Title: Chief Executive Officer

For Immediate Release
Bennett Environmental Update

Oakville, Ontario, August 5, 2004 Bennett Environmental Inc., is a North American leader in the high temperature treatment of contaminated soils. The Company is pleased to provide this status report on its operations.

Sales and Production

The Company is conducting business as usual and expects the volumes of soil to be processed in the third quarter of 2004 will be comparable to the same period last year, when 20,000 tonnes were treated. At the end of July, storage was approximately 2,000 tonnes. The Saint Ambroise facility is expected to operate at about 80% capacity overall this quarter. Existing customers such as the Government of Canada, General Electric Canada, Severson Environmental and others are all shipping soil for treatment under existing contracts.

To secure higher and more stable inventories of soil from a variety of sources, the Company has begun a series of initiatives to build its sales organization. For the first time, the Company has added two seasoned sales executives full time in the U.S. Additional U.S. based, experienced sales executives are expected to start later this year. The Company is also in discussions with other environmental companies in the U.S. with the goal of forming new strategy partnerships. Our expanded sales force is actively seeking new contracts in both the U.S. and Canadian markets.

Federal Creosote Project

This project is ongoing. Since 2001, the Company has successfully treated approximately 110,000 tons from this site. Bennett has always taken the position that it entered into a binding contract for Phase III work on May 30, 2003. This contract was awarded after a request for proposal process which Bennett won. Severson attempted to reopen the request for proposal process in early August 2003 and it is the Company's position that Severson could not reopen the awarded proposal. The attempt to amend the request for proposal was abandoned by Severson, and the Phase III contract remains in effect. To date, Bennett has received 7,000 tons under the original 300,000 ton Phase III contract.

Bennett is the prime sub-contractor on the recently awarded indefinite quantity/indefinite delivery contract for a guaranteed minimum of 1,000 tons up to a maximum of 100,000 tons. Management is awaiting a definitive site design plan from the US EPA (Environmental Protection Agency) that is currently being prepared to better evaluate the prospects for additional material from the Federal Creosote site over the next several years.

Severson Environmental Inc. remains a key customer of Bennett and we understand that the US Army Corps and Severson are very satisfied with Bennett's performance.

For Immediate Release

The Company's goal is to exceed our customers' expectations and to remain the prime subcontractor for soil treatment from this site.

The recent class action lawsuits deal with allegations of misrepresentations and omissions of material facts concerning the Federal Creosote Phase III contract. The Company disagrees with these allegations and intends to vigorously defend itself. A Special Committee of the Board has been formed to oversee a review of contractual arrangements surrounding the Phase III contract. The Washington based law firm of Piper Rudnick LLP is assisting in the review. Because these matters are now the subject of pending litigation, the Company will decline further public comment at this time.

Belledune, New Brunswick Facility

Construction and permitting activities are continuing well at the Belledune, New Brunswick facility. The construction of the facility is approximately 99% complete and the plant will enter the commissioning phase, as planned, within the next month. The Company plans to complete compliance testing and receive an operating permit in the fourth quarter. However, the Company is dependent on the soil delivery schedule from our clients to begin production at Belledune. Only when it is clear that sufficient volumes of shipments will be received for processing at Belledune, will the facility begin operations.

On June 14, 2004, the Federal Minister of Environment asked that a public review panel be formed to assess the transboundary environmental impacts of the Company's Belledune facility. The Company has asked the Federal Court of Canada to review the legal authority of the Minister in asking for this review of the Company's facility. The Company believes it will be successful in its challenge and that neither the Ministers review panel and the judicial review will have any adverse impact on the progress of the new facility in Belledune.

Financial

The Company ended June 30, 2004 with a strong balance sheet with no debt, over \$13.9 million of cash in the bank and an untapped \$10 million line of credit with no plans for its use. Receivables balances of \$22.8 million are all excellent quality receivables, most of which are from work ongoing with the Government of Canada on the Saglek Labrador project as part of negotiated payment terms. The Company is expecting to return to profitability and generate positive cash flow over the second half of this year.

About Bennett Environmental Inc.

Bennett Environmental Inc. is a North American leader in high temperature treatment services for the remediation of contaminated soil and has provided thermal solutions to contamination problems throughout Canada and the US. Bennett Environmental's

For Immediate Release

proprietary technology provides for the safe, economical and permanent solution to contaminated soil. Independent testing has consistently proven that the technology operates well within the most stringent criteria in North America.

Bennett Environmental is listed on the Toronto Stock Exchange (Trading Symbol BEV) and the American Stock Exchange (Trading Symbol BEL).
