COMMUNITY BANK SYSTEM, INC.
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (Unaudited)
March 31, 2014

## NOTE A: BASIS OF PRESENTATION

The interim financial data as of and for the three months ended March 31, 2014 is unaudited; however, in the opinion of Community Bank System, Inc. (the "Company"), the interim data includes all adjustments, consisting only of normal recurring adjustments, necessary for a fair statement of the results for the interim periods in conformity with generally accepted accounting principles ("GAAP"). The results of operations for the interim periods are not necessarily indicative of the results that may be expected for the full year or any other interim period.

## NOTE B: ACQUISITIONS

On January 1, 2014, the Company, through its subsidiary, Harbridge Consulting Group, LLC ("Harbridge"), completed its acquisition of a professional services practice from EBS-RMSCO, Inc., a subsidiary of The Lifetime Healthcare Companies ("EBS-RMSCO"). This professional services practice, which provides actuarial valuation and consulting services to clients who sponsor pension and post-retirement medical and welfare plans, enhances the Company's participation in the Western New York market. The effects of the acquired assets and liabilities have been included in the consolidated financial statements since that date.

On December 13, 2013, Community Bank, N.A. (the "Bank" or "CBNA") completed its acquisition of eight branches in Northern Pennsylvania from Bank of America, N.A. ("B of A"), acquiring approximately \$303 million of deposits and \$1 million of loans. The assumed deposits consist primarily of core deposits (checking, savings and money market accounts) and the purchased loans consist of in-market performing commercial loans. Under the terms of the purchase agreement, the Bank paid a blended deposit premium of 2.4%, or approximately \$7.3 million. The effects of the acquired assets and liabilities have been included in the consolidated financial statements since that date.

The assets and liabilities assumed in the acquisitions were recorded at their estimated fair values based on management's best estimates using information available at the dates of the acquisition, and are subject to adjustment based on updated information not available at the time of acquisition. The following table summarizes the estimated fair value of the assets acquired and liabilities assumed during 2013 and the first three months of 2014.

(000s omitted)	2014	2013

Deposits	0	(303,456)
Total		
identifiable		
assets/(		
liabilities), net	741	(297,268)
Goodwill	\$183	\$5,288

The fair value of checking, savings and money market deposit accounts acquired were assumed to approximate the carrying value as these accounts have no stated maturity and are payable on demand. Certificate of deposit accounts were valued as the present value of the certificates' expected contractual payments discounted at market rates for similar certificates, which approximated their book values.

The core deposit intangible and other intangibles related to the B of A and EBS-RMSCO acquisitions are being amortized using an accelerated method over their estimated useful lives of eight years. The goodwill, which is not amortized for book purposes, was assigned to the Banking segment for the B of A acquisition and the Employee Benefit Services segment for the EBS-RMSCO acquisition. The goodwill arising from the B of A branch and the EBS-RMSCO acquisitions is deductible for tax purposes.

Direct costs related to the acquisitions were expensed as incurred. Merger and acquisition integration-related expenses amount to \$0.1 million in the three months ended March 31, 2014 and have been separately stated in the Consolidated Statements of Income.

Supplemental pro forma financial information related to the B of A and EBS-RMSCO acquisitions has not been provided as it would be impracticable to do so. Historical financial information regarding the acquired branches is not accessible and, thus, the amounts would require estimates so significant as to render the disclosure irrelevant.

#### NOTE C: ACCOUNTING POLICIES

The accounting policies of the Company, as applied in the consolidated interim financial statements presented herein, are substantially the same as those followed on an annual basis as presented on pages 56 through 61 of the Annual Report on Form 10-K for the year ended December 31, 2013 filed with the Securities and Exchange Commission ("SEC") on March 3, 2014.

## **Critical Accounting Policies**

#### Acquired loans

Acquired loans are initially recorded at their acquisition date fair values. The carryover of allowance for loan losses is prohibited as any credit losses in the loans are included in the determination of the fair value of the loans at the acquisition date. Fair values for acquired loans are based on a discounted cash flow methodology that involves assumptions and judgments as to credit risk, prepayment risk, liquidity risk, default rates, loss severity, payment speeds, collateral values and discount rate.

## Acquired impaired loans

Acquired loans that have evidence of deterioration in credit quality since origination and for which it is probable, at acquisition, that the Company will be unable to collect all contractually required payments are accounted for as impaired loans under ASC 310-30. The excess of undiscounted cash flows expected at acquisition over the estimated fair value is referred to as the accretable discount and is recognized into interest income over the remaining life of the loans using the interest method. The difference between contractually required payments at acquisition and the undiscounted cash flows expected to be collected at acquisition is referred to as the non-accretable discount. The non-accretable discount represents estimated future credit losses and other contractually required payments that the Company does not expect to collect. Subsequent decreases in expected cash flows are recognized as impairments through a charge to the provision for credit losses resulting in an increase in the allowance for loan losses. Subsequent improvements in expected cash flows result in a recovery of previously recorded allowance for loan losses or a reversal of a corresponding amount of the non-accretable discount, which the Company then reclassifies as an accretable discount that is recognized into interest income over the remaining life of the loans using the interest method.

Acquired loans that met the criteria for non-accrual of interest prior to acquisition may be considered performing upon acquisition, regardless of whether the customer is contractually delinquent, if the Company can reasonably estimate the timing and amount of the expected cash flows on such loans and if the Company expects to fully collect the new carrying value of the loans. As such, the Company may no longer consider the loan to be non-accrual or non-performing and may accrue interest on these loans, including the impact of any accretable discount.

## Acquired non-impaired loans

Acquired loans that do not meet the requirements under ASC 310-30 are considered acquired non-impaired loans. The difference between the acquisition date fair value and the outstanding balance represents the fair value adjustment for a loan and includes both credit and interest rate considerations. Fair value adjustments may be discounts (or premiums) to a loan's cost basis and are accreted (or amortized) to net interest income (or expense) over the loan's remaining life in accordance with ASC 310- 20. Fair value adjustments for revolving loans are accreted (or amortized) using a straight line method. Term loans are accreted (or amortized) using the constant effective yield method.

Subsequent to the purchase date, the methods used to estimate the allowance for loan losses for the acquired non-impaired loans is consistent with the policy described below. However, the Company compares the net realizable value of the loans to the carrying value, for loans collectively evaluated for impairment. The carrying value represents the net of the loan's unpaid principal balance and the remaining purchase discount (or premium) that has yet to be

accreted into interest income. When the carrying value exceeds the net realizable value, an allowance for loan losses is recognized.

## Allowance for Loan Losses

Management continually evaluates the credit quality of the Company's loan portfolio, and performs a formal review of the adequacy of the allowance for loan losses on a quarterly basis. The allowance reflects management's best estimate of probable losses inherent in the loan portfolio. Determination of the allowance is subjective in nature and requires significant estimates. The Company's allowance methodology consists of two broad components - general and specific loan loss allocations.

The general loan loss allocation is composed of two calculations that are computed on five main loan segments: business lending, consumer installment - direct, consumer installment - indirect, home equity and consumer mortgage. The first calculation is quantitative and determines an allowance level based on the latest 36 months of historical net charge-off data for each loan class (commercial loans exclude balances with specific loan loss allocations). The second calculation is qualitative and takes into consideration eight qualitative environmental factors: levels and trends in delinquencies and impaired loans; levels of and trends in charge-offs and recoveries; trends in volume and terms of loans; effects of any changes in risk selection and underwriting standards, and other changes in lending policies, procedures, and practices; experience, ability, and depth of lending management and other relevant staff; national and local economic trends and conditions; industry conditions; and effects of changes in credit concentrations. A component of the qualitative calculation is the unallocated allowance for loan loss. The qualitative and quantitative calculations are added together to determine the general loan loss allocation. The specific loan loss allocation relates to individual commercial loans that are both greater than \$0.5 million and in a nonaccruing status with respect to interest. Specific loan losses are based on discounted estimated cash flows, including any cash flows resulting from the conversion of collateral or collateral shortfalls. The allowance levels computed from the specific and general loan loss allocation methods are combined with unallocated allowances and allowances needed for acquired loans to derive the total required allowance for loan losses to be reflected on the Consolidated Statement of Condition.

Loan losses are charged off against the allowance, while recoveries of amounts previously charged off are credited to the allowance. A provision for loan losses is charged to operations based on management's periodic evaluation of factors previously mentioned.

#### **Investment Securities**

The Company has classified its investments in debt and equity securities as held-to-maturity or available-for-sale. Held-to-maturity securities are those for which the Company has the positive intent and ability to hold until maturity, and are reported at cost, which is adjusted for amortization of premiums and accretion of discounts. During December 2013 the Company reclassified its held-to-maturity portfolio to available-for-sale and the Company will not be able to use the held-to-maturity classification for the foreseeable future. Securities classified as available-for-sale are reported at fair value with net unrealized gains and losses reflected as a separate component of shareholders' equity, net of applicable income taxes. None of the Company's investment securities have been classified as trading securities at March 31, 2014. Certain equity securities are stated at cost and include restricted stock of the Federal Reserve Bank of New York ("Federal Reserve") and Federal Home Loan Bank of New York ("FHLB").

Fair values for investment securities are based upon quoted market prices, where available. If quoted market prices are not available, fair values are based upon quoted market prices of comparable instruments, or a discounted cash flow model using market estimates of interest rates and volatility.

The Company conducts an assessment of all securities in an unrealized loss position to determine if other-than-temporary impairment ("OTTI") exists on a quarterly basis. An unrealized loss exists when the current fair value of an individual security is less than its amortized cost basis. The OTTI assessment considers the security structure, recent security collateral performance metrics, if applicable, external credit ratings, failure of the issuer to make scheduled interest or principal payments, judgment about and expectations of future performance, and relevant independent industry research, analysis and forecasts. The severity of the impairment and the length of time the security has been impaired is also considered in the assessment. The assessment of whether an OTTI decline exists is performed on each security, regardless of the classification of the security as available-for-sale or held-to-maturity and involves a high degree of subjectivity and judgment that is based on the information available to management at a point in time.

An OTTI loss must be recognized for a debt security in an unrealized loss position if there is intent to sell the security or it is more likely than not the Company will be required to sell the security prior to recovery of its amortized cost basis. In this situation, the amount of loss recognized in income is equal to the difference between the fair value and the amortized cost basis of the security. Even if management does not have the intent, and it is not more likely than not that the Company will be required to sell the securities, an evaluation of the expected cash flows to be received is performed to determine if a credit loss has occurred. For debt securities, a critical component of the evaluation for OTTI is the identification of credit-impaired securities, where the Company does not expect to receive cash flows sufficient to recover the entire amortized cost basis of the security. In the event of a credit loss, only the amount of impairment associated with the credit loss would be recognized in income. The portion of the unrealized loss relating to other factors, such as liquidity conditions in the market or changes in market interest rates, is recorded in accumulated other comprehensive loss.

Equity securities are also evaluated to determine whether the unrealized loss is expected to be recoverable based on whether evidence exists to support a realizable value equal to or greater than the amortized cost basis. If it is probable that the amortized cost basis will not be recovered, taking into consideration the estimated recovery period and the ability to hold the equity security until recovery, OTTI is recognized in earnings equal to the difference between the fair value and the amortized cost basis of the security.

The specific identification method is used in determining the realized gains and losses on sales of investment securities and OTTI charges. Premiums and discounts on securities are amortized and accreted, respectively, on the interest method basis over the period to maturity or estimated life of the related security. Purchases and sales of securities are recognized on a trade date basis.

## **Intangible Assets**

Intangible assets include core deposit intangibles, customer relationship intangibles and goodwill arising from acquisitions. Core deposit intangibles and customer relationship intangibles are amortized on either an accelerated or straight-line basis over periods ranging from seven to 20 years. The initial and ongoing carrying value of goodwill and other intangible assets is based upon discounted cash flow modeling techniques that require management to make estimates regarding the amount and timing of expected future cash flows. It also requires use of a discount rate that reflects the current return requirements of the market in relation to present risk-free interest rates, required equity market premiums, peer volatility indicators, and company-specific risk indicators.

The Company evaluates goodwill for impairment on an annual basis, or more often if events or circumstances indicate there may be impairment. The implied fair value of a reporting unit's goodwill is compared to its carrying amount and the impairment loss is measured by the excess of the carrying value over fair value. The fair value of each reporting unit is compared to the carrying amount of that reporting unit in order to determine if impairment is indicated.

#### **Retirement Benefits**

The Company provides defined benefit pension benefits to eligible employees and post-retirement health and life insurance benefits to certain eligible retirees. The Company also provides deferred compensation and supplemental executive retirement plans for selected current and former employees, officers, and directors. Expense under these plans is charged to current operations and consists of several components of net periodic benefit cost based on various actuarial assumptions regarding future experience under the plans, including discount rate, rate of future compensation increases and expected return on plan assets.

#### **New Accounting Pronouncements**

In January 2014, the Financial Accounting Standards Board ("FASB") issued Accounting Standards Update ("ASU") No. 2014-04, Receivables – Troubled Debt Restructurings by Creditors (Subtopic 310-40): Reclassification of Residential Real Estate Collateralized Consumer Mortgage Loans upon Foreclosure. This new guidance clarifies when an in substance repossession or foreclosure occurs, and requires all creditors who obtain physical possession (resulting from an in substance repossession or foreclosure) of residential real estate property collateralizing a consumer mortgage loan in satisfaction of a receivable to reclassify the collateralized mortgage loan such that the loan should be derecognized and the collateral asset recognized. This guidance is effective prospectively for the Company for annual and interim periods beginning after December 15, 2014. The adoption of this guidance is not expected to have a material impact on the Company's consolidated financial statements.

#### NOTE D: INVESTMENT SECURITIES

The amortized cost and estimated fair value of investment securities as of March 31, 2014 and December 31, 2013 are as follows:

	March 31,	2014			December 3	1, 2013

The unrealized losses reported pertaining to securities issued by the U.S. government and its sponsored entities, include treasuries, agencies, and mortgage-backed securities issued by GNMA, FNMA and FHLMC which are

currently rated AAA by Moody's Investor Services, AA+ by Standard & Poor's and are guaranteed by the U.S. government. The majority of the obligations of state and political subdivisions and corporations carry a credit rating of A or better. Additionally, a majority of the obligations of state and political subdivisions carry a secondary level of credit enhancement. The Company does not intend to sell these securities, nor is it more likely than not that the Company will be required to sell these securities prior to recovery of the amortized cost. The unrealized losses in the portfolios are primarily attributable to changes in interest rates. As such, management does not believe any individual unrealized loss as of March 31, 2014 represents OTTI.

The amortized cost and estimated fair value of debt securities at March 31, 2014, by contractual maturity, are shown below. Expected maturities will differ from contractual maturities because borrowers may have the right to call or prepay obligations with or without call or prepayment penalties. Securities not due at a single maturity date are shown separately.

#### NOTE E: LOANS

The segments of the Company's loan portfolio are disaggregated into the following classes that allow management to monitor risk and performance:

- Consumer mortgages consist primarily of fixed rate residential instruments, typically 15 30 years in contractual term, secured by first liens on real property.
- Business lending is comprised of general purpose commercial and industrial loans including, but not limited to agricultural-related and dealer floor plans, as well as mortgages on commercial property.
- Consumer indirect consists primarily of installment loans originated through selected dealerships and are secured by automobiles, marine and other recreational vehicles.
- Consumer direct consists of all other loans to consumers such as personal installment loans and lines of credit.
- Home equity products are consumer purpose installment loans or lines of credit most often secured by a first or second lien position on residential real estate with terms up to 30 years.

The balances of these classes are summarized as follows:

		December
	March 31,	31,
(000's omitted)	2014	2013
Consumer		
mortgage	\$1,579,322	\$1,582,058
Business lending	1,246,070	1,260,364
Consumer

## Credit Quality

Management monitors the credit quality of its loan portfolio on an ongoing basis. Measurement of delinquency and past due status are based on the contractual terms of each loan. Past due loans are reviewed on a monthly basis to identify loans for non-accrual status. The following is an aged analysis of the Company's past due loans, by class as of March 31, 2014:

Legacy Loans (excludes loans acquired after January 1, 2009)

(1) Acquired impaired loans were not classified as nonperforming assets as the loans are considered to be performing under ASC 310-30. As a result interest income, through the accretion of the difference between the carrying amount of the loans and the expected cashflows, is being recognized on all acquired impaired loans.

The following is an aged analysis of the Company's past due loans by class as of December 31, 2013:

As a result interest income, through the accretion of the difference between the carrying amount of the loans and the expected cashflows, is being recognized on all acquired impaired loans.

The Company uses several credit quality indicators to assess credit risk in an ongoing manner. The Company's primary credit quality indicator for its business lending portfolio is an internal credit risk rating system that categorizes loans as "pass", "special mention", or "classified". Credit risk ratings are applied individually to those classes of loans that have significant or unique credit characteristics that benefit from a case-by-case evaluation. In general, the following are the definitions of the Company's credit quality indicators:

Pass The condition of the borrower and the performance of the loans are satisfactory or better.

Special Mention

The condition of the borrower has deteriorated although the loan performs as agreed.

Classified The condition of the borrower has significantly deteriorated and the performance of the loan could further deteriorate, if deficiencies are not corrected.

Doubtful The condition of the borrower has deteriorated to the point that collection of the balance is improbable based on current facts and conditions.

All other loans are underwritten and structured using standardized criteria and characteristics, primarily payment performance, and are normally risk rated and monitored collectively on a monthly basis. These are typically loans to individuals in the consumer categories and are delineated as either performing or nonperforming. Performing loans include current, 30 - 89 days past due and acquired impaired loans. Nonperforming loans include 90+ days past due and still accruing and nonaccrual loans. The following table details the balances in all other loan categories at March 31, 2014:

Legacy loans (excludes loans acquired after January 1, 2009)

	Consumer	Consumer	Consumer	Home	
(000's omitted)	Mortgage	Indirect	Direct	Equity	Total

Total	\$79,799	\$3,725	\$8,735	\$70,610	\$162,869

All loan classes are collectively evaluated for impairment except business lending, as described in Note C. A summary of individually evaluated impaired loans as of March 31, 2014 and December 31, 2013 follows:

(000)	31,	December 31,
(000's omitted)	2014	2013
Loans with allowance allocation	\$1,543	\$945
Loans without allowance allocation	0	600
Carrying balance	1,543	1,545
Contractual balance	1,851	1,852
Specifically allocated allowance	176	50

In the course of working with borrowers, the Company may choose to restructure the contractual terms of certain loans. In this scenario, the Company attempts to work-out an alternative payment schedule with the borrower in order to optimize collectability of the loan. Any loans that are modified are reviewed by the Company to identify if a troubled debt restructuring ("TDR") has occurred, which is when, for economic or legal reasons related to a borrower's financial difficulties, the Company grants a concession to the borrower that it would not otherwise consider. Terms may be modified to fit the ability of the borrower to repay in line with its current financial standing and the restructuring of the loan may include the transfer of assets from the borrower to satisfy the debt, a modification of loan terms, or a combination of the two. With regard to determination of the amount of the allowance for loan losses, troubled debt restructured loans are considered to be impaired. As a result, the determination of the amount of allowance for loan losses related to impaired loans for each portfolio segment within troubled debt restructurings is the same as detailed previously.

During 2012, clarified guidance was issued by the OCC addressing the accounting for certain loans that have been discharged in Chapter 7 bankruptcy. In accordance with this clarified guidance, loans that have been discharged in Chapter 7 bankruptcy, but not reaffirmed by the borrower, are classified as TDRs, irrespective of payment history or delinquency status, even if the repayment terms for the loan have not been otherwise modified. The Company's lien position against the underlying collateral remains unchanged. Pursuant to that guidance, the Company records a charge-off equal to any portion of the carrying value that exceeds the net realizable value of the collateral. The amount of loss incurred in 2014 and 2013 was immaterial.

TDRs less than \$0.5 million are collectively included in the general loan loss allocation and the qualitative review, if necessary. Commercial loans greater than \$0.5 million are individually evaluated for impairment, and if necessary, a specific allocation of the allowance for loan losses is provided. At March 31, 2014, there were no impaired loans that were considered a TDR.

Information regarding troubled debt restructurings as of March 31, 2014 and December 31, 2013 is as follows:

(0.0.0.1		M	Iarch	31, 201	4			Dec	emb	er 31, 20	13

The following table presents information related to loans modified in a TDR during the three months ended March 31, 2014 and 2013. Of the loans noted in the table below, all but two loans for the three months ended March 31, 2014, and no loans for the three months ended March 31 2013, were modified due to a Chapter 7 bankruptcy as described previously. The two exceptions were a business loan restructured via an extension of term and a consumer mortgage restructured via an extension of term and a rate concession. The financial effects of these restructurings were immaterial.

net		

#### NOTE G: MANDATORILY REDEEMABLE PREFERRED SECURITIES

The Company sponsors two business trusts, Community Statutory Trust III and Community Capital Trust IV, of which 100% of the common stock is owned by the Company. The trusts were formed for the purpose of issuing company-obligated mandatorily redeemable preferred securities to third-party investors and investing the proceeds from the sale of such preferred securities solely in junior subordinated debt securities of the Company. The debentures held by each trust are the sole assets of that trust. Distributions on the preferred securities issued by each trust are payable quarterly at a rate per annum equal to the interest rate being earned by the trust on the debentures held by that trust and are recorded as interest expense in the consolidated financial statements. The preferred securities are subject to mandatory redemption, in whole or in part, upon repayment of the debentures. The Company has entered into agreements which, taken collectively, fully and unconditionally guarantee the preferred securities subject to the terms of each of the guarantees. The terms of the preferred securities of each trust are as follows:

	Issuance	Par		Maturity	
					Call
Trust	Date	Amount	Interest Rate	Date	Price
		3	month LIBOR		
		\$24.5	plus 3.58%		
III	7/31/2001	million	(3.82%)	7/31/2031	Par
3 month LIBOR					
		\$75	plus 1.65%		
IV	12/8/2006	million	(1.88%)	12/15/2036	Par

#### NOTE H: BENEFIT PLANS

The Company provides a qualified defined benefit pension to eligible employees and retirees, other post-retirement health and life insurance benefits to certain retirees, an unfunded supplemental pension plan for certain key executives, and an unfunded stock balance plan for certain of its nonemployee directors. The Company accrues for the estimated cost of these benefits through charges to expense during the years that employees earn these benefits. No contributions to the defined benefit pension plan are required or planned for 2014.

The net periodic benefit cost for the three months ended March 31, 2014 and 2013 is as follows:

	Pension		Post-retirement	
	Benefits		Benefits	
	Three Months		Three Months	
	Ended		Ended	
	March 31,		March 31,	
(000's omitted)	2014	2013	2014	2013

Net periodic

benefit cost (\$856) \$584 (\$18) (\$20)

#### NOTE I: EARNINGS PER SHARE

Basic earnings per share are computed based on the weighted-average of the common shares outstanding for the period. Diluted earnings per share are based on the weighted-average of the shares outstanding adjusted for the dilutive effect of restricted stock and the assumed exercise of stock options during the year. The dilutive effect of options is calculated using the treasury stock method of accounting. The treasury stock method determines the number of common shares that would be outstanding if all the dilutive options (those where the average market price is greater than the exercise price) were exercised and the proceeds were used to repurchase common shares in the open market at the average market price for the applicable time period. There were approximately 0.04 million weighted-average anti-dilutive stock options outstanding for the three months ended March 31, 2014, compared to approximately 0.5 million weighted-average anti-dilutive stock options outstanding for the three months March 31, 2013 that were not included in the computation below.

The following is a reconciliation of basic to diluted earnings per share for the three months ended March 31, 2014 and 2013.

### Stock Repurchase Program

At its December 2013 meeting, the Board approved a new repurchase program authorizing the repurchase of up to 2,000,000 shares of the Company's common stock, in accordance with securities laws and regulations, through December 31, 2014. Any repurchased shares will be used for general corporate purposes, including those related to stock plan activities. The timing and extent of repurchases will depend on market conditions and other corporate considerations as determined at the Company's discretion.

There were no open market treasury stock purchases in 2013 or the first three months of 2014.

### NOTE J: COMMITMENTS, CONTINGENT LIABILITIES AND RESTRICTIONS

The Company is a party to financial instruments with off-balance sheet risk in the normal course of business to meet the financing needs of its customers. These financial instruments consist primarily of commitments to extend credit and standby letters of credit. Commitments to extend credit are agreements to lend to customers, generally having fixed expiration dates or other termination clauses that may require payment of a fee. These commitments consist principally of unused commercial and consumer credit lines. Standby letters of credit generally are contingent upon the failure of the customer to perform according to the terms of an underlying contract with a third party. The credit risks associated with commitments to extend credit and standby letters of credit are essentially the same as that involved with extending loans to customers and are subject to the Company's normal credit policies. Collateral may be obtained based on management's assessment of the customer's creditworthiness. The fair value of the standby letters of

credit is immaterial for disclosure.

The contract amount of commitments and contingencies are as follows:

	March	December
(000's	31,	31,
omitted)	2014	2013
Commitment	S	
to extend		
credit	\$728,223	3 \$704,904

credit	24,333	3 24,449
Total	\$752,556	5 \$729,353

The Company and its subsidiaries are subject in the normal course of business to various pending and threatened legal proceedings in which claims for monetary damages are asserted. As of March 31, 2014, management, after consultation with legal counsel, does not anticipate that the aggregate ultimate liability arising out of litigation pending or threatened against the Company or its subsidiaries will be material to the Company's consolidated financial position. On at least a quarterly basis the Company assesses its liabilities and contingencies in connection with such legal proceedings. For those matters where it is probable that the Company will incur losses and the amounts of the losses can be reasonably estimated, the Company records an expense and corresponding liability in its consolidated financial statements. To the extent the pending or threatened litigation could result in exposure in excess of that liability, the amount of such excess is not currently estimable. Although not considered probable, the range of reasonably possible losses for such matters in the aggregate, beyond the existing recorded liability, is between \$0 and \$5 million. Although the Company does not believe that the outcome of pending litigation will be material to the Company's consolidated financial position, it cannot rule out the possibility that such outcomes will be material to the consolidated results of operations for a particular reporting period in the future.

The Bank was named a defendant in an action commenced October 30, 2013 which is pending in the United States District Court for the Middle District of Pennsylvania. The plaintiff alleges that the notices provided to her in connection with the repossession of her automobile failed to comply with certain requirements of Pennsylvania's Uniform Commercial Code (UCC). Plaintiff seeks to pursue the action as a class action on behalf of herself and other similarly situated plaintiffs who had their automobiles repossessed and seeks to recover statutory damages under the UCC. The Bank contests the allegation that the repossession notices were deficient and intends to oppose class certification. The Bank has also asserted counterclaims for breach of contract and set-off against plaintiff, individually and as representative of the putative class, and has filed a motion to dismiss the action on the basis of mootness. In response, Plaintiff has moved to dismiss the Bank's counterclaims on the grounds that the Court lacks subject matter jurisdiction. The parties' motions to dismiss are currently pending before the Court. As set forth in the preceding paragraph, all current litigation matters, including this action, are within a range of reasonably possible losses for such matters in the aggregate, beyond the existing recorded liability, and are included in the range of reasonably possible losses set forth above.

### NOTE K: FAIR VALUE

Accounting standards allow entities an irrevocable option to measure certain financial assets and financial liabilities at fair value. Unrealized gains and losses on items for which the fair value option has been elected are reported in earnings. The Company has elected to value loans held for sale at fair value in order to more closely match the gains and losses associated with loans held for sale with the gains and losses on forward sales contracts. Accordingly, the impact on the valuation will be recognized in the Company's consolidated statement of income. All mortgage loans held for sale are current and in performing status.

Accounting standards establish a framework for measuring fair value and require certain disclosures about such fair value instruments. It defines fair value as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date (i.e. exit price). Inputs used to measure fair value are classified into the following hierarchy:

- · Level 1 Quoted prices in active markets for identical assets or liabilities.
- Level 2 Quoted prices in active markets for similar assets or liabilities, or quoted prices for identical or similar assets or
  - liabilities in markets that are not active, or inputs other than quoted prices that are observable for the asset or liability.
- · Level 3 Significant valuation assumptions not readily observable in a market.

A financial instrument's categorization within the valuation hierarchy is based upon the lowest level of input that is significant to the fair value measurement. The following tables set forth the Company's financial assets and liabilities that were accounted for at fair value on a recurring basis. There were no transfers between any of the levels for the periods presented.

The valuation techniques used to measure fair value for the items in the table above are as follows:

- Available for sale investment securities The fair value of available-for-sale investment securities is based upon quoted prices, if available. If quoted prices are not available, fair values are measured using quoted market prices for similar securities or model-based valuation techniques. Level 1 securities include U.S. Treasury obligations and marketable equity securities that are traded by dealers or brokers in active over-the-counter markets. Level 2 securities include U.S. agency securities, mortgage-backed securities issued by government-sponsored entities, municipal securities and corporate debt securities that are valued by reference to prices for similar securities or through model-based techniques in which all significant inputs, such as reported trades, trade execution data, LIBOR swap yield curve, market prepayment speeds, credit information, market spreads, and security's terms and conditions, are observable. See Note D for further discussion of the fair value of investment securities.
- Mortgage loans held for sale Mortgage loans held for sale are carried at fair value, which is determined using quoted secondary-market prices of loans with similar characteristics and, as such, have been classified as a Level 2 valuation. The unpaid principal value of mortgage loans held for sale at March 31, 2014 is approximately \$0.8 million. The unrealized gain on mortgage loans held for sale of approximately \$0.02 million was recognized in mortgage banking and other income in the consolidated statement of income for the three months ended March 31, 2014.
- Forward sales commitments The Company enters into forward sales commitments to sell certain residential real estate loans. Such commitments are considered to be derivative financial instruments and, therefore, are carried at estimated fair value in the other asset or other liability section of the consolidated balance sheet. The fair value of these forward sales commitments is primarily measured by obtaining pricing from certain government-sponsored entities and reflects the underlying price the entity would pay the Company for an immediate sale on these mortgages. As such, these instruments are

classified as Level 2 in the fair value hierarchy.

•Commitments to originate real estate loans for sale – The Company enters into various commitments to originate residential real estate loans for sale. Such commitments are considered to be derivative financial instruments and, therefore, are carried at estimated fair value in the other asset or other liability section of the consolidated balance sheet. The estimated fair value of these commitments is determined using quoted secondary market prices obtained from certain government-sponsored entities. Additionally, accounting guidance requires the expected net future cash flows related to the associated servicing of the loan to be included in the fair value measurement of the derivative. The expected net future cash flows are based on a valuation model that calculates the present value of estimated net servicing income. The valuation model incorporates assumptions that market participants would use in estimating future net servicing income. Such assumptions include estimates of the cost of servicing loans, appropriate discount rate and prepayment speeds. The determination of expected net cash flows is considered a significant unobservable input contributing to the Level 3 classification of commitments to originate real estate loans for sale.

The changes in Level 3 assets measured at fair value on a recurring basis are summarized in the following tables:

Three Months Ended

	THICC MOHINS Effect			
	March 31,			
	2014	2013		
	Commitments			
	to Originate			
	Real Estate	Pooled Trust		
	Loans for	Preferred		
(000's omitted)	Sale	Securities		
Beginning balance	\$44	\$49,600		
Total (losses)/gains included				
in earnings (1)(3)	(44)	103		
Total gains included in other				
comprehensive income(2)	0	1,892		
Principal reductions	0	(4,109)		
Commitments to originate				
real estate loans held for sale,				
net	67	0		
Ending balance	\$67	\$47,486		

(1) Amounts included in earnings associated with the pooled trust preferred securities relate to accretion of related

discount, which are reported in interest and dividends on taxable investments.

(2) Amounts included in other comprehensive income associated with the pooled trust preferred securities relate to

changes in unrealized loss and are reported as a component of net unrealized gains/(losses) on available-for sale

securities in the Statement of Comprehensive Income.

(3) Amounts included in earnings associated with the commitments to originate real estate loans for sale are reported

as a component of other banking services in the Consolidated Statement of Income.

Assets and liabilities measured on a non-recurring basis:

	M	arch 3	1, 2014		D	ecember	31, 20	13
				Total				Total
				Fair	Level		Level	Fair

Total	\$0	\$0	\$5,334	\$5,334	\$0	\$600	\$5,060	\$5,660

Loans are generally not recorded at fair value on a recurring basis. Periodically, the Company records nonrecurring adjustments to the carrying value of loans based on fair value measurements for partial charge-offs of the uncollectible portions of those loans. Nonrecurring adjustments also include certain impairment amounts for collateral-dependent

loans calculated when establishing the allowance for credit losses. Such amounts are generally based on the fair value of the underlying collateral supporting the loan and, as a result, the carrying value of the loan less the calculated valuation amount does not necessarily represent the fair value of the loan. Real estate collateral is typically valued using independent appraisals or other indications of value based on recent comparable sales of similar properties or assumptions generally observable in the marketplace, adjusted for non-observable inputs. Thus, the resulting nonrecurring fair value measurements are generally classified as Level 3. Estimates of fair value used for other collateral supporting commercial loans generally are based on assumptions not observable in the marketplace and, therefore, such valuations classify as Level 3. At December 31, 2013, impaired loans recorded at fair value consisted of one loan that was valued using a purchase offer that did not require an adjustment for estimated costs. As such, no unobservable inputs were utilized and it was classified as a Level 2 valuation.

Other real estate owned ("OREO") is valued at the time the loan is foreclosed upon and the asset is transferred to other real estate owned. The value is based primarily on third party appraisals, less costs to sell. The appraisals are sometimes further discounted based on management's historical knowledge, changes in market conditions from the time of valuation, and/or management's expertise and knowledge of the customer and customer's business. Such discounts are significant, ranging from 5% to 69% at March 31, 2014 and result in a Level 3 classification of the inputs for determining fair value. OREO is reviewed and evaluated on at least a quarterly basis for additional impairment and adjusted accordingly, based on the same factors identified above. The Company recovers the carrying value of OREO through the sale of the property. The ability to affect future sales prices is subject to market conditions and factors beyond our control and may impact the estimated fair value of a property.

Originated mortgage servicing rights are recorded at their fair value at the time of sale of the underlying loan, and are amortized in proportion to and over the estimated period of net servicing income. The fair value of mortgage servicing rights is based on a valuation model incorporating inputs that market participants would use in estimating future net servicing income. Such inputs include estimates of the cost of servicing loans, appropriate discount rate and prepayment speeds and are considered to be unobservable and contribute to the Level 3 classification of mortgage servicing rights. In accordance with GAAP, the Company must record impairment charges, on a nonrecurring basis, when the carrying value of a stratum exceeds its estimated fair value. Impairment is recognized through a valuation allowance. There is no valuation allowance at March 31, 2014 as the fair value of mortgage servicing rights of approximately \$1.6 million exceeded the carrying value of approximately \$1.1 million.

The Company evaluates goodwill for impairment on an annual basis, or more often if events or circumstances indicate there may be impairment. The fair value of each reporting unit is compared to the carrying amount of that reporting unit in order to determine if impairment is indicated. If so, the implied fair value of the reporting unit's goodwill is compared to its carrying amount and the impairment loss is measured by the excess of the carrying value of the goodwill over fair value of the goodwill. In such situations, the Company performs a discounted cash flow modeling technique that requires management to make estimates regarding the amount and timing of expected future cash flows of the assets and liabilities of the reporting unit that enable the Company to calculate the implied fair value of the goodwill. It also requires use of a discount rate that reflects the current return expectation of the market in relation to present risk-free interest rates, expected equity market premiums, peer volatility indicators and company-specific risk indicators. The Company did not recognize an impairment charge during 2013 or thus far in 2014.

The significant unobservable inputs used in the determination of fair value of assets classified as Level 3 on a recurring or non-recurring basis as of March 31, 2014 are as follows:

(000's omitted)	Fair Value at March 31, 2014		Significant Unobservable Inputs	Significant Unobservable Input Range (Weighted Average)
Impaired loans	\$420	Fair Value of Collateral	Estimated cost of disposal/market adjustment	12.0%-50.0% (23.1%)
Other real estate owned	4,914	Fair Value of Collateral	Estimated cost of disposal/market adjustment	4.6%-69.2% (25.7%)
Commitments to originate real estate loans for sale	67	Discounted cash flow	Embedded servicing value	1%

The significant unobservable inputs used in the determination of fair value of assets classified as Level 3 on a recurring or non-recurring basis as of December 31, 2013 are as follows:

			Significant Unobservable

The Company determines fair values based on quoted market values, where available, estimates of present values, or other valuation techniques. Those techniques are significantly affected by the assumptions used, including, but not limited to, the discount rate and estimates of future cash flows. In that regard, the derived fair value estimates cannot be substantiated by comparison to independent markets and, in many cases, may not be realized in immediate settlement of the instrument. Certain financial instruments and all nonfinancial instruments are excluded from fair value disclosure requirements. Accordingly, the aggregate fair value amounts presented do not represent the underlying value of the Company.

The carrying amounts and estimated fair values of the Company's other financial instruments that are not accounted for at fair value at March 31, 2014 and December 31, 2013 are as follows:

	March 31, 2014		December	31, 2013
	Carrying	Fair	Carrying	Fair
(000's omitted)	Value	Value	Value	Value
Financial assets:				
Net loans	\$4,052,1613	\$4,041,417	\$4,064,7643	\$4,044,449
Financial liabilities:				
Deposits	6,038,888	6,039,766	5,896,044	5,898,138
Borrowings	217,110	217,110	141,913	141,913
Subordinated debt held by				
unconsolidated subsidiary trusts	102,103	99,265	102,097	109,284

The following is a further description of the principal valuation methods used by the Company to estimate the fair values of its financial instruments.

Loans have been classified as a Level 3 valuation. Fair values for variable rate loans that reprice frequently are based on carrying values. Fair values for fixed rate loans are estimated using discounted cash flows and interest rates currently being offered for loans with similar terms to borrowers of similar credit quality.

Deposits have been classified as a Level 2 valuation. The fair value of demand deposits, interest-bearing checking deposits, savings accounts and money market deposits is the amount payable on demand at the reporting date. The fair value of time deposit obligations are based on current market rates for similar products.

Borrowings have been classified as a Level 2 valuation. The fair value of FHLB overnight advances is the amount payable on demand at the reporting date. Fair values for long-term borrowings are estimated using discounted cash flows and interest rates currently being offered on similar borrowings, and are immaterial as of the reporting dates.

Subordinated debt held by unconsolidated subsidiary trusts have been classified as a Level 2 valuation. The fair value of subordinated debt held by unconsolidated subsidiary trusts are estimated using discounted cash flows and interest rates currently being offered on similar securities.

Other financial assets and liabilities – Cash and cash equivalents have been classified as a Level 1 valuation, while accrued interest receivable and accrued interest payable have been classified as a Level 2 valuation. The fair values of each approximate the respective carrying values because the instruments are payable on demand or have short-term maturities and present relatively low credit risk and interest rate risk.

### NOTE L: DERIVATIVE INSTRUMENTS

The Company is party to derivative financial instruments in the normal course of its business to meet the financing needs of its customers and to manage its own exposure to fluctuations in interest rates. These financial instruments have been limited to commitments to originate real estate loans held for sale and forward sales commitments. The Company does not hold or issue derivative financial instruments for trading or other speculative purposes.

The Company enters into forward sales commitments for the future delivery of residential mortgage loans, and interest rate lock commitments to fund loans at a specified interest rate. The forward sales commitments are utilized to reduce interest rate risk associated with interest rate lock commitments and loans held for sale. Changes in the estimated fair value of the forward sales commitments and interest rate lock commitments subsequent to inception are based on changes in the fair value of the underlying loan resulting from the fulfillment of the commitment and changes in the probability that the loan will fund within the terms of the commitment, which is affected primarily by changes in interest rates and the passage of time. At inception and during the life of the interest rate lock commitment, the Company includes the expected net future cash flows related to the associated servicing of the loan as part of the fair value measurement of the interest rate lock commitments. These derivatives are recorded at fair value.

The following table presents the Company's derivative financial instruments, their estimated fair values, and balance sheet location as of March 31, 2014:

### NOTE M: SEGMENT INFORMATION

Operating segments are components of an enterprise, which are evaluated regularly by the "chief operating decision maker" in deciding how to allocate resources and assess performance. The Company's chief operating decision maker is the President and Chief Executive Officer of the Company. The Company has identified Banking, Employee Benefit Services and Wealth Management as its reportable operating business segments. CBNA operates the banking segment that provides full-service banking to consumers, businesses and governmental units in northern, central and western New York as well as northern Pennsylvania. Employee benefit services, which includes Benefit Plans Administrative Services, Inc. ("BPAS"), Harbridge and Hand Benefit & Trust Company ("HB&T") provides employee benefit trust, collective investment fund, retirement plan administration, actuarial, VEBA/HRA and health and welfare consulting services. Wealth management services activities include trust services provided by the personal trust unit within the Bank, investment and insurance products and services provided by Community Investment Services, Inc. ("CISI") and CBNA Insurance Agency, Inc., and asset management provided by Nottingham Advisors, Inc. The accounting policies used in the disclosure of business segments are the same as those described in the summary of significant accounting policies (See Note A, Summary of Significant Accounting Policies of the most recent Form 10-K for the year ended December 31, 2013 filed with the SEC on March 3, 2014).

Information about reportable segments and reconciliation of the information to the consolidated financial statements follows:

Employee

### Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

### Introduction

This Management's Discussion and Analysis of Financial Condition and Results of Operations ("MD&A") primarily reviews the financial condition and results of operations of Community Bank System, Inc. (the "Company" or "CBSI") as of and for the three months ended March 31, 2014 and 2013, although in some circumstances the fourth quarter of 2013 is also discussed in order to more fully explain recent trends. The following discussion and analysis should be read in conjunction with the Company's Consolidated Financial Statements and related notes that appear on pages 3 through 25. All references in the discussion to the financial condition and results of operations are to those of the Company and its subsidiaries taken as a whole. Unless otherwise noted, the term "this year" refers to results in calendar year 2014, "first quarter" refers to the quarter ended March 31, 2014 and earnings per share ("EPS") figures refer to diluted EPS.

This MD&A contains certain forward-looking statements with respect to the financial condition, results of operations and business of the Company. These forward-looking statements involve certain risks and uncertainties. Factors that may cause actual results to differ materially from those proposed by such forward-looking statements are set herein under the caption, "Forward-Looking Statements," on page 41.

## **Critical Accounting Policies**

As a result of the complex and dynamic nature of the Company's business, management must exercise judgment in selecting and applying the most appropriate accounting policies for its various areas of operations. The policy decision process not only ensures compliance with the latest generally accepted accounting principles ("GAAP"), but also reflects management's discretion with regard to choosing the most suitable methodology for reporting the Company's financial performance. It is management's opinion that the accounting estimates covering certain aspects of the business have more significance than others due to the relative importance of those areas to overall performance, or the level of subjectivity in the selection process. These estimates affect the reported amounts of assets, liabilities and shareholders' equity and disclosures of revenues and expenses during the reporting period. Actual results could differ from those estimates. Management believes that critical accounting estimates include:

• Acquired loans – Acquired loans are initially recorded at their acquisition date fair values based on a discounted cash flow methodology that involves assumptions and judgments as to credit risk, prepayment risk, liquidity risk, default rates, loss severity, payment speeds, collateral values and discount rate.

Acquired loans deemed impaired at acquisition are recorded in accordance with ASC 310-30. The excess of undiscounted cash flows expected at acquisition over the estimated fair value is referred to as the accretable discount. The difference between contractually required payments at acquisition and the undiscounted cash flows expected to be collected at acquisition is referred to as the non-accretable discount, which represents estimated future credit losses and other contractually required payments that the Company does not expect to collect. Subsequent decreases in expected cash flows are recognized as impairments through a charge to the provision for credit losses resulting in an increase in the allowance for loan losses. Subsequent improvements in expected cash flows result in a recovery of previously recorded allowance for loan losses or a reversal of a corresponding amount of the non-accretable discount, which the Company then reclassifies as an accretable discount that is recognized into interest income over the remaining life of the loans using the interest method.

For acquired loans that are not deemed impaired at acquisition, the difference between the acquisition date fair value and the outstanding balance represents the fair value adjustment for a loan and includes both credit and interest rate considerations. Subsequent to the purchase date, the methods used to estimate the allowance for loan losses for the

acquired non-impaired loans is consistent with the policy described below. However, the Company compares the net realizable value of the loans to the carrying value, for loans collectively evaluated for impairment. The carrying value represents the net of the loan's unpaid principal balance and the remaining purchase discount (or premium) that has yet to be accreted into interest income. When the carrying value exceeds the net realizable value, an allowance for loan losses is recognized. For loans individually evaluated for impairment, a provision is recorded when the required allowance exceeds any remaining discount on the loan.

• Allowance for loan losses – The allowance for loan losses reflects management's best estimate of probable loan losses in the Company's loan portfolio. Determination of the allowance for loan losses is inherently subjective. It requires significant estimates including the amounts and timing of expected future cash flows and evaluation of collateral values on impaired loans and the amount of estimated losses on pools of homogeneous loans which is based on historical loss experience and consideration of current economic trends, all of which may be susceptible to significant change.

- Investment securities Investment securities are classified as held-to-maturity, available-for-sale, or trading. The appropriate classification is based partially on the Company's ability to hold the securities to maturity and largely on management's intentions with respect to either holding or selling the securities. The classification of investment securities is significant since it directly impacts the accounting for unrealized gains and losses on securities. Unrealized gains and losses on available-for-sale securities are recorded in accumulated other comprehensive income or loss, as a separate component of shareholders' equity and do not affect earnings until realized. The fair values of investment securities are generally determined by reference to quoted market prices, where available. If quoted market prices are not available, fair values are based on quoted market prices of comparable instruments, or a discounted cash flow model using market estimates of the amount and timing of future cash flows, prepayment speed assumptions, expected interest rate curve, and the selection of discount rates that appropriately reflect market and credit risks. Investment securities with significant declines in fair value are evaluated to determine whether they should be considered other-than-temporarily impaired ("OTTI"). An unrealized loss is generally deemed to be other-than-temporary and a credit loss is deemed to exist if the present value of the expected future cash flows is less than the amortized cost basis of the debt security. The credit loss component of an OTTI write-down is recorded in earnings, while the remaining portion of the impairment loss is recognized in other comprehensive income (loss), provided the Company does not intend to sell the underlying debt security, and it is not more likely than not that the Company will be required to sell the debt security prior to recovery of the full value of its amortized cost basis.
- •Retirement benefits The Company provides defined benefit pension benefits to eligible employees and post-retirement health and life insurance benefits to certain eligible retirees. The Company also provides deferred compensation and supplemental executive retirement plans for selected current and former employees and officers. Expense under these plans is charged to current operations and consists of several components of net periodic benefit cost based on various actuarial assumptions regarding future experience under the plans, including, but not limited to, discount rate, rate of future compensation increases, mortality rates, future health care costs and expected return on plan assets.
- •Intangible assets As a result of acquisitions, the Company has acquired goodwill and identifiable intangible assets. Goodwill represents the cost of acquired companies in excess of the fair value of net assets at the acquisition date. Goodwill is evaluated at least annually, or when business conditions suggest impairment may have occurred and will be reduced to its carrying value through a charge to earnings if impairment exists. Core deposits and other identifiable intangible assets are amortized to expense over their estimated useful lives. The determination of whether or not impairment exists is based upon discounted cash flow modeling techniques that require management to make estimates regarding the amount and timing of expected future cash flows. It also requires them to select a discount rate that reflects the current return requirements of the market in relation to present risk-free interest rates, expected equity market premiums, peer volatility indicators and company-specific market and performance metrics, all of which are susceptible to change based on changes in economic conditions and other factors. Future events or changes in the estimates used to determine the carrying value of goodwill and identifiable intangible assets could have a material impact on the Company's results of operations.

A summary of the accounting policies used by management is disclosed in Note A, "Summary of Significant Accounting Policies" on pages 56-61 of the most recent Form 10-K (fiscal year ended December 31, 2013) filed with the Securities and Exchange Commission ("SEC") on March 3, 2014.

### **Executive Summary**

The Company's business philosophy is to operate as a community bank with local decision-making, principally in non-metropolitan markets, providing a broad array of banking and financial services to retail, commercial and municipal customers. The Company's banking subsidiary is Community Bank, N.A. (the "Bank" or "CBNA"). During the third quarter of 2013, the Company rebranded its First Liberty Bank and Trust operations in Pennsylvania to

Community Bank, N.A. This provided a uniform brand identification to customers across the Bank's footprint and allowed for greater efficiency in marketing efforts in conjunction with the Bank announcing the acquisition of eight new branch-banking locations in Northeast Pennsylvania from Bank of America, N.A. ("B of A").

The Company's core operating objectives are: (i) grow the branch network, primarily through a disciplined acquisition strategy, and certain selective de novo expansions, (ii) build profitable loan and deposit volume using both organic and acquisition strategies, (iii) increase the noninterest income component of total revenues through development of banking-related fee income, growth in existing financial services business units, and the acquisition of additional financial services and banking businesses, and (iv) utilize technology to deliver customer-responsive products and services and to improve efficiencies.

Significant factors management reviews to evaluate achievement of the Company's operating objectives and its operating results and financial condition include, but are not limited to: net income and earnings per share; return on assets and equity; net interest margins; noninterest income; operating expenses; asset quality; loan and deposit growth; capital management; performance of individual banking and financial services units; liquidity and interest rate sensitivity; enhancements to customer products and services and their underlying performance characteristics; technology advancements; market share; peer comparisons; and the performance of acquisition activities.

On December 13, 2013, the Company completed its acquisition of eight retail branch-banking locations across its Northeast Pennsylvania markets from B of A, acquiring approximately \$0.9 million in loans and \$303 million of deposits. The assumed deposits consist of \$220 million of core deposits (checking, savings and money market accounts) and \$83 million of time deposits. Under the terms of the agreement, the Bank paid B of A a blended deposit premium of 2.4%, or approximately \$7.3 million.

On January 1, 2014, Harbridge completed its acquisition of a professional services practice from EBS-RMSCO, Inc., a subsidiary of The Lifetime Healthcare Companies. This professional services practice, which provides actuarial valuation and consulting services to clients who sponsor pension and post-retirement medical and welfare plans, enhances the Company's participation in the Western New York marketplace and is expected to add incremental revenue of approximately \$1.2 million annually.

First quarter net income of \$22.2 million increased \$1.9 million or 9.5% as compared to the first quarter of 2013, while earnings per share for the quarter of \$0.54 were \$0.04 or 8.0% higher than the first quarter of the prior year. The higher net income was due to higher net interest income that resulted from earning asset growth, generated organically and from the B of A branch acquisitions, and a higher net interest margin. Also contributing to the higher net income was a lower provision for loan losses and growth of noninterest income due to incremental deposit service fees, including those from the B of A branch acquisitions, higher debit card-related revenue, higher employee benefit services revenue and solid revenue growth from the wealth management businesses. These were partially offset by higher operating expenses due in large part to the additional operating costs from the B of A branch acquisitions, as well as a higher effective income tax rate.

Asset quality in the first quarter of 2014 remained stable and favorable in comparison to averages for peer financial organizations. First quarter net charge-off ratio and delinquency loan ratios were lower than those experienced in the last eight quarters. The current quarter provision for loan losses was lower than the first quarter of 2013 primarily as a result of lower net charge-off levels. The nonperforming loan ratio for the first quarter of 2014 was higher than the fourth quarter of 2013, but was lower than the seven quarters proceeding that period. The Company generated an increase in year-over-year average loan balances due to strong organic loan growth. Average deposits in the first quarter of 2014 were higher than the first quarter of 2013 and the fourth quarter of 2013, driven by the B of A branch acquisitions and organic core deposit growth.

### Net Income and Profitability

As shown in Table 1, net income for the first quarter of \$22.2 million was up \$1.9 million or 9.5% as compared to the first quarter of 2013. Earnings per share of \$0.54 for the first quarter were \$0.04 higher than the EPS generated in the first quarter of 2013. As reflected in Table 1, first quarter net interest income of \$60.1 million, was up \$1.7 million or 2.9% from the comparable prior year period. The improvement resulted from a higher net interest margin, primarily due to the balance sheet restructuring activities completed during 2013, along with a year-over-year increase in interest-earning assets, primarily due to organic loan growth. The provision for loan losses decreased \$0.4 million as compared to the first quarter 2013, reflective of lower net charge-off levels and the continuation of generally stable and favorable asset quality metrics.

First quarter noninterest income was \$28.4 million, up \$2.3 million or 8.6% from the first quarter of 2013, primarily due to the B of A branch acquisitions and organic growth across the franchise. Contributing to the increase was a \$1.4 million increase in revenue generated during the first quarter of 2014 in comparison to the equivalent prior year period from the Company's employee benefit services and wealth management groups, principally resulting from new customer additions and favorable market conditions. During the first quarter of 2013, the Company sold \$398.7 million of investment securities, realizing \$47.8 million of gains and utilized the proceeds to retire \$366.6 million of FHLB borrowings with \$47.8 million of early extinguishment costs.

Operating expenses of \$55.9 million for the first quarter increased \$1.4 million or 2.5% from the comparable prior year period, reflective of the additional operating costs associated with the B of A branch acquisitions completed in the fourth quarter of 2013, as well as higher weather-related facility maintenance and utility costs in the first quarter of this year, in comparison to last year.

A condensed income statement is as follows:

### Net Interest Income

Net interest income is the amount by which interest and fees on earning assets (loans, investments and cash equivalents) exceed the cost of funds, primarily interest paid to the Company's depositors and interest on external borrowings. Net interest margin is the difference between the gross yield on earning assets and the cost of interest-bearing funds as a percentage of earning assets.

As shown in Table 2, net interest income (with nontaxable income converted to a fully tax-equivalent basis) for the first quarter of 2014 was \$63.9 million, a \$1.5 million or 2.4% increase from the same period last year, resulting from a \$128.3 million decrease in average interest-bearing liabilities and an eight-basis point increase in the net interest margin, and a \$16.6 million increase in first quarter interest-earning assets versus the prior year. As reflected in Table 3, the first quarter rate decrease on interest bearing liabilities, the volume decrease in interest-bearing liabilities combined with the volume increase in interest bearing assets had a \$6.6 million favorable impact on net interest income while the rate decrease from interest-bearing assets had a \$5.1 million unfavorable impact on net interest income.

Average investments, including cash equivalents, for the first quarter were \$222.5 million lower than the comparable period of 2013, reflective of the balance sheet restructuring program completed in the first half of 2013 and the sale of the CDO portfolio and certain Treasury securities at the end of 2013. During the first six months of 2013, the Company sold \$648.7 million of U.S. Treasury and agency securities, using the proceeds to retire \$501.6 million of higher rate FHLB borrowings. During the second and third quarters of 2013, the Company purchased \$525 million of U.S. Treasury securities in anticipation of the excess funding expected from the pending branch acquisition and certain other expected cash flows. In late December 2013, the Company sold its entire portfolio, \$56.2 million, of bank and insurance trust preferred collateralized debt obligation (CDO) securities in response to the uncertainties created by the announcement of the final rules implementing Section 619 of the Dodd-Frank Act, commonly known as the "Volcker Rule". In conjunction with the liquidation of the trust preferred CDOs, the Company extinguished \$226.4 million of FHLB term advances and sold \$417.6 million of U.S. Treasury securities previously classified as held-to-maturity. The Company also reinvested the net cash proceeds of \$246 million created from these transactions into U.S. Treasury securities with similar blended durations to the assets sold in order to mitigate the net interest income impact of the security sales and debt extinguishment. In the first quarter of 2014, the Company purchased another \$225 million of U.S. Treasury securities.

First quarter average loan balances increased \$239.1 million as compared to the same period of 2013, due to strong organic loan growth, principally in the consumer mortgage and indirect portfolios. In comparison to the prior year, total average interest-bearing deposits were up \$155.6 million or 3.4% for the quarter, a result of the B of A branch acquisition in the fourth quarter of 2013 and organic growth during the first half of 2013. Quarterly average borrowings decreased \$283.9 million reflective of the restructuring program in the first half of 2013 which retired \$501.6 million of FHLB borrowings as well as the extinguishment of \$226.4 million of FHLB term advances in December 2013.

The net interest margin of 3.94% for the first quarter increased eight basis points as compared to the first quarter of 2013. The rates on interest-bearing liabilities decreased 48 basis points, due primarily to the balance sheet restructuring previously discussed, as well as the continued decline in rates paid on interest-bearing deposits. This was partially offset by a 31-basis point reduction in interest-earning asset yields, reflective of lower yields on loans and investment securities versus last year's first quarter. Net interest margin was positively impacted by the balance sheet restructuring activities in 2013. Proactive management of deposit funding costs continue to have a positive effect on margin results, but have not been able to fully offset declining asset yields.

The decrease in the earning-asset yield was partially attributable to a 23-basis point decrease in investment yield, including cash equivalents, for the first quarter as compared to the prior year period, due to the sale and maturing of higher rate investments being replaced with lower rate investments. Additionally, contributing to the decrease in earning-asset yield for the quarter was a 43-basis point decline in the loan yield as compared to the first quarter of 2013, a result of lower yields on fixed-rate new loan volume due to the decline in interest rates to levels below those prevalent in prior periods and certain existing longer-term adjustable rate loans repricing downward.

The first quarter cost of funds decreased versus the prior year quarter due to a nine-basis point decrease in interest-bearing deposit rates, and a higher proportion of funding being supplied from low and noninterest bearing deposits, as well as a 286-basis point decrease in the average interest rate paid on external borrowings as a result of the balance sheet restructuring conducted during 2013. The decreases in the cost of funds were reflective of disciplined deposit pricing, whereby interest rates on all categories of deposit accounts were lowered throughout 2013 in response to market conditions. Additionally, the proportion of customer deposits held in higher cost time deposits has continued to decline over the last several quarters.

Table 2 below sets forth information related to average interest-earning assets and interest-bearing liabilities and their associated yields and rates for the periods indicated. Interest income and yields are on a fully tax-equivalent basis ("FTE") using a marginal income tax rate of 39.1% and 38.79% in 2014 and 2013, respectively. Average balances are computed by accumulating the daily ending balances in a period and dividing by the number of days in that period. Loan yields and amounts earned include loan fees, deferred loan costs and accretion of acquired loan marks. Average loan balances include nonaccrual loans and loans held for sale.

adjustment		\$3,834			\$4,022	

- (1) Averages for investment securities are based on historical cost basis and the yields do not give effect to changes in fair value that is reflected as a component of shareholders' equity and deferred taxes.
- (2) Includes nonaccrual loans. The impact of interest and fees not recognized on nonaccrual loans was immaterial.

As discussed above and disclosed in Table 3 below, the quarterly change in net interest income (fully tax-equivalent basis) may be analyzed by segregating the volume and rate components of the changes in interest income and interest expense for each underlying category.

Table 3: Rate/Volume

Three months ended March 31, 2014 versus March 31, 2013 Increase (Decrease) Due to Change in (1) Net (000's omitted) Volume Rate Change Interest earned on: Cash equivalents (\$47) \$0 (\$47) Taxable investment securities (1,005)(1,663)(2,668)Nontaxable investment securities (222) (520) (742)Loans 2,829(4,246)(1,417) Total interest-earning assets (2) 182(5,056) (4,874) Interest paid on: Interest checking, savings and money market deposits 73 (264) (191) Time deposits (185) (531) (716) Borrowings (1,925)(3,537)(5,462)Total interest-bearing liabilities (2) (226)(6,143)(6,369)Net interest earnings (2) \$158 \$1,337 \$1,495

- (1) The change in interest due to both rate and volume has been allocated to volume and rate changes in proportion to the relationship of the absolute dollar amounts of such change in each component.
- (2) Changes due to volume and rate are computed from the respective changes in average balances and rates of the totals; they are not a summation of the changes of the components.

### Noninterest Income

The Company's sources of noninterest income are of three primary types: 1) general banking services related to loans, deposits and other core customer activities typically provided through the branch network and electronic banking channels (performed by CBNA); 2) employee benefit services (performed by Benefit Plans Administrative Services, Inc. ("BPAS")); and 3) wealth management services, comprised of trust services (performed by the trust unit within CBNA), investment and insurance products and services (performed by Community Investment Services, Inc. and CBNA Insurance Agency, Inc.) and asset management (performed by Nottingham Advisors, Inc. or "Nottingham"). Additionally, the Company has periodic transactions, most often net gains or losses from the sale of investment securities and prepayment of debt instruments.

Table 4: Noninterest Income

(000's amittad)	Three Months Ended March 31, 2014 2013		
(000's omitted)	2014	2013	
Deposit service charges and fees	¢12 255	\$11,595	
Employee benefit	\$12,233	\$11,393	
services	10,435	9,770	
Wealth management	10,133	2,770	
services	4,474	3,698	
Other banking revenues	906	•	
Mortgage banking	284		
Subtotal	28,354	26,101	
Gain on sales of			
investment securities	0	47,791	
Loss on debt			
extinguishments	0	(47,783)	
Total noninterest income	\$28,354	\$26,109	
Noninterest			
income/operating income			
(FTE basis) (1)	30.7%	29.5%	

(1) For purposes of this ratio noninterest income excludes gains and losses on investment securities and debt extinguishments. Operating income is defined as net interest income on a fully-tax equivalent basis plus noninterest income, excluding gains and losses on investment securities and debt extinguishments.

As displayed in Table 4, noninterest income was \$28.4 million in the first quarter of 2014, an increase of \$2.2 million or 8.6% in comparison to the same quarter of 2013. General recurring banking fees of \$13.2 million for the first quarter were up \$0.7 million or 5.6% as compared to the prior year period. This growth was driven by the addition of new deposit relationships from both acquired and organic sources, as well as solid growth in debit card-related revenue that more than offset the continuing trend of lower utilization of overdraft protection programs and other deposit-related services.

Residential mortgage banking income totaled \$0.3 million for the first quarter of 2014 as compared to \$0.2 million in the first quarter of 2013. Residential mortgage banking income consists of realized gains or losses from the sale of residential mortgage loans and the origination of mortgage loan servicing rights, unrealized gains and losses on residential mortgage loans held for sale and related commitments, mortgage loan servicing fees and other mortgage loan-related fee income. Residential mortgage loans sold to investors, primarily Fannie Mae, totaled \$3.9 million in the first quarter of 2014. Residential mortgage loans held for sale at March 31, 2014 totaled \$0.8 million. Realization of the unrealized gains or losses on mortgage loans held for sale and the related commitments, as well as future revenue generation from mortgage banking activities, will be dependent on market conditions and long-term interest rate trends.

Employee benefit services revenue increased \$0.7 million or 6.8% for the three months ended March 31, 2014 as compared to the prior year period. This business benefitted from new customer additions, favorable market conditions and additional service offerings. Wealth management services revenue increased \$0.8 million or 21% for the first quarter as compared to the first quarter of 2013, driven by solid organic growth in trust and asset advisory services, as well as favorable market conditions.

In the first quarter of 2013, the company initiated a balance sheet restructuring program through the sale of certain longer duration investment securities and retired a portion of the Company's existing FHLB borrowings. The Company sold \$398.7 million of investments securities, realizing \$47.8 million of gains, and utilized the proceeds to retire FHLB borrowings of \$366.6 million with \$47.8 million of early extinguishment costs. These actions improved the Company's regulatory capital position, and positively impacted net interest income generation.

The ratio of noninterest income to total income (FTE basis) was 30.7% for the quarter versus 29.5% for the comparable period of 2013. The increase is a function of an 8.6% increase in non-interest income, primarily from the B of A branch acquisitions as well as strong organic growth at the Company's employee benefit services and wealth management businesses, while net interest income increased at a lesser 2.9% rate due to a lower level of growth in the interest-bearing balance sheet.

### **Operating Expenses**

Table 5 below sets forth the quarterly results of the major operating expense categories for the current and prior year, as well as efficiency ratios (defined below), a standard measure of expense utilization effectiveness commonly used in the banking industry.

Table 5: Noninterest Expenses

	Three I	Months
	End	ded
	Marc	h 31,
(000's omitted)	2014	2013

Total noninterest		
expenses	\$55,921\$	54,552

Operating		
expenses(1)/average		
assets	3.02%	2.94%
Efficiency ratio(2)	59.2%	60.3%

- (1) Operating expenses is calculated as total noninterest expenses less acquisition expenses and amortization of intangibles.
- (2) Efficiency ratio is calculated as operating expenses as defined in (1) divided by net interest income on a fully tax-equivalent basis plus noninterest income less gains and losses on investment securities and debt extinguishments.

As shown in Table 5, operating expenses were \$55.9 million for the first quarter, an increase of \$1.4 million or 2.5% from the prior year level, primarily reflective of additional operating cost associated with the eight branches acquired from B of A in December of 2013. Salaries and employee benefits increased \$0.3 million or 0.8% for the first quarter of 2014 as compared to the first quarter of 2013. Merit-based personnel cost increases were offset by lower retirement plan costs related to the combination of strong plan asset performance and slightly higher pension discount rates. Additional changes to operating expenses can be attributable to higher occupancy and equipment (up \$0.6 million), data processing and communications (up \$0.1 million), and business development and marketing (up \$0.3 million). The aforementioned acquisitions had a significant impact on the increases of each of these expense categories, reflecting the additional cost of operating an expanded franchise. Additionally contributing to the higher occupancy and equipment costs were higher weather-related maintenance and utility costs for the first quarter of 2014 as compared to the first quarter of 2013.

The Company's efficiency ratio (total operating expenses excluding intangible amortization and acquisition expenses divided by the sum of net interest income (FTE) and noninterest income excluding gain/(loss) on investment securities and debt extinguishment costs) was 59.2% for the first quarter, 1.1 percentage points favorable to the comparable quarter of 2013. This resulted from operating income increasing 4.2% driven by a higher net interest margin and solid growth in noninterest income, while operating expenses (as described above) increased at a lower 2.4% rate. Operating expenses, excluding intangible amortization and acquisition expenses, as a percentage of average assets increased eight basis points for the quarter as operating expenses (as defined above) increased 2.4% for the quarter, while average assets decreased 0.5% versus the prior year quarter due to the balance sheet restructuring activities.

### **Income Taxes**

The first quarter 2014 effective income tax rate was 29.7%, as compared to 29.2% effective tax rate for the comparable period of 2013, reflective of a lower level of non-taxable income to total income in the current quarter as compared to the prior year.

### Investments

The carrying value of investments (including unrealized gains on available-for-sale securities) was \$2.51 billion at the end of the first quarter, an increase of \$287.5 million from December 31, 2013 and an increase of \$58.1 million from March 31, 2013. The book value (excluding unrealized gains) of investments increased \$246.9 million from December 31, 2013 and \$113.3 million from March 31, 2013. As part of the ongoing asset liability management process, the Company had been evaluating the opportunity to restructure certain portions of the balance sheet. During the first quarter of 2013, the Company initiated a balance sheet restructuring program through the sale of certain longer duration investment securities and retired a portion of the Company's existing FHLB borrowings. During the first half of 2013, the Company sold \$648.7 million of U.S. Treasury and Agency securities, realizing \$63.8 million of gains that supported the retirement of \$501.6 million of FHLB borrowings. These actions enhanced the Company's regulatory capital position and reduced the expected duration of the investment portfolio, while positively impacting expected future net interest income generation. During the second and third quarters of 2013, the Company purchased \$525 million of U.S. Treasury securities in anticipation of the excess funding expected from the pending branch acquisition and certain other expected cash flows.

In late December 2013, the Company sold its entire portfolio, \$56.2 million, of bank and insurance trust preferred collateralized debt obligation (CDO) securities in response to the uncertainties created by the announcement of the final rules implementing Section 619 of the Dodd-Frank Act, commonly known as the "Volcker Rule", recognizing a \$15.5 million loss. In conjunction with the liquidation of the trust preferred CDOs, the Company extinguished \$226.4 million of FHLB term advances and sold \$417.6 million of U.S. Treasury securities, previously classified as

held-to-maturity, at a gain of \$32.4 million. The Company also reinvested the net cash proceeds of \$246 million created from these transactions into U.S. Treasury securities with similar blended durations to the assets sold in order to mitigate the net interest income impact of the security sales and debt extinguishment. As a result of the securities sold from the held-to-maturity classification, the remaining unsold securities within the held-to-maturity classification were transferred to the available-for-sale classification prior to December 31, 2013. As a result of the transaction, the Company will not be able to use the held-to-maturity classification for the foreseeable future. During the first quarter of 2014, the Company purchased another \$225 million of U.S. Treasury securities.

With these transactions, the overall mix of securities within the portfolio over the last twelve months has changed, with an increase in the proportion of U.S. Treasury and Agency securities and a decrease in the proportion of obligations of state and political subdivisions and pooled trust preferred securities. The change in the carrying value of investments is also impacted by the amount of net unrealized gains in the available-for-sale portfolio at a point in time. At March 31, 2014, the portfolio had a \$9.6 million net unrealized gain, an increase of \$40.6 million from the unrealized loss at December 31, 2013 and a \$55.2 million decline from the unrealized gain at March 31, 2013. These changes in the unrealized gain (loss) are indicative of the recent sales of securities as well as the recent increase in longer-term interest rates.

#### Loans

As shown in Table 7, loans ended the first quarter at \$4.10 billion, up \$234.8 million or 6.1% from one year earlier and down \$12.7 million or 0.3% from the end of 2013. The growth during the last twelve months was attributable to strong organic growth in the consumer mortgage and the consumer indirect installment portfolios, partially offset by the continued soft demand in a very competitive business lending market and declining demand for home equity loans. The slight decline during the first quarter was due to continued soft demand in business lending and seasonal declines in the consumer mortgage, home equity and consumer direct portfolios, partially offset by growth in the consumer indirect portfolio.

Table 7: Loans

(000's omitted)	March 31,	2014	Decembe 2013		March 31,	2013

Home equity	340,760	8.3%	346,520	8.4%	353,365	9.1%
Total loans	\$4,096,358	100.0%	\$4,109,083	100.0%	\$3,861,601	100.0%

Consumer mortgages increased \$99.1 million or 6.7% from one year ago and decreased \$2.7 million or 0.2% from December 31, 2013. Consumer mortgage volume has been strong over the last few years due to historically low long-term rates and comparatively stable real estate valuations in the Company's primary markets. Consumer mortgage volume has slowed during the first quarter of 2014 as the market opportunities for refinancing have declined. The consumer real estate portfolio does not include exposure to Alt-A or other higher-risk mortgage products. The Company chose to retain in portfolio almost all of mortgage production in the first quarter of 2013 and sold \$3.8 million in the secondary market during the first quarter of 2014. Interest rate levels and expected duration continue to be the most significant factors in determining whether the Company chooses to retain, versus sell and service, portions of its new mortgage production.

The combined total of general-purpose business lending to commercial and industrial customers, mortgages on commercial property and dealer floor plan financing is characterized as the Company's business lending activity. The business lending portfolio increased \$23.2 million from March 31, 2013 and decreased \$14.3 million from December 31, 2013, as contractual and other unscheduled principal reductions continued to offset new loan generation in certain periods. Soft customer demand and highly competitive conditions continue to prevail in the small and middle market segments the Company operates in due primarily to general economic conditions. Further, the Company proactively managed payout of certain unprofitable acquired loan relationships during the last year. The Company maintains its commitment to generating growth in its business portfolio in a manner that adheres to its twin goals of maintaining strong asset quality and producing profitable margins. The Company continues to invest in additional personnel, technology and business development resources to further strengthen its capabilities in this important product category.

Consumer installment loans, both those originated directly (such as personal installment and lines of credit), and indirectly (originated predominantly in automobile, marine and recreational vehicle dealerships), increased \$125.0 million or 16% on a year-over-year basis and increased \$10.1 million or 1.1% as compared to December 31, 2013. The volume of new and used vehicle sales to upper tier credit profile customers in the Company's primary markets has remained stable in recent periods. The Company is focused on maintaining the solid profitability produced by its in-market and contiguous market indirect portfolio, while continuing to pursue its disciplined, long-term approach to expanding its dealer network. Market trends predict moderate vehicle sales increases over the prior year levels and this will create opportunity for the Company to continue to produce solid indirect loan growth.

Home equity loans decreased \$12.6 million or 3.6% from one year ago and decreased \$5.8 million or 1.7% from December 31, 2013, in part due to home equity loans being paid off or down as part of the high level of mortgage refinancing activity that occurred over the past 12 months in the low rate environment. In addition, home equity utilization has been adversely impacted by the heightened level of consumer deleveraging that is occurring in response to continued low-growth economic conditions.

## **Asset Quality**

Table 8 below exhibits the major components of nonperforming loans and assets and key asset quality metrics for the periods ending March 31, 2014 and 2013 and December 31, 2013.

Table 8: Nonperforming Assets

(1)Legacy loans exclude loans acquired after January 1, 2009. These ratios are included for comparative purposes to prior periods.

As displayed in Table 8, nonperforming assets at March 31, 2014 were \$28.6 million, a \$1.5 million increase versus the level at the end of 2013 and a \$5.6 million decrease as compared to one year earlier. Nonperforming loans increased \$1.6 million from year-end 2013 and were down \$3.7 million from March 31, 2013. Other real estate owned ("OREO") at March 31, 2014 of \$4.9 million decreased \$0.1 million and \$1.9 million from December 31, 2013 and March 31, 2013, respectively. The Company is managing 47 OREO properties at March 31, 2014 as compared to 46 OREO properties at December 31, 2013 and 38 OREO properties at March 31, 2013. The OREO properties at March 31, 2014 are comprised of 12 commercial real estate properties and 35 residential properties, as compared to 13 commercial properties and 25 residential properties at March 31, 2013. Nonperforming loans were 0.58% of total loans outstanding at the end of the first quarter, four basis points higher than the level at December 31, 2013 and 13 basis points lower than the level at March 31, 2013.

Approximately 20% of the nonperforming loans at March 31, 2014 are related to the business lending portfolio, which is comprised of business loans broadly diversified by industry type. The level of nonperforming business loans have continued to decline and are now more consistent with the Company's longer-term average results. Approximately 66% of nonperforming loans at March 31, 2014 are related to the consumer mortgage portfolio. Collateral values of residential properties within the Company's market area have generally trended lower over the past few years, although they did not experience the significant decline in values that other parts of the country encountered. However, the continued soft economic conditions and comparatively high unemployment levels have adversely impacted both consumers and businesses, and have resulted in higher mortgage nonperforming levels. Additionally, contributing to the increased level of nonperforming consumer mortgages is the increased length of time required to complete the consumer foreclosure process driven by new regulatory requirements. The remaining 14% of nonperforming loans relate to consumer installment and home equity loans. The allowance for loan losses to nonperforming loans ratio, a general measure of coverage adequacy, was 187% at the end of the first quarter, as compared to 201% at year-end 2013 and 157% at March 31, 2013.

Members of senior management, special asset officers and lenders review all delinquent and nonaccrual loans and OREO regularly in order to identify deteriorating situations, monitor known problem credits and discuss any needed changes to collection efforts, if warranted. Based on the group's consensus, a relationship may be assigned a special assets officer or other senior lending officer to review the loan, meet with the borrowers, assess the collateral and recommend an action plan. This plan could include foreclosure, restructuring loans, issuing demand letters or other actions. The Company's larger criticized credits are also reviewed on a quarterly basis by senior credit administration, special assets and commercial lending management to monitor their status and discuss relationship management plans. Commercial lending management reviews the criticized loan portfolio on a monthly basis.

Delinquent loans (30 days past due through nonaccruing) as a percent of total loans was 1.25% at the end of the first quarter, 24 basis points below the 1.49% at year-end 2013 and 30 basis points lower than the 1.55% at March 31, 2013. The delinquency rate for consumer mortgage, consumer indirect, consumer direct and home equity decreased as compared to both December 31, 2013 and March 31, 2013. The business lending delinquency ratio at the end of the first quarter increased in comparison to December 31, 2013 but was lower than the delinquency ratio at March 31, 2013. The Company's success at keeping the non-performing and delinquency ratios at manageable levels despite soft economic conditions has been the result of its continued focus on maintaining strict underwriting standards, as well as the effective utilization of its collection and recovery capabilities.

<sup>(1)</sup> Legacy loans exclude loans acquired after January 1, 2009. These ratios are included for comparative purposes to prior periods.

As displayed in Table 9, net charge-offs during the first quarter of 2014 were \$1.1 million, \$1.8 million and \$0.2 million lower than the fourth and first quarters of 2013, respectively. First quarter net charge-offs for the business lending, consumer mortgage and the home equity portfolios decreased as compared to the equivalent prior year period. Net charge-offs for the consumer indirect and consumer direct portfolios experienced higher levels of net charge-offs in the first quarter of 2014 as compared to the first quarter of 2013. The net charge-off ratio (net charge-offs as a percentage of average loans outstanding) for the first quarter of 2014 was 0.11%, 18 and three basis points lower than the fourth quarter and first quarter of 2013, respectively. Net charge-offs and the corresponding net charge-off ratios continue to be below average long-term historical levels.

Provision for loan losses was \$1.0 million in the first quarter, comprised of a \$1.3 million provision for legacy loans and a \$0.3 million reversal of provision for acquired impaired loans. The combined provision was \$0.4 million below the equivalent prior year period. The first quarter 2014 loan loss provision for legacy loans was \$0.2 million higher than the level of net charge-offs for the quarter, reflective of the growth in certain loan categories and the continuation of generally stable and favorable asset quality metrics. The allowance for loan losses of \$44.2 million as of March 31, 2014 increased \$1.3 million from the level one year ago. The increased proportion of lower-risk consumer mortgage loans in the portfolio have a major influence on the determination of reserve levels, resulting in an allowance for loan loss to total legacy loans ratio of 1.15% at March 31, 2014, six basis points lower than March 31, 2013 and consistent with the level at year-end 2013.

As of March 31, 2014, the purchase discount related to the \$328 million of remaining non-impaired loan balances acquired from HSBC, First Niagara and Wilber National Bank approximated \$11.8 million or 3.6% of that portfolio, with an additional \$0.2 million included in the allowance for loan losses for acquired loans where the carrying value exceeded the estimated net recoverable value.

#### **Deposits**

As shown in Table 10, average deposits of \$5.93 billion in the first quarter were up \$258.3 million compared to the first quarter of 2013 and increased \$238.2 million versus the fourth quarter of last year. Excluding the impact of the B of A branch acquisitions, average quarterly deposits at March 31, 2014 decreased \$40.1 million or 0.7% from the first quarter of 2013. The mix of average deposits has been changing throughout the last several years. The weightings of core deposits (noninterest checking, interest checking, savings and money markets accounts) have increased from their year-ago levels, while the proportion of time deposits decreased. This change in deposit mix reflects the Company's goal of expanding core account relationships and reducing higher cost time deposit balances, as well as the preference of certain customers to hold more funds in liquid accounts in the low interest rate environment. This shift in mix, combined with the Company's ability to reduce rates due to market conditions, resulting in the quarterly cost of interest-bearing deposits to decline from 0.28% in the first quarter of 2013 to 0.19% in the most recent quarter. The Company continues to focus heavily on growing its core deposit relationships through its proactive marketing efforts, competitive product offerings and high quality customer service.

Average first quarter non-public fund deposits increased \$190.9 million or 3.7% versus the fourth quarter of 2013 and increased \$211.0 million or 4.1% compared to the year earlier period. Excluding the impact of the B of A branch acquisitions, average non-public deposits decreased \$86.5 million or 1.7% from the first quarter of 2013. Average public fund deposits for the first quarter increased \$47.3 million, or 8.6%, from the fourth quarter 2013 and \$47.2 million or 8.6%, from the first quarter of 2013. Excluding the impact of the B of A branch acquisitions, average public fund deposits increased \$46.4 million or 8.4% from the first quarter of 2013. Public fund deposits as a percentage of total deposits increased from 9.7% in the first quarter of 2013 to 10.1% in the first quarter 2013.

### **Borrowings**

At the end of the first quarter, external borrowings of \$319.2 million were \$75.2 million or 31% higher than borrowings at December 31, 2013, and were \$144.3 million or 31% lower than the end of the first quarter of 2013. Short term borrowings from the FHLB were used to fund the purchase of investment securities during the first quarter of 2014. As part of the ongoing asset liability management process, the Company had been evaluating the opportunity to restructure certain portions of the balance sheet. During the first quarter of 2013, the Company initiated a balance sheet restructuring program through the sale of certain longer duration investment securities and retired \$366.6 million of the Company's existing FHLB borrowings with \$47.8 million of early extinguishment costs. During the remainder of 2013, the Company retired an additional \$362 million of FHLB borrowing with \$39.6 million of early extinguishment costs. These actions improved the Company's regulatory capital position and positively impacted net interest income generation. The 0.90% cost of funds on total borrowings in the first quarter was 286 basis points lower than the year-earlier period due to the balance sheet restructuring.

### Shareholders' Equity

Total shareholders' equity of \$918.1 million at the end of the first quarter increased \$42.3 million from the balance at December 31, 2013. This increase consisted of a \$25.5 million increase in other comprehensive income, net income of \$22.2 million, \$4.8 million from shares issued under the employee stock plan and \$1.2 million from employee stock options earned, partially offset by dividends declared of \$11.4 million. The change in other comprehensive income/(loss) was comprised of a \$25.6 million increase in the after-tax market value adjustment on the available for sale investment portfolio, partially offset by a negative \$0.1 million adjustment to the funded status of the Company's retirement plans. Over the past 12 months, total shareholders' equity increased by \$40.8 million, as net income, the change in the funded status of the Company's defined benefit pension and other postretirement plans and the issuance of common stock more than offset a lower market value adjustment on investments and dividends declared.

The Company's Tier I leverage ratio, a primary measure of regulatory capital for which 5% is the requirement to be "well-capitalized", was 9.48% at the end of the first quarter, up 19 basis points from year-end 2013 and 70 basis points higher than its level one year earlier. The increase in the Tier I leverage ratio compared to December 31, 2013 is the result of shareholders' equity excluding intangibles and other comprehensive income items increasing 2.7%, primarily from net earnings retention, while average assets excluding intangibles and the market value adjustment on investments increased at a slower 0.7% pace. The Tier I leverage ratio increased as compared to the prior year's first quarter as shareholders' equity, excluding intangibles and other comprehensive income increased 9.1%, while average assets excluding intangibles and the market value adjustment increased 0.6%, due to strong earnings retention and the balance sheet restructuring that occurred in 2013. The net tangible equity-to-assets ratio (a non-GAAP measure) of 7.97% increased 29 basis points from December 31, 2013 and 39 basis points versus March 31, 2013. The increase in the tangible equity ratio from the prior year was mostly attributable to a proportionally larger increase in tangible equity than the increase in tangible asset levels due to income generation and the balance sheet restructuring conducted in 2013.

The dividend payout ratio (dividends declared divided by net income) for the first three months of 2014 was 51.2%, down from 53.0% for the first three months of 2013. Net income increased 9.5% over the prior year period, while dividends declared increased 5.8%. The Company's quarterly dividend per share was raised from \$0.27 to \$0.28 in July 2013 and the number of common shares outstanding increased 1.7% over the last twelve months.

### Liquidity

Liquidity risk is a measure of the Company's ability to raise cash when needed at a reasonable cost and minimize any loss. The Bank maintains appropriate liquidity levels in both normal operating environments as well as stressed

environments. The Company must be capable of meeting all obligations to its customers at any time and, therefore, the active management of its liquidity position remains an important management role. The Bank has appointed the Asset Liability Committee ("ALCO") to manage liquidity risk using policy guidelines and limits on indicators of potential liquidity risk. The indicators are monitored using a scorecard with three risk level limits. These risk indicators measure core liquidity and funding needs, capital at risk and change in available funding sources. The risk indicators are monitored using such statistics as the core basic surplus ratio, unencumbered securities to average assets, free loan collateral to average assets, loans to deposits, deposits to total funding and borrowings to total funding ratios.

Given the uncertain nature of our customers' demands as well as the Company's desire to take advantage of earnings enhancement opportunities, the Company must have available adequate sources of on and off-balance sheet funds that can be acquired in time of need. Accordingly, in addition to the liquidity provided by balance sheet cash flows, liquidity must be supplemented with additional sources such as credit lines from correspondent banks, borrowings from the FHLB and the Federal Reserve Bank of New York. Other funding alternatives may also be appropriate from time to time, including wholesale and retail repurchase agreements, large certificates of deposit and the brokered CD market. The primary source of non-deposit funds are FHLB advances, of which \$217 million are outstanding.

The Bank's primary sources of liquidity are its liquid assets, as well as unencumbered securities that can be used to collateralize additional funding. At March 31, 2014, the Bank had \$153 million of cash and cash equivalents of which \$13 million are interest earning deposits held at the Federal Reserve, FHLB and other correspondent banks. The Bank also had \$1.0 billion in unused FHLB borrowing capacity based on the Company's quarter-end collateral levels. Additionally, the Company has \$1.6 billion of unencumbered securities that could be pledged at the FHLB or Federal Reserve to obtain additional funding. There is \$65 million available in unsecured lines of credit with other correspondent banks.

The Company's primary approach to measuring short-term liquidity is known as the Basic Surplus/Deficit model. It is used to calculate liquidity over two time periods: first, the amount of cash that could be made available within 30 days (calculated as liquid assets less short-term liabilities as a percentage of average assets); and second, a projection of subsequent cash availability over an additional 60 days. As of March 31, 2014, this ratio was 19.5% for 30-days and 19.4% for 90-days, excluding the Company's capacity to borrow additional funds from the FHLB and other sources. There is a sufficient amount of liquidity given the Company's internal policy requirement of 7.5%.

A sources and uses statement is used by the Company to measure intermediate liquidity risk over the next twelve months. As of March 31, 2014, there is more than enough liquidity available during the next year to cover projected cash outflows. In addition, stress tests on the cash flows are performed in various scenarios ranging from high probability events with a low impact on the liquidity position to low probability events with a high impact on the liquidity position. The results of the stress tests as of March 31, 2014 indicate the Bank has sufficient sources of funds for the next year in all stressed scenarios.

To measure longer-term liquidity, a baseline projection of loan and deposit growth for five years is made to reflect how liquidity levels could change over time. This five-year measure reflects ample liquidity for loan and other asset growth over the next five years.

Though remote, the possibility of a funding crisis exists at all financial institutions. Accordingly, management has addressed this issue by formulating a Liquidity Contingency Plan, which has been reviewed and approved by both the Board of Directors and the Company's ALCO. The plan addresses the actions that the Company would take in response to both a short-term and long-term funding crisis.

A short-term funding crisis would most likely result from a shock to the financial system, either internal or external, which disrupts orderly short-term funding operations. Such a crisis should be temporary in nature and would not involve a change in credit ratings. A long-term funding crisis would most likely be the result of drastic credit deterioration at the Company. Management believes that both potential circumstances have been fully addressed through detailed action plans and the establishment of trigger points for monitoring such events.

### Forward-Looking Statements

This document contains comments or information that constitute forward-looking statements (within the meaning of the Private Securities Litigation Reform Act of 1995), which involve significant risks and uncertainties. Actual results may differ materially from the results discussed in the forward-looking statements. Moreover, the Company's plans, objectives and intentions are subject to change based on various factors (some of which are beyond the Company's control). Factors that could cause actual results to differ from those discussed in the forward-looking statements include: (1) risks related to credit quality, interest rate sensitivity and liquidity; (2) the strength of the U.S. economy in general and the strength of the local economies where the Company conducts its business; (3) the effect of, and changes in, monetary and fiscal policies and laws, including interest rate policies of the Board of Governors of the Federal Reserve System; (4) inflation, interest rate, market and monetary fluctuations; (5) the timely development of new products and services and customer perception of the overall value thereof (including, but not limited to, features, pricing and quality) compared to competing products and services; (6) changes in consumer spending, borrowing and savings habits; (7) technological changes and implementation and cost/financial risks with respect to transitioning to new computer and technology based systems involving large multi-year contracts; (8) the ability of the Company to maintain the security of its financial, accounting, technology, data processing and other operating systems and facilities; (9) any acquisitions or mergers that might be considered or consummated by the Company and the costs and factors associated therewith, including differences in the actual financial results of the acquisition or merger compared to expectations and the realization of anticipated cost savings and revenue enhancements; (10) the ability to maintain and increase market share and control expenses; (11) the nature, timing and effect of changes in banking regulations or other regulatory or legislative requirements affecting the respective businesses of the Company and its subsidiaries, including changes in laws and regulations concerning taxes, accounting, banking, securities and other aspects of the financial services industry, specifically the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010; (12) changes in the Company's organization, compensation and benefit plans and in the availability of, and compensation levels for, employees in its geographic markets; (13) the outcome of pending or future litigation and government proceedings; (14) other risk factors outlined in the Company's filings with the SEC from time to time; and (15) the success of the Company at managing the risks of the foregoing.

The foregoing list of important factors is not all-inclusive. Such forward-looking statements speak only as of the date on which they are made and the Company does not undertake any obligation to update any forward-looking statement, whether written or oral, to reflect events or circumstances after the date on which such statement is made. If the Company does update or correct one or more forward-looking statements, investors and others should not conclude that the Company would make additional updates or corrections with respect thereto or with respect to other forward-looking statements.

#### Item 3. Quantitative and Qualitative Disclosures about Market Risk

Market risk is the risk of loss in a financial instrument arising from adverse changes in market rates, prices or credit risk. Credit risk associated with the Company's loan portfolio has been previously discussed in the asset quality section of the MD&A. Management believes that the tax risk of the Company's municipal investments associated with potential future changes in statutory, judicial and regulatory actions is minimal. Treasury, agency, mortgage-backed and CMO securities issued by government agencies comprise 71% of the total portfolio and are currently rated AAA by Moody's Investor Services and AA+ by Standard & Poor's. Municipal and corporate bonds account for 29% of the total portfolio, of which, 98% carry a minimum rating of A-. The remaining 2% of the portfolio is comprised of other investment grade securities. The Company does not have material foreign currency exchange rate risk exposure. Therefore, almost all the market risk in the investment portfolio is related to interest rates.

The ongoing monitoring and management of both interest rate risk and liquidity, in the short and long term time horizons is an important component of the Company's asset/liability management process, which is governed by limits established in the policies reviewed and approved annually by the Company's Board of Directors. The Board of Directors delegates responsibility for carrying out the policies to the ALCO, which meets each month. The committee is made up of the Company's senior management as well as regional and line-of-business managers who oversee specific earning asset classes and various funding sources. As the Company does not believe it is possible to reliably predict future interest rate movements, it has maintained an appropriate process and set of measurement tools, which enables it to identify and quantify sources of interest rate risk in varying rate environments. The primary tool used by the Company in managing interest rate risk is income simulation.

While a wide variety of strategic balance sheet and treasury yield curve scenarios are tested on an ongoing basis, the following reflects the Company's projected net interest income sensitivity over the subsequent twelve months based on:

- Asset and liability levels using March 31, 2014 as a starting point.
- •There are assumed to be conservative levels of balance sheet growth, low to mid single digit growth in loans and deposits, while using the cash flows from investment contractual maturities and prepayments to repay short-term capital market borrowings or reinvest into securities or cash equivalents.
- •The prime rate and federal funds rates are assumed to move up 200 basis points over a 12-month period while moving the long end of the treasury curve to spreads over federal funds that are more consistent with historical norms (normalized yield curve). In the 0 basis point model, the prime and federal funds rates remain at current levels while moving the long end of the curve to levels over federal funds using spreads at a time when the yield curve was flat. Deposit rates are assumed to move in a manner that reflects the historical relationship between deposit rate movement and changes in the federal funds rate.
- Cash flows are based on contractual maturity, optionality, and amortization schedules along with applicable prepayments derived from internal historical data and external sources.

### Net Interest Income Sensitivity Model

Calculated annualized decrease in projected net interest income at March 31, Change in interest rates 2014 +200 basis points (\$5,728,000)0 basis points (\$660,000)

The modeled net interest income (NII) decreases in a rising rate environment from a flat rate scenario. The decrease is largely a result of assumed deposit and funding costs increasing faster than the repricing of corresponding of assets. In the short term (year 1-2) the assumed increase of deposit rates in the rising rate environment temporarily outweighs the benefit of earning asset yields increasing to higher levels. However, over a longer time period (year 3-5), the growth in NII improves significantly in a rising rate environment as lower yielding assets mature and are replaced at higher rates.

In the 0 basis point model, the Bank shows interest rate risk exposure if the yield curve continues to flatten. Net interest income declines during the first twelve months largely from additional investment cash flows that are assumed to repay short term advances. Corresponding deposit rates are assumed to remain constant. Despite Fed Funds trading near 0%, the Company believes long-term Treasury rates could potentially fall further in this scenario, and thus, the model tests the impact of this lower Treasury rate scenario.

The analysis does not represent a Company forecast and should not be relied upon as being indicative of expected operating results. These hypothetical estimates are based upon numerous assumptions: the nature and timing of interest rate levels (including yield curve shape), prepayments on loans and securities, deposit decay rates, pricing decisions on loans and deposits, reinvestment/replacement of asset and liability cash flows, and other factors. While the assumptions are developed based upon current economic and local market conditions, the Company cannot make any assurances as to the predictive nature of these assumptions, including how customer preferences or competitor influences might change. Furthermore, the sensitivity analysis does not reflect actions that ALCO might take in responding to or anticipating changes in interest rates.

#### Item 4. Controls and Procedures

#### Evaluation of Disclosure Controls and Procedures

The Company maintains disclosure controls and procedures, as defined in Rule 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934 as amended (the "Exchange Act"), designed to ensure information required to be disclosed by the Company in the reports that it files or submits under the Exchange Act is: (i) recorded, processed, summarized, and reported within the time periods specified in the SEC rules and forms, and (ii) accumulated and communicated to management, including the principal executive and principal financial officers, as appropriate, to allow timely decisions regarding required disclosure. Based on management's evaluation of the effectiveness of the Company's disclosure controls and procedures, with the participation of the Chief Executive Officer and the Chief Financial Officer, it has concluded that, as of the end of the period covered by this Quarterly Report on Form 10-Q, these disclosure controls and procedures were effective as of March 31, 2014.

### Changes in Internal Control over Financial Reporting

The Company regularly assesses the adequacy of its internal controls over financial reporting. There have been no changes in the Company's internal controls over financial reporting in connection with the evaluation referenced in the paragraph above that occurred during the Company's quarter ended March 31, 2014 that have materially affected, or are reasonably likely to materially affect, the Company's internal control over financial reporting.

Part II. Other Information

# Item 1. Legal Proceedings

The Company and its subsidiaries are subject in the normal course of business to various pending and threatened legal proceedings in which claims for monetary damages are asserted. As of March 31, 2014, management, after consultation with legal counsel, does not anticipate that the aggregate ultimate liability arising out of litigation pending or threatened against the Company or its subsidiaries will be material to the Company's consolidated financial position. On at least a quarterly basis the Company assesses its liabilities and contingencies in connection with such legal proceedings. For those matters where it is probable that the Company will incur losses and the amounts of the losses can be reasonably estimated, the Company records an expense and corresponding liability in its consolidated financial statements. To the extent the pending or threatened litigation could result in exposure in excess of that liability, the amount of such excess is not currently estimable. Although not considered probable, the range of reasonably possible losses for such matters in the aggregate, beyond the existing recorded liability, is between \$0 and \$5 million. Although the Company does not believe that the outcome of pending litigation will be material to the Company's consolidated financial position, it cannot rule out the possibility that such outcomes will be material to the consolidated results of operations for a particular reporting period in the future.

The Bank was named a defendant in an action commenced October 30, 2013 which is pending in the United States District Court for the Middle District of Pennsylvania. The plaintiff alleges that the notices provided to her in connection with the repossession of her automobile failed to comply with certain requirements of Pennsylvania's Uniform Commercial Code (UCC). Plaintiff seeks to pursue the action as a class action on behalf of herself and other similarly situated plaintiffs who had their automobiles repossessed and seeks to recover statutory damages under the UCC. The Bank contests the allegation that the repossession notices were deficient and intends to oppose class certification. The Bank has also asserted counterclaims for breach of contract and set-off against plaintiff, individually and as representative of the putative class, and has filed a motion to dismiss the action on the basis of mootness. In response, Plaintiff has moved to dismiss the Bank's counterclaims on the grounds that the Court lacks subject matter jurisdiction. The parties' motions to dismiss are currently pending before the Court. As set forth in the preceding paragraph, all current litigation matters, including this action, are within a range of reasonably possible losses for such matters in the aggregate, beyond the existing recorded liability, and are included in the range of reasonably possible losses set forth above.

#### Item 1A. Risk Factors

There has not been any material change in the risk factors disclosure from that contained in the Company's Annual Report on Form 10-K for the fiscal year ended December 31, 2013 filed with the SEC on March 3, 2014.

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds

- a) Not applicable.
- b) Not applicable.
- c) At its December 2013 meeting, the Company's Board of Directors approved a new repurchase program authorizing the repurchase of up to 2,000,000 of its outstanding shares in open market or privately negotiated transactions in accordance with securities laws and regulations, through December 31, 2014. Any repurchased shares will be used for general corporate purposes, including those related to stock plan activities. The timing and extent of repurchases will depend on market conditions and other corporate considerations as determined at the Company's discretion.

The following table presents stock purchases made during the first quarter of 2014:

## Issuer Purchases of Equity Securities

				Maximum
			Total Number	Number of
	Total		of Shares	Shares
			Purchased as	That May Yet
