Portfolio management review

Delaware Investments Closed-End Municipal Bond Funds April 12, 2011

Performance preview

The fiscal year ended March 31, 2011 was generally volatile for the Funds (and for investors in tax-exempt debt in general). Municipal bonds were under considerable selling pressure during the later parts of the fiscal year, driven primarily by fears about the credit worthiness of the municipal bond market, as well as technical developments that affected bond supply. Despite a fiscal year that ended in a flurry of headwinds, municipal bonds posted a cumulative gain of slightly more than 1.5% for the period (as measured by the Barclays Capital Municipal Bond Index).

National economic environment

During the fiscal year, the U.S. economy continued to emerge from its biggest downturn in seven decades, albeit relatively slowly. As the Funds' fiscal year got under way, U.S. economic growth softened, with gross domestic product (a measure of the economy's production of goods and services) slipping from an annualized rate of 3.7% in the first quarter of 2010 to just 1.7% in the second quarter. The grim economic situation was reflected in the national unemployment rate, which stood at 9.7% at the start of the fiscal year.

Several factors contributed to sluggish economic performance, among them:

- Many investors focused their attention on the high levels of sovereign debt across the developed world (and particularly in Greece), fearing that reductions in government spending could exacerbate declining economic growth.
- The U.S. housing market's glut of supply continued toweigh on home prices in many parts of the country.
- State and local governments, whose spending makes up a sizeable component of GDP, largely cut back expenditures to meet big budget shortfalls.

GDP data moderately improved as the fiscal year went on, with the economy growing at an annual rate of 2.6% in the third quarter of 2010 and 2.8% in the final three months of that year. The employment picture, while still generally challenging, began to improve as well, finishing the Funds' fiscal year at 8.9%.

Data: Bloomberg, Lipper, U.S. Department of Commerce

Municipal market trends

For the first two quarters of the Funds' fiscal year, the municipal bond market enjoyed relatively strong performance, echoing the positive trends of 2009. The municipal bond market benefited from several factors, including:

- Low inflation and declining interest rates provided a generally favorable climate for fixed-income securities.
- The popular Build America Bond (BAB) program continued to divert supply away from the traditional tax-exempt bond market and toward the taxable bond market.
- In this environment of reduced supply of tax-exempt securities, demand remained strong, especially for lower-rated, higher-yielding issues.

In November 2010, conditions in the tax-exempt bond market deteriorated suddenly, as many investors became increasingly concerned about the potential for inflation to put downward pressure on bond prices. Concerns were heightened by several developments, including the Federal Reserve's announcement that it would engage in another round of quantitative easing, in which it plans to purchase \$600 billion of Treasury securities, in order to further spur economic growth.

Meanwhile, several other events inhibited the municipal bond market:

- With the BAB program facing expiration at the end of 2010, many investors realized that supply of tax-exempt bonds could potentially increase markedly.
- Negative sentiment grew about the fiscal health of state and local governments.

(continues) 1

Portfolio management review

Delaware Investments Closed-End Municipal Bond Funds

- Significant gains in the number of Republican seats in Congress led many investors to envision a less friendly environment for federal aid to help states manage their budget challenges.
- An extension of Bush-era tax cuts led some investors to view the tax advantage of municipal bonds less favorably.

This confluence of factors precipitated dramatic investment outflows from municipal bond funds in the final months of 2010 and early 2011, reversing the tremendous inflows seen during the market's run-up in much of 2010. In turn, these outflows put downward pressure on municipal bond prices.

Fund positioning

When the Funds' fiscal year began, we maintained a modest emphasis on lower-rated, longer-dated securities, using our research capabilities to help identify those securities we believed offered good value relative to their risk. This approach generally worked well; within each of the Funds, these types of securities generally added to performance.

Unfortunately, this approach hampered the Funds' returns relative to their benchmark index when market conditions deteriorated in the final months of the fiscal year. As investors' confidence in the tax-exempt bond market generally waned, securities with heightened credit risk (such as lower-rated bonds) or interest-rate risk (namely, bonds with longer maturity dates) underperformed their higher-rated, shorter-dated counterparts.

As the Funds' fiscal year came to a close, we faced the need to make a decision about current market conditions — whether to treat them as a passing storm or as a fundamental change that warranted a shift in approach. We concluded that the increased volatility in the municipal bond environment at least required us to position the Funds somewhat more conservatively. This resulted in an increased focus on intermediate-maturity bonds with higher credit ratings, and a reduction of exposure to longer-dated, lower-rated bonds where appropriate.

Performance effects

Our conservative positioning was consistent with our overall philosophy of managing the Funds with an emphasis on preserving principal. We were willing to be somewhat more conservative than some other municipal bond managers (perhaps sacrificing a bit of performance potential) in an attempt to avoid greater losses during particularly difficult market downturns.

On an individual security basis, the Funds often saw good results from the types of bonds that outperformed for the fiscal year; namely, bonds with shorter maturities and relatively higher credit ratings. Within Delaware Investments Arizona Municipal Income Fund, Inc., for instance, bonds with relatively shorter maturities led the way, including bonds issued by the University of Arizona (maturing in 2018) as well as housing bonds issued by the City of Phoenix (maturing in 2020).

Leading contributors also included prerefunded bonds, which are very high-quality, short-duration bonds. (When a bond is prerefunded, the issuer has secured the bond's principal value by holding some type of risk-free asset — typically Treasurys — in an escrow account). Within Delaware Investments Colorado Municipal Income Fund, Inc., prerefunded bonds issued by the University of Denver and by the Denver Convention Center Hotel Authority were among the Fund's leading contributors.

Similar to the Colorado Fund, Delaware Investments Minnesota Municipal Income Fund II, Inc. benefited from holdings in prerefunded bonds that raised money for civic projects, as bonds for the St. Paul civic center were among its strongest contributors.

Leading contributors within Delaware Investments National Municipal Income Fund included bonds issued in New York that were backed by American Airlines (in an arrangement commonly known as an industrial development revenue bond) and an energy bond issued in Iowa by the state's Authority for Interstate Power. Both bonds advanced by more than 5%.

Across all four Funds, the weakest contributors to overall return included bonds issued by the Commonwealth of Puerto Rico. These bonds, which are widely held and are highly liquid, came under tremendous selling pressure during the last half of the Funds' fiscal year. In a sense, the characteristics that make Puerto Rico bonds desirable were the very characteristics that worked against them: They became the instrument of choice for municipal bond investors seeking to raise cash. (This was particularly true for mutual fund managers who needed to satisfy investor redemptions.) The resulting decline in bond prices was widespread and difficult to control, and it was a good example of the dislocation that municipal markets were suffering through.

As in prior reporting periods, we continued to follow our basic investment philosophy and management approach. We believe successful municipal bond investing requires rigorous credit analysis. In our opinion, there is no substitute for thorough credit research. On a bond-by-bond basis, we scrutinize each security we include in the Funds to help ensure our comfort level with its financial position and to feel confident that, in our view, any risks are more than offset by the potential income provided by the bond.
