periods of market volatility remain, and may continue to occur in the future, in response to various political, social and economic events both within and outside of the United States. These conditions have resulted in, and in many cases continue to result in, greater price volatility, less liquidity, widening credit spreads and a lack of price transparency, with many securities remaining illiquid and of uncertain value. Such market conditions may make valuation of some of the Fund's securities uncertain and/or result in sudden and significant valuation increases or declines in its holdings. If there is a significant decline in the value of the Fund's portfolio, this may impact the asset coverage levels for the Fund's outstanding leverage.

Table of Contents

Risks resulting from any future debt or other economic crisis could also have a detrimental impact on the global economic recovery, the financial condition of financial institutions and our business, financial condition and results of operation. Downgrades to the credit ratings of major banks could result in increased borrowing costs for such banks and negatively affect the broader economy. Moreover, Federal Reserve policy, including with respect to certain interest rates, may also adversely affect the value, volatility and liquidity of dividend- and interest-paying securities. Market volatility, rising interest rates and/or a return to unfavorable economic conditions could impair the Fund's ability to achieve its investment objectives.

See Risk Factors and Special Considerations General Risks Economic Events and Market Risk.

Government Intervention in Financial Markets Risk. The U.S. government and certain foreign governments have in the past taken actions designed to support certain financial institutions and segments of the financial markets that have experienced extreme volatility, and in some cases a lack of liquidity, including through direct purchases of equity and debt securities. Federal, state, and other governments, their regulatory agencies or self-regulatory organizations may take actions that affect the regulation of the issuers in which the Fund invests, or the issuers of such securities, in ways that are unforeseeable. Legislation or regulation may also change the way in which the Fund is regulated. Such legislation or regulation could limit or preclude the Fund's ability to achieve its investment objectives. See Risk Factors and Special Considerations General Risks Government Intervention in Financial Markets Risk.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be worth less in the future as inflation decreases the value of money. As inflation increases, the real value of the Fund's shares and distributions thereon can decline. In addition, during any periods of rising inflation, dividend rates of any debt securities issued by the Fund would likely increase, which would tend to further reduce returns to common shareholders. See Risk Factors and Special Considerations General Risks Inflation Risk.

Restricted and Illiquid Securities Risk. Unregistered securities are securities that cannot be sold publicly in the United States without registration under Securities Act of 1933 (the Securities Act). An illiquid investment is a security or other investment that cannot be disposed of within seven days in the ordinary course of business at approximately the value at which the Fund has valued the investment. Unregistered securities often can be resold only in privately negotiated transactions with a limited number of purchasers or in a public offering registered under the Securities Act. Considerable delay could be encountered in either event and, unless otherwise contractually provided for, the Fund's proceeds upon sale may be reduced by the costs of registration or underwriting discounts. The difficulties and delays associated with such transactions could result in the Fund's inability to realize a favorable price upon disposition of unregistered securities, and at times might make disposition of such securities impossible. The Fund may be unable to sell illiquid investments when it desires to do so, resulting in the Fund obtaining a lower price or being required to retain the investment. Illiquid investments generally must be valued at fair value, which is inherently less precise than utilizing market values for liquid investments, and may lead to differences between the price a security is valued for determining the Fund's net asset value and the price the Fund actually receives upon sale. See Risk Factors and Special Considerations General Risks Restricted and Illiquid Securities Risk.

Table of Contents

Investment Companies. The Fund may invest in the securities of other investment companies, including exchange-traded funds, to the extent permitted by law. To the extent the Fund invests in the common equity of investment companies, the Fund will bear its ratable share of any such investment company's expenses, including management fees. The Fund will also remain obligated to pay management fees to the Investment Adviser with respect to the assets invested in the securities of other investment companies. In these circumstances, holders of the Fund's common shares will be in effect subject to duplicative investment expenses. See Risk Factors and Special Considerations General Risks Investment Companies.

Status as a Regulated Investment Company. The Fund has elected to qualify as a RIC under Subchapter M of the Code. Qualification requires, among other things, compliance by the Fund with certain distribution requirements. Statutory limitations on distributions on the common shares if the Fund fails to satisfy the 1940 Act's asset coverage requirements could jeopardize the Fund's ability to meet such distribution requirements. While the Fund presently intends to purchase or redeem notes or preferred shares, if any, to the extent necessary in order to maintain compliance with such asset coverage requirements, there can be no assurance that such actions can be effected in time to meet the Code's requirements. See Risk Factors and Special Considerations General Risks Status as a Regulated Investment Company.

Anti-takeover Provisions. The Governing Documents include provisions that could limit the ability of other entities or persons to acquire control of the Fund or convert the Fund to an open-end fund. See Anti-Takeover Provisions of the Governing Documents.

Management and Fees

The Investment Adviser's fee is computed weekly and paid monthly at the annual rate of 1.00% of the Fund's average weekly net assets. Net assets are total assets minus the sum of the Fund's liabilities (such liabilities will exclude the aggregate liquidation preference of outstanding preferred shares and accumulated dividends, if any, on those shares and the outstanding principal amount of any debt securities the proceeds of which were used for investment purposes, plus accrued and unpaid interest thereon). The investment advisory agreement between the Fund and the Investment Adviser combines investment advisory and administrative responsibilities in one agreement. See Management of the Fund.

Repurchase of Common Shares

The Board has authorized the Fund to consider the repurchase of its common shares in the open market when the common shares are trading at a discount of 10% or more from net asset value (or such other percentage as the Board may determine from time to time). Although the Board has authorized such repurchases, the Fund is not required to repurchase its common shares. During the year ended December 31, 2016, the Fund repurchased and retired 148,727 shares in the open market at an investment of \$788,141 and an average discount of approximately 14.61% from its net asset value. Such repurchases are subject to certain notice and other requirements under the 1940 Act. See Repurchase of Common Shares.

Table of Contents

Anti-Takeover Provisions Certain provisions of the Governing Documents may be regarded as anti-takeover provisions. Pursuant to these provisions, only one of three classes of Trustees is elected each year; super-majority voting requirements apply to the authorization of the conversion of the Fund from a closed-end to an open-end investment company or to the authorization of certain transactions between the Fund and a beneficial owner of more than 5% of any class of the Fund's shares; advance notice to the Fund of any shareholder proposal is required; and any shareholder proposing the nomination or election of a person as a Trustee must supply significant amounts of information designed to enable verification of whether such person satisfies the qualifications required of potential nominees to the Board. The overall effect of these provisions is to render more difficult the accomplishment of a merger with, or the assumption of control by, a principal shareholder. These provisions may have the effect of depriving the Fund's common shareholders of an opportunity to sell their shares at a premium to the prevailing market price. The issuance of preferred shares could make it more difficult for the holders of common shares to avoid the effect of these provisions. See Anti-Takeover Provisions of the Fund's Governing Documents.

Custodian, Transfer Agent, Auction Agent and Dividend Disbursing Agent The Bank of New York Mellon, located at 135 Santilli Highway, Everett, Massachusetts 02149, serves as the custodian (the Custodian) of the Fund's assets pursuant to a custody agreement. Under the custody agreement, the Custodian holds the Fund's assets in compliance with the 1940 Act. For its services, the Custodian will receive a monthly fee paid by the Fund based upon, among other things, the average value of the total assets of the Fund, plus certain charges for securities transactions and out of pocket expenses.

American Stock Transfer & Trust Company, located at 6201 15th Avenue Brooklyn, New York 11219, serves as the Fund's distribution disbursing agent, as agent under the Fund's Automatic Dividend Reinvestment and Voluntary Cash Purchase Plan (the Plan), and as transfer agent and registrar with respect to the common shares of the Fund.

Table of Contents

USE OF PROCEEDS

The Investment Adviser expects that it will initially invest the proceeds of the offering in high quality short term debt securities and instruments. The Investment Adviser anticipates that the investment of the proceeds will be made in accordance with the Fund's investment objectives and policies as appropriate investment opportunities are identified, which is expected to substantially be completed within three months; however, changes in market conditions could result in the Fund's anticipated investment period extending to as long as six months. Depending on market conditions and operations, a portion of the cash held by the Fund, including any proceeds raised from this offering, may be used to pay distributions in accordance with the Fund's distribution policy.

Table of Contents**SUMMARY OF FUND EXPENSES**

The following table shows the Fund's expenses, including preferred shares offering expenses, as a percentage of net assets attributable to common shares. All expenses of the Fund are borne, directly or indirectly, by the common shareholders.

<i>Shareholder Transaction Expenses</i>	
Sales Load (as a percentage of offering price)	1.54(1)
Offering Expenses Borne by the Fund (excluding Preferred Shares Offering Expenses) (as a percentage of offering price)	0.67(1)
Dividend Reinvestment and Cash Purchase Plan Fees	None
Sale transaction	\$ 1.00 (2)
Preferred Shares Offering Expenses Borne by the Fund (as a percentage of net assets attributable to common shares)	0.11%(3)
	Percentage of Net Assets Attributable to Common Shares
<i>Annual Expenses (as a percentage of net assets attributable to common shares)</i>	
Management Fees	1.17%(4)
Interest Payments on Borrowed Funds	None
Other Expenses	0.27%(5)
Total Annual Expenses	1.44%
Dividends on Preferred Shares	0.95%(6)
Total Annual Expenses and Dividends on Preferred Shares	2.39%

- (1) Estimated maximum amount based on offering of \$150 million in common shares and \$50 million in preferred shares. The estimates assume a 1.00% sales load on common shares and \$997,000 in common offering expenses, and 3.15% sales load on preferred shares and \$323,000 in preferred offering expenses. Actual sales loads and offering expenses may be higher or lower than these estimates and will be set forth in the Prospectus Supplement if applicable.
- (2) Shareholders participating in the Fund's Automatic Dividend Reinvestment Plan do not incur any additional fees. Shareholders participating in the Voluntary Cash Purchase Plan would pay their pro rata share of brokerage

commissions to purchase shares and \$1.00 per transaction plus their pro rata share of brokerage commissions to sell shares. See Automatic Dividend Reinvestment and Voluntary Cash Purchase Plans.

- (3) Assumes issuance of \$50 million in liquidation preference of Fixed Rate Preferred Shares, net assets attributable to common shares of \$349 million (which includes issuance of \$150 million in common shares) and \$323,000 in preferred offering expenses. The actual amounts in connection with any offering will be set forth in the Prospectus Supplement if applicable.
- (4) The Investment Adviser's fee is 1.00% of the Fund's average weekly net assets including proceeds attributable to any outstanding preferred shares, with no deduction for liquidation preference of any preferred shares, and the outstanding principal amount of any debt securities the proceeds of which were used for investment purposes. Consequently, if the Fund has preferred shares or debt outstanding, the investment management fees and other expenses as a percentage of net assets attributable to common shares may be higher than if the Fund does not utilize a leveraged capital structure.
- (5) Other Expenses are based on estimated amounts for the current year assuming completion of the proposed issuances.
- (6) Dividends on Preferred Shares represent the distributions that would be made assuming \$50 million of preferred shares is issued with a fixed dividend rate of 5.70%. There can, of course, be no guarantee that any preferred shares would be issued or, if issued, the terms thereof.

The purpose of the table above and the example below is to help you understand the various costs and expenses that you, as a shareholder, would bear directly or indirectly. For a more complete description of the various costs and expenses a common shareholder would bear in connection with the issuance and ongoing maintenance of any preferred shares or notes issued by the Fund, see Risk Factors and Special Considerations Special Risks to Holders of Common Shares Leverage Risk.

The following example illustrates the expenses (including the maximum estimated sales load on common shares of \$10 and on preferred shares of \$31.50, and estimated offering expenses of \$4.42 from the issuance of \$150 million in common shares and \$50 million in preferred shares) you would pay on a \$1,000 investment in common shares, followed by a preferred shares offering, assuming a 5% annual portfolio total return.* The actual amounts in connection with any offering will be set forth in the Prospectus Supplement if applicable.

Table of Contents

	1 Year	3 Years	5 Years	10 Years
Total Expenses incurred	\$ 44	\$ 93	\$ 145	\$ 287

- * The example should not be considered a representation of future expenses. The example is based on total Annual Expenses and Dividends on Preferred Shares shown in the table above and assumes that the amounts set forth in the table do not change and that all distributions are reinvested at net asset value. Actual expenses may be greater or less than those assumed. Moreover, the Fund's actual rate of return may be greater or less than the hypothetical 5% return shown in the example.

The example includes Dividends of Preferred Shares. If Dividends on Preferred Shares were not included in the example calculation, the expenses for the 1-, 3-, 5- and 10-year periods in the table above would be as follows (based on the same assumptions as above): \$34, \$64, \$97 and \$189.

Table of Contents**FINANCIAL HIGHLIGHTS**

The selected data below sets forth the per share operating performance and ratios for the period presented. The financial information was derived from and should be read in conjunction with the Financial Statements of the Fund and Notes thereto, . Based on net asset value per share, adjusted for reinvestment of distributions at the net asset value per share on the ex-dividend dates. Total return for a period of less than one year is not annualized.

Based on market value per share, adjusted for reinvestment of distributions at prices obtained under the Fund's dividend reinvestment plan. Total return for a period of less than one year is not annualized.

- (a) The Fund commenced investment operations on January 27, 2011.
- (b) The beginning of period NAV reflects a \$0.04 reduction of costs associated with the initial public offering.
- (c) Amount represents less than \$0.005 per share.
- (d) The Fund received credits from a designated broker who agreed to pay certain Fund operating expenses. For the six months ended June 30, 2016 and the year ended December 31, 2015, there was no impact on the expense ratios.

Table of Contents

THE FUND

The Fund is a non-diversified, closed-end management investment company registered under the 1940 Act. The Fund was organized as a Delaware statutory trust on June 26, 2008. The Fund commenced investment operations on January 27, 2011. The Fund's principal office is located at One Corporate Center, Rye, New York 10580-1422.

INVESTMENT OBJECTIVES AND POLICIES

Investment Objectives and Policies

The Fund's primary investment objective is to provide a high level of current income from interest, dividends and option premiums. The Fund's secondary investment objective is to seek capital appreciation consistent with the Fund's strategy and its primary objective. To meet the objective of providing a high level of current income, the Fund intends to invest in income producing securities such as equity securities, convertible securities and other securities and earn short-term gains from a strategy of writing covered call options on equity securities in its portfolio. The Fund will seek dividend income through investments in equity securities such as common stock or convertible preferred stock. The Fund will seek interest income through investments in convertible or corporate bonds. Under normal market conditions, the Fund will attempt to achieve its objectives by investing at least 80% of its assets, which includes the amount of any borrowing for investment purposes, in securities of companies principally engaged in the natural resources and gold industries. The Fund will invest at least 25% of its assets in the securities of companies principally engaged in the exploration, production or distribution of natural resources, such as base metals, metals, paper, food and agriculture, forestry products, water, gas, oil, sustainable energy and other commodities as well as related transportation companies and equipment manufacturers. The Fund will invest at least 25% of its assets in the securities of companies principally engaged in the exploration, mining, fabrication, processing, distribution or trading of gold or the financing, managing, controlling or operating of companies engaged in gold-related activities. The Fund may invest without limitation in the securities of domestic and foreign issuers. The Fund expects that its assets will usually be invested in several countries. To the extent that the natural resources and gold industries are concentrated in any given geographic region, such as Europe, North America or Asia, a relatively high proportion of the Fund's assets may be invested in that particular region. Equity securities may include common stocks, preferred stocks, convertible securities, warrants, depository receipts and equity interests in trusts and other entities. Other Fund investments may include investment companies, securities of issuers subject to reorganization or other risk arbitrage investments, certain derivative instruments, debt (including obligations of the U.S. government) and money market instruments.

As part of its investment strategy, the Fund intends to generate current income from short-term gains through an option strategy of writing (selling) covered call options on equity securities in its portfolio. When the Fund sells a covered call option, it generates current income from short-term gains in the form of the premium paid by the buyer of the call option, but the Fund forgoes the opportunity to participate in any increase in the value of the underlying equity security above the exercise price of the option.

The Fund may, from time to time, modify the foregoing definitions and limitations, which are measured at the time of investment, and will provide notice to shareholders of material changes. In particular, the Fund's policy to invest at least 80% of its total assets in securities of companies principally engaged in the natural resources and gold industries may be changed by the Board; however, if this policy changes, the Fund will provide shareholders at least 60 days' written notice before implementation of the change in compliance with Securities and Exchange Commission (the Commission or SEC) rules.

In selecting securities for the Fund, the Investment Adviser will use a bottom-up, value approach. The Investment Adviser will primarily focus on company-specific criteria rather than on political, economic or other country-specific

factors. The Fund may invest without limitation in securities of foreign issuers, although the portion invested in foreign securities will vary over time based on market conditions. Foreign investments may involve certain risk and opportunity considerations not typically associated with investing in domestic issuers and could cause the Fund to be affected favorably or unfavorably by changes in currency exchange rates and revaluations of currencies.

Table of Contents

No assurances can be given that the Fund's objectives will be achieved. The Fund's investment objectives and its policies of investing at least 25% of its assets in normal circumstances in Natural Resources Companies and in Gold Companies are fundamental policies that cannot be changed without the affirmative vote of a majority, as defined in the 1940 Act, of the outstanding voting securities (voting together as a single class) of the Fund (which for this purpose and under the 1940 Act means the lesser of (i) 67% of the shares represented at a meeting at which more than 50% of the outstanding shares are represented or (ii) more than 50% of the outstanding shares). If the Fund issues and has outstanding preferred shares, the affirmative vote of the holders of a majority, as defined in the 1940 Act, of the outstanding preferred shares of the Fund voting as a separate class (which for this purposes and under the 1940 Act means the lesser of (i) 67% of the preferred shares, as a single class, represented at a meeting at which more than 50% of the Fund's outstanding preferred shares are represented or (ii) more than 50% of the outstanding preferred shares) would also be required to change a fundamental policy. Unless specifically stated as such, no other policy of the Fund is fundamental and each policy may be changed by the Board without shareholder approval. The percentage and ratings limitations stated herein and in the SAI apply only at the time of investment and are not considered violated as a result of subsequent changes to the value, or downgrades to the ratings, of the Fund's portfolio investments.

Gabelli Funds, LLC, a New York limited liability company, with offices at One Corporate Center, Rye, New York 10580-1422, serves as investment adviser to the Fund.

Investment Methodology of the Fund

In selecting securities for the Fund, the Investment Adviser normally considers the following factors, among others:

the industry of the issuer of a security;

the ability of the Fund to generate current income from short-term gains from writing covered call options on such securities;

the interest or dividend income generated by the securities;

the potential for capital appreciation of the securities;

the prices of the securities relative to other comparable securities;

whether the securities are entitled to the benefits of call protection or other protective covenants;

the existence of any anti-dilution protections or guarantees of the security; and

the number and size of investments of the portfolio as to issuers.

The Investment Adviser's investment philosophy with respect to selecting investments in the gold industry and the natural resources industries is to emphasize quality and value, as determined by such factors as asset quality, balance sheet leverage, management ability, reserve life, cash flow, and commodity hedging exposure. In addition, in making stock selections, the Investment Adviser looks for securities that it believes may have a superior yield as well as capital gains potential.

Certain Investment Practices

Natural Resources Industries Concentration. Under normal market conditions, the Fund will invest at least 25% of its assets in securities of Natural Resources Companies. Natural Resources Companies are those that are principally engaged in the exploration, production or distribution of natural resources, such as base metals, metals, paper, food and agriculture, forestry products, gas, oil and other commodities as well as related transportation companies and

Table of Contents

equipment manufacturers. Related transportation companies and equipment manufacturers, such as agriculture transportation vehicles and farm equipment manufacturers, are vital components of the natural resource industry and are therefore included within the definition of Natural Resources Companies.

Principally engaged, as used in this Prospectus, means a company that derives at least 50% of its revenues or earnings or devotes at least 50% of its assets to natural resources or gold related activities, as the case may be.

Gold Industry Concentration. Under normal market conditions the Fund will invest at least 25% of its assets in the securities of Gold Companies. Gold Companies are those that are principally engaged in the exploration, mining, fabrication, processing, distribution or trading of gold, or the financing, managing, controlling or operating of companies engaged in gold-related activities. Companies principally engaged in the financing, managing, controlling or operating of companies engaged in gold-related activities include companies that own or receive royalties on the production of gold; such companies are vital components of the gold industry and are therefore included within the definition of Gold Companies. The Fund's investments in Gold Companies will generally be in the common equity of Gold Companies, but the Fund may also invest in other securities of Gold Companies, such as preferred stocks, securities convertible into common stocks, and securities such as rights and warrants that have common stock characteristics. The Fund will not invest in gold bullion and therefore the Fund's performance will not track directly the price of gold.

In selecting investments in Gold Companies for the Fund, the Investment Adviser will focus on stocks that are undervalued, but which appear to have favorable prospects for growth. Factors considered in this determination will include capitalization per ounce of gold production, capitalization per ounce of recoverable reserves, quality of management and ability to create shareholder wealth. Because most of the world's gold production is outside of the United States, the Fund may have a significant portion of its investments in Gold Companies in securities of foreign issuers, including those located in developed as well as emerging markets. The percentage of Fund assets invested in particular countries or regions will change from time to time based on the Investment Adviser's judgment. Among other things, the Investment Adviser will consider the economic stability and economic outlook of these countries and regions. See Risk Factors and Special Considerations Industry Risks.

Covered Calls and Other Option Transactions. The Fund intends to provide current income from short-term gains earned through an option strategy which will normally consist of writing (selling) call options on equity securities in its portfolio (covered calls), but may, in amounts up to 15% of the Fund's assets, consist of writing uncovered call options on additional amounts of such securities beyond the amounts held in its portfolio, on other securities not held in its portfolio and on indices comprised of Natural Resources Companies or Gold Companies or on exchange traded funds comprised of such issuers and also may consist of writing put options on securities of Natural Resources Companies or Gold Companies. Any premiums received by the Fund from writing options may result in short-term capital gains. Writing a covered call is the selling of an option contract entitling the buyer to purchase an underlying security that the Fund owns, while writing an uncovered call is the selling of such a contract entitling the buyer to purchase a security the Fund does not own or in an amount in excess of the amount the Fund owns. When the Fund sells a call option, it generates current income from short-term gains in the form of the premium paid by the buyer of the call option, but the Fund forgoes the opportunity to participate in any increase in the value of the underlying equity security above the exercise price of the option. The writer of the call option has the obligation, upon exercise of the option, to deliver the underlying security or currency upon payment of the exercise price during the option period.

A put option is the reverse of a call option, giving the buyer the right, in return for a premium, to sell the underlying security to the writer, at a specified price, and obligating the writer to purchase the underlying security from the holder at that price. When the Fund sells a put option, it generates current income from short-term gains in the form of the premium paid by the buyer of the put option, but the Fund will have the obligation to buy the underlying security at

the exercise price if the price of the security decreases below the exercise price of the option.

If the Fund has written a call option, it may terminate its obligation by effecting a closing purchase transaction. This is accomplished by purchasing a call option with the same terms as the option previously written. However, once the Fund has been assigned an exercise notice, the Fund will be unable to effect a closing purchase transaction. Similarly, if

Table of Contents

the Fund is the holder of an option, it may liquidate its position by effecting a closing sale transaction. This is accomplished by selling an option with the same terms as the option previously purchased. There can be no assurance that either a closing purchase or sale transaction can be effected when the Fund so desires.

The Fund will realize a profit from a closing transaction if the price of the transaction is less than the premium it received from writing the option, or is more than the premium it paid to purchase the option; the Fund will realize a loss from a closing transaction if the price of the transaction is more than the premium it received from writing the option, or is less than the premium it paid to purchase the option. Since call option prices generally reflect increases in the price of the underlying security, any loss resulting from the repurchase of a call option may also be wholly or partially offset by unrealized appreciation of the underlying security. Other principal factors affecting the market value of a put or a call option include supply and demand, interest rates, the current market price and price volatility of the underlying security and the time remaining until the expiration date of the option. Gains and losses on investments in options depend, in part, on the ability of the Investment Adviser to predict correctly the effect of these factors. The use of certain options transactions cannot serve as a complete hedge since the price movement of securities underlying certain options will not necessarily follow the price movements of the portfolio securities that may be subject to the hedge.

An option position may be closed out only on an exchange that provides a secondary market for an option with the same terms or in a private transaction. Although the Fund will generally purchase or write options for which there appears to be an active secondary market, there is no assurance that a liquid secondary market on an exchange will exist for any particular option. In such event, it might not be possible to effect closing transactions in particular options, in which case the Fund would have to exercise its options in order to realize any profit and would incur brokerage commissions upon the exercise of call options and upon the subsequent disposition of underlying securities for the exercise of put options.

Although the Investment Adviser will attempt to take appropriate measures to minimize the risks relating to the Fund's writing and purchasing of put and call options, there can be no assurance that the Fund will succeed in any option-writing program it undertakes.

Uncovered Calls. When the Fund writes an uncovered call option or put option, it will segregate liquid assets with its custodian in an amount equal to the amount, adjusted daily, by which such option is in the money or will treat the unsegregated amount as borrowings. See **Leverage and Risk Factors and Special Considerations Risks Associated with Uncovered Calls.**

Foreign Securities. The Fund may invest in securities principally traded in securities markets outside the United States. Foreign investments may be affected favorably or unfavorably by changes in currency rates and in exchange control regulations. There may be less publicly available information about a foreign company than about a U.S. company, and foreign companies may not be subject to accounting, auditing and financial reporting standards and requirements comparable to those applicable to U.S. companies. Securities of some foreign companies may be less liquid or more volatile than securities of U.S. companies, and foreign brokerage commissions and custodian fees are generally higher than in the United States. Investments in foreign securities may also be subject to other risks different from those affecting U.S. investments, including local political or economic developments, expropriation or nationalization of assets and imposition of withholding taxes on dividend or interest payments.

American Depositary Receipts. The Fund may invest in American Depositary Receipts (ADRs). Such investment may entail certain risks similar to foreign securities. ADRs are certificates representing an ownership interest in a security or a pool of securities issued by a foreign issuer and deposited with the depository, typically a bank, and held in trust for the investor. The economies of many of the countries in which the issuer of a security underlying an ADR

principally engages in business may not be as developed as the United States economy and may be subject to significantly different forces. Political or social instability, expropriation or confiscatory taxation, and limitations on the removal of funds or other assets could adversely affect the value of the Fund's investments in such securities. The value of the securities underlying ADRs could fluctuate as exchange rates change between U.S. dollars and the currency of the country in which the foreign company is located. In addition, foreign companies are not registered with the SEC and are

Table of Contents

generally not subject to the regulatory controls imposed on United States issuers and, as a consequence, there is generally less publicly available information about foreign companies than is available about domestic companies. Foreign companies are not subject to uniform accounting, auditing and financial reporting standards, practices and requirements comparable to those applicable to domestic companies.

Emerging Market Countries. The risks described above for foreign securities, including the risks of nationalization and expropriation of assets, are typically increased to the extent that the Fund invests in companies headquartered in developing, or emerging market, countries. Investments in securities of companies headquartered in such countries may be considered speculative and subject to certain special risks. The political and economic structures in many of these countries may be in their infancy and developing rapidly, and such countries may lack the social, political and economic characteristics of more developed countries. Certain of these countries have in the past failed to recognize private property rights and have at times nationalized and expropriated the assets of private companies. Some countries have inhibited the conversion of their currency to another. The currencies of certain emerging market countries have experienced devaluation relative to the U.S. dollar, and future devaluations may adversely affect the value of the Fund's assets denominated in such currencies. Some emerging market countries have experienced substantial rates of inflation for many years. Continued inflation may adversely affect the economies and securities markets of such countries. In addition, unanticipated political or social developments may affect the value of the Fund's investments in these countries and the availability of the Fund of additional investments in these countries. The small size, limited trading volume and relative inexperience of the securities markets in these countries may make the Fund's investments in such countries illiquid and more volatile than investments in more developed countries, and the Fund may be required to establish special custodial or other arrangements before making investments in these countries. There may be little financial or accounting information available with respect to companies located in these countries, and it may be difficult as a result to assess the value or prospects of an investment in such companies.

Restricted and Illiquid Securities. The Fund may invest in securities that are illiquid. Illiquid securities include securities legally restricted as to resale, such as commercial paper issued pursuant to Section 4(a)(2) of the Securities Act and securities eligible for resale pursuant to Rule 144A thereunder. Section 4(a)(2) and Rule 144A securities may, however, be treated as liquid by the Investment Adviser pursuant to procedures adopted by the Board, which require consideration of factors such as trading activity, availability of market quotations and number of dealers willing to purchase the security. If the Fund invests in Rule 144A securities, the level of portfolio illiquidity may be increased to the extent that eligible buyers become uninterested in purchasing such securities.

It may be difficult to sell such securities at a price representing the fair value until such time as such securities may be sold publicly. Where registration is required, a considerable period may elapse between a decision to sell the securities and the time when it would be permitted to sell. Thus, the Fund may not be able to obtain as favorable a price as that prevailing at the time of the decision to sell. The Fund may also acquire securities through private placements under which it may agree to contractual restrictions on the resale of such securities. Such restrictions might prevent their sale at a time when such sale would otherwise be desirable.

Income Securities. Under normal market conditions, the Fund may invest up to 35% of its assets in fixed income securities, not including short-term discounted Treasury Bills or certain short-term securities of U.S. government sponsored instrumentalities. Income securities include (i) fixed income securities such as bonds, debentures, notes, preferred stock, short term discounted Treasury Bills or certain securities of the U.S. government sponsored instrumentalities, as well as money market open-end funds that invest in those securities, which, in the absence of an applicable exemptive order, will not be affiliated with the Investment Adviser, and (ii) common stocks of issuers that have historically paid periodic dividends. Fixed income securities obligate the issuer to pay to the holder of the security a specified return, which may be either fixed or reset periodically in accordance with the terms of the security. Fixed income securities generally are senior to an issuer's common stock and their holders generally are entitled to

receive amounts due before any distributions are made to common shareholders. Common stocks, on the other hand, generally do not obligate an issuer to make periodic distributions to holders.

Table of Contents

The market value of fixed income securities, especially those that provide a fixed rate of return, may be expected to rise and fall inversely with interest rates and in general is affected by the credit rating of the issuer, the issuer's performance and perceptions of the issuer in the market place. The market value of callable or redeemable fixed income securities may also be affected by the issuer's call and redemption rights. In addition, it is possible that the issuer of fixed income securities may not be able to meet its interest or principal obligations to holders. Further, holders of non-convertible fixed income securities do not participate in any capital appreciation of the issuer.

The Fund may also invest in obligations of government sponsored instrumentalities. Unlike non-U.S. government securities, obligations of certain agencies and instrumentalities of the U.S. government, such as the Government National Mortgage Association, are supported by the full faith and credit of the U.S. government; others, such as those of the Export-Import Bank of the U.S., are supported by the right of the issuer to borrow from the U.S. Treasury; others, such as those of the Federal National Mortgage Association, are supported by the discretionary authority of the U.S. government to purchase the agency's obligations; and still others, such as those of the Student Loan Marketing Association, are supported only by the credit of the instrumentality. No assurance can be given that the U.S. government would provide financial support to U.S. government sponsored instrumentalities if it is not obligated to do so by law.

The Fund also may invest in common stock of issuers that have historically paid periodic dividends or otherwise made distributions to common shareholders. Unlike fixed income securities, dividend payments generally are not guaranteed and so may be discontinued by the issuer at its discretion or because of the issuer's inability to satisfy its liabilities. Further, an issuer's history of paying dividends does not guarantee that it will continue to pay dividends in the future. In addition to dividends, under certain circumstances the holders of common stock may benefit from the capital appreciation of the issuer.

Common stocks represent the residual ownership interest in the issuer and holders of common stock are entitled to the income and increase in the value of the assets and business of the issuer after all of its debt obligations and obligations to preferred shareholders are satisfied. Common stocks generally have voting rights. Common stocks fluctuate in price in response to many factors including historical and prospective earnings of the issuer, the value of its assets, general economic conditions, interest rates, investor perceptions and market liquidity.

Non-Investment Grade Securities. The Fund may invest up to 25% of its net assets in fixed-income and convertible securities rated below investment grade by recognized statistical rating agencies, generally securities rated CCC or lower by S&P or Caa by Moody's, or non-rated securities of comparable quality as determined by the Investment Adviser. These securities are predominantly speculative with respect to the issuer's capacity to pay interest and repay principal, and involve major risk exposure to adverse conditions. Debt securities that are not rated or rated lower than BBB by S&P or lower than Baa by Moody's (or unrated securities of comparable quality) are referred to in the financial press as junk bonds.

Generally, such non-investment grade securities and unrated securities of comparable quality offer a higher current yield than is offered by higher rated securities, but also (i) will likely have some quality and protective characteristics that, in the judgment of the rating organizations, are outweighed by large uncertainties or major risk exposures to adverse conditions and (ii) are predominantly speculative with respect to the issuer's capacity to pay interest and repay principal in accordance with the terms of the obligation. The market values of certain of these securities also tend to be more sensitive to individual corporate developments and changes in economic conditions than higher quality bonds. In addition, such non-investment grade securities and comparable unrated securities generally present a higher degree of credit risk. The risk of loss due to default by these issuers is significantly greater because such non-investment grade securities and unrated securities of comparable quality generally are unsecured and frequently are subordinated to the prior payment of senior indebtedness. In light of these risks, the Investment Adviser, in

evaluating the creditworthiness of an issue, whether rated or unrated, will take various factors into consideration, which may include, as applicable, the issuer's operating history, financial resources and its sensitivity to economic conditions and trends, the market support for the facility financed by the issue, the perceived ability and integrity of the issuer's management and regulatory matters.

Table of Contents

In addition, the market value of securities in non-investment grade categories is more volatile than that of higher quality securities, and the markets in which such lower grade or unrated securities are traded are more limited than those in which higher rated securities are traded. The existence of limited markets may make it more difficult for the Fund to obtain accurate market quotations for purposes of valuing its portfolio and calculating its net asset value. Moreover, the lack of a liquid trading market may restrict the availability of securities for the Fund to purchase and may also have the effect of limiting the ability of the Fund to sell securities at their fair value to respond to changes in the economy or the financial markets.

Non-investment grade rated debt obligations also present risks based on payment expectations. If an issuer calls the obligation for redemption (often a feature of fixed income securities), the Fund may have to replace the security with a lower yielding security, resulting in a decreased return for investors. Also, as the principal value of bonds moves inversely with movements in interest rates, in the event of rising interest rates the value of the securities held by the Fund may decline proportionately more than a portfolio consisting of higher rated securities. Investments in zero coupon bonds may be more speculative and subject to greater fluctuations in value due to changes in interest rates than bonds that pay interest currently. Interest rates are at historical lows and, therefore, it is likely that they will rise in the future.

As part of its investments in non-investment grade securities, the Fund may invest not more than 5% of the total assets of the Fund in securities of issuers in default. The Fund will make an investment in securities of issuers in default only when the Investment Adviser believes that such issuers will honor their obligations or emerge from bankruptcy protection and the value of these securities will appreciate. By investing in securities of issuers in default, the Fund bears the risk that these issuers will not continue to honor their obligations or emerge from bankruptcy protection or that the value of the securities will not appreciate.

In addition to using statistical rating agencies and other sources, the Investment Adviser will also perform its own analysis of issues in seeking investments that it believes to be underrated (and thus higher yielding) in light of the financial condition of the issuer. Its analysis of issuers may include, among other things, current and anticipated cash flow and borrowing requirements, value of assets in relation to historical cost, strength of management, responsiveness to business conditions, credit standing and current anticipated results of operations. In selecting investments for the Fund, the Investment Adviser may also consider general business conditions, anticipated changes in interest rates and the outlook for specific industries.

Subsequent to its purchase by the Fund, an issue of securities may cease to be rated or its rating may be reduced. In addition, it is possible that statistical rating agencies might change their ratings of a particular issue to reflect subsequent events on a timely basis. Moreover, such ratings do not assess the risk of a decline in market value. None of these events will require the sale of the securities by the Fund, although the Investment Adviser will consider these events in determining whether the Fund should continue to hold the securities.

Fixed income securities, including non-investment grade securities and comparable unrated securities, frequently have call or buy-back features that permit their issuers to call or repurchase the securities from their holders, such as the Fund. If an issuer exercises these rights during periods of declining interest rates, the Fund may have to replace the security with a lower yielding security, thus resulting in a decreased return for the Fund.

The market for non-investment grade and comparable unrated securities has at various times, particularly during times of economic recession, experienced substantial reductions in market value and liquidity. Past recessions have adversely affected the ability of certain issuers of such securities to repay principal and pay interest thereon. The market for those securities could react in a similar fashion in the event of any future economic recession.

Temporary Defensive Investments. When a temporary defensive posture is believed by the Investment Adviser to be warranted (temporary defensive periods), the Fund may without limitation hold cash or invest all or a portion of its assets in money market instruments and repurchase agreements in respect of those instruments. The money market instruments in which the Fund may invest are obligations of the U.S. government, its agencies or instrumentalities; commercial paper rated A-1 or higher by S&P or Prime-1 by Moody s; and certificates of deposit and bankers

Table of Contents

acceptances issued by domestic branches of U.S. banks that are members of the Federal Deposit Insurance Corporation. During temporary defensive periods, the Fund may also invest to the extent permitted by applicable law in shares of money market mutual funds. Money market mutual funds are investment companies and the investments in those companies by the Fund are in some cases subject to certain fundamental investment restrictions and applicable law. As a shareholder in a mutual fund, the Fund will bear its ratable share of its expenses, including management fees, and will remain subject to payment of the fees to the Investment Adviser, with respect to assets so invested. The Fund may find it more difficult to achieve its investment objectives during temporary defensive periods.

When Issued, Delayed Delivery Securities and Forward Commitments. The Fund may enter into forward commitments for the purchase or sale of securities, including on a when issued or delayed delivery basis, in excess of customary settlement periods for the type of security involved. In some cases, a forward commitment may be conditioned upon the occurrence of a subsequent event, such as approval and consummation of a merger, corporate reorganization or debt restructuring, i.e., a when, as and if issued security. When such transactions are negotiated, the price is fixed at the time of the commitment, with payment and delivery taking place in the future, generally a month or more after the date of the commitment. While it will only enter into a forward commitment with the intention of actually acquiring the security, the Fund may sell the security before the settlement date if it is deemed advisable. Securities purchased under a forward commitment are subject to market fluctuation, and no interest (or dividends) accrues to the Fund prior to the settlement date.

Short Sales. The Fund may make short sales as a form of hedging to offset potential declines in long positions in the same or similar securities, including short sales of securities in the Fund's portfolio at the time of sale (shorting against the box). The short sale of a security is considered a speculative investment technique. At the time of the sale, the Fund will own, or have the immediate and unconditional right to acquire at no additional cost, identical or similar securities or establish a hedge against a security of the same issuer which may involve additional cost, such as an in the money warrant.

Short sales against the box are subject to special tax rules, one of the effects of which may be to accelerate the recognition of income by the Fund. Other than with respect to short sales against the box, the Fund will limit short sales of securities to not more than 5% of the Fund's assets. When the Fund makes a short sale, it must deliver the security to the broker-dealer through which it made the short sale in order to satisfy its obligation to deliver the security upon conclusion of the sale.

If the price of the security sold short increases between the time of the short sale and the time the Fund replaces the borrowed security, the Fund will incur a loss; conversely, if the price declines, the Fund will realize a capital gain. Any gain will be decreased, and any loss will be increased, by the transaction costs incurred by the Fund, including the costs associated with providing collateral to the broker-dealer (usually cash, U.S. government securities or other highly liquid debt securities) and the maintenance of collateral with its custodian. Although the Fund's gain is limited to the price at which it sold the security short, its potential loss is theoretically unlimited.

Repurchase Agreements. Repurchase agreements may be seen as loans by the Fund collateralized by underlying debt securities. Under the terms of a typical repurchase agreement, the Fund would acquire an underlying debt obligation for a relatively short period (usually not more than one week) subject to an obligation of the seller to repurchase, and the Fund to resell, the obligation at an agreed price and time. This arrangement results in a fixed rate of return to the Fund that is not subject to market fluctuations during the holding period. The Fund bears a risk of loss in the event that the other party to a repurchase agreement defaults on its obligations and the Fund is delayed in or prevented from exercising its rights to dispose of the collateral securities, including the risk of a possible decline in the value of the underlying securities during the period in which it seeks to assert these rights. The Investment Adviser, acting under the supervision of the Board, reviews the creditworthiness of those banks and dealers with which the Fund enters into

repurchase agreements to evaluate these risks and monitors on an ongoing basis the value of the securities subject to repurchase agreements to ensure that the value is maintained at the required level. The Fund will not enter into repurchase agreements with the Investment Adviser or any of its affiliates.

Table of Contents

Registered Investment Companies. The Fund may invest in registered investment companies in accordance with the 1940 Act to the extent consistent with the Fund's investment objectives, including exchange traded funds that concentrate in investments in securities of companies in the natural resources or gold industries. The 1940 Act generally prohibits the Fund from investing more than 5% of its assets in any one other investment company or more than 10% of its assets in all other investment companies. However, many exchange-traded funds are exempt from these limitations.

Investment Restrictions. The Fund has adopted certain investment restrictions as fundamental policies of the Fund. Under the 1940 Act, a fundamental policy may not be changed without the vote of a majority, as defined in the 1940 Act, of the outstanding voting securities of the Fund (voting together as a single class subject to class approval rights of any preferred shares). See *Investment Restrictions* in the SAI.

Portfolio Turnover. The Fund will buy and sell securities to accomplish its investment objectives. The investment policies of the Fund, including its strategy of writing covered call options on securities in its portfolio, may lead to frequent changes in investments, particularly in periods of rapidly fluctuating interest or currency exchange rates, and are expected to result in portfolio turnover that is higher than that of many investment companies, may initially be higher than 100% and may result in the Fund paying higher commissions than many investment companies.

Portfolio turnover generally involves some expense to the Fund, including brokerage commissions or dealer mark-ups and other transaction costs on the sale of securities and reinvestment in other securities. The portfolio turnover rate is computed by dividing the lesser of the amount of the securities purchased or securities sold by the average monthly value of securities owned during the year (excluding securities whose maturities at acquisition were one year or less). Higher portfolio turnover may decrease the after-tax return to individual investors in the Fund to the extent it results in a decrease of the long term capital gains portion of distributions to shareholders.

For the years ended December 31, 2015 and December 31, 2016, the portfolio turnover rate of the Fund was 58.0% and 183.0%, respectively.

Further information on the investment objectives and policies of the Fund is set forth in the SAI.

Leverage

The Fund may use leverage, including as a result of any issuances of preferred shares or notes pursuant to an applicable Prospectus Supplement. As provided in the 1940 Act and subject to certain exceptions, the Fund may issue senior securities (which may be stock, such as preferred shares, and/or securities representing debt) only if immediately after such issuance the value of the Fund's total assets, less certain ordinary course liabilities, exceeds 300% of the amount of the debt outstanding and exceeds 200% of the amount of preferred shares and debt outstanding. Any such preferred shares may be convertible in accordance with the SEC staff guidelines, which may permit the Fund to obtain leverage at attractive rates. The use of leverage magnifies the impact of changes in net asset value. In addition, if the cost of leverage exceeds the return on the securities acquired with the proceeds of leverage, the use of leverage will diminish rather than enhance the return to the Fund. The use of leverage generally increases the volatility of returns to the Fund. See *Risk Factors and Special Considerations* *Special Risks to Holders of Common Shares* *Leverage Risk*.

In the event the Fund had both outstanding preferred shares and senior securities representing debt at the same time, the Fund's obligations to pay dividends or distributions and, upon liquidation of the Fund, liquidation payments in respect of its preferred shares would be subordinate to the Fund's obligations to make any principal and/or interest payments due and owing with respect to its outstanding senior debt securities. Accordingly, the Fund's issuance of

senior securities representing debt would have the effect of creating special risks for the Fund's preferred shareholders that would not be present in a capital structure that did not include such securities.

Additionally, the Fund may enter into derivative transactions that have economic leverage embedded in them. Derivative transactions that the Fund may enter into and the risks associated with them are described elsewhere in this Prospectus and in the SAI. The Fund cannot assure you that investments in derivative transactions that have economic leverage embedded in them will result in a higher return on its common shares.

Table of Contents

To the extent the terms of such transactions obligate the Fund to make payments, the Fund may earmark or segregate cash or liquid assets in an amount at least equal to the current value of the amount then payable by the Fund under the terms of such transactions or otherwise cover such transactions in accordance with applicable interpretations of the staff of the SEC. If the current value of the amount then payable by the Fund under the terms of such transactions is represented by the notional amounts of such investments, the Fund would segregate or earmark cash or liquid assets having a market value at least equal to such notional amounts, and if the current value of the amount then payable by the Fund under the terms of such transactions is represented by the market value of the Fund's current obligations, the Fund would segregate or earmark cash or liquid assets having a market value at least equal to such current obligations. To the extent the terms of such transactions obligate the Fund to deliver particular securities to extinguish the Fund's obligations under such transactions the Fund may cover its obligations under such transactions by either (i) owning the securities or collateral underlying such transactions or (ii) having an absolute and immediate right to acquire such securities or collateral without additional cash consideration (or, if additional cash consideration is required, having earmarked or segregated an appropriate amount of cash or liquid assets). Such earmarking, segregation or cover is intended to provide the Fund with available assets to satisfy its obligations under such transactions. As a result of such earmarking, segregation or cover, the Fund's obligations under such transactions will not be considered senior securities representing indebtedness for purposes of the 1940 Act, or considered borrowings subject to the Fund's limitations on borrowings discussed above, but may create leverage for the Fund. To the extent that the Fund's obligations under such transactions are not so earmarked, segregated or covered, such obligations may be considered senior securities representing indebtedness under the 1940 Act and therefore subject to the 300% asset coverage requirement.

These earmarking, segregation or cover requirements can result in the Fund maintaining securities positions it would otherwise liquidate, segregating or earmarking assets at a time when it might be disadvantageous to do so or otherwise restrict portfolio management.

Derivative Instruments

The Fund may also utilize other types of derivative instruments primarily for hedging or risk management purposes. These instruments include futures, forward contracts, options on such contracts and interest rate, total return and other kinds of swaps. For a further description of such derivative instruments, see *Investment Objectives and Policies* *Additional Investment Policies* in the SAI.

Options. The Fund may, from time to time, subject to guidelines of the Board and the limitations set forth in the Prospectus, purchase or sell (i.e., write) options on securities, securities indices and foreign currencies which are listed on a national securities exchange or in the OTC market, as a means of achieving additional return or of hedging the value of the Fund's portfolio.

A call option is a contract that gives the holder of the option the right to buy from the writer of the call option, in return for a premium, the security or currency underlying the option at a specified exercise price at any time during the term of the option. The writer of the call option has the obligation, upon exercise of the option, to deliver the underlying security or currency upon payment of the exercise price during the option period.

A put option is a contract that gives the holder of the option the right, in return for a premium, to sell to the seller the underlying security at a specified price. The seller of the put option has the obligation to buy the underlying security upon exercise at the exercise price.

A call option is covered if the Fund owns the underlying instrument covered by the call or has an absolute and immediate right to acquire that instrument without additional cash consideration (or for additional cash consideration

held in a segregated account by its custodian) upon conversion or exchange of other instruments held in its portfolio. A call option is also covered if the Fund holds a call option on the same instrument as the call option written where the exercise

Table of Contents

price of the call option held is (i) equal to or less than the exercise price of the call option written or (ii) greater than the exercise price of the call option written if the difference is maintained by the Fund in cash, U.S. government securities or other high-grade short-term obligations in a segregated account with its custodian. A call option is uncovered if the underlying security covered by the call is not held by the Fund. A put option is covered if the Fund maintains cash or other liquid securities with a value equal to the exercise price in a segregated account with its custodian, or else holds a put option on the same instrument as the put option written where the exercise price of the put option held is equal to or greater than the exercise price of the put option written.

If the Fund has written an option, it may terminate its obligation by effecting a closing purchase transaction. This is accomplished by purchasing an option of the same series as the option previously written. However, once the Fund has been assigned an exercise notice, the Fund will be unable to effect a closing purchase transaction. Similarly, if the Fund is the holder of an option it may liquidate its position by effecting a closing sale transaction. This is accomplished by selling an option of the same series as the option previously purchased. There can be no assurance that either a closing purchase or sale transaction can be effected when the Fund so desires.

The Fund will realize a profit from a closing transaction if the price of the transaction is less than the premium received from writing the option, or is more than the premium paid to purchase the option; the Fund will realize a loss from a closing transaction if the price of the transaction is more than the premium received from writing the option, or is less than the premium paid to purchase the option. Since call option prices generally reflect increases in the price of the underlying security, any loss resulting from the repurchase of a call option may also be wholly or partially offset by unrealized appreciation of the underlying security. Other principal factors affecting the market value of a put or a call option include supply and demand, interest rates, the current market price and price volatility of the underlying security and the time remaining until the expiration date of the option. Gains and losses on investments in options depend, in part, on the ability of the Investment Adviser to correctly predict the effect of these factors. The use of options cannot serve as a complete hedge since the price movement of securities underlying the options will not necessarily follow the price movements of the portfolio securities subject to the hedge.

An option position may be closed out only on an exchange that provides a secondary market for an option of the same series or in a private transaction. Although the Fund will generally purchase or write only those options for which there appears to be an active secondary market, there is no assurance that a liquid secondary market on an exchange will exist for any particular option. In such event it might not be possible to effect closing transactions in particular options, in which case the Fund would have to exercise its options in order to realize any profit and would incur brokerage commissions upon the exercise of call options and upon the subsequent disposition of underlying securities for the exercise of put options. If the Fund, as a covered call option writer, is unable to effect a closing purchase transaction in a secondary market, it will not be able to sell the underlying security until the option expires or it delivers the underlying security upon exercise, or otherwise covers the position.

To the extent that the Fund purchases options pursuant to a hedging strategy, the Fund will be subject to the following additional risks. If a put or call option purchased by the Fund is not sold when it has remaining value, and if the market price of the underlying security remains equal to or greater than the exercise price (in the case of a put), or remains less than or equal to the exercise price (in the case of a call), the Fund will lose its entire investment in the option.

Where a put or call option on a particular security is purchased to hedge against price movements in that or a related security, the price of the put or call option may move more or less than the price of the security. If restrictions on exercise are imposed, the Fund may be unable to exercise an option it has purchased. If the Fund is unable to close out an option that it has purchased on a security, it will have to exercise the option in order to realize any profit, or the option may expire worthless.

Options on Securities Indices. The Fund may purchase and sell securities index options. One effect of such transactions may be to hedge all or part of the Fund's securities holdings against a general decline in the securities market or a segment of the securities market. Options on securities indices are similar to options on stocks except that, rather than the right to take or make delivery of stock at a specified price, an option on a securities index gives the holder the right to receive, upon exercise of the option, an amount of cash if the closing level of the securities index upon which the option is based is greater than, in the case of a call option, or less than, in the case of a put option, the exercise price of the option.

Table of Contents

The Fund's successful use of options on indices depends upon its ability to predict the direction of the market and is subject to various additional risks. The correlation between movements in the index and the price of the securities being hedged against is imperfect and the risk from imperfect correlation increases as the composition of the Fund diverges from the composition of the relevant index. Accordingly, a decrease in the value of the securities being hedged against may not be wholly offset by a gain on the exercise or sale of a securities index put option held by the Fund.

Futures Contracts and Options on Futures. The Fund may, without limit, enter into futures contracts or options on futures contracts. It is anticipated that these investments, if any, will be made by the Fund primarily for the purpose of hedging against changes in the value of its portfolio securities and in the value of securities it intends to purchase. Such investments will only be made if they are economically appropriate to the reduction of risks involved in the management of the Fund. In this regard, the Fund may enter into futures contracts or options on futures for the purchase or sale of securities indices or other financial instruments including but not limited to U.S. government securities.

A sale of a futures contract (or a short futures position) means the assumption of a contractual obligation to deliver the securities underlying the contract at a specified price at a specified future time. A purchase of a futures contract (or a long futures position) means the assumption of a contractual obligation to acquire the securities underlying the contract at a specified price at a specified future time. Certain futures contracts, including stock and bond index futures, are settled on a net cash payment basis rather than by the sale and delivery of the securities underlying the futures contracts.

No consideration will be paid or received by the Fund upon the purchase or sale of a futures contract. Initially, the Fund will be required to deposit with the broker an amount of cash or cash equivalents equal to approximately 1% to 10% of the contract amount (this amount is subject to change by the exchange or board of trade on which the contract is traded and brokers or members of such board of trade may charge a higher amount). This amount is known as the initial margin and is in the nature of a performance bond or good faith deposit on the contract. Subsequent payments, known as variation margin, to and from the broker will be made daily as the price of the index or security underlying the futures contract fluctuates. At any time prior to the expiration of the futures contract, the Fund may elect to close the position by taking an opposite position, which will operate to terminate its existing position in the contract.

An option on a futures contract gives the purchaser the right, in return for the premium paid, to assume a position in a futures contract at a specified exercise price at any time prior to the expiration of the option. Upon exercise of an option, the delivery of the futures position by the writer of the option to the holder of the option will be accompanied by delivery of the accumulated balance in the writer's futures margin account attributable to that contract, which represents the amount by which the market price of the futures contract exceeds, in the case of a call, or is less than, in the case of a put, the exercise price of the option on the futures contract. The potential loss related to the purchase of an option on futures contracts is limited to the premium paid for the option (plus transaction costs). Because the value of the option purchased is fixed at the point of sale, there are no daily cash payments by the purchaser to reflect changes in the value of the underlying contract; however, the value of the option does change daily and that change would be reflected in the net assets of the Fund.

Futures and options on futures entail certain risks, including but not limited to the following: no assurance that futures contracts or options on futures can be offset at favorable prices; possible reduction of the yield of the Fund due to the use of hedging; possible reduction in value of both the securities hedged and the hedging instrument; possible lack of liquidity due to daily limits on price fluctuations; imperfect correlation between the contracts and the securities being hedged; losses from investing in futures transactions that are potentially unlimited; and the segregation requirements described below.

Table of Contents

Limitations on the Purchase and Sale of Futures Contracts, Certain Options, and Swaps. Subject to the guidelines of the Board, the Fund may engage in commodity interest transactions (generally, transactions in futures, certain options, certain currency transactions, and certain types of swaps) only for bona fide hedging or other permissible transactions in accordance with the rules and regulations of the Commodity Futures Trading Commission (CFTC). Pursuant to amendments by the CFTC to Rule 4.5 under the Commodity Exchange Act (CEA), the Investment Adviser has filed a notice of exemption from registration as a commodity pool operator with respect to the Fund. The Fund and the Investment Adviser are therefore not subject to registration or regulation as a commodity pool operator under the CEA. In addition, certain trading restrictions are applicable to the Fund as a result of this status. These trading restrictions permit the Fund to engage in commodity interest transactions that include (i) bona fide hedging transactions, as that term is defined and interpreted by the CFTC and its staff, without regard to the percentage of the Fund's assets committed to margin and options premiums and (ii) non-bona fide hedging transactions, provided that the Fund does not enter into such non-bona fide hedging transactions if, immediately thereafter, either (a) the sum of the amount of initial margin deposits on the Fund's existing futures positions or swaps positions and option or swaption premiums would exceed 5% of the market value of the Fund's liquidating value, after taking into account unrealized profits and unrealized losses on any such transactions, or (b) the aggregate net notional value of the Fund's commodity interest transactions would not exceed 100% of the market value of the Fund's liquidating value, after taking into account unrealized profits and unrealized losses on any such transactions. In addition to meeting one of the foregoing trading limitations, the Fund may not market itself as a commodity pool or otherwise as a vehicle for trading in the futures, options or swaps markets. Therefore, in order to claim the Rule 4.5 exemption, the Fund is limited in its ability to invest in commodity futures, options, and certain types of swaps (including securities futures, broad based stock index futures, and financial futures contracts). As a result, the Fund is more limited in its ability to use these instruments than in the past, and these limitations may have a negative impact on the ability of the Investment Adviser to manage the Fund, and on the Fund's performance. If the Investment Adviser was required to register as a commodity pool operator with respect to the Fund, compliance with additional registration and regulatory requirements would increase Fund expenses. Other potentially adverse regulatory initiatives could also develop.

Swaps. The Fund may enter into total rate of return, credit default or other types of swaps and related derivatives for the purpose of hedging and risk management. These transactions generally provide for the transfer from one counterparty to another of certain risks inherent in the ownership of a financial asset such as a common stock or debt instrument. Such risks include, among other things, the risk of default and insolvency of the obligor of such asset, the risk that the credit of the obligor or the underlying collateral will decline or the risk that the common stock of the underlying issuer will decline in value. The transfer of risk pursuant to a derivative of this type may be complete or partial, and may be for the life of the related asset or for a shorter period. These derivatives may be used as a risk management tool for a pool of financial assets, providing the Fund with the opportunity to gain or reduce exposure to one or more reference securities or other financial assets (each, a Reference Asset) without actually owning or selling such assets in order, for example, to increase or reduce a concentration risk or to diversify a portfolio. Conversely, these derivatives may be used by the Fund to reduce exposure to an owned asset without selling it.

Because the Fund would not own the Reference Assets, the Fund may not have any voting rights with respect to the Reference Assets, and in such cases all decisions related to the obligors or issuers of the Reference Assets, including whether to exercise certain remedies, will be controlled by the swap counterparties.

Total rate of return swap agreements are contracts in which one party agrees to make periodic payments to another party based on the change in market value of the assets underlying the contract, which may include a specified security, basket of securities or securities indices during the specified period, in return for periodic payments based on a fixed or variable interest rate or the total return from other underlying assets.

A credit default swap consists of an agreement between two parties in which the buyer agrees to pay to the seller a periodic stream of payments over the term of the contract and the seller agrees to pay the buyer the par value (or other agreed-upon value) of a referenced debt obligation upon the occurrence of a credit event with respect to the issuer of the referenced debt obligation. Generally, a credit event means bankruptcy, failure to pay, obligation acceleration or

Table of Contents

modified restructuring. The Fund may be either the buyer or seller in a credit default swap. As the buyer in a credit default swap, the Fund would pay to the counterparty the periodic stream of payments. If no default occurs, the Fund would receive no benefit from the contract. As the seller in a credit default swap, the Fund would receive the stream of payments but would be subject to exposure on the notional amount of the swap, which it would be required to pay in the event of a credit event with respect to the issuer of the referenced debt obligation. Accordingly, if the Fund sells a credit default swap (or a credit default index swap), it intends at all times to segregate or designate on its books and records liquid assets in an amount at least equal to the notional amount of the swap (*i.e.*, the cost of payment to the buyer if a credit event occurs).

The Fund may also enter into equity contract for difference swap transactions for the purpose of increasing the income of the Fund. In an equity contract for difference swap, a set of future cash flows is exchanged between two counterparties. One of these cash flow streams will typically be based on a reference interest rate combined with the performance of a notional value of shares of a stock. The other will be based on the performance of the shares of a stock. Depending on the general state of short term interest rates and the returns on the Fund's portfolio securities at the time an equity contract for difference swap transaction reaches its scheduled termination date, there is a risk that the Fund will not be able to obtain a replacement transaction or that the terms of the replacement will not be as favorable as on the expiring transaction.

Total rate of return swaps and similar derivatives are subject to many risks, including the possibility that the market will move in a manner or direction that would have resulted in gain for the Fund had the swap or other derivative not been utilized (in which case it would have been better had the Fund not engaged in the hedging transactions), the risk of imperfect correlation between the risk sought to be hedged and the derivative transactions utilized, the possible inability of the counterparty to fulfill its obligations under the swap and potential illiquidity of the hedging instrument utilized, which may make it difficult for the Fund to close out or unwind one or more hedging transactions.

Total rate of return swaps and related derivatives are a relatively recent development in the financial markets. Consequently, there are certain legal, tax and market uncertainties that present risks in entering into such arrangements.

There is currently little or no case law or litigation characterizing total rate of return swaps or related derivatives, interpreting their provisions, or characterizing their tax treatment. In addition, additional regulations and laws may apply to these types of derivatives that have not previously been applied. There can be no assurance that future decisions construing similar provisions to those in any swap agreement or other related documents or additional regulations and laws will not have an adverse effect on the Fund that utilizes these instruments.

RISK FACTORS AND SPECIAL CONSIDERATIONS

Investors should consider the following risk factors and special considerations associated with investing in the Fund:

General Risks

Total Return Risk. The Fund utilizes several investment management techniques in an effort to generate positive total return. The risks of these techniques, such as option writing, concentration in certain industries, and investing in emerging markets, are described in the following paragraphs. Taken together these and other techniques represent a risk that the Fund will experience a negative total return even in market environments that are generally positive and that the Fund's returns, both positive and negative, may be more volatile than if the Fund did not utilize these investment techniques.

Industry Risk. The Fund's investments will be concentrated in the natural resources and gold industries. Because the Fund is concentrated in these industries, it may present more risks than if it were broadly diversified over numerous industries and sectors of the economy. A downturn in the natural resources or gold industries would have a larger impact on the Fund than on an investment company that does not concentrate in such industries.

Table of Contents

Under normal market conditions the Fund will invest at least 25% of its assets in securities of Natural Resources Companies. A downturn in the indicated natural resources industries would have a larger impact on the Fund than on an investment company that does not invest significantly in such industries. Such industries can be significantly affected by the supply of and demand for the indicated commodities and related services, exploration and production spending, government regulations, world events and economic conditions. The base metals, metals, paper, food and agriculture, forestry products, water, gas, oil, sustainable energy and other commodities industries can be significantly affected by events relating to international political developments, the success of exploration projects, commodity prices, and tax and government regulations. The stock prices of Natural Resources Companies may also experience greater price volatility than other types of common stocks. Securities issued by Natural Resources Companies are sensitive to changes in the prices of, and in supply and demand for, the indicated commodities. The value of securities issued by Natural Resources Companies may be affected by changes in overall market movements, changes in interest rates, or factors affecting a particular industry or commodity, such as weather, embargoes, tariffs, policies of commodity cartels and international economic, political and regulatory developments. The Investment Adviser's judgments about trends in the prices of these securities and commodities may prove to be incorrect. It is possible that the performance of securities of Natural Resources Companies may lag the performance of other industries or the broader market as a whole.

Under normal market conditions the Fund will invest at least 25% of its assets in securities of Gold Companies. Securities of Gold Companies may experience greater volatility than companies not involved in the gold industries. Investments related to gold are considered speculative and are affected by a variety of worldwide economic, financial and political factors. The price of gold may fluctuate sharply, including substantial decreases, over short periods of time due to changes in inflation or expectations regarding inflation in various countries, the availability of supplies of gold, changes in industrial and commercial demand, gold sales by governments, central banks or international agencies, investment speculation, monetary and other economic policies of various governments and government restrictions on private ownership of gold. In times of significant inflation or great economic uncertainty, Gold Companies have at times outperformed securities markets generally. However, in times of stable economic growth, traditional equity and debt investments could offer greater appreciation potential and the value of gold and the prices of securities of Gold Companies may be adversely affected, which could in turn affect the Fund's returns. Some Gold Companies hedge, to varying degrees, their exposure to declines in the price of gold. Such hedging limits a Gold Company's ability to benefit from future rises in the price of gold. The Investment Adviser's judgments about trends in the prices of securities of Gold Companies may prove to be incorrect. It is possible that the performance of securities of Gold Companies may lag the performance of other industries or the broader market as a whole.

Supply and Demand Risk. A decrease in the production of or exploration of, gold, base metals, metals, paper, food and agriculture, forestry products, gas, oil and other commodities or a decrease in the volume of such commodities available for transportation, mining, processing, storage or distribution may adversely impact the financial performance of the Fund's investments. Production declines and volume decreases could be caused by various factors, including catastrophic events affecting production, depletion of resources, labor difficulties, environmental proceedings, increased regulations, equipment failures and unexpected maintenance problems, import supply disruption, increased competition from alternative energy sources or commodity prices. Sustained declines in demand for the indicated commodities could also adversely affect the financial performance of Natural Resources Companies and Gold Companies over the long-term. Factors which could lead to a decline in demand include economic recession or other adverse economic conditions, higher fuel taxes or governmental regulations, increases in fuel economy, consumer shifts to the use of alternative fuel sources, changes in commodity prices, or weather.

Depletion and Exploration Risk. Many Natural Resources Companies and Gold Companies are either engaged in the production or exploration of particular commodities or are engaged in transporting, storing, distributing and processing such commodities. To maintain or increase their revenue level, these companies or their customers need to

maintain or expand their reserves through exploration of new sources of supply, the development of existing sources,

Table of Contents

acquisitions, or long-term contracts to acquire reserves. The financial performance of Natural Resources Companies and Gold Companies may be adversely affected if they, or the companies to whom they provide products or services, are unable to cost effectively acquire additional products or reserves sufficient to replace the natural decline.

Regulatory Risk. Natural Resources Companies and Gold Companies may be subject to extensive government regulation in virtually every aspect of their operations, including how facilities are constructed, maintained and operated, environmental and safety controls, and in some cases the prices they may charge for the products and services they provide. Various governmental authorities have the power to enforce compliance with these regulations and the permits issued under them, and violators are subject to administrative, civil and criminal penalties, including civil fines, injunctions or both. Stricter laws, regulations or enforcement policies could be enacted in the future, which would likely increase compliance costs and may adversely affect the financial performance of Natural Resources Companies and Gold Companies.

Commodity Pricing Risk. The operations and financial performance of Natural Resources Companies and Gold Companies may be directly affected by the prices of the indicated commodities, especially those Natural Resources Companies and Gold Companies for whom the commodities they own are significant assets. Commodity prices fluctuate for several reasons, including changes in market and economic conditions, levels of domestic production, impact of governmental regulation and taxation, the availability of transportation systems and, in the case of oil and gas companies in particular, conservation measures and the impact of weather. Volatility of commodity prices, which may lead to a reduction in production or supply, may also negatively affect the performance of Natural Resources Companies and Gold Companies which are solely involved in the transportation, processing, storing, distribution or marketing of commodities. Volatility of commodity prices may also make it more difficult for Natural Resources Companies and Gold Companies to raise capital to the extent the market perceives that their performance may be directly or indirectly tied to commodity prices.

Catastrophe Risk. The operations of Natural Resources Companies and Gold Companies are subject to many hazards inherent in the development of energy infrastructure and the acquisition, exploration, production, mining, processing (including fractionating), refining, transportation (including trans-loading), storage, servicing or marketing of natural resources, including, but not limited to, crude oil, refined products, petrochemicals, natural gas, natural gas liquids, coal, metals and renewable energy sources, including damage to production equipment, pipelines, storage tanks or related equipment and surrounding properties caused by hurricanes, tornadoes, floods, fires and other natural disasters or by acts of terrorism; inadvertent damage from construction or other equipment; leaks of natural gas, natural gas liquids, crude oil, refined petroleum products or other hydrocarbons; and fires and explosions. These risks could result in substantial losses due to personal injury or loss of life, severe damage to and destruction of property and equipment and pollution or other environmental damage, and might result in the curtailment or suspension of their related operations. Not all Natural Resources Companies or Gold Companies are fully insured against all risks inherent to their businesses. If a significant accident or event occurs that is not fully insured, it could adversely affect a Natural Resources Company's or Gold Company's operations and financial condition.

Interest Rate Risk for Natural Resources Companies and Gold Companies. The prices of the equity and debt securities of the Natural Resources Companies and Gold Companies that the Fund holds in its portfolio are susceptible in the short term to decline when interest rates rise. Rising interest rates could limit the capital appreciation of securities of certain investments as a result of the increased availability of alternative investments with yields comparable to those investments. Rising interest rates could adversely affect the financial performance of Natural Resources Companies and Gold Companies generally by increasing their cost of capital. This may reduce their ability to execute acquisitions or expansion projects in a cost-effective manner. The risk of rising interest rates may be more pronounced because certain rates are near historical lows.

Risks Associated with Covered Calls and Other Option Transactions. There are several risks associated with transactions in options on securities. For example, there are significant differences between the securities and options markets that could result in an imperfect correlation between these markets, causing a given covered call option

Table of Contents

transaction not to achieve its objectives. A decision as to whether, when and how to use covered calls (or other options) involves the exercise of skill and judgment, and even a well-conceived transaction may be unsuccessful because of market behavior or unexpected events. The use of options may require the Fund to sell portfolio securities at inopportune times or for prices other than current market values, may limit the amount of appreciation the Fund can realize on an investment, or may cause the Fund to hold a security it might otherwise sell. As the writer of a covered call option, the Fund forgoes, during the option's life, the opportunity to profit from increases in the market value of the security covering the call option above the exercise price of the call option, but has retained the risk of loss should the price of the underlying security decline. Although such loss would be offset in part by the option premium received, in a situation in which the price of a particular stock on which the Fund has written a covered call option declines rapidly and materially or in which prices in general on all or a substantial portion of the stocks on which the Fund has written covered call options decline rapidly and materially, the Fund could sustain material depreciation or loss in its net assets to the extent it does not sell the underlying securities (which may require it to terminate, offset or otherwise cover its option position as well). The writer of an option has no control over the time when it may be required to fulfill its obligation as a writer of the option. Once an option writer has received an exercise notice, it cannot effect a closing purchase transaction in order to terminate its obligation under the option and must deliver the underlying security at the exercise price.

There can be no assurance that a liquid market will exist when the Fund seeks to close out an option position. Reasons for the absence of a liquid secondary market for exchange-traded options include the following: (i) there may be insufficient trading interest; (ii) restrictions may be imposed by an exchange on opening transactions or closing transactions or both; (iii) trading halts, suspensions or other restrictions may be imposed with respect to particular classes or series of options; (iv) unusual or unforeseen circumstances may interrupt normal operations on an exchange; (v) the trading facilities of an exchange or the Options Clearing Corporation (the OCC) may not be adequate to handle current trading volume; or (vi) the relevant exchange could, for economic or other reasons, decide or be compelled at some future date to discontinue the trading of options (or a particular class or series of options). If trading were discontinued, the secondary market on that exchange (or in that class or series of options) would cease to exist. However, outstanding options on that exchange that had been issued by the OCC as a result of trades on that exchange would continue to be exercisable in accordance with their terms. The Fund's ability to terminate over-the-counter options may be more limited than with exchange-traded options and may involve the risk that counterparties participating in such transactions will not fulfill their obligations. If the Fund were unable to close out a covered call option that it had written on a security, it would not be able to sell the underlying security unless the option expired without exercise.

The hours of trading for options may not conform to the hours during which the underlying securities are traded. To the extent that the options markets close before the markets for the underlying securities, significant price and rate movements can take place in the underlying markets that cannot be reflected in the options markets. Call options are marked to market daily and their value will be affected by changes in the value of and dividend rates of the underlying common stocks, an increase in interest rates, changes in the actual or perceived volatility of the stock market and the underlying common stocks and the remaining time to the options' expiration. Additionally, the exercise price of an option may be adjusted downward before the option's expiration as a result of the occurrence of certain corporate events affecting the underlying equity security, such as extraordinary dividends, stock splits, merger or other extraordinary distributions or events. A reduction in the exercise price of an option would reduce the Fund's capital appreciation potential on the underlying security.

Limitation on Covered Call Writing Risk. The number of covered call options the Fund can write is limited by the number of shares of the corresponding common stock the Fund holds. Furthermore, the Fund's covered call options and other options transactions will be subject to limitations established by each of the exchanges, boards of trade or other trading facilities on which such options are traded. These limitations govern the maximum number of options in

each class which may be written or purchased by a single investor or group of investors acting in concert, regardless of whether the options are written or purchased on the same or different exchanges, boards of trade or other trading facilities or are held or written in one or more accounts or through one or more brokers. As a result, the number of covered call options that the Fund may write or purchase may be affected by options written or purchased by it and other investment advisory clients of the Investment Adviser. An exchange, board of trade or other trading facility may order the liquidation of positions found to be in excess of these limits, and it may impose certain other sanctions.

Table of Contents

Risks Associated with Uncovered Calls. There are special risks associated with uncovered option writing which expose the Fund to potentially significant loss. As the writer of an uncovered call option, the Fund has no risk of loss should the price of the underlying security decline, but bears unlimited risk of loss should the price of the underlying security increase above the exercise price until the Fund covers its exposure. As with writing uncovered calls, the risk of writing uncovered put options is substantial. The writer of an uncovered put option bears a risk of loss if the value of the underlying instrument declines below the exercise price. Such loss could be substantial if there is a significant decline in the value of the underlying instrument.

For combination writing, where the Fund writes both a put and a call on the same underlying instrument, the potential risk is unlimited. If a secondary market in options were to become unavailable, the Fund could not engage in losing transactions and would remain obligated until expiration or assignment.

Equity Risk. Investing in the Fund involves equity risk, which is the risk that the securities held by the Fund will fall in market value due to adverse market and economic conditions, perceptions regarding the industries in which the issuers of securities held by the Fund participate and the particular circumstances and performance of particular companies whose securities the Fund holds. An investment in the Fund represents an indirect economic stake in the securities owned by the Fund, which are for the most part traded on securities exchanges or in the OTC markets. The market value of these securities, like other market investments, may move up or down, sometimes rapidly and unpredictably. The net asset value of the Fund may at any point in time be worth less than the amount at the time the shareholder invested in the Fund, even after taking into account any reinvestment of distributions.

Common Stock Risk. Common stock of an issuer in the Fund's portfolio may decline in price for a variety of reasons, including if the issuer fails to make anticipated dividend payments because, among other reasons, the issuer of the security experiences a decline in its financial condition. Common stock in which the Fund will invest is structurally subordinated as to income and residual value to preferred stock, bonds and other debt instruments in a company's capital structure, in terms of priority to corporate income, and therefore will be subject to greater dividend risk than preferred stock or debt instruments of such issuers. In addition, while common stock has historically generated higher average returns than fixed income securities, common stock has also experienced significantly more volatility in those returns.

Distribution Risk for Equity Income Portfolio Securities. In selecting equity income securities in which the Fund will invest, the Investment Adviser will consider the issuer's history of making regular periodic distributions (*i.e.*, dividends) to its equity holders. An issuer's history of paying dividends or other distributions, however, does not guarantee that the issuer will continue to pay dividends or other distributions in the future. The dividend income stream associated with equity income securities generally is not guaranteed and will be subordinate to payment obligations of the issuer on its debt and other liabilities. Accordingly, an issuer may forgo paying dividends on its equity securities. In addition, because in most instances issuers are not obligated to make periodic distributions to the holders of their equity securities, such distributions or dividends generally may be discontinued at the issuer's discretion.

Commodities-Linked Equity Derivative Instrument Risk. The Fund may invest in structured notes that are linked to one or more underlying commodities. Such structured notes provide exposure to the investment returns of physical commodities without actually investing directly in physical commodities. Such structured notes in which the Fund may invest are hybrid instruments that have substantial risks, including risk of loss of all or a significant portion of their principal value. Because the payments on these notes are linked to the price change of the underlying commodities, these investments are subject to market risks that relate to the movement of prices in the commodities markets. They may also be subject to additional special risks that do not affect traditional equity and debt securities that may be greater than or in addition to the risks of derivatives in general, including risk of loss of interest, risk of

loss of principal, lack of liquidity and risk of greater volatility.

Table of Contents

Interest Rate Risk. During periods of declining interest rates, the issuer of a preferred stock or fixed income security may be able to exercise an option to prepay principal earlier than scheduled, forcing the Fund to reinvest in lower yielding securities. This is known as call or prepayment risk. Preferred stock and debt securities frequently have call features that allow the issuer to redeem the securities prior to their stated maturities. An issuer may redeem such a security if the issuer can refinance it at a lower cost due to declining interest rates or an improvement in the credit standing of the issuer. During periods of rising interest rates, the average life of certain types of securities may be extended because of slower than expected principal payments. This may prolong the length of time the security pays a below market interest rate, increase the security's duration and reduce the value of the security. This is known as extension risk.

Preferred Stock Risk. There are special risks associated with the Fund's investing in preferred securities, including:

Deferral. Preferred securities may include provisions that permit the issuer, at its discretion, to defer dividends or distributions for a stated period without any adverse consequences to the issuer. If the Fund owns a preferred security that is deferring its dividends or distributions, the Fund may be required to report income for tax purposes although it has not yet received such income.

Non-Cumulative Dividends. Some preferred securities are non-cumulative, meaning that the dividends do not accumulate and need not ever be paid. A portion of the portfolio may include investments in non-cumulative preferred securities, whereby the issuer does not have an obligation to make up any arrearages to its shareholders. Should an issuer of a non-cumulative preferred security held by the Fund determine not to pay dividends or distributions on such security, the Fund's return from that security may be adversely affected. There is no assurance that dividends or distributions on non-cumulative preferred securities in which the Fund invests will be declared or otherwise made payable.

Subordination. Preferred securities are subordinated to bonds and other debt instruments in an issuer's capital structure in terms of priority to corporate income and liquidation payments, and therefore will be subject to greater credit risk than more senior debt security instruments.

Liquidity. Preferred securities may be substantially less liquid than many other securities, such as common stocks or U.S. government securities.

Limited Voting Rights. Generally, preferred security holders (such as the Fund) have no voting rights with respect to the issuing company unless preferred dividends have been in arrears for a specified number of periods, at which time the preferred security holders may be entitled to elect a number of directors to the issuer's board. Generally, once all the arrearages have been paid, the preferred security holders no longer have voting rights.

Special Redemption Rights. In certain varying circumstances, an issuer of preferred securities may redeem the securities prior to a specified date. For instance, for certain types of preferred securities, a

redemption may be triggered by a change in U.S. federal income tax or securities laws. A redemption by the issuer may negatively impact the return of the security held by the Fund.

Foreign Securities Risk. Because many of the world's Natural Resources Companies and Gold Companies are located outside of the United States, the Fund may have a significant portion of its investments in securities that are traded in foreign markets and that are not subject to the requirements of the U.S. securities laws, markets and accounting requirements. Investments in the securities of foreign issuers involve certain considerations and risks not ordinarily associated with investments in securities of domestic issuers and such securities may be more volatile than those of issuers located in the United States. Foreign companies are not generally subject to uniform accounting, auditing and financial standards and requirements comparable to those applicable to U.S. companies. Foreign securities exchanges, brokers and listed companies may be subject to less government supervision and regulation than exists in the United States. Dividend

Table of Contents

and interest income may be subject to withholding and other foreign taxes, which may adversely affect the net return on such investments. There may be difficulty in obtaining or enforcing a court judgment abroad. In addition, it may be difficult to effect repatriation of capital invested in certain countries. In addition, with respect to certain countries, there are risks of expropriation, confiscatory taxation, political or social instability or diplomatic developments that could affect assets of the Fund held in foreign countries. Dividend income the Fund receives from foreign securities may not be eligible for the special tax treatment applicable to qualified dividend income. Moreover, certain equity investments in foreign issuers classified as passive foreign investment companies may be subject to additional taxation risk.

There may be less publicly available information about a foreign company than a U.S. company. Foreign securities markets may have substantially less volume than U.S. securities markets and some foreign company securities are less liquid than securities of otherwise comparable U.S. companies. A portfolio of foreign securities may also be adversely affected by fluctuations in the rates of exchange between the currencies of different nations and by exchange control regulations. Foreign markets also have different clearance and settlement procedures that could cause the Fund to encounter difficulties in purchasing and selling securities on such markets and may result in the Fund missing attractive investment opportunities or experiencing loss. In addition, a portfolio that includes foreign securities can expect to have a higher expense ratio because of the increased transaction costs on non-U.S. securities markets and the increased costs of maintaining the custody of foreign securities.

The Fund also may purchase ADRs or U.S. dollar-denominated securities of foreign issuers. ADRs are receipts issued by U.S. banks or trust companies in respect of securities of foreign issuers held on deposit for use in the U.S. securities markets. While ADRs may not necessarily be denominated in the same currency as the securities into which they may be converted, many of the risks associated with foreign securities may also apply to ADRs. In addition, the underlying issuers of certain depositary receipts, particularly unsponsored or unregistered depositary receipts, are under no obligation to distribute shareholder communications to the holders of such receipts, or to pass through to them any voting rights with respect to the deposited securities.

The following provides more detail on certain pronounced risks with foreign investing:

Foreign Currency Risk. The Fund may invest in companies whose securities are denominated or quoted in currencies other than U.S. dollars or have significant operations or markets outside of the United States. In such instances, the Fund will be exposed to currency risk, including the risk of fluctuations in the exchange rate between U.S. dollars (in which the Fund's shares are denominated) and such foreign currencies, the risk of currency devaluations and the risks of non-exchangeability and blockage. As non-U.S. securities may be purchased with and payable in currencies of countries other than the U.S. dollar, the value of these assets measured in U.S. dollars may be affected favorably or unfavorably by changes in currency rates and exchange control regulations. Fluctuations in currency rates may adversely affect the ability of the Investment Adviser to acquire such securities at advantageous prices and may also adversely affect the performance of such assets.

Certain non-U.S. currencies, primarily in developing countries, have been devalued in the past and might face devaluation in the future. Currency devaluations generally have a significant and adverse impact on the devaluing country's economy in the short and intermediate term and on the financial condition and results of companies operations in that country. Currency devaluations may also be accompanied by significant declines in the values and liquidity of equity and debt securities of affected governmental and private sector entities generally. To the extent that affected companies have obligations denominated in currencies other than the devalued currency, those companies may also have difficulty in meeting those obligations under such circumstances, which in turn could have an adverse

effect upon the value of the Fund's investments in such companies. There can be no assurance that current or future developments with respect to foreign currency devaluations will not impair the Fund's investment flexibility, its ability to achieve its investment objectives or the value of certain of its foreign currency-denominated investments.

Table of Contents

Tax Consequences of Foreign Investing. The Fund's transactions in foreign currencies, foreign currency-denominated debt obligations and certain foreign currency options, futures contracts and forward contracts (and similar instruments) may give rise to ordinary income or loss to the extent such income or loss results from fluctuations in the value of the foreign currency concerned. This treatment could increase or decrease the Fund's ordinary income distributions to you, and may cause some or all of the Fund's previously distributed income to be classified as a return of capital. In certain cases, the Fund may make an election to treat gain or loss attributable to certain investments as capital gain or loss.

EMU and Redenomination Risk. Any partial or complete dissolution of the European Monetary Union (the EMU) could have significant adverse effects on currency and financial markets, and on the values of the Fund's portfolio investments. Such effects could include the redenomination of the Fund's investments from the Euro into a different or newly adopted currency. Redenomination could cause the Fund's investments to decline significantly and unpredictably while also exposing the Fund's investments to increased foreign currency risk, liquidity risk and valuation risk. The Fund may incur additional expenses to the extent it is required to seek judicial or other clarification of the denomination or value of such securities.

Emerging Markets Risk. The considerations noted above in Foreign Securities Risk are generally intensified for investments in emerging market countries. Emerging market countries typically have economic and political systems that are less fully developed, and can be expected to be less stable than those of more developed countries. Investing in securities of companies in emerging markets may entail special risks relating to potential political and economic instability and the risks of expropriation, nationalization, confiscation or the imposition of restrictions on foreign investment, the lack of hedging instruments and restrictions on repatriation of capital invested. Economies of such countries can be subject to rapid and unpredictable rates of inflation or deflation. Emerging securities markets are substantially smaller, less developed, less liquid and more volatile than the major securities markets. The limited size of emerging securities markets and limited trading volume compared to the volume of trading in U.S. securities could cause prices to be erratic for reasons apart from factors that affect the quality of the securities. For example, limited market size may cause prices to be unduly influenced by traders who control large positions. Adverse publicity and investors' perceptions, whether or not based on fundamental analysis, may decrease the value and liquidity of portfolio securities, especially in these markets. Other risks include high concentration of market capitalization and trading volume in a small number of issuers representing a limited number of industries, as well as a high concentration of investors and financial intermediaries; overdependence on exports, including gold and natural resources exports, making these economies vulnerable to changes in commodity prices; overburdened infrastructure and obsolete or unseasoned financial systems; environmental problems; less developed legal systems; and less reliable securities custodial services and settlement practices. Certain emerging markets may also face other significant internal or external risks, including the risk of war and civil unrest. For all of these reasons, investments in emerging markets may be considered speculative.

Brexit Risk. As a consequence of the United Kingdom's vote to withdraw from the European Union (the EU), the government of the United Kingdom may give notice of its withdrawal from the EU. There is still considerable uncertainty relating to the potential consequences and precise timeframe for the exit,

how the negotiations for the terms of withdrawal and new trade agreements will be conducted, and whether the United Kingdom's exit will increase the likelihood of other countries also departing the EU. During this period of uncertainty, the negative impact on not only the United Kingdom and European economies, but the broader global economy, could be significant, potentially resulting in increased volatility and illiquidity and lower economic growth for companies that rely significantly on Europe for their business activities and revenues. Any further exits from the EU, or the possibility of such exits, would likely cause additional market disruption globally and introduce new legal and regulatory uncertainties.

Table of Contents

Income Risk. The income shareholders receive from the Fund is expected to be based primarily on income from short-term gains that the Fund earns from its investment strategy of writing covered calls and dividends and other distributions received from its investments. If the Fund's covered call strategy fails to generate sufficient income from short-term gains or the distribution rates or yields of the Fund's holdings decrease, shareholders' income from the Fund could decline.

Dilution Risk for Convertible Securities. In the absence of adequate anti-dilution provisions in a convertible security, dilution in the value of the Fund's holding may occur in the event the underlying stock is subdivided, additional equity securities are issued for below market value, a stock dividend is declared, or the issuer enters into another type of corporate transaction that has a similar effect.

Non-Investment Grade Securities. The Fund may invest in below investment-grade debt securities, also known as high-yield securities or junk bonds. These securities, which may be preferred stock or debt, are predominantly speculative and involve major risk exposure to adverse conditions. Securities that are rated lower than BBB by S&P or lower than Baa by Moody's (or unrated securities of comparable quality) are referred to in the financial press as junk bonds or high yield securities and generally pay a premium above the yields of U.S. government securities or securities of investment grade issuers because they are subject to greater risks than these securities. These risks, which reflect their speculative character, include the following:

greater volatility;

potentially greater sensitivity to general economic or industry conditions;

potential lack of attractive resale opportunities (illiquidity); and

additional expenses to seek recovery from issuers who default.

In addition, the prices of these non-investment grade securities are more sensitive to negative developments, such as a decline in the issuer's revenues or a general economic downturn, than are the prices of higher grade securities. Non-investment grade securities tend to be less liquid than investment grade securities. The market value of non-investment grade securities may be more volatile than the market value of investment grade securities and generally tends to reflect the market's perception of the creditworthiness of the issuer and short term market developments to a greater extent than investment grade securities, which primarily reflect fluctuations in general levels of interest rates.

Ratings are relative and subjective and not absolute standards of quality. Securities ratings are based largely on the issuer's historical financial condition and the rating agencies' analysis at the time of rating. Consequently, the rating assigned to any particular security is not necessarily a reflection of the issuer's current financial condition.

As a part of its investments in non-investment grade securities, the Fund may invest in the securities of issuers in default. The Fund invests in securities of issuers in default only when the Investment Adviser believes that such issuers will honor their obligations and emerge from bankruptcy protection and that the value of such issuers' securities will appreciate. By investing in the securities of issuers in default, the Fund bears the risk that these issuers will not continue to honor their obligations or emerge from bankruptcy protection or that the value of these securities will not

otherwise appreciate.

Interest Rate Risk for Fixed Income Securities. The primary risk associated with fixed income securities is interest rate risk. A decrease in interest rates will generally result in an increase in the value of a fixed income security, while increases in interest rates will generally result in a decline in its value. This effect is generally more pronounced for fixed rate securities than for securities whose income rate is periodically reset. Market interest rates are currently significantly below historical average rates, which may increase the risk that these rates will rise in the future.

Table of Contents

Further, while longer term fixed rate securities may pay higher interest rates than shorter term securities, longer term fixed rate securities, like fixed rate securities, also tend to be more sensitive to interest rate changes and, accordingly, tend to experience larger changes in value as a result of interest rate changes. An increase in market interest rates will also generally result in a decrease in the price of any of the Fund's outstanding preferred shares. For more risks associated with fixed income securities, see "Investment Objectives and Policies" and "Additional Investment Policies" in the SAI.

U.S. Government Securities and Credit Rating Downgrade Risk. The Fund may invest in direct obligations of the government of the United States or its agencies. Obligations issued or guaranteed by the U.S. government, its agencies, authorities and instrumentalities and backed by the full faith and credit of the U.S. guarantee only that principal and interest will be timely paid to holders of the securities. These entities do not guarantee that the value of such obligations will increase, and, in fact, the market values of such obligations may fluctuate. In addition, not all U.S. government securities are backed by the full faith and credit of the United States; some are the obligation solely of the entity through which they are issued. There is no guarantee that the U.S. government would provide financial support to its agencies and instrumentalities if not required to do so by law.

The events surrounding negotiations regarding the U.S. federal government debt ceiling and deficit reduction could adversely affect the Fund's ability to achieve its investment objectives. In 2011, S&P lowered its long term sovereign credit rating on the U.S. to AA+ from AAA. The downgrade by S&P increased volatility in both stock and bond markets, resulting in higher interest rates and higher Treasury yields, and increased the costs of all kinds of debt. Repeat occurrences of similar events could have significant adverse effects on the U.S. economy generally and could result in significant adverse impacts on issuers of securities held by the Fund itself. The Investment Adviser cannot predict the effects of similar events in the future on the U.S. economy and securities markets or on the Fund's portfolio. The Investment Adviser monitors developments and seeks to manage the Fund's portfolio in a manner consistent with achieving the Fund's investment objectives, but there can be no assurance that it will be successful in doing so and the Investment Adviser may not timely anticipate or manage existing, new or additional risks, contingencies or developments.

Special Risks Related to Investment in Derivatives. The Fund may participate in derivative transactions. Such transactions entail certain execution, market, liquidity, hedging and tax risks. Participation in the options or futures markets, in currency exchange transactions and in other derivatives transactions involves investment risks and transaction costs to which the Fund would not be subject absent the use of these strategies. If the Investment Adviser's prediction of movements in the direction of the securities, foreign currency, interest rate or other referenced instruments or markets is inaccurate, the consequences to the Fund may leave the Fund in a worse position than if it had not used such strategies. Risks inherent in the use of options, foreign currency, futures contracts and options on futures contracts, securities indices and foreign currencies include:

dependence on the Investment Adviser's ability to predict correctly movements in the direction of the relevant measure;

imperfect correlation between the price of the derivative instrument and movements in the prices of the referenced assets;

the fact that skills needed to use these strategies are different from those needed to select portfolio securities;

the possible absence of a liquid secondary market for any particular instrument at any time;

the possible need to defer closing out certain hedged positions to avoid adverse tax consequences;

the possible inability of the Fund to purchase or sell a security or instrument at a time that otherwise would be favorable for it to do so, or the possible need for the Fund to sell a security or instrument at a disadvantageous time due to a need for the Fund to maintain cover or to segregate securities in connection with the hedging techniques; and

the creditworthiness of counterparties.

Table of Contents

Options, futures contracts, swaps contracts, and options thereon and forward contracts on securities and currencies may be traded on foreign exchanges. Such transactions may not be regulated as effectively as similar transactions in the United States, may not involve a clearing mechanism and related guarantees, and are subject to the risk of governmental actions affecting trading in, or the prices of, foreign securities. The value of such positions also could be adversely affected by (i) other complex foreign political, legal and economic factors, (ii) lesser availability than in the United States of data on which to make trading decisions, (iii) delays in the ability of the Fund to act upon economic events occurring in the foreign markets during non-business hours in the United States, (iv) the imposition of different exercise and settlement terms and procedures and margin requirements than in the United States and (v) less trading volume. Exchanges on which options, futures, swaps and options on futures or swaps are traded may impose limits on the positions that the Fund may take in certain circumstances.

Many OTC derivatives are valued on the basis of dealers' pricing of these instruments. However, the price at which dealers value a particular derivative and the price which the same dealers would actually be willing to pay for such derivative should the Fund wish or be forced to sell such position may be materially different. Such differences can result in an overstatement of the Fund's net asset value and may materially adversely affect the Fund in situations in which the Fund is required to sell derivative instruments. Exchange-traded derivatives and OTC derivative transactions submitted for clearing through a central counterparty have become subject to minimum initial and variation margin requirements set by the relevant clearinghouse, as well as possible margin requirements mandated by the SEC or the CFTC. These regulators also have broad discretion to impose margin requirements on non-cleared OTC derivatives. These margin requirements will increase the overall costs for the Fund.

While hedging can reduce or eliminate losses, it can also reduce or eliminate gains. Hedges are sometimes subject to imperfect matching between the derivative and the underlying security, and there can be no assurance that the Fund's hedging transactions will be effective.

Derivatives may give rise to a form of leverage and may expose the Fund to greater risk and increase its costs. Recent legislation calls for new regulation of the derivatives markets. The extent and impact of the regulation is not yet known and may not be known for some time. New regulation may make derivatives more costly, may limit the availability of derivatives, or may otherwise adversely affect the value or performance of derivatives.

Counterparty Risk. The Fund will be subject to credit risk with respect to the counterparties to the derivative contracts purchased by the Fund. If a counterparty becomes bankrupt or otherwise fails to perform its obligations under a derivative contract due to financial difficulties, the Fund may experience significant delays in obtaining any recovery under the derivative contract in bankruptcy or other reorganization proceeding. The Fund may obtain only a limited recovery or may obtain no recovery in such circumstances.

The counterparty risk for cleared derivatives is generally lower than for uncleared OTC derivative transactions since generally a clearing organization becomes substituted for each counterparty to a cleared derivative contract and, in effect, guarantees the parties' performance under the contract as each party to a trade looks only to the clearing organization for performance of financial obligations under the derivative contract. However, there can be no assurance that a clearing organization, or its members, will satisfy its obligations to the Fund, or that the Fund would be able to recover the full amount of assets deposited on its behalf with the clearing organization in the event of the default by the clearing organization or the Fund's clearing broker. In addition, cleared derivative transactions benefit from daily marking-to-market and settlement, and segregation and minimum capital requirements applicable to intermediaries. Uncleared OTC derivative transactions generally do not benefit from such protections. This exposes the Fund to the risk that a counterparty will not settle a transaction in accordance with its terms and conditions because of a dispute over the terms of the contract (whether or not bona fide) or because of a credit or liquidity problem, thus causing the Fund to suffer a loss. Such counterparty risk is accentuated for contracts with longer

maturities where events may intervene to prevent settlement, or where the Fund has concentrated its transactions with a single or small group of counterparties.

Table of Contents

Failure of Futures Commission Merchants and Clearing Organizations Risk. The Fund may deposit funds required to margin open positions in the derivative instruments subject to the CEA with a clearing broker registered as a futures commission merchant (FCM). The CEA requires an FCM to segregate all funds received from customers with respect to any orders for the purchase or sale of U.S. domestic futures contracts and cleared swaps from the FCM's proprietary assets. Similarly, the CEA requires each FCM to hold in a separate secure account all funds received from customers with respect to any orders for the purchase or sale of foreign futures contracts and segregate any such funds from the funds received with respect to domestic futures contracts. However, all funds and other property received by a clearing broker from its customers are held by the clearing broker on a commingled basis in an omnibus account and may be invested by the clearing broker in certain instruments permitted under the applicable regulation. There is a risk that assets deposited by the Fund with any swaps or futures clearing broker as margin for futures contracts may, in certain circumstances, be used to satisfy losses of other clients of the Fund's clearing broker. In addition, the assets of the Fund may not be fully protected in the event of the clearing broker's bankruptcy, as the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing broker's combined domestic customer accounts.

Similarly, the CEA requires a clearing organization approved by the CFTC as a derivatives clearing organization to segregate all funds and other property received from a clearing member's clients in connection with domestic futures, swaps and options contracts from any funds held at the clearing organization to support the clearing member's proprietary trading. Nevertheless, with respect to futures and options contracts, a clearing organization may use assets of a non-defaulting customer held in an omnibus account at the clearing organization to satisfy payment obligations of a defaulting customer of the clearing member to the clearing organization. As a result, in the event of a default or the clearing broker's other clients or the clearing broker's failure to extend own funds in connection with any such default, the Fund would not be able to recover the full amount of assets deposited by the clearing broker on its behalf with the clearing organization.

Swaps Risk. Swap agreements are two-party contracts entered into primarily by institutional investors for periods ranging from a few weeks to more than one year. In a standard swap transaction, two parties agree to exchange the returns (or differentials in rates of return) earned or realized on particular predetermined investments or instruments. The gross returns to be exchanged or swapped between the parties are calculated with respect to a notional amount, i.e., the return on or increase in value of a particular dollar amount invested at a particular interest rate, in a particular foreign currency, or in a basket of securities representing a particular index. The notional amount of the swap agreement is only a fictive basis on which to calculate the obligations that the parties to a swap agreement have agreed to exchange.

Historically, swap transactions have been individually negotiated non-standardized transactions entered into in OTC markets and have not been subject to the same type of government regulation as exchange-traded instruments. However, the OTC derivatives markets have recently become subject to comprehensive statutes and regulations. In particular, in the U.S., the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (the Dodd-Frank Act) requires that certain derivatives with U.S. persons must be executed on a regulated market and a substantial portion of OTC derivatives must be submitted for clearing to regulated clearinghouses. As a result, swap transactions entered into by the Fund may become subject to various requirements applicable to swaps under the Dodd-Frank Act, including clearing, exchange-execution, reporting and recordkeeping requirements, which may make it more difficult and costly for the Fund to enter into swap transactions and may also render certain strategies in which the Fund might otherwise engage impossible or so costly that they will no longer be economical to implement. Furthermore, the number of counterparties that may be willing to enter into swap transactions with the Fund may also be limited if the swap transactions with the Fund are subject to the swap regulation under the Dodd-Frank Act.

Swap agreements will tend to shift the Fund's investment exposure from one type of investment to another. For example, if the Fund agreed to pay fixed rates in exchange for floating rates while holding fixed-rate bonds, the swap would tend to decrease the Fund's exposure to long term interest rates. Caps and floors have an effect similar to buying or writing options. Depending on how they are used, swap agreements may increase or decrease the overall volatility of the Fund's investments and its share price and yield. The most significant factor in the performance of swap agreements is the change in the specific interest rate, currency, or other factors that determine the amounts of payments due to and from the Fund. If a swap agreement calls for payments by the Fund, the Fund must be prepared to make such payments when due.

Table of Contents

The Fund may enter into swap agreements that would calculate the obligations of the parties to the agreements on a net basis. Consequently, the Fund's obligations (or rights) under a swap agreement will generally be equal only to the net amount to be paid or received under the agreement based on the relative values of the positions held by each party to the agreement (the net amount). The Fund's obligations under a swap agreement will be accrued daily (offset against any amounts owing to the Fund) and any accrued but unpaid net amounts owed to a swap counterparty will be covered by the maintenance of liquid assets in accordance with SEC staff positions on the subject.

The Fund's use of swap agreements may not be successful in furthering its investment objective, as the Investment Adviser may not accurately predict whether certain types of investments are likely to produce greater returns than other investments. Moreover, swap agreements involve the risk that the party with whom a Fund has entered into the swap will default on its obligation to pay a Fund and the risk that a Fund will not be able to meet its obligations to pay the other party to the agreement. The Fund may be able to eliminate its exposure under a swap agreement either by assignment or other disposition, or by entering into an offsetting swap agreement with the same party or a similarly creditworthy party.

Futures Contracts and Options on Futures. Futures and options on futures entail certain risks, including but not limited to the following: no assurance that futures contracts or options on futures can be offset at favorable prices; possible reduction of the yield of the Fund due to the use of hedging; possible reduction in value of both the securities hedged and the hedging instrument; possible lack of liquidity due to daily limits on price fluctuations; imperfect correlation between the contracts and the securities being hedged; losses from investing in futures transactions that are potentially unlimited; and the segregation requirements for such transactions.

Options Risk. To the extent that the Fund purchases options pursuant to a hedging strategy, the Fund will be subject to the following additional risks. If a put or call option purchased by the Fund is not sold when it has remaining value, and if the market price of the underlying security remains equal to or greater than the exercise price (in the case of a put), or remains less than or equal to the exercise price (in the case of a call), the Fund will lose its entire investment in the option.

Where a put or call option on a particular security is purchased to hedge against price movements in that or a related security, the price of the put or call option may move more or less than the price of the security. If restrictions on exercise are imposed, the Fund may be unable to exercise an option it has purchased. If the Fund is unable to close out an option that it has purchased on a security, it will have to exercise the option in order to realize any profit or the option may expire worthless.

Short Sales Risk. Short-selling involves selling securities which may or may not be owned and borrowing the same securities for delivery to the purchaser, with an obligation to replace the borrowed securities at a later date. If the price of the security sold short increases between the time of the short sale and the time the Fund replaces the borrowed security, the Fund will incur a loss; conversely, if the price declines, the Fund will realize a capital gain. Any gain will be decreased, and any loss will be increased, by the transaction costs incurred by the Fund, including the costs associated with providing collateral to the broker-dealer (usually cash and liquid securities) and the maintenance of collateral with its Custodian. Although the Fund's gain is limited to the price at which it sold the security short, its potential loss is theoretically unlimited.

Short-selling necessarily involves certain additional risks. However, if the short seller does not own the securities sold short (an uncovered short sale), the borrowed securities must be replaced by securities purchased at market prices in order to close out the short position, and any appreciation in the price of the borrowed securities would result in a loss. Uncovered short sales expose the Fund to the risk of uncapped losses until a position can be closed out due to the lack of an upper limit on the price to which a security may rise. Purchasing securities to close out the short position can

itself

Table of Contents

cause the price of the securities to rise further, thereby exacerbating the loss. There is the risk that the securities borrowed by the Fund in connection with a short-sale must be returned to the securities lender on short notice. If a request for return of borrowed securities occurs at a time when other short-sellers of the security are receiving similar requests, a short squeeze can occur, and the Fund may be compelled to replace borrowed securities previously sold short with purchases on the open market at the most disadvantageous time, possibly at prices significantly in excess of the proceeds received at the time the securities were originally sold short.

In September 2008, in response to spreading turmoil in the financial markets, the SEC temporarily banned short selling in the stocks of numerous financial services companies, and also promulgated new disclosure requirements with respect to short positions held by investment managers. The SEC's temporary ban on short selling of such stocks has since expired, but should similar restrictions and/or additional disclosure requirements be promulgated, especially if market turmoil occurs, the Fund may be forced to cover short positions more quickly than otherwise intended and may suffer losses as a result. Such restrictions may also adversely affect the ability of the Fund to execute its investment strategies generally. Similar emergency orders were also instituted in non-U.S. markets in response to increased volatility. The Fund's ability to engage in short sales is also restricted by various regulatory requirements relating to short sales.

Leverage Risk. The Fund may use financial leverage for investment purposes. A leveraged capital structure would create special risks not associated with unleveraged funds that have a similar investment objectives and policies. These include the possibility of greater loss and the likelihood of higher volatility of the net asset value of the Fund and the asset coverage for any preferred shares or debt outstanding. Such volatility may increase the likelihood of the Fund having to sell investments in order to meet its obligations to make distributions on the preferred shares or principal or interest payments on debt securities, or to redeem preferred shares or repay debt, when it may be disadvantageous to do so. The use of leverage magnifies both the favorable and unfavorable effects of price movements in the investments made by the Fund. To the extent the Fund is leveraged in its investment operations, the Fund will be subject to substantial risk of loss. The Fund cannot assure that borrowings or the issuance of preferred shares will result in a higher yield or return to the holders of the common shares. Also, to the extent the Fund utilizes leverage, a decline in net asset value could affect the ability of the Fund to make common share distributions and such a failure to make distributions could result in the Fund ceasing to qualify as a RIC under the Code. For more information regarding the risks of a leverage capital structure to holders of the Fund's common shares, see Risk Factors and Special Considerations Special Risks to Holders of Common Shares Leverage Risk.

Market Discount Risk. The Fund is a non-diversified, closed-end management investment company. Whether investors will realize gains or losses upon the sale of additional securities of the Fund will depend upon the market price of the securities at the time of sale, which may be less or more than the Fund's net asset value per share or the liquidation value of any Fund preferred shares issued. Since the market price of any additional securities the Fund may issue will be affected by such factors as the Fund's dividend and distribution levels (which are in turn affected by expenses), dividend and distribution stability, net asset value, market liquidity, the relative demand for and supply of such securities in the market, general market and economic conditions and other factors beyond the control of the Fund, we cannot predict whether any such securities will trade at, below or above net asset value or at, below or above their public offering price or at, below or above their liquidation value, as applicable. For example, common shares of closed-end funds often trade at a discount to their net asset values and the Fund's common shares may trade at such a discount. This risk may be greater for investors expecting to sell their securities of the Fund soon after the completion of a public offering for such securities. The risk of a market price discount from net asset value is separate and in addition to the risk that net asset value itself may decline. The Fund's securities are designed primarily for long term investors, and investors in the shares should not view the Fund as a vehicle for trading purposes.

Long Term Objective; Not a Complete Investment Program. The Fund is intended for investors seeking long term growth of capital. The Fund is not meant to provide a vehicle for those who wish to play short term swings in the stock market. An investment in shares of the Fund should not be considered a complete investment program. Each shareholder should take into account the Fund's investment objectives as well as the shareholder's other investments when considering an investment in the Fund.

Table of Contents

Portfolio Turnover Risk. The investment policies of the Fund, including its strategy of writing covered call options on securities in its portfolio, may result in portfolio turnover that is higher than that of many investment companies. Increased portfolio turnover rates will result in higher costs from brokerage commissions, dealer-mark-ups and other transaction costs and may also may decrease the after-tax return to individual investors in the Fund to the extent it results in a decrease in the portion of the Fund's distributions that is attributable to long-term capital gain.

Management Risk. The Fund is subject to management risk because it is an actively managed portfolio. The Investment Adviser will apply investment techniques and risk analyses in making investment decisions for the Fund, but there can be no guarantee that these will produce the desired results.

Non-Diversified Status. The Fund is classified as a non-diversified investment company under the 1940 Act, which means the Fund is not limited by the 1940 Act in the proportion of its assets that may be invested in the securities of a single issuer. As a non-diversified investment company, the Fund may invest in the securities of individual issuers to a greater degree than a diversified investment company. As a result, the Fund may be more vulnerable to events affecting a single issuer and therefore, subject to greater volatility than a fund that is more broadly diversified. Accordingly, an investment in the Fund may present greater risk to an investor than an investment in a diversified company.

Dependence on Key Personnel. The Fund is dependent upon the expertise of Vincent Hugonnard-Roche as the sole option strategist on the Fund's portfolio management team. If the Fund were to lose the services of Mr. Roche, it could be temporarily adversely affected until a suitable replacement could be found.

Market Disruption and Geopolitical Risk. The occurrence of events similar to those in recent years, such as the aftermath of the war in Iraq, instability in Afghanistan, Pakistan, Egypt, Libya, Syria, Russia, Ukraine and the Middle East, ongoing epidemics of infectious diseases in certain parts of the world, terrorist attacks in the U.S. and around the world, social and political discord, debt crises (such as the Greek crisis), sovereign debt downgrades, or the exit or potential exit of one or more countries from the EU or the EMU (such as the United Kingdom), among others, may result in market volatility, may have long term effects on the U.S. and worldwide financial markets, and may cause further economic uncertainties in the U.S. and worldwide.

The occurrence of any of the above events could have a significant adverse impact on the value and risk profile of the Fund's portfolio. The Fund does not know how long the securities markets may be affected by similar events and cannot predict the effects of similar events in the future on the U.S. economy and securities markets. There can be no assurance that similar events and other market disruptions will not have other material and adverse implications.

Economic Events and Market Risk. Periods of market volatility remain, and may continue to occur in the future, in response to various political, social and economic events both within and outside of the United States. These conditions have resulted in, and in many cases continue to result in, greater price volatility, less liquidity, widening credit spreads and a lack of price transparency, with many securities remaining illiquid and of uncertain value. Such market conditions may adversely affect the Fund, including by making valuation of some of the Fund's securities uncertain and/or result in sudden and significant valuation increases or declines in the Fund's holdings. If there is a significant decline in the value of the Fund's portfolio, this may impact the asset coverage levels for the Fund's outstanding leverage.

Risks resulting from any future debt or other economic crisis could also have a detrimental impact on the global economic recovery, the financial condition of financial institutions and our business, financial condition and results of operation. Market and economic disruptions have affected, and may in the future affect, consumer confidence levels and spending, personal bankruptcy rates, levels of incurrence and default on consumer debt and home prices, among

other factors. To the extent uncertainty regarding the U.S. or global economy negatively impacts consumer confidence and consumer credit factors, our business, financial condition and results of operations could be significantly and adversely affected. Downgrades to the credit ratings of major banks could result in increased borrowing costs for such banks and negatively affect the broader economy. Moreover, Federal Reserve policy, including with respect to certain interest rates, may also adversely affect the value, volatility and liquidity of dividend- and interest-paying securities. Market volatility, rising interest rates and/or a return to unfavorable economic conditions could impair the Fund's ability to achieve its investment objectives.

Table of Contents

Government Intervention in Financial Markets Risk. The U.S. government and certain foreign governments and their regulatory agencies or self-regulatory organizations have in the past taken, and may in the future take, legislative and regulatory actions that may affect the Fund, its securities and/or the Fund's investments. Such legislation or regulation may change the way in which the Fund is regulated and could limit or preclude the Fund's ability to achieve its investment objectives. The Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (the Dodd-Frank Act), signed into law by President Obama on July 21, 2010, contains sweeping financial legislation regarding the operation of banks, private fund managers and other financial institutions. The Dodd-Frank Act includes provisions regarding, among other things, the regulation of derivatives (see Dodd-Frank Act Risk below), the identification, monitoring and prophylactic regulation of systemic risks to financial markets, and the regulation of proprietary trading and investment activity of banking institutions. The continuing implementation of the Dodd-Frank Act and any other regulations could adversely affect the Investment Adviser and the Fund. The Investment Adviser may attempt to take certain actions to lessen the impact of the Dodd-Frank Act and any other legislation or regulation affecting the Fund, although no assurance can be given that such actions would be successful and no assurance can be given that such actions would not have a significant negative impact on the Fund. The ultimate impact of the Dodd-Frank Act, and any additional future legislation or regulation, is not yet certain and the Investment Adviser and the Fund may be affected by governmental action in ways that are unforeseeable.

Additionally, the SEC and its staff are also reportedly engaged in various initiatives and reviews that seek to improve and modernize the regulatory structure governing investment companies. These efforts appear to be focused on risk identification and controls in various areas, including imbedded leverage through the use of derivatives and other trading practices, cybersecurity, liquidity, enhanced regulatory and public reporting requirements and the evaluation of systemic risks. Any new rules, guidance or regulatory initiatives resulting from these efforts could increase the Fund's expenses and impact its returns to shareholders or, in the extreme case, impact or limit the Fund's use of various portfolio management strategies or techniques and adversely impact the Fund.

Additionally, the change in presidential administration could significantly impact the regulation of United States financial markets. Areas subject to potential change, amendment or repeal include the Dodd-Frank Act, including the Volcker Rule and various swaps and derivatives regulations, the authority of the Federal Reserve and Financial Stability Oversight Council, and renewed proposals to separate banks' commercial and investment banking activities. Other potential changes that could be pursued by the new presidential administration could include the United States withdrawal from, or attempt to renegotiate, various trade agreements or the taking of other actions that would change current trade policies of the United States. It is not possible to predict which, if any, of these actions will be taken or, if taken, their effect on the economy, securities markets or the financial stability of the United States. The Fund may be affected by governmental action in ways that are not foreseeable, and there is a possibility that such actions could have a significant adverse effect on the Fund and its ability to achieve its investment objectives.

Inflation Risk. Inflation risk is the risk that the value of assets or income from investments will be worth less in the future as inflation decreases the value of money. As inflation increases, the real value of the Fund's shares and distributions thereon can decline. In addition, during any periods of rising inflation, dividend rates of any debt securities issued by the Fund would likely increase, which would tend to further reduce returns to common shareholders.

Restricted and Illiquid Securities Risk. Unregistered securities are securities that cannot be sold publicly in the United States without registration under the Securities Act. An illiquid investment is a security or other investment that cannot be disposed of within seven days in the ordinary course of business at approximately the value at which the Fund has valued the investment. Unregistered securities often can be resold only in privately negotiated transactions with a limited number of purchasers or in a public offering registered under the Securities Act. Considerable delay could be encountered in either event and, unless otherwise contractually provided for, the Fund's

proceeds upon sale may be reduced by the costs of registration or underwriting discounts. The difficulties and delays associated with such

Table of Contents

transactions could result in the Fund's inability to realize a favorable price upon disposition of unregistered securities, and at times might make disposition of such securities impossible. The Fund may be unable to sell illiquid investments when it desires to do so, resulting in the Fund obtaining a lower price or being required to retain the investment. Illiquid investments generally must be valued at fair value, which is inherently less precise than utilizing market values for liquid investments, and may lead to differences between the price a security is valued for determining the Fund's net asset value and the price the Fund actually receives upon sale.

Investment Companies. The Fund may invest in the securities of other investment companies, including exchange traded funds, to the extent permitted by law. To the extent the Fund invests in the common equity of investment companies, the Fund will bear its ratable share of any such investment company's expenses, including management fees. The Fund will also remain obligated to pay management fees to the Investment Adviser with respect to the assets invested in the securities of other investment companies. In these circumstances holders of the Fund's common shares will be in effect subject to duplicative investment expenses.

Status as a Regulated Investment Company. The Fund has elected to qualify as a regulated investment company (a RIC) under Subchapter M of the Code. Qualification requires, among other things, compliance by the Fund with certain distribution requirements. Statutory limitations on distributions on the common shares if the Fund fails to satisfy the 1940 Act's asset coverage requirements could jeopardize the Fund's ability to meet such distribution requirements. While the Fund presently intends to purchase or redeem notes or preferred shares, if any, to the extent necessary in order to maintain compliance with such asset coverage requirements, there can be no assurance that such actions can be effected in time to meet the Code requirements. For a more complete discussion of these and other U.S. federal income tax considerations, see "Taxation" below.

Anti-Takeover Provisions. The Agreement and Declaration of Trust and By-Laws of the Fund include provisions that could limit the ability of other entities or persons to acquire control of the Fund or convert the Fund to an open-end fund. See "Anti-Takeover Provisions of the Fund's Governing Documents."

Special Risks to Holders of Common Shares

Dilution Risk. If the Fund determines to conduct a rights offering to subscribe for common shares, holders of common shares may experience dilution or accretion of the aggregate net asset value of their common shares. Such dilution or accretion will depend upon whether (i) such shareholders participate in the rights offering and (ii) the Fund's net asset value per common share is above or below the subscription price on the expiration date of the rights offering.

Leverage Risk. The Fund may use financial leverage for investment purposes. As provided in the 1940 Act and subject to certain exceptions, the Fund may issue senior securities (which may be stock, such as preferred shares, and/or securities representing debt) only if immediately after such issuance the value of the Fund's total assets, less certain ordinary course liabilities, exceeds 300% of the amount of the debt outstanding and exceeds 200% of the amount of preferred shares and debt outstanding.

A leveraged capital structure would create special risks not associated with unleveraged funds having a similar investment objective and policies. These include the possibility of greater loss and the likelihood of higher volatility of the net asset value of the Fund and the asset coverage for the preferred shares. Such volatility may increase the likelihood of the Fund having to sell investments in order to meet its obligations to make distributions on the preferred shares or principal or interest payments on debt securities, or to redeem preferred shares or repay debt, when it may be disadvantageous to do so. The Fund's use of leverage may require it to sell portfolio investments at inopportune times in order to raise cash to redeem preferred shares or otherwise de-leverage so as to maintain required asset coverage amounts or comply with the mandatory redemption terms of any outstanding preferred shares. The use of leverage

magnifies both the favorable and unfavorable effects of price movements in the investments made by the Fund. To the extent that the Fund employs leverage in its investment operations, the Fund is subject to substantial risk of loss. The Fund cannot assure

Table of Contents

you that borrowings or the issuance of preferred shares will result in a higher yield or return to the holders of the common shares. Also, since the Fund utilizes leverage, a decline in net asset value could affect the ability of the Fund to make common share distributions and such a failure to make distributions could result in the Fund ceasing to qualify as a RIC under the Code. See Taxation.

Any decline in the net asset value of the Fund's investments would be borne entirely by the holders of common shares. Therefore, if the market value of the Fund's portfolio declines, the leverage will result in a greater decrease in net asset value to the holders of common shares than if the Fund were not leveraged. This greater net asset value decrease will also tend to cause a greater decline in the market price for the common shares. The Fund might be in danger of failing to maintain the required asset coverage of its borrowings, notes or preferred shares or of losing its ratings on its notes or preferred shares or notes or, in an extreme case, the Fund's current investment income might not be sufficient to meet the distribution or interest requirements on the borrowings, preferred shares or notes. In order to counteract such an event, the Fund might need to liquidate investments in order to fund a redemption or repayment of some or all of the borrowings, preferred shares or notes.

Preferred Share and Note Risk. The issuance of preferred shares or notes causes the net asset value and market value of the common shares to become more volatile. If the dividend rate on the preferred shares or the interest rate on the notes approaches the net rate of return on the Fund's investment portfolio, the benefit of leverage to the holders of the common shares would be reduced. If the dividend rate on the preferred shares or the interest rate on the notes plus the management fee annual rate of 1.00% exceeds the net rate of return on the Fund's portfolio, the leverage will result in a lower rate of return to the holders of common shares than if the Fund had not issued preferred shares or notes. If the Fund has insufficient investment income and gains, all or a portion of the distributions to preferred shareholders or interest payments to note holders would come from the common shareholders' capital. Such distributions and interest payments reduce the net assets attributable to common shareholders. The Prospectus Supplement relating to any sale of preferred shares will set forth dividend rate on such preferred shares.

In addition, the Fund would pay (and the holders of common shares will bear) all costs and expenses relating to the issuance and ongoing maintenance of the preferred shares or notes, including the advisory fees on the incremental assets attributable to the preferred shares or notes.

Holders of preferred shares and notes may have different interests than holders of common shares and may at times have disproportionate influence over the Fund's affairs. As provided in the 1940 Act and subject to certain exceptions, the Fund may issue senior securities (which may be stock, such as preferred shares, and/or securities representing debt, such as notes) only if immediately after such issuance the value of the Fund's total assets, less certain ordinary course liabilities, exceeds 300% of the amount of the debt outstanding and exceeds 200% of the amount of preferred shares and debt outstanding, which is referred to as the asset coverage required by the 1940 Act. In the event the Fund fails to maintain an asset coverage of 100% for any notes outstanding for certain periods of time, the 1940 Act requires that either an event of default be declared or that the holders of such notes have the right to elect a majority of the Fund's Trustees until asset coverage recovers to 110%. In addition, holders of preferred shares, voting separately as a single class, have the right (subject to the rights of noteholders) to elect two members of the Board at all times and in the event dividends become two full years in arrears would have the right to elect a majority of the Trustees until such arrearage is completely eliminated. In addition, preferred shareholders have class voting rights on certain matters, including changes in fundamental investment restrictions and conversion of the Fund to open-end status, and accordingly can veto any such changes. Further, interest on notes will be payable when due as described in a Prospectus Supplement and if the Fund does not pay interest when due, it will trigger an event of default and the Fund

expects to be restricted from declaring dividends and making other distributions with respect to common shares and preferred shares. Upon the occurrence and continuance of an event of default, the holders of a majority in principal amount of a series of outstanding notes or the trustee will be able to declare the

Table of Contents

principal amount of that series of notes immediately due and payable upon written notice to the Fund. The 1940 Act also generally restricts the Fund from declaring distributions on, or repurchasing, common or preferred shares unless notes have an asset coverage of 300% (200% in case of declaring distributions on preferred shares). The Fund's common shares are structurally subordinated as to income and residual value to any preferred shares or notes in the Fund's capital structure, in terms of priority to income and payment in liquidation. See Description of the Securities Preferred Shares Asset Maintenance Requirements and Description of the Securities Notes Limitations.

Restrictions imposed on the declarations and payment of dividends or other distributions to the holders of the Fund's common shares and preferred shares, both by the 1940 Act and by requirements imposed by rating agencies, might impair the Fund's ability to maintain its qualification as a RIC for U.S. federal income tax purposes. While the Fund intends to redeem its preferred shares or notes to the extent necessary to enable the Fund to distribute its income as required to maintain its qualification as a RIC under the Code, there can be no assurance that such actions can be effected in time to meet the Code requirements.

Portfolio Guidelines of Rating Agencies for Preferred Shares and/or Credit Facility. In order to obtain and maintain attractive credit quality ratings for preferred shares or borrowings, the Fund must comply with investment quality, diversification and other guidelines established by the relevant rating agencies. These guidelines could affect portfolio decisions and may be more stringent than those imposed by the 1940 Act. In the event that a rating on the Fund's preferred shares or notes is lowered or withdrawn by the relevant rating agency, the Fund may also be required to redeem all or part of its outstanding preferred shares or notes, and the common shares of the Fund will lose the potential benefits associated with a leveraged capital structure.

Impact on Common Shares. The following table is furnished in response to requirements of the SEC. It is designed to illustrate the effect of leverage on common share total return, assuming investment portfolio total returns (comprised of net investment income of the Fund, realized gains or losses of the Fund and changes in the value of the securities held in the Fund's portfolio) of -10%, -5%, 0%, 5% and 10%. These assumed investment portfolio returns are hypothetical figures and are not necessarily indicative of the investment portfolio returns experienced or expected to be experienced by the Fund. The table further reflects leverage representing 14% of the Fund's total net assets, the Fund's current projected blended annual average leverage dividend or interest rate of 5.70%, a management fee at an annual rate of 1.00% of the liquidation preference of any outstanding preferred shares and estimated annual incremental expenses attributable to any outstanding preferred shares of 0.04% of the Fund's net assets attributable to common shares.

Assumed Return on Portfolio (Net of Expenses)	(10)%	(5)%	0%	5%	10%
Corresponding Return to Common Shareholder	(12.73)%	(6.91)%	(1.10)%	4.72%	10.53%

Common share total return is composed of two elements: the common share distributions paid by the Fund (the amount of which is largely determined by the taxable income of the Fund (including realized gains or losses) after paying interest on any debt and/or dividends on any preferred shares) and unrealized gains or losses on the value of the securities the Fund owns. As required by SEC rules, the table assumes that the Fund is more likely to suffer capital losses than to enjoy total return. For example, to assume a total return of 0% the Fund must assume that the income it receives on its investments is entirely offset by expenses and losses in the value of those investments.

Market Discount Risk. As described above in General Risks Market Discount Risk, common shares of closed-end funds often trade at a discount to their net asset values and the Fund's common shares may trade at such a discount. This risk may be greater for investors expecting to sell their common shares of the Fund soon after completion of a public offering. The common shares of the Fund are designed primarily for long-term investors and investors in the shares should not view the Fund as a vehicle for trading purposes.

Table of Contents

Special Risks to Holders of Preferred Shares

Illiquidity Prior to Exchange Listing. Prior to an offering, there will be no public market for any series of Fixed Rate Preferred Shares. In the event any series of Fixed Rate Preferred Shares are issued, we expect to apply to list such shares on a national securities exchange, which will likely be the NYSE. However, during an initial period, which is not expected to exceed 30 days after the date of its initial issuance, such shares may not be listed on any securities exchange. During such period, the underwriters may make a market in such shares, though they will have no obligation to do so. Consequently, an investment in such shares may be illiquid during such period.

Market Price Fluctuation. Fixed Rate Preferred Shares may trade at a premium to or discount from liquidation value for various reasons, including changes in interest rates, perceived credit quality and other factors.

Special Risks to Holders of Notes

An investment in our notes is subject to special risks. Our notes are not likely to be listed on an exchange or automated quotation system. We cannot assure you that any market will exist for our notes or if a market does exist, whether it will provide holders with liquidity. Broker-dealers that maintain a secondary trading market for the notes are not required to maintain this market, and the Fund is not required to redeem notes if an attempted secondary market sale fails because of a lack of buyers. To the extent that our notes trade, they may trade at a price either higher or lower than their principal amount depending on interest rates, the rating (if any) on such notes and other factors.

Special Risks of Notes to Holders of Preferred Shares

As provided in the 1940 Act, and subject to compliance with the Fund's investment limitations, the Fund may issue notes. In the event the Fund were to issue such securities, the Fund's obligations to pay dividends or make distributions and, upon liquidation of the Fund, liquidation payments in respect of its preferred shares would be subordinate to the Fund's obligations to make any principal and interest payments due and owing with respect to its outstanding notes. Accordingly, the Fund's issuance of notes would have the effect of creating special risks for the Fund's preferred shareholders that would not be present in a capital structure that did not include such securities.

Special Risks to Holders of Notes and Preferred Shares

Common Share Repurchases. Repurchases of common shares by the Fund may reduce the net asset coverage of the notes and preferred shares, which could adversely affect their liquidity or market prices.

Credit Quality Ratings. In order to obtain and maintain attractive credit quality ratings for preferred shares or borrowings, the Fund's portfolio must satisfy over-collateralization tests established by the relevant rating agencies. These tests are more difficult to satisfy to the extent the Fund's portfolio securities are of lower credit quality, longer maturity or not diversified by issuer and industry.

These guidelines could affect portfolio decisions and may be more stringent than those imposed by the 1940 Act. With respect to ratings (if any) of the notes or preferred shares, a rating by a ratings agency does not eliminate or necessarily mitigate the risks of investing in our preferred shares or notes, and a rating may not fully or accurately reflect all of the securities' credit risks. A rating does not address the liquidity or any other market risks of the securities being rated. A rating agency could downgrade the rating of our notes or preferred shares, which may make such securities less liquid in the secondary market. If a rating agency downgrades the rating assigned to our preferred shares or notes, we may alter our portfolio or redeem all or a portion of the preferred shares or notes that are then redeemable under certain circumstances.

Table of Contents

Special Risk to Holders of Subscription Rights

There is a risk that changes in market conditions may result in the underlying common or preferred shares purchaseable upon exercise of the subscription rights being less attractive to investors at the conclusion of the subscription period. This may reduce or eliminate the value of the subscription rights. Investors who receive subscription rights may find that there is no market to sell rights they do not wish to exercise. If investors exercise only a portion of the rights, the number of common or preferred shares issued may be reduced, and the common or preferred shares may trade at less favorable prices than larger offerings for similar securities.

HOW THE FUND MANAGES RISK

Investment Restrictions

The Fund has adopted certain investment limitations designed to limit investment risk and maintain portfolio diversification. These limitations are fundamental and may not be changed without the approval of the holders of a majority, as defined in the 1940 Act, of the outstanding voting securities of the Fund (voting together as a single class subject to class approval rights of any preferred shares). See **Investment Restrictions** in the SAI for a complete list of the fundamental investment policies of the Fund. The Fund may become subject to rating agency guidelines that are more limiting than its current investment restrictions in order to obtain and maintain a desired rating on its preferred shares, if any.

Interest Rate Transactions

The Fund may enter into interest rate swap or cap transactions to manage its borrowing costs, as well as to increase income. The use of such swaps and caps is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio security transactions. In an interest rate swap, the Fund would agree to pay to the other party to the interest rate swap (which is known as the counterparty) periodically a fixed rate payment in exchange for the counterparty agreeing to pay to the Fund periodically a variable rate payment that is intended to approximate the Fund's variable rate payment obligation on its borrowings (or the Fund's potential variable payment obligations on Fixed Rate Preferred Shares that may have certain variable rate features). In an interest rate cap, the Fund would pay a premium to the counterparty to the interest rate cap and, to the extent that a specified variable rate index exceeds a predetermined fixed rate, would receive from the counterparty payments of the difference based on the notional amount of such cap. Interest rate swap and cap transactions introduce additional risk because the Fund would remain obligated to pay interest or preferred shares dividends when due even if the counterparty defaulted. Depending on the general state of short-term interest rates and the returns on the Fund's portfolio securities at that point in time, such a default could negatively affect the Fund's ability to make interest payments or dividend payments on the preferred shares. In addition, at the time an interest rate swap or cap transaction reaches its scheduled termination date, there is a risk that the Fund will not be able to obtain a replacement transaction or that the terms of the replacement will not be as favorable as on the expiring transaction. If this occurs, it could have a negative impact on the Fund's ability to make interest payments or dividend payments on the preferred shares. To the extent there is a decline in interest rates, the value of the interest rate swap or cap could decline, resulting in a decline in the asset coverage for the borrowings or preferred shares. A sudden and dramatic decline in interest rates may result in a significant decline in the asset coverage. If the Fund fails to maintain the required asset coverage on any outstanding borrowings or preferred shares or fails to comply with other covenants, the Fund may be required to prepay some or all of such borrowings or redeem some or all of such shares. Any such prepayment or redemption would likely result in the Fund seeking to terminate early all or a portion of any swap or cap transactions. Early termination of a swap could result in a termination payment by the Fund to the counterparty, while early termination of a cap could result in a termination payment to the Fund.

Table of Contents

The Fund may enter into equity contract for difference swap transactions, for the purpose of increasing the income of the Fund. In an equity contract for difference swap, a set of future cash flows is exchanged between two counterparties. One of these cash flow streams will typically be based on a reference interest rate combined with the performance of a notional value of shares of a stock. The other will be based on the performance of the shares of a stock. Depending on the general state of short-term interest rates and the returns on the Fund's portfolio securities at the time a swap transaction reaches its scheduled termination date, there is a risk that the Fund will not be able to obtain a replacement transaction or that the terms of the replacement will not be as favorable as on the expiring transaction.

The Fund will usually enter into swaps or caps on a net basis; that is, the two payment streams will be netted out in a cash settlement on the payment date or dates specified in the instrument, with the Fund receiving or paying, as the case may be, only the net amount of the two payments. The Fund intends to segregate or earmark cash or liquid assets having a value at least equal to the value of the Fund's net payment obligations under any swap transaction, marked to market daily. The Fund will monitor any such swap with a view to ensuring that the Fund remains in compliance with all applicable regulatory investment policy and tax requirements.

MANAGEMENT OF THE FUND

General

The Fund's Board (who, with its officers, are described in the SAI) has overall responsibility for the management of the Fund. The Board decides upon matters of general policy and reviews the actions of the Investment Adviser, Gabelli Funds, LLC, One Corporate Center, Rye, New York 10580-1422, and the Sub-Administrator (as defined below). Pursuant to an investment advisory agreement between the Fund and the Investment Adviser (the "Investment Advisory Agreement"), the Investment Adviser, under the supervision of the Board, provides a continuous investment program for the Fund's portfolio; provides investment research and makes and executes recommendations for the purchase and sale of securities; and provides all facilities and personnel, including officers required for its administrative management, and pays the compensation of Trustees of the Fund who are officers or employees of the Investment Adviser or its affiliates. As compensation for its services rendered and the related expenses borne by the Investment Adviser, the Fund pays the Investment Adviser a fee at an annual rate of 1.00% of the Fund's average weekly net assets. The value of the Fund's average weekly net assets shall be deemed to be the average weekly value of the Fund's total assets minus the sum of the Fund's liabilities (such liabilities do not include the aggregate liquidation preference of any outstanding preferred shares and accumulated dividends, if any, on those shares and the outstanding principal amount of any debt securities the proceeds of which were used for investment purposes, plus accrued and unpaid interest thereon). Consequently, if the Fund has preferred shares outstanding, the investment management fees and other expenses as a percentage of net assets attributable to common shares may be higher than if the Fund does not utilize a leveraged capital structure.

The Investment Adviser

Gabelli Funds, LLC serves as the Fund's Investment Adviser pursuant to the Investment Advisory Agreement with the Fund. The Investment Adviser is a New York limited liability company which serves as an investment adviser to registered investment companies with combined aggregate net assets approximating \$22.7 billion as of December 31, 2016. The Investment Adviser is a registered investment adviser under the Investment Advisers Act of 1940, as amended, and is a wholly owned subsidiary of GAMCO Investors, Inc. ("GBL"), a New York corporation, whose Class A Common Stock is traded on the NYSE under the symbol, "GBL". Mr. Mario J. Gabelli may be deemed a controlling person of the Investment Adviser on the basis of his controlling interest in GBL. Mr. Gabelli owns a majority of the stock of GGCP, Inc. ("GGCP"), which holds a majority of the capital stock and voting power of

GBL. The Investment Adviser has several affiliates that provide investment advisory services: GAMCO Asset Management, Inc., a wholly owned subsidiary of GBL, acts as investment adviser for individuals, pension trusts, profit sharing trusts, and endowments, and for The GAMCO Mathers Fund, and as sub-adviser to certain third party investment funds, which include registered investment companies, having assets under management of approximately \$17.2 billion as of December 31, 2016; Teton Advisors, Inc., with assets under management of approximately \$1.4 billion as of December 31, 2016, acts as investment adviser to

Table of Contents

The TETON Westwood Funds and separately managed accounts; Gabelli & Company Investment Adviser, Inc. (formerly, Gabelli Securities, Inc.), a wholly-owned subsidiary of Associated Capital Group, Inc. (Associated Capital), acts as investment adviser to certain alternative investment products, consisting primarily of risk arbitrage and merchant banking limited partnerships and offshore companies, with assets under management of approximately \$1 billion as of December 31, 2016; and Gabelli Fixed Income, LLC, an indirect wholly owned subsidiary of GBL, acts as investment adviser for separate accounts having assets under management of approximately \$31 million as of December 31, 2016. Teton Advisors, Inc. was spun off by GBL in March 2009 and is an affiliate of GBL by virtue of Mr. Gabelli's ownership of GGCP, the principal shareholder of Teton Advisors, Inc., as of December 31, 2016. Associated Capital was spun off from GBL on November 30, 2015, and is an affiliate of GBL by virtue of Mr. Gabelli's ownership of GGCP, the principal shareholder of Associated Capital.

Payment of Expenses

The Investment Adviser is obligated to pay expenses associated with providing the services contemplated by the Investment Advisory Agreement including compensation of and office space for its officers and employees connected with investment and economic research, trading and investment management and administration of the Fund (but excluding costs associated with the calculation of the net asset value and allocated costs of the chief compliance officer function and officers of the Fund who are employed by the Fund and are not employed by the Investment Adviser although such officers may receive incentive based variable compensation from affiliates of the Investment Adviser), as well as the fees of all Trustees of the Fund who are officers or employees of the Investment Adviser or its affiliates.

In addition to the fees of the Investment Adviser, the Fund is responsible for the payment of all its other expenses incurred in the operation of the Fund, which include, among other things, underwriting compensation and reimbursements in connection with sales of the Fund's securities, expenses for legal and the Fund's independent registered public accounting firm's services, stock exchange listing fees and expenses, costs of printing proxies, share certificates and shareholder reports, charges of the Fund's Custodian, any sub-custodian and any transfer agent and distribution disbursing agent, expenses in connection with the Automatic Dividend Reinvestment Plan and the Voluntary Cash Purchase Plan, SEC fees and preparation of filings with the SEC, fees and expenses of Trustees who are not officers or employees of the Investment Adviser or its affiliates, accounting and printing costs, the Fund's pro rata portion of membership fees in trade organizations, compensation and other expenses of officers and employees of the Fund (including, but not limited to, the Chief Compliance Officer, Vice President and Ombudsman) as approved by the Fund's Trustees, fidelity bond coverage for the Fund's officers and employees, Trustees' and officers' errors and omissions insurance coverage, interest, brokerage costs, taxes, expenses of qualifying the Fund's shares for sale in various states, expenses of personnel performing shareholder servicing functions, litigation and other extraordinary or non-recurring expenses and other expenses properly payable by the Fund.

Selection of Securities Brokers

The Investment Advisory Agreement contains provisions relating to the selection of securities brokers to effect the portfolio transactions of the Fund. Under those provisions, the Investment Adviser may (i) direct Fund portfolio brokerage to G.research, LLC (G.research), an affiliate of the Investment Adviser, or to other broker-dealer affiliates of the Investment Adviser and (ii) pay commissions to brokers other than G.research that are higher than might be charged by another qualified broker to obtain brokerage and/or research services considered by the Investment Adviser to be useful or desirable for its investment management of the Fund and/or its other investment advisory accounts or those of any investment adviser affiliated with it. The SAI contains further information about the Investment Advisory Agreement, including a more complete description of the investment advisory and expense arrangements, exculpatory and brokerage provisions, as well as information on the brokerage practices of the Fund.

Table of Contents

Portfolio Managers

Caesar M. P. Bryan joined GAMCO Asset Management in 1994. He is a member of the global investment team of Gabelli Funds, LLC and portfolio manager of several funds within the Gabelli/GAMCO Fund Complex (or alternatively, Fund Complex) defined herein as including all of the U.S. registered investment companies that are considered part of the same fund complex as the Fund because they have common or affiliated investment advisers. Prior to joining Gabelli, Mr. Bryan was a portfolio manager at Lexington Management. He began his investment career at Samuel Montagu Company, the London based merchant bank. Mr. Bryan graduated from the University of Southampton in England with a Bachelor of Law and is a member of the English Bar.

Vincent Hugonnard-Roche joined GAMCO Investors, Inc. in 2000. He is the sole option strategist on the Fund's portfolio management team. He is Director of Quantitative Strategies, head of the Gabelli Risk Management Group, serves as a portfolio manager of Gabelli Funds, LLC, and manages several funds within the Gabelli/GAMCO Fund Complex. He received a Master's degree in Mathematics of Decision Making from EISITI, France and an MS in Finance from ESSEC, France.

The SAI provides additional information about the Portfolio Managers' compensation, other accounts managed by the Portfolio Managers and the Portfolio Managers' ownership of securities in the Fund.

Non-Resident Trustees

Anthonie C. van Ekris is not a U.S. resident and substantially all of his assets may be located outside of the United States. Mr. van Ekris does not have an agent for service of process in the United States. As a result, it may be difficult for U.S. investors to effect service of process upon Mr. van Ekris within the United States or to realize judgments of courts of the United States predicated upon civil liabilities under the federal securities laws of the United States. In addition, it is not certain that civil liabilities predicated upon the federal securities laws on which a valid judgment of a court in the United States is obtained would be enforceable in the courts of the jurisdictions in which Mr. van Ekris resides.

Sub-Administrator

The Investment Adviser has entered into a sub-administration agreement with BNY Mellon Investment Servicing (US) Inc. (the Sub-Administrator) pursuant to which the Sub-Administrator provides certain administrative services necessary for the Fund's operations which do not include the investment and portfolio management services provided by the Investment Adviser. For these services and the related expenses borne by the Sub-Administrator, the Investment Adviser pays an annual fee based on the value of the aggregate average daily net assets of all funds under its administration managed by the Investment Adviser, GAMCO and Teton Advisors, Inc. as follows: 0.0275% first \$10 billion, 0.0125% exceeding \$10 billion but less than \$15 billion, 0.01% over \$15 billion but less than \$20 billion and 0.008% over \$20 billion. The Sub-Administrator has its principal office at 760 Moore Road, King of Prussia, Pennsylvania 19406.

PORTFOLIO TRANSACTIONS

Principal transactions are not entered into with affiliates of the Fund. However, G.research, LLC, an affiliate of the Investment Adviser, may execute portfolio transactions on stock exchanges and in the OTC markets on an agency basis and may be paid commissions. For a more detailed discussion of the Fund's brokerage allocation practices, see Portfolio Transactions in the SAI.

Table of Contents

DIVIDENDS AND DISTRIBUTIONS

The Fund makes regular monthly cash distributions of all or a portion of its investment company taxable income (which includes ordinary income and short-term capital gains) to its common shareholders. The Fund's distribution policy may be modified from time to time by the Board as it deems appropriate, including in light of market and economic conditions and the Fund's current, expected and historical earnings and investment performance. Common shareholders are expected to be notified of any such modifications by press release or in the Fund's periodic shareholder reports. As a RIC under the Code, the Fund will not be subject to U.S. federal income tax on any taxable income that it distributes to shareholders, provided that at least 90% of its investment company taxable income for that taxable year is distributed to its shareholders.

The Fund's annualized distributions may contain a return of capital. Shareholders who receive the payment of a distribution consisting of a return of capital may be under the impression that they are receiving net profits when they are not. Shareholders should not assume that the source of a distribution from the Fund is net profit. In addition, the amount treated as a tax-free return of capital will reduce a shareholder's adjusted tax basis in its shares, thereby increasing the shareholder's potential taxable gain or reducing the potential taxable loss on the sale of the shares. To minimize the U.S. federal income tax that the Fund must pay at the corporate level, the Fund intends to distribute substantially all of its investment company taxable income and previously undistributed cumulative net capital gain.

The Fund may retain for reinvestment, and pay the resulting U.S. federal income taxes on its net capital gain, if any, although, as previously mentioned, the Fund intends to distribute substantially all of its previously undistributed cumulative net capital gain each year. In the event that the Fund's investment company taxable income and net capital gain exceeds the total of the Fund's annual distributions on any shares issued by the Fund, the Fund intends to pay such excess once a year. If, for any calendar year, the total annual distributions on any shares issued by the Fund exceed investment company taxable income and cumulative net capital gain, the excess will generally be treated as a tax-free return of capital up to the amount of a shareholder's tax basis in his or her shares. Any distributions to the holders of shares which constitute tax-free return of capital will reduce a shareholder's tax basis in such shares, thereby increasing such shareholder's potential gain or reducing his or her potential loss on the sale of the shares. Any amounts distributed to a shareholder in excess of the basis in the shares will generally be taxable to the shareholder as capital gain. See Taxation.

To the extent the Fund makes distributions consisting of returns of capital, such distributions will further decrease the Fund's total assets and, therefore have the likely effect of increasing the Fund's expense ratio as the Fund's fixed expenses will become a larger percentage of the Fund's average net assets. In addition, in order to make such distributions, a Fund may have to sell a portion of its investment portfolio at a time when independent investment judgment may not dictate such action.

AUTOMATIC DIVIDEND REINVESTMENT

AND VOLUNTARY CASH PURCHASE PLANS

Enrollment in the Plan

It is the policy of the Fund to automatically reinvest dividends payable to common shareholders. As a registered shareholder you automatically become a participant in the Fund's Automatic Dividend Reinvestment Plan (the Plan). The Plan authorizes the Fund to credit common shares to participants upon an income dividend or a capital gains distribution regardless of whether the shares are trading at a discount or a premium to net asset value. All distributions to shareholders whose shares are registered in their own names will be automatically reinvested pursuant to the Plan in

Table of Contents

additional shares of the Fund. Plan participants may send their share certificates to American Stock Transfer (AST) to be held in their dividend reinvestment account. Registered shareholders wishing to receive their distributions in cash must submit this request in writing to:

GAMCO Natural Resources, Gold & Income Trust

c/o American Stock Transfer

6201 15th Avenue

Brooklyn, NY 11219

Shareholders requesting this cash election must include the shareholder's name and address as they appear on the share certificate. Shareholders with additional questions regarding the Plan or requesting a copy of the terms of the Plan, may contact AST at (888) 422-3262.

If your shares are held in the name of a broker, bank, or nominee, you should contact such institution. If such institution is not participating in the Plan, your account will be credited with a cash dividend. In order to participate in the Plan through such institution, it may be necessary for you to have your shares taken out of street name and re-registered in your own name. Once registered in your own name your distributions will be automatically reinvested. Certain brokers participate in the Plan. Shareholders holding shares in street name at participating institutions will have dividends automatically reinvested. Shareholders wishing a cash dividend at such institution must contact their broker to make this change.

The number of common shares distributed to participants in the Plan in lieu of cash dividends is determined in the following manner. Under the Plan, whenever the market price of the Fund's common shares is equal to or exceeds net asset value at the time shares are valued for purposes of determining the number of shares equivalent to the cash dividends or capital gains distribution, participants are issued common shares valued at the greater of (i) the net asset value as most recently determined or (ii) 95% of the then current market price of the Fund's common shares. The valuation date is the dividend or distribution payment date or, if that date is not a NYSE Amex trading day, the next trading day. If the net asset value of the common shares at the time of valuation exceeds the market price of the common shares, participants will receive common shares from the Fund valued at market price. If the Fund should declare a dividend or capital gains distribution payable only in cash, AST will buy common shares in the open market, or on the NYSE Amex, or elsewhere, for the participants' accounts, except that AST will endeavor to terminate purchases in the open market and cause the Fund to issue shares at net asset value if, following the commencement of such purchases, the market value of the common shares exceeds the then current net asset value.

The automatic reinvestment of dividends and capital gains distributions will not relieve participants of any income tax which may be payable on such distributions. A participant in the Plan will be treated for federal income tax purposes as having received, on a dividend payment date, a dividend or distribution in an amount equal to the cash the participant could have received instead of shares.

Voluntary Cash Purchase Plan

The Voluntary Cash Purchase Plan is yet another vehicle for our shareholders to increase their investment in the Fund. In order to participate in the Voluntary Cash Purchase Plan, shareholders must have their shares registered in their own name.

Participants in the Voluntary Cash Purchase Plan have the option of making additional cash payments to AST for investments in the Fund's common shares at the then current market price. Shareholders may send an amount from \$250 to \$10,000. AST will use these funds to purchase shares in the open market on or about the 1st and 15th of each month. AST will charge each shareholder who participates a pro rata share of the brokerage commissions. Brokerage charges for such purchases are expected to be less than the usual brokerage charge for such transactions. It is suggested that any voluntary cash payments be sent to American Stock Transfer, 6201 15th Avenue, Brooklyn, NY 11219 such that AST receives such payments approximately 10 days before the investment date. Funds not received at least five days before the investment date shall be held for investment until the next purchase date. A payment may be withdrawn without charge if notice is received by AST at least 48 hours before such payment is to be invested.

Table of Contents

Shareholders wishing to liquidate shares held at AST must do so in writing or by telephone. Please submit your request to the above mentioned address or telephone number. Include in your request your name, address, and account number. The cost to liquidate shares is \$1.00 per transaction as well as the brokerage commission incurred. Brokerage charges are expected to be less than the usual brokerage charge for such transactions.

For more information regarding the Automatic Dividend Reinvestment Plan and Voluntary Cash Purchase Plan, brochures are available by calling (914) 921-5070 or by writing directly to the Fund.

The Fund reserves the right to amend or terminate the Plan as applied to any voluntary cash payments made and any dividend or distribution paid subsequent to written notice of the change sent to the members of the Plan at least 90 days before the record date for such dividend or distribution. The Plan also may be amended or terminated by AST on at least 90 days written notice to participants in the Plan.

DESCRIPTION OF THE SECURITIES

The following is a brief description of the terms of the common and preferred shares, notes, and subscription rights. This description does not purport to be complete and is qualified by reference to the Fund's Agreement and Declaration of Trust and its By-Laws. For complete terms of the common and preferred shares, please refer to the actual terms of such series, which are set forth in the Governing Documents. For complete terms of the notes, please refer to the actual terms of such notes, which will be set forth in an Indenture relating to such notes (the Indenture). For complete terms of the subscription rights, please refer to the actual terms of such subscription rights which will be set forth in the subscription rights agreement relating to such subscription rights (the Subscription Rights Agreement).

Common Shares

The Fund is an unincorporated statutory trust organized under the laws of Delaware pursuant to a Certificate of Trust dated as of June 26, 2008. The Fund is authorized to issue an unlimited number of common shares of beneficial interest, par value \$0.001 per share. Each common share has one vote and, when issued and paid for in accordance with the terms of the applicable offering, will be fully paid and non-assessable. Though the Fund expects to pay distributions monthly on its common shares, it is not obligated to do so. All common shares are equal as to distributions, assets and voting privileges and have no conversion, preemptive or other subscription rights. The Fund will send annual and semiannual reports, including financial statements, to all holders of its shares. In the event of liquidation, each of the Fund's common shares is entitled to its proportion of the Fund's assets after payment of debts and expenses and the amounts payable to holders of the Fund's preferred shares ranking senior to the Fund's common shares as described below.

Any additional offerings of shares will require approval by the Fund's Board. Any additional offering of common shares will be subject to the requirements of the 1940 Act, which provides that common shares may not be issued at a price below the then current net asset value, exclusive of sales load, except in connection with an offering to existing holders of common shares or with the consent of a majority of the Fund's common shareholders.

The Fund's outstanding common shares have been listed and traded on the NYSE under the symbol "GNT" since January 27, 2011. The Fund's common shares have historically traded at a discount to the Fund's net asset value. Since the Fund commenced trading on the NYSE, the Fund's common shares have traded at a discount to net asset value as high as 18.29% and as low as 0%. The average weekly trading volume of the common shares on the NYSE during the period from January 27, 2011, when the Fund began investment operations, through December 31, 2016 was 111,124 shares.

Table of Contents

Unlike open-end funds, closed-end funds like the Fund do not continuously offer shares and do not provide daily redemptions. Rather, if a shareholder determines to buy additional common shares or sell shares already held, the shareholder may do so by trading through a broker on the NYSE or otherwise.

Shares of closed-end investment companies often trade on an exchange at prices lower than net asset value. Because the market value of the common shares may be influenced by such factors as dividend and distribution levels (which are in turn affected by expenses), dividend and distribution stability, net asset value, market liquidity, relative demand for and supply of such shares in the market, unrealized gains, general market and economic conditions and other factors beyond the control of the Fund, the Fund cannot assure you that common shares will trade at a price equal to or higher than net asset value in the future. The common shares are designed primarily for long term investors and you should not purchase the common shares if you intend to sell them soon after purchase.

The Fund's common shareholders vote as a single class to elect the Board and on additional matters with respect to which the 1940 Act, the Governing Documents or resolutions adopted by the Trustees provide for a vote of the Fund's common shareholders. See *Anti-Takeover Provisions of the Fund's Governing Documents*.

The Fund is a closed-end, non-diversified, management investment company and as such its shareholders do not, and will not, have the right to require the Fund to repurchase their shares. The Fund, however, may repurchase its common shares from time to time as and when it deems such a repurchase advisable, subject to maintaining required asset coverage for each series of outstanding preferred shares. The Board has authorized such repurchases to be made when the Fund's common shares are trading at a discount from net asset value of 10% or more (or such other percentage as the Board of the Fund may determine from time to time). Pursuant to the 1940 Act, the Fund may repurchase its common shares on a securities exchange (provided that the Fund has informed its shareholders within the preceding six months of its intention to repurchase such shares) or pursuant to tenders and may also repurchase shares privately if the Fund meets certain conditions regarding, among other things, distribution of net income for the preceding fiscal year, status of the seller, price paid, brokerage commissions, prior notice to shareholders of an intention to purchase shares and purchasing in a manner and on a basis that does not discriminate unfairly against the other shareholders through their interest in the Fund.

When the Fund repurchases its common shares for a price below net asset value, the net asset value of the common shares that remain outstanding will be enhanced, but this does not necessarily mean that the market price of the outstanding common shares will be affected, either positively or negatively. The repurchase of common shares will reduce the total assets of the Fund available for investment and may increase the Fund's expense ratio. In total through December 31, 2016, the Fund has repurchased and retired 148,727 common shares in the open market at an average price of \$5.29 per share and at an average discount of approximately 14.61% from the Fund's net asset value.

Book-Entry. The common shares will initially be held in the name of Cede & Co. as nominee for the Depository Trust Company (DTC). The Fund will treat Cede & Co. as the holder of record of the common shares for all purposes. In accordance with the procedures of DTC, however, purchasers of common shares will be deemed the beneficial owners of shares purchased for purposes of distributions, voting and liquidation rights.

Preferred Shares

The Agreement and Declaration of Trust provides that the Board may authorize and issue senior securities with rights as determined by the Board, by action of the Board without the approval of the holders of the common shares. Holders of common shares have no preemptive right to purchase any senior securities that might be issued.

Currently an unlimited number of the Fund's shares have been classified by the Board as preferred shares, par value \$0.001 per share. The terms of such preferred shares may be fixed by the Board and would materially limit and/or qualify the rights of holders of the Fund's common shares.

Table of Contents

If the Fund issues preferred shares, it will pay dividends to the holders of the preferred shares at a fixed rate, as described in a Prospectus Supplement accompanying each preferred share offering.

Upon a liquidation, each holder of the preferred shares will be entitled to receive out of the assets of the Fund available for distribution to shareholders (after payment of claims of the Fund's creditors but before any distributions with respect to the Fund's common shares or any other shares of the Fund ranking junior to the preferred shares as to liquidation payments) an amount per share equal to such share's liquidation preference plus any accumulated but unpaid distributions (whether or not earned or declared, excluding interest thereon) to the date of distribution, and such shareholders shall be entitled to no further participation in any distribution or payment in connection with such liquidation. Each series of the preferred shares will rank on a parity with any other series of preferred shares of the Fund as to the payment of distributions and the distribution of assets upon liquidation, and will be junior to the Fund's obligations with respect to any outstanding senior securities representing debt. The preferred shares carry one vote per share on all matters on which such shares are entitled to vote. The preferred shares will, upon issuance, be fully paid and nonassessable and will have no preemptive, exchange or conversion rights. The Board may by resolution classify or reclassify any authorized but unissued capital shares of the Fund from time to time by setting or changing the preferences, conversion or other rights, voting powers, restrictions, limitations as to distributions or terms or conditions of redemption. The Fund will not issue any class of shares senior to the preferred shares.

Redemption, Purchase and Sale of Preferred Shares By the Fund. The terms of any preferred shares are expected to provide that (i) they are redeemable by the Fund at any time (either after the date of initial issuance, or after some period of time following initial issuance) in whole or in part at the original purchase price per share plus accumulated dividends per share, (ii) the Fund may tender for or purchase preferred shares and (iii) the Fund may subsequently resell any shares so tendered for or purchased. Any redemption or purchase of preferred shares by the Fund will reduce the leverage applicable to the common shares, while any resale of preferred shares by the Fund will increase that leverage.

Rating Agency Guidelines. Upon issuance, it is expected that any new series of preferred shares will be rated by Moody's or Fitch.

The Fund is, and expects that it will be, required under the applicable rating agency guidelines to maintain assets having in the aggregate a discounted value at least equal to a Basic Maintenance Amount (as defined in the applicable Statement of Preferences and summarized below), for its outstanding preferred shares. To the extent any particular portfolio holding does not satisfy the applicable rating agency's guidelines, all or a portion of such holding's value will not be included in the calculation of discounted value (as defined by such rating agency). The Moody's and Fitch guidelines also impose certain diversification requirements and industry concentration limitations on the Fund's overall portfolio, and apply specified discounts to securities held by the Fund (except certain money market securities).

The Basic Maintenance Amount is generally equal to (a) the sum of (i) the aggregate liquidation preference of any preferred shares then outstanding plus (to the extent not included in the liquidation preference of such preferred shares) an amount equal to the aggregate accumulated but unpaid distributions (whether or not earned or declared) in respect of such preferred shares, (ii) the Fund's other liabilities (excluding dividends and other distributions payable on the Fund's common shares) and (iii) any other current liabilities of the Fund (including amounts due and payable by the Fund pursuant to reverse repurchase agreements and payables for assets purchased) less (b) the value of the Fund's assets if such assets are either cash or evidences of indebtedness which mature prior to or on the date of redemption or repurchase of preferred shares or payment of another liability and are either U.S. government securities or evidences of indebtedness rated at least Aaa, P-1, VMIG-1 or MIG-1 by Moody's or AAA, SP-1+ or A-1+ by S&P by the Fund for distributions, the redemption or repurchase of preferred shares or the Fund's liabilities.

If the Fund does not cure in a timely manner a failure to maintain a discounted value of its portfolio equal to the Basic Maintenance Amount in accordance with the requirements of the applicable rating agency or agencies then rating the preferred shares at the request of the Fund, the Fund may, and in certain circumstances will be required to, mandatorily redeem preferred shares.

Table of Contents

The Fund may, but is not required to, adopt any modifications to the rating agency guidelines that may hereafter be established by Moody's and Fitch (or such other rating agency then rating the preferred shares at the request of the Fund). Failure to adopt any such modifications, however, may result in a change in the relevant rating agency's ratings or a withdrawal of such ratings altogether. In addition, any rating agency providing a rating for the preferred shares at the request of the Fund may, at any time, change or withdraw any such rating. The Board, without further action by shareholders, may amend, alter, add to or repeal any provision of the Statement of Preferences adopted pursuant to rating agency guidelines if the Board determines that such amendments or modifications are necessary to prevent a reduction in, or the withdrawal of, a rating of the preferred shares and are in the aggregate in the best interests of the holders of the preferred shares. Additionally, the Board, without further action by the shareholders, may amend, alter, add to or repeal any provision of the Statement of Preferences adopted pursuant to rating agency guidelines if the Board determines that such amendments or modifications will not in the aggregate adversely affect the rights and preferences of the holders of any series of the preferred shares, provided that the Fund has received advice from each applicable rating agency that such amendment or modification is not expected to adversely affect such rating agency's then-current rating of such series of the Fund's preferred shares.

As described by Moody's and Fitch, the ratings assigned to the preferred shares are assessments of the capacity and willingness of the Fund to pay the obligations of each series of the preferred shares. The ratings on the preferred shares are not recommendations to purchase, hold or sell shares of any series, inasmuch as the ratings do not comment as to market price or suitability for a particular investor. The rating agency guidelines also do not address the likelihood that an owner of preferred shares will be able to sell such shares on an exchange, in an auction or otherwise. The ratings are based on current information furnished to Moody's and Fitch by the Fund and the Investment Adviser and information obtained from other sources. The ratings may be changed, suspended or withdrawn as a result of changes in, or the unavailability of, such information.

The rating agency guidelines will apply to the preferred shares, as the case may be, only so long as such rating agency is rating such shares at the request of the Fund. The Fund would pay fees to Moody's and Fitch for rating the preferred shares.

Asset Maintenance Requirements. In addition to the requirement summarized under, Rating Agency Guidelines above, the Fund must satisfy asset maintenance requirements under the 1940 Act with respect to its preferred shares. Under the 1940 Act, debt or additional preferred shares may be issued only if immediately after such issuance the value of the Fund's total assets (less ordinary course liabilities) is at least 300% of the amount of any debt outstanding and at least 200% of the amount of any preferred shares and debt outstanding.

The Fund will be required under the Statement of Preferences of each series of preferred shares to determine whether it has, as of the last business day of each March, June, September and December of each year, an asset coverage (as defined in the 1940 Act) of at least 200% (or such higher or lower percentage as may be required at the time under the 1940 Act) with respect to all outstanding senior securities of the Fund that are debt or stock, including any outstanding preferred shares. If the Fund fails to maintain the asset coverage required under the 1940 Act on such dates and such failure is not cured by a specific time (generally within 49 calendar days), the Fund may, and in certain circumstances will be required to, mandatorily redeem preferred shares sufficient to satisfy such asset coverage. See Redemption Procedures below.

Distributions. Holders of any Fixed Rate Preferred Shares will be entitled to receive, out of funds legally available therefore, cumulative cash distributions, at an annual rate set forth in the applicable Statement of Preferences or Prospectus Supplement, payable with such frequency as set forth in the applicable Statement of Preferences or Prospectus Supplement. Such distributions will accumulate from the date on which such shares are issued.

Restrictions on Dividends and Other Distributions for the Preferred Shares. So long as any preferred shares are outstanding, the Fund may not pay any dividend or distribution (other than a dividend or distribution paid in common shares or in options, warrants or rights to subscribe for or purchase common shares) in respect of the common shares or call for redemption, redeem, purchase or otherwise acquire for consideration any common shares (except by conversion into or exchange for shares of the Fund ranking junior to the preferred shares as to the payment of dividends or distributions and the distribution of assets upon liquidation), unless:

Table of Contents

the Fund has declared and paid (or provided to the relevant dividend paying agent) all cumulative distributions on the Fund's outstanding preferred shares due on or prior to the date of such common shares dividend or distribution;

the Fund has redeemed the full number of preferred shares to be redeemed pursuant to any mandatory redemption provision in the Fund's Governing Documents; and

after making the distribution, the Fund meets applicable asset coverage requirements described under Preferred Shares Asset Maintenance Requirements.

No complete distribution due for a particular dividend period will be declared or made on any series of preferred shares for any dividend period, or part thereof, unless full cumulative distributions due through the most recent dividend payment dates therefore for all outstanding series of preferred shares of the Fund ranking on a parity with such series as to distributions have been or contemporaneously are declared and made. If full cumulative distributions due have not been made on all outstanding preferred shares of the Fund ranking on a parity with such series of preferred shares as to the payment of distributions, any distributions being paid on the preferred shares will be paid as nearly pro rata as possible in proportion to the respective amounts of distributions accumulated but unmade on each such series of preferred shares on the relevant dividend payment date. The Fund's obligation to make distributions on the preferred shares will be subordinate to its obligations to pay interest and principal, when due, on any senior securities representing debt.

Mandatory Redemption Relating to Asset Coverage Requirements. The Fund may, at its option, consistent with the Governing Documents and the 1940 Act, and in certain circumstances will be required to, mandatorily redeem preferred shares in the event that:

the Fund fails to maintain the asset coverage requirements specified under the 1940 Act on a quarterly valuation date and such failure is not cured on or before a specified period of time, following such failure (typically 49 calendar days); or

the Fund fails to maintain the asset coverage requirements as calculated in accordance with any applicable rating agency guidelines as of any monthly valuation date, and such failure is not cured on or before a specified period of time after such valuation date (typically 10 business days).

The redemption price for preferred shares subject to mandatory redemption will generally be the liquidation preference, as stated in the Statement of Preferences of each existing series of preferred shares or the Prospectus Supplement accompanying the issuance of any series of preferred shares, plus an amount equal to any accumulated but unpaid distributions (whether or not earned or declared) to the date fixed for redemption, plus any applicable redemption premium determined by the Board and included in the Statement of Preferences.

The number of preferred shares that will be redeemed in the case of a mandatory redemption will equal the minimum number of outstanding preferred shares, the redemption of which, if such redemption had occurred immediately prior to the opening of business on the applicable cure date, would have resulted in the relevant asset coverage requirement having been met or, if the required asset coverage cannot be so restored, all of the preferred shares. In the event that preferred shares are redeemed due to a failure to satisfy the 1940 Act asset coverage requirements, the Fund may, but is not required to, redeem a sufficient number of preferred shares so that the Fund's assets exceed the asset coverage

requirements under the 1940 Act after the redemption by 10% (that is, 220% asset coverage) or some other amount specified in the Statement of Preferences. In the event that preferred shares are redeemed due to a failure to satisfy applicable rating agency guidelines, the Fund may, but is not required to, redeem a sufficient number of preferred shares so that the Fund's discounted portfolio value (as determined in accordance with the applicable rating agency guidelines) after redemption exceeds the asset coverage requirements of each applicable rating agency by up to 10% (that is, 110% rating agency asset coverage) or some other amount specified in the Statement of Preferences.

Table of Contents

If the Fund does not have funds legally available for the redemption of, or is otherwise unable to redeem, all the preferred shares to be redeemed on any redemption date, the Fund will redeem on such redemption date that number of shares for which it has legally available funds, or is otherwise able to redeem, from the holders whose shares are to be redeemed ratably on the basis of the redemption price of such shares, and the remainder of those shares to be redeemed will be redeemed on the earliest practicable date on which the Fund will have funds legally available for the redemption of, or is otherwise able to redeem, such shares upon written notice of redemption.

If fewer than all of the Fund's outstanding preferred shares are to be redeemed, the Fund, at its discretion and subject to the limitations of the Governing Documents, the 1940 Act, and applicable law, will select the one or more series of preferred from which shares will be redeemed and the amount of preferred to be redeemed from each such series. If fewer than all shares of a series of preferred are to be redeemed, such redemption will be made as among the holders of that series pro rata in accordance with the respective number of shares of such series held by each such holder on the record date for such redemption (or by such other equitable method as the Fund may determine). If fewer than all preferred shares held by any holder are to be redeemed, the notice of redemption mailed to such holder will specify the number of shares to be redeemed from such holder, which may be expressed as a percentage of shares held on the applicable record date.

Optional Redemption. Fixed Rate Preferred Shares are not subject to optional redemption by the Fund until the date, if any, specified in the applicable Prospectus or Prospectus Supplement, unless such redemption is necessary, in the judgment of the Fund, to maintain the Fund's status as a RIC under the Code. Commencing on such date and thereafter, the Fund may at any time redeem such Fixed Rate Preferred Shares in whole or in part for cash at a redemption price per share equal to the liquidation preference per share plus accumulated and unpaid distributions (whether or not earned or declared) to the redemption date plus any premium specified in or pursuant to the Statement of Preferences. Such redemptions are subject to the notice requirements set forth under Preferred Shares Redemption Procedures and the limitations of the Governing Documents, the 1940 Act and applicable law.

Redemption Procedures. If the Fund determines or is required to redeem preferred shares, it will mail a notice of redemption to holders of the shares to be redeemed. Each notice of redemption will state (i) the redemption date, (ii) the number or percentage of preferred shares to be redeemed (which may be expressed as a percentage of such shares outstanding), (iii) the CUSIP number(s) of such shares, (iv) the redemption price (specifying the amount of accumulated distributions to be included therein), (v) the place or places where such shares are to be redeemed, (vi) that distributions on the shares to be redeemed will cease to accumulate on such redemption date, (vii) the provision of the Statement of Preferences under which the redemption is being made and (viii) in the case of an optional redemption, any conditions precedent to such redemption. No defect in the notice of redemption or in the mailing thereof will affect the validity of the redemption proceedings, except as required by applicable law.

The redemption date with respect to fixed rate preferred shares will not be fewer than 15 days nor more than 40 days (subject to NYSE requirements) after the date of the applicable notice of redemption. Preferred shareholders may receive shorter notice in the event of a mandatory redemption.
