Gold as an investment today?

Given recent market volatility, the definition of what we believe constitutes a defensive stance has shifted. The current environment may offer support for an investment in gold, despite the metal's rise over the past few weeks and over the past decade.

Though commodities have been traditionally viewed as a volatile asset class, given a backdrop of low or negative real rates and ongoing anxiety over developed market sovereign debt, we believe defensive investors should consider maintaining a **strategic allocation to commodities, and in particular, gold.**

Low real interest rates

The relationship between real rates and gold is significant. Over the past forty years, real rates accounted for roughly 45% of the annual variation in gold price. And unlike many factors that have historically driven commodity prices—such as inflation—this relationship has strengthened in recent years. Over the past twenty years, the level of real rates has explained nearly 60% of the annual change in gold prices¹.

Most commodities have historically had a strong, inverse relationship with real yields, partly because when real yields are high, the opportunity cost for holding commodities, which produce no income, tends to be higher. Commodities are typically strongest when real yields are low or negative, as is the case today.

What's more, recent market volatility and weak economic data have strengthened the case for the maintenance of a low interest rate, and provided additional buoyancy for gold prices. With the Fed's intention to keep rates at exceptionally low levels for the federal funds rate at least through mid-2013², sustained low interest rates over the next two years will likely continue to support gold prices, assuming inflation expectations remain stable.

Erosion of the US dollar

Historically, gold has performed well when the dollar's value is eroding. Part of this relationship is mechanical. As gold is valued in US dollars, a declining dollar by definition will lead to higher gold prices. However, the relationship between gold and the US dollar also reflects a second dynamic: in those periods when investors are uncomfortable with fiat currency, including the dollar, gold is the natural beneficiary.

Conclusion

If the Fed keeps the short end of the yield curve anchored at zero due to fears of anemic growth and low inflation, this will perpetuate the low real rate environment and may give an unintended boost to commodity prices. Defensive investors, therefore, might find commodities in general and gold specifically—an attractive investment in the current market environment.

Why the iShares Gold Trust (IAU)

In selecting the most appropriate exchange traded vehicle even among those that seem to be identical, there are many factors to consider. Key considerations include:

Total cost to access gold

Two sources of liquidity: secondary market and underlying market

Creation/redemption size

Diversification of vaults

Allocated/unallocated gold requirements

Spotlight on Gold: iShares Gold Trust (IAU) as of June 30, 2011

The iShares Gold Trust (Trust) seeks to correspond generally to the day-to-day movement of the price of gold bullion. The objective of the Trust is for the value to reflect, at any given time, the price of gold owned by the Trust at that time, less the expenses and liabilities of the Trust.

Backed by physical gold - The shares are backed by gold, identified on the custodian's books as property of the Trust and held by the custodian in vaults in the vicinity of New York, Toronto, London and other locations.

Accessible - Investors may purchase and sell shares through traditional brokerage accounts. The shares are listed and trade on NYSE Arca and are available to be bought or sold throughout the trading day.

Cost efficient - Shares of the Trust may represent a cost-efficient alternative to investments in gold for investors not otherwise in a position to participate directly in the market for physical gold.

Transparent - Price, NAV and holding amounts of gold are available daily on iShares.com. Vault inspections are conducted twice a year and inspection certificates are available on iShares.com.

iShares Gold Trust (Trust) has filed a registration statement (including a prospectus) with the SEC for the offering to which this communication relates. Before you invest, you should read the prospectus and other documents the Trust has filed with the SEC for more complete information about the issuer and this offering. You may get these documents for free by visiting www.iShares.com or EDGAR on the SEC website at www.sec.gov. Alternatively, the Trust will arrange to send you the prospectus if you request it by calling toll-free 1-800-474-2737.

Investing involves risk, including possible loss of principal. The iShares Gold Trust (Trust) is not an investment company registered under the Investment Company Act of 1940 or a commodity pool for purposes of the Commodity Exchange Act. Shares of the Trust are not subject to the same regulatory requirements as mutual funds. Because shares of the Trust are created to reflect the price of the gold held by the Trust, the market price of the shares will be as unpredictable as the price of gold has historically been. Additionally, shares of the Trust are bought and sold at market price (not NAV). Brokerage commissions will reduce returns.

Shares of the Trust are created to reflect, at any given time, the market price of gold owned by the trust at that time less the trust's expenses and liabilities. The price received upon the sale of the shares, which trade at market price, may be more or less than the value of the gold represented by them. If an investor sells the shares at a time when no active market for them exists, such lack of an active market will most likely adversely affect the price received for the shares. **For a more complete discussion of the risk factors relative to the Trust, carefully read the prospectus.**

Following an investment in shares of the Trust, several factors may have the effect of causing a decline in the prices of gold and a corresponding decline in the price of the shares. Among them: (i) Large sales by the official sector. A significant portion of the aggregate world gold holdings is owned by governments, central banks and related institutions. If one or more of these institutions decides to sell in amounts large enough to cause a decline in world gold prices, the price of the shares will be adversely affected. (ii) A significant increase in gold hedging activity by gold producers. Should there be an increase in the level of hedge activity of gold producing companies, it could cause a decline in world gold prices, adversely affecting the price of the shares. (iii) A significant change in the attitude of speculators and investors towards gold. Should the speculative community take a negative view towards gold, it could cause a decline in world gold prices, negatively impacting the price of the shares.

The amount of gold represented by shares of the Trust will decrease over the life of the trust due to sales necessary to pay the sponsor's fee and trust expenses. Without increases in the price of gold sufficient to compensate for that decrease, the price of the shares will also decline, and investors will lose money on their investment. The Trust will have limited duration. The liquidation of the trust may occur at a time when the disposition of the trust's gold will result in losses to investors.

Although market makers will generally take advantage of differences between the NAV and the trading price of Trust shares through arbitrage opportunities, there is no guarantee that they will do so. There is no guarantee an active trading market will develop for the shares, which may result in losses on your investment at the time of disposition of your shares. The value of the shares of the Trust will be adversely affected if gold owned by the trust is lost or damaged in circumstances in which the trust is not in a position to recover the corresponding loss. The Trust is a passive investment vehicle. This means that the value of your shares may be adversely affected by trust losses that, if the trust had been actively managed, might have been possible to avoid.

Shares of the iShares Gold Trust are not deposits or other obligations of or guaranteed by BlackRock, Inc., and its affiliates, and are not insured by the Federal Deposit Insurance Corporation or any other governmental agency.

BlackRock Asset Management International Inc. (BAMII) is the sponsor of the Trust. BlackRock Fund Distribution Company (BFDC), a subsidiary of BAMII, assists in the promotion of the Trust.
