CERTIFIED SHAREHOLDER REPORT OF REGISTERED MANAGEMENT INVESTMENT COMPANIES

Investment Company Act file number 811-21982

Guggenheim Strategic Opportunities Fund (Exact name of registrant as specified in charter)

2455 Corporate West Drive, Lisle, IL 60532 (Address of principal executive offices) (Zip code)

> Kevin M. Robinson 2455 Corporate West Drive, Lisle, IL 60532 (Name and address of agent for service) Registrant's telephone number, including area code: (630) 505-3700

> > Date of fiscal year end: May 31

Date of reporting period: November 30, 2012

Item 1. Reports to Stockholders.

The registrant's semi-annual report transmitted to shareholders pursuant to Rule 30e-1 under the Investment Company Act of 1940, as amended (the "Investment Company Act"), is as follows:

WWW.GUGGENHEIMINVESTMENTS.COM/GOF ... YOUR WINDOW TO THE LATEST, MOST UP-TO-DATE INFORMATION ABOUT THE GUGGENHEIM STRATEGIC OPPORTUNITIES FUND

The shareholder report you are reading right now is just the beginning of the story. Online at www.guggenheiminvestments.com/gof, you will find:

- Daily, weekly and monthly data on share prices, net asset values, distributions and more
- Portfolio overviews and performance analyses
- Announcements, press releases and special notices
- Fund and adviser contact information

Guggenheim Partners Investment Management, LLC and Guggenheim Funds Investment Advisors, LLC are continually updating and expanding shareholder information services on the Fund's website, in an ongoing effort to provide you with the most current information about how your Fund's assets are managed, and the results of our efforts. It is just one more small way we are working to keep you better informed about your investment in the Fund.

November 30, 2012

DEAR SHAREHOLDER

We thank you for your investment in the Guggenheim Strategic Opportunities Fund (the "Fund"). This report covers the Fund's performance for the semiannual period ended November 30, 2012.

The Fund's investment objective is to maximize total return through a combination of current income and capital appreciation. The Fund seeks to achieve that objective by combining a credit-managed fixed-income portfolio with access to a diversified pool of alternative investments and equity strategies. The Fund pursues a relative value-based investment philosophy, which utilizes quantitative and qualitative analysis to seek to identify securities or spreads between securities that deviate from their perceived fair value and/or historical norms. There is no guarantee that the perceived fair value will be achieved.

All Fund returns cited—whether based on net asset value ("NAV") or market price—assume the reinvestment of all distributions. For the six-month period ended November 30, 2012, the Fund provided a total return based on market price of 2.50% and a total return based on NAV of 10.62%. As of November 30, 2012, the Fund's market price of \$20.65 per share represented a premium of 2.94% to its NAV of \$20.06 per share. The market value of the Fund's shares fluctuates from time to time and it may be higher or lower than the Fund's NAV.

In each month from June 2012 through November 2012, the Fund paid a monthly dividend of \$0.154 per share. The dividend as of November 30, 2012, represents an annualized distribution rate of 8.9% based on the Fund's closing market price of \$20.65 on November 30, 2012. The Fund announced an increase in its monthly dividend to \$0.1694 per share, effective with its December 2012 dividend.

During the six months ended November 30, 2012, the Fund raised approximately \$24.0 million by offering additional shares to the public. The offering of additional shares of the Fund was made in recognition of continued investor demand for the Fund's unique investment strategy and strong performance track record. The additional shares offered to the public were priced at a premium to the Fund's NAV.

Guggenheim Funds Investment Advisors, LLC (the "Adviser") serves as the investment adviser to the Fund. Guggenheim Partners Investment Management, LLC (formerly, Guggenheim Partners Asset Management, LLC) ("GPIM" or the "Sub-Adviser") serves as the Fund's investment sub-adviser and is responsible for the management of the Fund's portfolio of investments. Each of the Adviser and the Sub-Adviser is an affiliate of Guggenheim Partners, LLC ("Guggenheim"), a global diversified financial services firm.

We encourage shareholders to consider the opportunity to reinvest their distributions from the Fund through the Dividend Reinvestment Plan ("DRIP"), which is described in detail on page 39 of this report. When shares trade at a discount to NAV, the DRIP takes advantage of the discount by reinvesting the monthly dividend distribution in common shares of the Fund purchased in the market at a price less than NAV. Conversely, when the market price of the Fund's common shares is at a premium above NAV, the DRIP reinvests participants' dividends in newly-issued common shares at NAV, subject to an IRS limitation that the purchase price cannot be more than 5% below the market price per share. The DRIP provides a cost-effective means to accumulate additional shares and enjoy the benefits of compounding returns over time. Since the Fund endeavors to maintain a stable monthly distribution, the DRIP effectively provides an income averaging technique, which causes shareholders to accumulate a larger number of Fund shares when the market price is depressed than when the price is higher.

To learn more about the Fund's performance and investment strategy, we encourage you to read the Questions & Answers section of this report, which begins on page 4. You'll find information on GPIM's investment philosophy,

views on the economy and market environment, and detailed information about the factors that impacted the Fund's performance.

We appreciate your investment and look forward to serving your investment needs in the future. For the most up-to-date information on your investment, please visit the Fund's website at www. guggenheiminvestments.com/gof.

Sincerely,

Donald C. Cacciapaglia Chief Executive Officer Guggenheim Strategic Opportunities Fund

December 31, 2012

QUESTIONS & ANSWERS

November 30, 2012

Guggenheim Strategic Opportunities Fund (the "Fund") is managed by a team of seasoned professionals at Guggenheim Partners Investment Management, LLC ("GPIM"). This team includes B. Scott Minerd, Chief Executive Officer and Chief Investment Officer; Anne Bookwalter Walsh, CFA, JD, Senior Managing Director; and James W. Michal, Director and Portfolio Manager. In the following interview, the investment team discusses the market environment and the Fund's performance for the six-month period ended November 30, 2012.

What is the Fund's investment objective and how is it pursued?

The Guggenheim Strategic Opportunities Fund (the "Fund") seeks to maximize total return through a combination of current income and capital appreciation. The Fund pursues a relative value-based investment philosophy, which utilizes quantitative and qualitative analysis to seek to identify securities or spreads between securities that deviate from their perceived fair value and/or historical norms. There is no guarantee that the perceived fair value of the Fund's portfolio investments will be achieved. GPIM seeks to combine a credit-managed fixed income portfolio with access to a diversified pool of alternative investments and equity strategies.

The Fund seeks to achieve its investment objective by investing in a wide range of fixed income and other debt and senior equity securities ("income securities") selected from a variety of credit qualities and sectors, including, but not limited to, corporate bonds, loans and loan participations, structured finance investments, U.S. government and agency securities, mezzanine and preferred securities and convertible securities, and in common stocks, limited liability company interests, trust certificates and other equity investments ("common equity securities," exposure to which is obtained primarily by investing in exchange traded funds, or ETFs) that GPIM believes offer attractive yield and/or capital appreciation potential, including employing a strategy of writing (selling) covered call and put options on such equities. GPIM believes the volatility of the Fund can be reduced by diversifying across a large number of sectors and securities, many of which historically have not been highly correlated to one another. To achieve the targeted level of diversification, the Fund has primarily invested in exchange traded funds.

Under normal market conditions:

- The Fund may invest up to 60% of its total assets in fixed income securities rated below investment grade (commonly referred to as "junk bonds");
- The Fund may invest up to 20% of its total assets in non-U.S. dollar denominated fixed income securities of corporate and governmental issuers located outside the U.S., including up to 10% of total assets in fixed income securities of issuers located in emerging markets;
- The Fund may invest up to 50% of its total assets in common equity securities; and
- The Fund may invest up to 30% of its total assets in investment funds that primarily hold (directly or indirectly) investments in which the Fund may invest directly of which amount, up to 20% of the Fund's total assets in investment funds that are registered as investment companies under the Investment Company Act of 1940, as amended (the "1940 Act") to the extent permitted by applicable law and related interpretations of the staff of the U.S. Securities and Exchange Commission.

GPIM's investment process is a collaborative effort between its Portfolio Construction Group, which utilizes tools such as a proprietary risk optimization model to determine allocation of assets among a variety of sectors, and its Sector Specialists, who are responsible for security selection within these sectors and for implementing securities transactions.

The Fund may use financial leverage (borrowing) to finance the purchase of additional securities. Although financial leverage may create an opportunity for increased return for shareholders, it also results in additional risks and can magnify the effect of any losses. There is no assurance that the strategy will be successful. If income and gains earned on securities purchased with the financial leverage proceeds are greater than the cost of the financial leverage, common shareholders' return will be greater than if financial leverage had not been used. Conversely, if the income or gains from the securities purchased with the proceeds of financial leverage are less than the cost of the financial leverage, common shareholders' return will be less than if financial leverage had not been used.

What were the significant events affecting the economy and market environment over the past six months? The U.S. economy continues its positive expansion although the risks of delinquencies, weak consumer demand, and the knock-on effect of Europe continue to weigh on the market. Unprecedented policy actions by the Federal Reserve ("the Fed") continue to provide ample liquidity and accommodation to stimulate growth of the U.S. economy. Recent Fed action, such as the third round of quantitative easing announced in September 2012, shows an increased tolerance for potentially higher levels of inflation. The Fed was aggressive in its policy action by announcing an open-ended bond purchasing program that focused on agency mortgages. Operation Twist, the Fed's program of buying longer duration Treasury securities while simultaneously selling shorter duration securities, was also extended.

QUESTIONS & ANSWERS continued

November 30, 2012

The U.S. election at the beginning of November may have had a small short-term effect on the market's perception of the path and pace towards economic recovery. Improving housing data and private payrolls have largely driven U.S. GDP growth, though perceived uncertainty surrounding consumer demand and unemployment continues to make it difficult for the corporate sector to make investment decisions with respect to hiring and capital investment. U.S. capital markets will largely be focused on the political decisions made in December with respect to the U.S. fiscal cliff and the impending legislation changes.

Central banks around the world have tagged along with U.S. policymakers and are engaging in their own forms of accommodative policy actions, which should continue to benefit risk assets and assets linked to inflation. While the European Central Bank has made considerable strides to reduce stress emanating from troubled Eurozone nations, it is evident that restructuring of toxic debt will take considerable time and effort. The Eurozone currency still remains at a relatively high value compared to the U.S. dollar, which makes European countries less competitive with respect to exports – the exchange rate between the Euro/USD finished at $1.298 \notin$ % to close November. Despite all of these headwinds, the U.S. economy appears to have the momentum, albeit at a slow pace, to withstand an imminent European recession.

How did the Fund perform for the six months ended November 30, 2012?

All Fund returns cited—whether based on net asset value ("NAV") or market price—assume the reinvestment of all distributions. For the six-month period ended November 30, 2012, the Fund provided a total return based on market price of 2.50% and a total return based on NAV of 10.62%.

As of November 30, 2012, the Fund's market price of \$20.65 per share represented a premium of 2.94% to its NAV of \$20.06 per share. The closing price of the Fund's shares as of May 31, 2012, was \$21.08, which represented a premium of 10.95% to the NAV of \$19.00. The market value of the Fund's shares fluctuates from time to time and it may be higher or lower than the Fund's NAV. Past performance is not a guarantee of future results.

In each month from June 2012 through November 2012, the Fund paid a monthly dividend of \$0.154 per share. The dividend as of November 30, 2012, represents an annualized distribution rate of 8.9% based on the Fund's closing market price of \$20.65 on November 30, 2012. Of course, the Fund's distribution rate is not constant and is subject to change based on the performance of the Fund.

What were the major contributors to or detractors from performance?

Performance of the Fund was strong, as leveraged credit markets (consisting primarily of high yield bonds and bank loans) registered gains over the period and also helped collateralized loan obligations ("CLO") spreads tighten. Monetary stimulus provided by central banks across the globe, combined with elevated demand by investors for yield, drove spreads and overall yields tighter.

Global equity markets, structured credit, and corporate bonds rallied on the back of monetary stimulus, with the main drivers of positive performance being high yield corporate bonds, asset-backed securities ("ABS") and CLOs. Macroeconomic-themed trades were another positive contributor, as monetary stimulus boosted gold and European equities. The Fund continues to remain overweight spread duration and underweight effective duration, given the macroeconomic forecast.

Detractors to performance included several corporate credit positions that experienced mark-to-market weakness given specific credit or industry outlooks. GPIM continues to believe that corporate fundamentals will remain positive, as accommodation and low borrowing rates remain supportive of corporate credits.

From an asset allocation perspective, sustained periods of low nominal interest rates coupled with improving corporate fundamentals increase the attractiveness of higher yielding, fixed income securities. We continue to see value in fundamentally strong, but seemingly out-of-favor, lower-rated securities, particularly in high yield bonds and bank loans.

What have market conditions been like for the Fund over the past six months?

Even though the U.S. debt and deficit issues continue to loom large, the global macroeconomic picture has undoubtedly improved over the past several months. The headline risk of European disintegration has diminished with ongoing progress towards a banking union, and ultimately towards a fiscal union in Europe.

Bank loans and high yield bonds continue to provide value down the credit spectrum, primarily in CCCs and select single Bs. Bank loans may also offer investors protection against rising rates, seniority in the capital structure and covenant protection. CLO activity also remains strong with year to date volume already higher than the past three years combined (2009-2011). Despite strong issuance, CLO spreads across the capital structure continue to tighten as outstanding volume continues to shrink, and investors are driven to other asset classes such as CLOs for wider spreads.

New issue U.S. ABS credit performance expectations remain firm, particularly in well-covered transactions backed by commercial loans and assets. While U.S. economic data has been mixed, the performance of the consumer and corporate credits underlying ABS has been stable and supportive of ABS performance at expected levels. Supply volumes are increasing but remain below the repayment of older deals, creating a net supply shortfall and firm spreads. European holdings of U.S. structured products have been reduced substantially post-crisis, and should not pose

GOF | GUGGENHEIM STRATEGIC OPPORTUNITIES FUND SEMIANNUAL REPORT | 5

QUESTIONS & ANSWERS continued

as large of a threat to the market as in past years. Overall trading pressures and changes in bank regulatory capital may affect trading volumes and dealer appetite to hold structured product risk assets.

How did other markets perform in this environment?

For the six-month period ended November 30, 2012, investors realized the highest returns from the most risky assets such as domestic and international equity markets, followed by the U.S. high yield and leveraged loan markets, while U.S. government debt provided the lowest returns.

The Standard & Poor's 500 Index (the "S&P 500"), which is generally regarded as an indicator of the broader U.S. stock market, rose 9.32% (this and all other returns cited in this section are total return). Foreign markets were much stronger, as the Morgan Stanley Capital International ("MSCI") Europe-Australasia-Far East ("EAFE") Index, which is comprised of approximately 1,100 companies in 20 developed countries in Europe and the Pacific Basin, rose 18.16% and the MSCI Emerging Market Index, which measures market performance in global emerging markets, rose 12.63%, for the six months ended November 30, 2012.

In the bond market, the Barclays U.S. Treasury Composite Index, which includes Treasury securities of all maturities, returned 0.57%. The Barclays U.S. Aggregate Bond Index (the "Barclays Aggregate"), which is a proxy for the U.S. investment-grade bond market, returned 1.99% for the period, while the Barclays U.S. Corporate High Yield Index (which tracks nearly 2,000 U.S. non-investment grade bonds) returned 8.54%. The Credit Suisse Leveraged Loan Index, which tracks approximately 1,500 syndicated bank loans, returned 4.71% for the period. Reflecting the Federal Reserve's continuing accommodative monetary policy, interest rates on short-term securities remained at their lowest levels in many years; the return of the Barclays 1-3 Month U.S. Treasury Bill Index was 0.04% for the same period.

What is the Fund's leverage strategy?

Since leverage adds to performance when the cost of leverage is less than the total return generated by investments, the use of leverage contributed to the Fund's total return during this period. The purpose of leverage (borrowing) is to fund the purchase of additional securities that provide the potential for increased income and greater appreciation to common shareholders than could be achieved from an unlevered portfolio. Leverage results in greater NAV volatility and entails more downside risk than an unleveraged portfolio.

As of November 30, 2012, the amount of leverage was approximately 29.6% of total assets. GPIM employs leverage through two vehicles: reverse repurchase agreements, under which the Fund transfers securities to a counterparty and receives cash which can be used for additional investments, and a committed financing facility through a leading investment bank.

Index Definitions

Indices are unmanaged and reflect no expenses. It is not possible to invest directly in an index.

The Standard & Poor's 500 Index is a capitalization-weighted index of 500 stocks. The index is designed to measure performance of the broad domestic economy through changes in the aggregate market value of 500 stocks representing all major industries.

The Barclays U.S. Aggregate Bond Index represents securities that are U.S. domestic, taxable, and dollar denominated. The index covers the U.S. investment grade fixed rate bond market, with index components for government and corporate securities, mortgage pass-through securities, and asset-backed securities.

November 30, 2012

The Barclays U.S. Corporate High Yield Index is an unmanaged index of below investment grade bonds issued by U.S. corporations.

The Barclays U.S. Treasury Composite Index includes public obligations of the U.S. Treasury. Treasury bills are excluded by the maturity constraint but are part of a separate Short Treasury Index. In addition, certain special issues, such as state and local government series bonds (SLGs), as well as U.S. Treasury TIPS, are excluded. STRIPS are excluded from the index because their inclusion would result in double-counting. Securities in the index roll up to the U.S. Aggregate, U.S. Universal, and Global Aggregate Indices. The U.S. Treasury Index was launched on January 1, 1973.

The Barclays 1-3 Month U.S. Treasury Bill Index tracks the performance of U.S. Treasury bills with a remaining maturity of one to three months. U.S. Treasury bills, which are short-term loans to the U.S. government, are full-faith-and-credit obligations of the U.S. Treasury and are generally regarded as being free of any risk of default.

The Credit Suisse Leveraged Loan Index is an Index designed to mirror the investable universe of the \$US-denominated leveraged loan market.

The MSCI EAFE Index is a capitalization weighted measure of stock markets in Europe, Australasia and the Far East.

The MSCI Emerging Markets Index is a free float-adjusted market capitalization weighted index that is designed to measure equity market performance in the global emerging markets.

QUESTIONS & ANSWERS continued

November 30, 2012

Risks and Other Considerations

The views expressed in this report reflect those of the portfolio managers only through the report period as stated on the cover. These views are subject to change at any time, based on market and other conditions and should not be construed as a recommendation of any kind. The material may also include forward looking statements that involve risk and uncertainty, and there is no guarantee that any predictions will come to pass. There can be no assurance that the Fund will achieve its investment objectives. The value of the Fund will fluctuate with the value of the underlying securities. Historically, closed-end funds often trade at a discount to their net asset value.

Asset-Backed Securities Risk: ABS involve certain risks in addition to those presented by mortgage-backed securities. Therefore, there is the possibility that recoveries on the underlying collateral may not, in some cases, be available to support payments on these securities. ABS do not have the benefit of the same security interest in the underlying collateral as mortgage-backed securities and are more dependent on the borrower's ability to pay and may provide the Fund with a less effective security interest in the related collateral than do mortgage- related securities. The collateral underlying ABS may constitute assets related to a wide range of industries and sectors. For example, ABS can be collateralized with credit card and automobile receivables. Credit card receivables are generally unsecured, and the debtors are entitled to the protection of a number of state and federal consumer credit laws, many of which give debtors the right to set off certain amounts owed on the credit cards, thereby reducing the balance due. Most issuers of automobile receivables permit the servicers to retain possession of the underlying obligations. If the servicer were to sell these obligations to another party, there is a risk that the purchaser would acquire an interest superior to that of the holders of the related automobile receivables. In addition, because of the large number of vehicles involved in a typical issuance and technical requirements under state laws, the trustee for the holders of the automobile receivables may not have an effective security interest in all of the obligations backing such receivables. If the economy of the United States deteriorates, defaults on securities backed by credit card, automobile and other receivables may increase, which may adversely affect the value of any ABS owned by the Fund. In addition, these securities may provide the Fund with a less effective security interest in the related collateral than do mortgage-related securities. Therefore, there is the possibility that recoveries on the underlying collateral may not, in some cases, be available to support payments on these securities.

The Credit CARD Act of 2009 imposes new regulations on the ability of credit card issuers to adjust the interest rates and exercise various other rights with respect to indebtedness extended through credit cards. The Fund and the Sub-Adviser cannot predict what effect, if any, such regulations might have on the market for ABS and such regulations may adversely affect the value of ABS owned by the Fund.

Most issuers of automobile receivables permit the servicers to retain possession of the underlying obligations. If the servicer were to sell these obligations to another party, there is a risk that the purchaser would acquire an interest superior to that of the holders of the related automobile receivables. In addition, because of the large number of vehicles involved in a typical issuance and technical requirements under state laws, the trustee for the holders of the automobile receivables may not have an effective security interest in all of the obligations backing such receivables. In recent years, certain automobile manufacturers have been granted access to emergency loans from the U.S. Government and have experienced bankruptcy. As a result of these events, the value of securities backed by receivables from the sale or lease of automobiles may be adversely affected.

If the economy of the United States deteriorates, defaults on securities backed by credit card, automobile and other receivables may increase, which may adversely affect the value of any ABS owned by the Fund. In addition, these securities may provide the Fund with a less effective security interest in the related collateral than do mortgage-related securities. Therefore, there is the possibility that recoveries on the underlying collateral may not, in some cases, be

available to support payments on these securities.

Below Investment-Grade Securities Risk: The Fund may invest in income securities rated below investment grade or, if unrated, determined by the Sub-Adviser to be of comparable credit quality, which are commonly referred to as "high-yield" or "junk" bonds. Investment in securities of below investment- grade quality involves substantial risk of loss. Income securities of below investment-grade quality are predominantly speculative with respect to the issuer's capacity to pay interest and repay principal when due and therefore involve a greater risk of default or decline in market value due to adverse economic and issuer-specific developments.

Senior and Second Lien Secured Loans Risk: The Fund's investments in senior loans and second lien secured floating-rate loans are typically below investment grade and are considered speculative because of the credit risk of their issuers. The risks associated with senior loans of below investment grade quality are similar to the risks of other lower-grade income securities. Second lien loans are second in right of payment to senior loans and therefore are subject to the additional risk that the cash flow of the borrower and any property securing the loan may be insufficient to meet scheduled payments after giving effect to the senior-secured obligations of the borrower. Second lien loans are expected to have greater price volatility and exposure to losses upon default than senior loans and may be less liquid. Structured Finance Investments Risk: The Fund's structured finance investments may include residential and commercial mortgage-related and asset-backed securities. These securities entail considerable risk, including many of the risks described above (e.g.,

GOF | GUGGENHEIM STRATEGIC OPPORTUNITIES FUND SEMIANNUAL REPORT | 7

QUESTIONS & ANSWERS continued

November 30, 2012

market risk, credit risk, interest rate risk and prepayment risk). The value of collateralized debt obligations also may change because of changes in the market's perception of the underlying collateral of the pool, the creditwor-thiness of the servicing agent for or the originator of the pool, or the financial institution or entity providing credit support for the pool. Returns on risk linked securities are dependent upon such events as property or casualty damages which may be caused by such catastrophic events as hurricanes or earthquakes or other unpredictable events.

Mezzanine Investments Risk: Mezzanine investments are subject to the same risks associated with investment in senior loans, second lien loans and other lower-grade income securities. Mezzanine investments are expected to have greater price volatility than senior loans and second lien loans and may be less liquid.

Preferred Stock Risk: Preferred stock is inherently more risky than the bonds and other debt instruments of the issuer, but typically less risky than its common stock. Preferred stocks may be significantly less liquid than many other securities, such as U.S. Government securities, corporate debt and common stock.

Convertible Securities Risk: As with all income securities, the market values of convertible securities tend to decline as interest rates increase and, conversely, to increase as interest rates decline. Convertible securities also tend to reflect the market price of the underlying stock in varying degrees, depending on the relationship of such market price to the conversion price in the terms of the convertible security.

Equity Risk: Common equity securities' prices fluctuate for a number of reasons, including changes in investors' perceptions of the financial condition of an issuer, the general condition of the relevant stock market, and broader domestic and international political and economic events. Real Estate Securities Risk: Because of the Fund's ability to invest in securities of companies in the real estate industry and to make indirect investments in real estate, it is subject to risks associated with the direct ownership of real estate, including declines in the value of real estate; general and local economic conditions; increased competition; and changes in interest rates. Because of the Fund's ability to make indirect investments in natural resources and physical commodities, and in real property asset companies, the Fund is subject to risks associated with such real property assets, including supply and demand risk, depletion risk, regulatory risk and commodity pricing risk.

Personal Property Asset Company Risk: The Fund may invest in personal property asset companies such as special situation transportation assets. The risks of special situation transportation assets include cyclicality of supply and demand for transportation assets and risk of decline in the value of transportation assets and rental values.

Private Securities Risk: Private securities have additional risk considerations than investments in comparable public investments.

Inflation/Deflation Risk: There is a risk that the value of assets or income from investments will be worth less in the future as inflation decreases the value of money.

Dividend Risk: Dividends on common stock and other common equity securities which the Fund may hold are not fixed but are declared at the discretion of an issuer's board of directors. There is no guarantee that the issuers of the common equity securities in which the Fund invests will declare dividends in the future or that, if declared, they will remain at current levels or increase over time.

Portfolio Turnover Risk: The Fund's annual portfolio turnover rate may vary greatly from year to year. A higher portfolio turnover rate results in correspondingly greater brokerage commissions and other transactional expenses that are borne by the Fund. High portfolio turnover may result in an increased realization of net short-term capital gains by

the Fund which, when distributed to common shareholders, will be taxable as ordinary income. Additionally, in a declining market, portfolio turnover may create realized capital losses.

Derivatives Risk: The Fund may be exposed to certain additional risks should the Sub-Adviser use derivatives as a means to synthetically implement the Fund's investment strategies. If the Fund enters into a derivative instrument whereby it agrees to receive the return of a security or financial instrument or a basket of securities or financial instruments, it will typically contract to receive such returns for a predetermined period of time. During such period, the Fund may not have the ability to increase or decrease its exposure. In addition, such customized derivative instruments will likely be highly illiquid, and it is possible that the Fund will not be able to terminate such derivative instruments prior to their expiration date or that the penalties associated with such a termination might impact the Fund's performance in a material adverse manner. Furthermore, derivative instruments typically contain provisions giving the counterparty the right to terminate the contract upon the occurrence of certain events. If a termination were to occur, the Fund's return could be adversely affected as it would lose the benefit of the indirect exposure to the reference securities and it may incur significant termination expenses.

Foreign Securities and Emerging Markets Risk: Investing in foreign issuers may involve certain risks not typically associated with investing in securities of U.S. issuers due to increased exposure to foreign economic, political and legal developments, including favorable or unfavorable changes in currency exchange rates, exchange control regulations, expropriation or nationalization of assets, imposition of withholding taxes on payments and possible difficulty in obtaining and enforcing judgments against foreign entities. Furthermore, issuers of foreign securities and obligations are subject to different, often less comprehensive, accounting, reporting and disclosure requirements than domestic issuers. The securities and obligations of some foreign companies and foreign markets are less liquid and at times more volatile than comparable U.S. securities, obligations and markets. These risks may be more pronounced to the extent that the Fund invests a significant amount of its assets in companies located in one region and to the extent that the Fund invests in securities of issuers in emerging markets. Heightened risks of investing in emerging markets include: smaller market capitalization of securities markets, which may suffer periods of relative illiquidity; significant price volatility; restrictions on foreign investment; and possible repatriation of investment income and capital.

8 | GOF | GUGGENHEIM STRATEGIC OPPORTUNITIES FUND SEMIANNUAL REPORT

QUESTIONS & ANSWERS continued

November 30, 2012

Financial Leverage Risk: Although the use of Financial Leverage by the Fund may create an opportunity for increased after-tax total return for the Common Shares, it also results in additional risks and can magnify the effect of any losses. If the income and gains earned on securities purchased with Financial Leverage proceeds are greater than the cost of Financial Leverage, the Fund's return will be greater than if Financial Leverage had not been used. Conversely, if the income or gains from the securities purchased with such proceeds does not cover the cost of Financial Leverage, the return to the Fund will be less than if Financial Leverage had not been used. Financial Leverage involves risks and special considerations for shareholders, including the likelihood of greater volatility of net asset value and market price of and dividends on the Common Shares than a comparable portfolio without leverage; the risk that fluctuations in interest rates on borrowings that the Fund must pay will reduce the return to the Common Shareholders; and the effect of Financial Leverage in a declining market, which is likely to cause a greater decline in the net asset value of the Common Shares than if the Fund were not leveraged, which may result in a greater decline in the market price of the Common Shares. There can be no assurance that a leveraging strategy will be implemented or that it will be successful during any period during which it is employed.

In addition to the risks described above, the Fund is also subject to: Income Securities Risk, Foreign Currency Risk, Risks Associated with the Fund's Covered Call Option Strategy, Investment Funds Risk, Private Investment Funds Risk, Affiliated Investment Funds Risk, Synthetic Investments Risk, Risks of Real Property Asset Companies, Inflation/Deflation Risk, Anti- Takeover Provisions, Market Discount Risk, and Current Developments Risks. Please see www.guggenheiminvestments.com/gof for a more detailed discussion about Fund risks and considerations.

Performance data quoted represents past performance, which is no guarantee of future results and current performance may be lower or higher than the figures shown. For the most recent month-end performance figures, please visit www.guggenheiminvestments.com/gof. The investment return and principal value of an investment will fluctuate with changes in the market conditions and other factors so that an investor's shares, when sold, may be worth more or less than their original cost.

1 Investors should also be aware that these returns were primarily achieved during favorable market conditions and may not be sustainable.

Portfolio composition and holdings are subject to change daily. For more information, please visit www.guggenheiminvestments.com/gof. The above summaries are provided for informational purposes only and should not be viewed as recommendations. Past performance does not guarantee future results.

**Ratings shown are assigned by one or more Nationally Recognized Statistical Credit Rating Organizations ("NRSRO"), such as Standard & Poor's, Moody's and Fitch. The ratings are an indication of an issuer's creditworthiness and typically range from AAA or Aaa (highest) to D (lowest). When two or more ratings are available, the lower rating is used; and when only one is available, that rating is used. The Non-Rated category consists of securities that have not been rated by an NRSRO. U.S. Treasury securities and U.S. Government Agency securities are not rated but deemed to be equivalent to securities rated AA+/Aaa.

- * Ratings shown are per Standard & Poor's Rating Group, Moody's Investor Services, Inc. or Fitch Ratings. Securities classified as NR are not rated. (For securities not rated by Standard & Poor's Rating Group, the rating by Moody's Investor Services, Inc. is provided. Likewise, for securities not rated by Standard & Poor's Rating Group and Moody's Investor Services, Inc., the rating by Fitch Ratings is provided.) All ratings are unaudited. The ratings apply to the credit worthiness of the issuers of the underlying securities and not to the Fund or its shares.
- ** Date and price of the earliest optional call or put provision. There may be other call provisions at varying prices at later dates. All optional call provisions are unaudited.
- (a) All or a portion of these securities have been physically segregated in connection with borrowings, unfunded commitments and reverse repurchase agreements. As of November 30, 2012, the total amount segregated was \$138,085,309.
- (b) Securities are exempt from registration under Rule 144A of the Securities Act of 1933. These securities may be resold in transactions exempt from registration, normally to qualified institutional buyers. At November 30, 2012, these securities amounted to \$186,983,469, which represents 77.2% of net assets.
- (c) Non-income producing as security is in default.
- (d) Illiquid security.
- (e) Security is perpetual and, thus does not have a predetermined maturity date.
- (f) Security has a fixed rate coupon which will convert to a floating or variable rate coupon on a future date.
- (g) The issuer of this security will accrue interest on the secured note at a rate of 12% per annum and will make interest payments as follows: (1) 10% in cash and (2) 2% payment-in-kind shares on the secured note.

See notes to financial statements. 22 | GOF | GUGGENHEIM STRATEGIC OPPORTUNITIES FUND SEMIANNUAL REPORT

PORTFOLIO OF INVESTMENTS (Unaudited) continued

November 30, 2012

- (h) The issuer of this security may elect to pay interest entirely in cash, entirely by payment-in-kind shares by increasing the principal amount or issuing new notes equal to such payment-in-kind interest, or pay 50% of the interest in cash and 50% payment-in-kind.
- (i) Floating or variable rate coupon. The rate shown is as of November 30, 2012.
- (j) Paid-in-kind toggle note. The issuer in each interest period has the option to pay interest in cash or to issue payment-in-kind shares of the note.
- (k) Security is valued in accordance with Fair Valuation procedures established in good faith by management and approved by the Board of Trustees and is based, in part on significant unobservable inputs. The total market value of such securities is \$4,345,868 which represents 1.8% of net assets.
- (1) Security has no stated coupon. However, it is expected to receive residual cashflow payments on deal defined payment dates.
- (m) Security is a "Step up" bond where the coupon increases or steps up at a predetermined date. The rate shown reflects the rate in effect at the end of the reporting period.
- (n) Term loans held by the Fund have a variable interest rate feature which is periodically adjusted based on an underlying interest rate benchmark. In addition, term loans may include mandatory and/or optional prepayment terms. As a result, the actual maturity dates of the loan may be different than the amounts disclosed in the portfolios of investments. Term loans may be considered restricted in that the Fund may be contractually obligated to secure approval from the Agent Bank and/or Borrower prior to the sale or disposition of loan.
- (o) The issuer of this security will accrue interest at a rate of 12.5% per annum and will make interest payments as follows: (1) 6.0% in payment-in-kind interest and (2) 6.5% in cash.
- (p) Non-income producing security.

Contracto
