Intermountain Community Bancorp
Notes to Consolidated Financial Statements

1. Basis of Presentation:

The foregoing unaudited interim consolidated financial statements have been prepared in accordance with accounting principles generally accepted in the United States of America for interim financial information and with the instructions to Form 10-Q and Article 10 of Regulation S-X as promulgated by the Securities and Exchange Commission. Accordingly, these financial statements do not include all of the disclosures required by accounting principles generally accepted in the United States of America for complete financial statements. These unaudited interim consolidated financial statements should be read in conjunction with the audited consolidated financial statements for the year ended December 31, 2008. In the opinion of management, the unaudited interim consolidated financial statements furnished herein include adjustments, all of which are of a normal recurring nature, necessary for a fair statement of the results for the interim periods presented.

The preparation of financial statements in accordance with accounting principles generally accepted in the United States of America requires the use of estimates and assumptions that affect the reported amounts of assets and liabilities, disclosure of contingent assets and liabilities known to exist as of the date the financial statements are published, and the reported amounts of revenues and expenses during the reporting period. Uncertainties with respect to such estimates and assumptions are inherent in the preparation of Intermountain Community Bancorp's (Intermountain's or the Company's) consolidated financial statements; accordingly, it is possible that the actual results could differ from these estimates and assumptions, which could have a material effect on the reported amounts of Intermountain's consolidated financial position and results of operations.

2. Investments

The amortized cost and fair values of investments are as follows (in thousands):

	Amortized Cost	Available-for-Sale Gross Unrealized Gains	Gross Unrealized Losses	Fair Value/ Carrying Value
March 31, 2009				
U.S. treasury securities and obligations of U.S. government agencies	\$ 2,065	\$ 2	\$	\$ 2,067
Residential mortgage-backed securities	202,011	1,999	(10,097)	193,913
	\$ 204,076	\$ 2,001	\$ (10,097)	\$ 195,980
December 31, 2008				
U.S. treasury securities and obligations of U.S. government agencies	\$ 7,569	\$ 48	\$	\$ 7,617
Residential mortgage-backed securities	148,244	2,550	(10,793)	140,001
	\$ 155,813	\$ 2,598	\$ (10,793)	\$ 147,618

Held-to-Maturity

	Carrying Value/ Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Fair Value
March 31, 2009				
State and municipal securities	\$17,575	\$ 109	\$(232)	\$17,453
December 31, 2008				
State and municipal securities	\$17,604	\$ 70	\$(149)	\$17,525

The following table summarizes the duration of Intermountain's unrealized losses on available-for-sale and held-to-maturity securities as of the dates indicated (in thousands).

	Less Than 12 Months Unrealized		12 Months or Longer Unrealized		Total Unrealized	
	Fair Value	Losses	Fair Value	Losses	Fair Value	Losses

Total	\$ 50,819	\$ 5,855	\$ 15,796	\$ 5,087	\$ 66,615	\$ 10,942

Table of Contents

Intermountain's investment portfolios are managed to provide and maintain liquidity; to maintain a balance of high quality, diversified investments to minimize risk; to offset other asset portfolio elements in managing interest rate risk; to provide collateral for pledging; and to maximize returns. At March 31, 2009, the Company does not intend to sell any of its available-for-sale securities that have a loss position and it is not likely that it will be required to sell the available-for-sale securities before the anticipated recovery of their remaining amortized cost. The unrealized losses on residential mortgage-backed securities without other-than-temporary impairment loss were considered by management to be temporary in nature.

At March 31, 2009, residential mortgage-backed securities included a security comprised of a pool of mortgages with a remaining unpaid balance of \$4.2 million. Due to the lack of an orderly market for the security and the declining national economic and housing market, its fair value was determined to be \$2.5 million at March 31, 2009 based on analytical modeling taking into consideration a range of factors normally found in an orderly market. Of the \$1.7 million other-than-temporary impairment on this security, based on an analysis of projected cash flows, \$244,000 was charged to earnings as a credit loss and \$1.5 million was recognized in other comprehensive income. Impairment losses on securities charged to earnings in the three months ended March 31, 2009 and 2008 were \$244,000 and \$0 respectively. See Note 9 Fair Value of Financial Instruments for more information on the calculation of fair or carrying value for the investment securities.

A summary of the portion of impairment loss on debt securities recognized in earnings for which a portion of the other-than-temporary impairment was not recognized follows:

Balance at January 1, 2009	\$
Amount of credit loss related to investment securities for which an other-than-temporary impairment was not previously recognized	244
Balance of the amount related to credit losses on investment securities held at March 31, 2009 for which a portion of an other-than-temporary impairment was recognized in other comprehensive income	\$ 244

3. Advances from the Federal Home Loan Bank of Seattle:

During September 2007, the Bank obtained two advances from the FHLB Seattle in the amounts of \$10.0 million and \$14.0 million with interest only payable at 4.96% and 4.90% and maturities in September 2010 and September 2009, respectively. During April 2008, the Bank obtained two advances from the FHLB Seattle in the amounts of \$5.0 million and \$5.0 million with interest only payable at 2.89% and 2.95% and maturities in April 2009. These two advances matured in April 2009 and the Bank did not renew them. During May 2008, the Bank obtained an advance from the FHLB Seattle in the amount of \$12.0 million with interest only payable at 2.88% which matures in August 2009.

Advances from FHLB Seattle are collateralized by certain qualifying loans. At March 31, 2009, Intermountain had the ability to borrow \$115.0 million from FHLB Seattle, of which \$46.0 million was utilized. The Bank's credit line with FHLB Seattle is limited to a percentage of its total regulatory assets subject to collateralization requirements. Intermountain would be able to borrow amounts in excess of this total from the FHLB Seattle with the placement of additional available collateral.

4. Other Borrowings:

The components of other borrowings are as follows (in thousands):

	March 31, 2009	December 31, 2008
Term note payable (1)	\$ 8,279	\$ 8,279
Term note payable (2)	8,248	8,248
Term note payable (3)	931	941
Term note payable (4)	23,145	23,145
 Total other borrowings	 \$ 40,603	 \$ 40,613

(1) In January 2003, the Company issued \$8.0 million of Trust Preferred securities through its subsidiary, Intermountain Statutory Trust I. The debt associated with these securities bears interest on a variable basis tied to the 90-day LIBOR (London Inter-Bank Offering Rate) index plus 3.25%, with interest only paid quarterly. The rate on this borrowing was 4.47% at March 31, 2009. The debt is callable by the Company quarterly and matures in March 2033. During the third quarter of 2008, the Company entered into an interest rate swap contract with Pacific

Coast Bankers
Bank. The
purpose of the
\$8.2 million
notional value
swap is to
convert the
variable rate
payments made
on our Trust
Preferred I
obligation to a
series of fixed
rate payments
for five years, as
a hedging
strategy to help
manage the
Company's
interest-rate
risk. See Note
A.

Table of Contents

- (2) In March 2004, the Company issued \$8.0 million of Trust Preferred securities through its subsidiary, Intermountain Statutory Trust II. The debt associated with these securities bears interest on a variable basis tied to the 90-day LIBOR index plus 2.8%, with interest only paid quarterly. The rate on this borrowing was 3.89% at March 31, 2009. The debt is callable by the Company quarterly and matures in April 2034. See Note A.
- (3) In January 2006, the Company purchased land to build its new headquarters, the Sandpoint Center in Sandpoint, Idaho. It entered into a Note Payable with the sellers of the property in the amount of \$1.13 million, with a fixed rate

of 6.65%,
payable in equal
installments.

The note
matures in
February 2026.
This note was
paid off as part
of the refinance
of the borrowing
discussed in
Foote 4, section
(4) immediately
below.

- (4) In March 2007,
the Company
entered into an
additional
borrowing
agreement with
Pacific Coast
Bankers Bank
(PCBB) in the
amount of
\$18.0 million
and in
December 2007
increased the
amount to
\$25.0 million.
The borrowing
agreement was a
non-revolving
line of credit
with a variable
rate of interest
tied to LIBOR
and was
collateralized by
Bank stock and
the Sandpoint
Center. This line
was used
primarily to
fund the
construction
costs of the
Company s new
headquarters
building in

Sandpoint. The balance at March 31, 2009 was \$23.1 million at a fixed interest rate of 7.0%. The borrowing had a maturity of January 2009 and was extended for 90 days with a fixed rate of 7.0%. In May 2009, the company negotiated new loan facilities with Pacific Coast Bankers Bank to refinance the existing holding company credit line into three longer-term, amortizing loans. The loans are as follows: \$9.0 million with a fixed interest rate of 7.0% secured by the Sandpoint Center and Panhandle State Bank stock, \$11.0 million with a variable rate of 2.35% plus the rate on the \$11.0 million 12-month certificate of deposit used to secure this loan (the rate for the first year is 4.35%), and

\$3.0 million with a rate of 10% secured by the Sandpoint Center and Panhandle State Bank stock. The amortization on all three loans is 25 years and the maturity is May 2012. The Company anticipates repaying these loans before maturity through the sale of the building. The \$11.0 million purchase of the certificate of deposit was funded by a dividend from the Bank to the holding company, and upon pay off of the loan secured by this account, the funds will be available again for bank or holding company purposes. Restrictive loan covenants that apply to all three loans include maintaining minimum levels of total risk-based capital, restrictions on incurring additional debt over \$2.0 million at

the holding company level without Pacific Coast Bankers Bank's consent, and requirements to provide financial and loan portfolio information on a periodic basis. In addition, there are debt service and asset quality requirements that only apply to the \$3.0 million credit facility. See Item 5 Other Information for further discussion on PCBB borrowing.

A) Intermountain's obligations under the above debentures issued by its subsidiaries constitute a full and unconditional guarantee by Intermountain of the Statutory Trusts' obligations under the Trust Preferred Securities. In accordance with Financial Interpretation No. 46 (Revised), Consolidation of Variable Interest Entities (FIN No. 46R), the trusts are not consolidated and the debentures and related amounts are treated as debt of Intermountain.

5. **Earnings Per Share:**

The following table presents the basic and diluted earnings per share computations:

	Three months Ended March	
	31,	
	2009	2008
Numerator:		
Net income (loss) – basic and diluted	\$ (118)	\$ 1,654
Preferred stock dividend	414	
Net Income (loss) applicable to commons stockholders	\$ (532)	\$ 1,654
Denominator:		
Weighted average shares outstanding – basic	8,348,238	8,271,104
Dilutive effect of common stock options, restricted stock awards		293,514
Weighted average shares outstanding – diluted	8,348,238	8,564,618

Edgar Filing: INTERMOUNTAIN COMMUNITY BANCORP - Form 10-Q

Earnings (loss) per share basic and diluted:				
Earnings (loss) per share basic	\$	(0.06)	\$	0.20
Effect of dilutive common stock options				(0.01)
Earnings per share diluted	\$	(0.06)	\$	0.19

Table of Contents**6. Operating Expenses:**

The following table details Intermountain's components of total operating expenses:

	Three months ended March 31,	
	2009	2008
	(Dollars in thousands)	
Salaries and employee benefits	\$ 5,706	\$ 6,946
Occupancy expense	1,968	1,652
Advertising	299	266
Fees and service charges	598	434
Printing, postage and supplies	361	349
Legal and accounting	338	448
Other expense	1,502	1,164
Total operating expenses	\$ 10,772	\$ 11,259

Salaries and employee benefits expense decreased \$1.2 million, or 17.9%, over the three month period last year as a result of decreased staffing levels and lower incentive expense.

Occupancy expenses increased \$316,000, or 19.1%, for the three month period ended March 31, 2009 compared to the same period one year ago. These increases were comprised of additional building expense from the Sandpoint Center which was opened in the second quarter of 2008 and additional computer hardware and software purchased to enhance security, compliance and business continuity.

The advertising expense increase of \$33,000 reflected additional donations and community meeting expenses associated with the Company's *Powered by Community* initiative. The \$164,000 increase in fees and service charges primarily reflected higher expenses for the Company's internet banking services, as usage increased significantly. The slight increase in printing, postage and supplies reflected fee increases and higher usage rates. Legal and accounting fees were \$109,000, or 24.4% lower than the same three month period in 2008 as a result of payments made during 2008 to a consultant engaged to assist the Company in streamlining business processes.

Other expenses increased \$338,000, or 29.04%, for the three month period over the same period last year. The increase in other expenses can be attributed to the reinstatement of FDIC insurance fees industry-wide and increases in collection and other real-estate owned expenses caused by the weakening credit environment and an additional \$354,000 charge to increase the Company's reserve for unfunded borrowing commitments.

7. Stock-Based Compensation Plans:

The Company utilized its stock to compensate employees and directors under the 1999 Director Stock Option Plan, the 1999 Employee Plan and the 1988 Employee Plan (together the "Stock Option Plans"). Options to purchase Intermountain common stock had been granted to employees and directors under the Stock Option Plans at prices equal to the fair market value of the underlying stock on the dates the options were granted. The options vest 20% per year, over a five-year period, and expire in 10 years. For the three months ended March 31, 2009 and 2008, stock option expense totaled \$0 and \$34,000, respectively. The Company did not have any remaining expense related to the non-vested stock options outstanding at March 31, 2009.

On January 14, 2009, the terms of the Amended and Restated 1999 Employee Stock Option and Restricted Stock Plan and the 1999 Director Stock Option Plan expired. Upon recommendation of management and approval of the Board of Directors, it was determined that, due to the economic uncertainty, the Board would not seek to implement a new plan at this time. The 1988 Employee Stock Option Plan was a predecessor plan to the Amended and Restated 1999 Employee Stock Option and Restricted Stock Plan. Because each of these plans has expired, shares may no longer be awarded under these plans. However, awards remain unexercised or unvested under these plans. The Company did not grant options to purchase Intermountain common stock or restricted stock during the three months ended March 31, 2009.

In 2003, shareholders approved a change to the 1999 Employee Option Plan to provide for the granting of restricted stock awards. The Company granted restricted stock to directors and employees beginning in 2005. The restricted stock vests 20% per year, over a five-year period. The Company granted 0 and 35,949 restricted shares with a grant date fair value of \$0 and \$521,000 during the three months ended March 31, 2009 and 2008, respectively. For the three months ended March 31, 2009 and 2008, restricted stock expense totaled \$93,000 and \$78,000, respectively. Total expense related to stock-based compensation is comprised of restricted stock expense for the three months ended March 31, 2009 and restricted stock expense, stock option expense and expense related to the 2006-2008 Long-Term Incentive Plan (LTIP) for the three months ended March 31, 2008. LTIP expense in 2008 was based on anticipated company performance over a 3-year period and had a 5-year vesting period. During the three months ended March 31, 2009, the Company did not have a Long-Term Incentive Plan and therefore did not have expense related to this portion of stock-based compensation. Total expense related to stock-based compensation recorded in the three months ended March 31, 2009 and 2008 was \$93,000 and \$166,000, respectively.

A summary of the changes in stock options outstanding for the three months ended March 31, 2009 is presented below:

	Three months ended March 31, 2009		
	(dollars in thousands, except per share amounts)		
	Number of Shares	Weighted Average Exercise Price	Weighted Average Remaining Life (Years)
Beginning Options Outstanding, Jan 1, 2009	325,482	\$ 6.00	
Options Granted			
Exercises	(12,500)	4.42	
Forfeitures	(47,048)	4.42	
Ending options outstanding, March 31, 2009	265,934	6.29	3.4
Exercisable at March 31, 2009	260,666	\$ 6.15	3.4

Table of Contents

The total intrinsic value of options exercised during the three months ended March 31, 2009 and 2008 was \$7,000 and \$43,000, respectively. A summary of the Company's nonvested restricted shares for the three months ended March 31, 2009 is presented below:

Nonvested Shares	Shares	Weighted-Average Grant-Date Fair Value
Balance at January 1, 2009	96,567	\$ 16.06
Granted		
Vested	(17,649)	18.07
Forfeited	(515)	18.10
Balance at March 31, 2009	78,403	\$ 15.59

As of March 31, 2009, there was \$1.1 million of unrecognized compensation cost related to nonvested share-based compensation arrangements granted under this plan. This cost is expected to be recognized over a weighted-average period of 3.3 years.

8. Derivative Financial Instruments

Management uses derivative financial instruments to protect against the risk of interest rate movements on the value of certain assets and liabilities and on future cash flows. The instruments that have been used by the Company include interest rate swaps and cash flow hedges with indices that relate to the pricing of specific assets and liabilities.

Derivative instruments have inherent risks, primarily market risk and credit risk. Market risk is associated with changes in interest rates and credit risk relates to the risk that the counterparty will fail to perform according to the terms of the agreement. The amounts potentially subject to market and credit risks are the streams of interest payments under the contracts and the market value of the derivative instrument which is determined based on the interaction of the notional amount of the contract with the underlying instrument, and not the notional principal amounts used to express the volume of the transactions. Management monitors the market risk and credit risk associated with derivative financial instruments as part of its overall Asset/Liability management process.

In accordance with SFAS 133, the Company recognizes all derivative financial instruments in the consolidated financial statements at fair value regardless of the purpose or intent for holding the instrument. Derivative financial instruments are included in other assets or other liabilities, as appropriate, on the Consolidated Statements of Condition. Changes in the fair value of derivative financial instruments are either recognized periodically in income or in shareholders' equity as a component of other comprehensive income depending on whether the derivative financial instrument qualifies for hedge accounting, and if so, whether it qualifies as a fair value hedge or cash flow hedge. Generally, changes in fair values of derivatives accounted for as fair value hedges are recorded in income in the same period and in the same income statement line as changes in the fair values of the hedged items that relate to the hedged risk(s). Changes in fair values of derivative financial instruments accounted for as cash flow hedges, to the extent they are effective hedges, are recorded as a component of other comprehensive income, net of deferred taxes. Changes in fair values of derivative financial instruments not qualifying as hedges pursuant to SFAS 133 are reported in non-interest income. Derivative contracts are valued by a third party and are periodically validated by comparison with valuations provided by the respective counterparties.

Interest Rate Swaps Designated as Cash Flow Hedges

The tables below identify the Company's interest rate swaps at March 31, 2009 and December 31, 2008, which were entered into to hedge certain LIBOR-based trust preferred debentures and designated as cash flow hedges pursuant to SFAS 133 (dollars in thousands):

Maturity Date	March 31, 2009		Receive Rate	Pay Rate	Type of Hedging Relationship
	Notional Amount	Fair Value Gain (Loss)			
<i>Pay Fixed, Receive Variable:</i>					
October 2013	\$ 8,248	\$ (881)	1.09%	4.58%	Cash Flow
Maturity Date	December 31, 2008		Receive Rate	Pay Rate	Type of Hedging Relationship
	Notional Amount	Fair Value Gain (Loss)			
<i>Pay Fixed, Receive Variable:</i>					
October 2013	\$ 8,248	\$ (985)	4.75%	4.58%	Cash Flow

Table of Contents

The fair values, or unrealized losses, of \$881,000 at March 31, 2009 and \$985,000 at December 31, 2008 are included in other liabilities. These hedges were considered highly effective during the quarter ended March 31, 2009, and none of the change in fair value of these derivatives was attributed to hedge ineffectiveness. The changes in fair value, net of tax, are separately disclosed in the statement of changes in shareholders' equity as a component of comprehensive income. Net cash flows from these interest rate swaps are included in interest expense on trust preferred debentures. The unrealized loss at March 31, 2009 is a component of comprehensive income for March 31, 2009. At March 31, 2009, Intermountain had \$1.2 million in pledged certificates of deposit as collateral for the cash flow hedge.

A rollforward of the amounts in accumulated other comprehensive income related to interest rate swaps designated as cash flow hedges follows:

	Three Months Ended	
	March	March
	31,	31,
	2009	2008
Unrealized gain (loss) at beginning of period	\$ (985)	\$
Amount of gain (loss) recognized in other comprehensive income	104	\$
Unrealized gain (loss) at end of period	\$ (881)	\$

Interest Rate Swaps Not Designated as Hedging Instruments Under SFAS 133

The Company has purchased certain derivative products to allow the Company to effectively convert a fixed rate loan to a variable rate. The Company economically hedges derivative transactions by entering into offsetting derivatives executed with third parties upon the origination of a fixed rate loan with a customer. Derivative transactions executed as part of this program are not designated in SFAS 133 hedge relationships and are, therefore, marked to market through earnings each period. In most cases the derivatives have mirror-image terms, which result in the positions changes in fair value offsetting completely through earnings each period. However, to the extent that the derivatives are not a mirror-image, changes in fair value will not completely offset, resulting in some earnings impact each period. Changes in the fair value of these interest rate swaps are included in other non-interest income. The following table summarizes these interest rate swaps as of March 31, 2009 and December 31, 2008 (dollars in thousands):

	March 31, 2009		December 31, 2008	
	Notional	Fair Value	Notional	Fair Value
	Amount	Gain	Amount	Gain
		(Loss)		(Loss)
Interest rate swaps with third party financial institutions	\$1,559	\$ (57)	\$	\$

Due to this being a fair value hedge, at March 31, 2009, the value included in other assets totaled \$57,000, which offset the fair value loss. At December 31, 2008, other assets included \$0 of derivative assets and other liabilities included \$0 million of derivative liabilities related to this interest rate swap transaction. At March 31, 2009, the interest rate swaps had a maturity date of March 2019. At March 31, 2009 Intermountain had \$48,000 in restricted cash for the interest rate swap.

9. Fair Value Measurements

Fair value is defined under SFAS 157 as the price that would be received for an asset or paid to transfer a liability (an exit price) in the principal market for the asset or liability in an orderly transaction between market participants on the measurement date. In support of this principle, SFAS 157 establishes a fair value hierarchy that prioritizes the information used to develop those assumptions. The fair value hierarchy is as follows:

Level 1 inputs Unadjusted quoted process in active markets for identical assets or liabilities that the entity has the ability to access at the measurement date.

Level 2 inputs Inputs other than quoted prices included in Level 1 that are observable for the asset or liability, either directly or indirectly. These might include quoted prices for similar assets and liabilities in active markets, and inputs other than quoted prices that are observable for the asset or liability, such as interest rates and yield curves that are observable at commonly quoted intervals.

Level 3 inputs Unobservable inputs that are supported by little or no market activity and that are significant to the fair value of the assets or liabilities. Level 3 assets and liabilities include financial instruments whose value is determined using pricing models, discounted cash flow methodologies, or similar techniques, as well as instruments for which the determination of fair values requires significant management judgment or estimation.

Table of Contents

The following table presents information about the Company's assets measured at fair value on a recurring basis as of March 31, 2009, and indicates the fair value hierarchy of the valuation techniques utilized by the Company to determine such fair value (dollars in thousands).

Description	Fair Value Measurements At March 31, 2009, Using			
	Fair Value March 31, 2009	Quoted Prices In Active Markets for Identical Assets (Level 1)	Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Available-for-Sale Securities:				
U.S. treasury securities and obligations of U.S. government agencies	\$ 2,067	\$	\$ 2,067	\$
Residential mortgage backed securities	193,913		158,648	35,265
Other Assets - Derivative	57			57
Total Assets Measured at Fair Value	\$ 196,037	\$	\$ 160,715	\$ 35,322
Other Liabilities - Derivatives	\$ 938	\$	\$	\$ 938

Description	Fair Value Measurements At December 31, 2008, Using			
	Fair Value March 31, 2009	Quoted Prices In Active Markets for Identical Assets (Level 1)	Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Available-for-Sale Securities	\$ 147,618	\$	\$ 108,954	\$ 38,664
Other Assets - Derivative				
Total Assets Measured at Fair Value	\$ 147,618	\$	\$ 108,954	\$ 38,664
Other Liabilities - Derivatives	\$ 985	\$	\$	\$ 985

Fair Value Measurement Transfers Assets

Included in other comprehensive income		(104)
March 31, 2009 Balance	\$	938

Table of Contents

The table below presents a portion of the Company's loans measured at fair value on a nonrecurring basis as of March 31, 2009, because they are impaired collateral-dependent loans and the Company's other real estate owned (OREO), aggregated by the level in the fair value hierarchy within which those measurements fall (dollars in thousands).

Description	Fair Value Measurements At March 31, 2009, Using			
	Fair Value March 31, 2009	Quoted Prices In Active Markets for Identical Assets (Level 1)	Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Loans(1)	\$ 35,181	\$	\$	\$ 35,181
Other real estate owned	9,052			9,052
Total Assets Measured at Fair Value	\$ 44,233	\$	\$	\$ 44,233

(1) Represents collateral-dependent impaired loans, net, which are included in loans.

Collateral dependent loans that are deemed to be impaired are valued based upon the fair value of the underlying collateral, as is the Company's OREO. While appraisals or other independent estimates of value do exist for this collateral, the uncertain and volatile market conditions require potential adjustments in value. As such, these loans and OREO are categorized as level 3.

The following is a further description of the principal valuation methods used by the Company to estimate the fair values of its financial instruments.

Securities

The fair value of securities, other than those categorized as level 3 described above, is based principally on market prices and dealer quotes. Certain fair values are estimated using pricing models or are based on comparisons to market prices of similar securities. The fair value of stock in the FHLB equals its carrying amount since such stock is only redeemable at its par value.

Available for Sale Securities. Securities totaling \$160.7 million classified as available for sale are reported at fair value utilizing Level 2 inputs. For these securities, the Company obtained fair value measurements from an independent pricing service and internally validated these measurements. The fair value measurements consider observable data that may include dealer quotes, market spreads, cash flows, the U.S. Treasury yield curve, live trading levels, trade execution data, market consensus, prepayment speeds, credit information and the bond's terms and conditions, among other things.

The available for sale portfolio also includes \$35.3 million in super senior or senior tranche collateralized mortgage obligations not backed by a government or other agency guarantee. These securities are collateralized by fixed rate prime or Alt A mortgages, are structured to provide credit support to the senior tranches, and are carefully analyzed and monitored by management. Because of disruptions in the current market for mortgage-backed securities and

collateralized mortgage obligations, an active market did not exist for these securities at March 31, 2009. This is evidenced by a significant widening in the bid-ask spread for these types of securities and the limited volume of actual trades made. As a result, less reliance can be placed on easily observable market data, such as pricing on transactions involving similar types of securities, in determining their current fair value. As such, significant adjustments were required to determine the fair value at the March 31, 2009 measurement date. These securities are valued using Level 3 inputs.

In valuing these securities, the Company utilized the same independent pricing service as for its other available-for-sale securities and internally validated these measurements. In addition, it utilized a second pricing service that specializes in whole-loan collateralized mortgage obligation valuation and another market source to derive independent valuations and used this data to evaluate and adjust the original values derived. In addition to the observable market-based input including dealer quotes, market spreads, live trading levels and execution data, both services also employed a present-value income model that considered the nature and timing of the cash flows and the relative risk of receiving the anticipated cash flows as agreed. The discount rates used were based on a risk-free rate, adjusted by a risk premium for each security. In accordance with the requirements of Statement No. 157, the Company has determined that the risk-adjusted discount rates utilized appropriately reflect the Company's best estimate of the assumptions that market participants would use in pricing the assets in a current transaction to sell the asset at the measurement date. Risks include nonperformance risk (that is, default risk and collateral value risk) and liquidity risk (that is, the compensation that a market participant receives for buying an asset that is difficult to sell under current market conditions). To the extent possible, the pricing services and the Company validated the results from these models with independently observable data.

Table of Contents

Using joint guidance from the SEC Office of the Chief Accountant and FASB staff issued October 10, 2008 as FSP FAS 157-3 and additional guidance issued on April 9, 2009 as FSP FAS 157-4 and FSP FAS 115-2 and FAS 124-1, and Emerging Issues Task Force (*EITF*) 99-20-2, which provided further clarification on fair value accounting, the Company also evaluated these and other securities in the investment portfolio for Other-than-temporary Impairment. In conducting this evaluation, the Company evaluated the following factors:

The length of time and the extent to which the market value of the securities have been less than their cost;

The financial condition and near-term prospects of the issuer or obligation, including any specific events, which may influence the operations of the issuer or obligation such as credit defaults and losses in mortgages underlying the security, changes in technology that impair the earnings potential of the investment or the discontinuation of a segment of the business that may affect the future earnings potential; and

The intent and ability of the holder to retain its investment in the issuer for a period of time sufficient to allow for any anticipated recovery in market value.

Based on the factors above, the Company has determined that one security comprised of a pool of mortgages was subject to Other-than-temporary Impairment, (OTTI) as of March 31, 2009. During the first quarter, the Company recorded an other-than-temporary impairment (OTTI) of \$1,751,000 on this security. Of the total \$1,751,000 OTTI, \$244,000 was related to credit losses, and under newly issued accounting guidance in FSP FAS 115-2/124-2 and EITF 99-20-0, is a charge against earnings. The remaining \$1,507,000 reflects non-credit value impairment and was charged against the Company's other comprehensive income and reported capital on the balance sheet. At this time, the Company anticipates holding the security until its value is recovered or maturity, and will continue to adjust its other comprehensive income and capital position to reflect the security's current market value. The Company calculated the credit loss charge against earnings by subtracting the estimated present value of future cash flows on the security from its amortized cost per the guidelines provided in EITF 99-20.

Loans. Loans are generally not recorded at fair value on a recurring basis. Periodically, the Company records nonrecurring adjustments to the carrying value of loans based on fair value measurements for partial charge-offs of the uncollectible portions of those loans. Nonrecurring adjustments also include certain impairment amounts for collateral-dependent loans calculated in accordance with SFAS No. 114 when establishing the allowance for credit losses. Such amounts are generally based on the fair value of the underlying collateral supporting the loan less selling costs. Real estate collateral on these loans and the Company's OREO is typically valued using appraisals or other indications of value based on recent comparable sales of similar properties or assumptions generally observable in the marketplace. Management reviews these valuations and makes additional valuation adjustments, as necessary. The related nonrecurring fair value measurement adjustments have generally been classified as Level 3 because of the volatility and the uncertainty in the current markets. Estimates of fair value used for other collateral supporting commercial loans generally are based on assumptions not observable in the marketplace and therefore such valuations have been classified as Level 3. Loans subject to nonrecurring fair value measurement were \$35.2 million at March 31, 2009, of which \$35.2 million were classified as Level 3.

Other Real Estate Owned. Other real estate owned, which is carried at the lower of cost or fair value, is periodically assessed for impairment based on fair value at the reporting date. Fair value is determined from external appraisals using judgments and estimates of external professionals. Many of these inputs are not observable and, accordingly, these measurements are classified as Level 3. The Company's OREO at March 31, 2009 totaled \$9.1 million, all of which was classified as Level 3.

Interest Rate Swaps. During the third quarter of 2008, the Company entered into an interest rate swap contract with Pacific Coast Bankers Bank. The purpose of the \$8.2 million notional value swap is to convert the variable rate payments made on the Trust Preferred I obligation (see Note 4 Other Borrowings) to a series of fixed rate payments for five years, as a hedging strategy to help manage the Company's interest-rate risk. This contract is carried as an asset or liability at fair value, and as of March 31, 2009, it was a liability with a fair value of \$881,000.

During the first quarter of 2009, the Company entered into an interest rate swap contract with Pacific Coast Bankers Bank. The purpose of the \$1.6 million notional value swap is to convert the fixed rate payments earned on a

loan receivable to a series of variable rate payments for ten years, as a hedging strategy to help manage the Company's interest-rate risk. This contract is carried as an asset or liability at fair value, and as of March 31, 2009, it was an asset with a fair value of \$0.

Intermountain is required to disclose the estimated fair value of financial instruments, both assets and liabilities on and off the balance sheet, for which it is practicable to estimate fair value. These fair value estimates are made at March 31, 2009 based on relevant market information and information about the financial instruments. Fair value estimates are intended to represent the price an asset could be sold at or the price a liability could be settled for. However, given there is no active market or observable market transactions for many of the Company's financial instruments, the Company has made estimates of many of these fair values which are subjective in nature, involve uncertainties and matters of significant judgment and therefore cannot be determined with precision. Changes in assumptions could significantly affect the estimated values.

Table of Contents**10. New Accounting Pronouncements:**

In April 2009, the FASB issued FSP FAS 115-2 and FAS 124-2, and Emerging Issues Task Force (*EITF*) 99-20-2, *Recognition and Presentation of Other-Than-Temporary Impairments* (*FSP FAS 115-2/124-2 and EITF 99-20-2*). FSP FAS 115-2/124-2 and EITF 99-20-2 requires entities to separate an other-than-temporary impairment of a debt security into two components when there are credit related losses associated with the impaired debt security for which management asserts that it does not have the intent to sell the security, and it is more likely than not that it will not be required to sell the security before recovery of its cost basis. The amount of the other-than-temporary impairment related to a credit loss is recognized in earnings, and the amount of the other-than-temporary impairment related to other factors is recorded in other comprehensive loss. FSP FAS 115-2/124-2 and EITF 99-20-2 are effective for periods ending after June 15, 2009, with early adoption permitted for periods ending after March 15, 2009. The Company did early adopt this FSP and it resulted in a portion of other-than-temporary impairment being recorded in other comprehensive income instead of earnings in the amount of \$1.5 million. See *Notes to Consolidated Financial Statements*, notes 2 and 9 for more information on the Company's investment securities and other-than-temporary impairment.

On January 12, 2009, FASB issued FSP Emerging Issues Task Force (EITF) 99-20-1, *Amendments to the Impairment Guidance of EITF Issue No. 99-20* (*FSP EITF 99-20-1*). FSP EITF 99-20-1 addresses certain practice issues in EITF No. 99-20, *Recognition of Interest Income and Impairment on Purchased Beneficial Interests and Beneficial Interests That Continue to Be Held by a Transferor in Securitized Financial Assets*, by making its other-than-temporary impairment assessment guidance consistent with SFAS No. 115, *Accounting for Certain Investments in Debt and Equity Securities*. FSP EITF 99-20-1 removes the reference to the consideration of a market participant's estimates of cash flows in EITF 99-20, and instead requires an assessment of whether it is probable, based on current information and events, that the holder of the security will be unable to collect all amounts due according to the contractual terms. If it is probable that there has been an adverse change in estimated cash flows, an other-than-temporary impairment is deemed to exist, and a corresponding loss shall be recognized in earnings equal to the entire difference between the investment's carrying value and its fair value at the balance sheet date of the reporting period for which the assessment is made. This FSP is effective for interim and annual reporting periods ending after December 15, 2008, and shall be applied prospectively. FSP EITF 99-20-1 was further modified in April, 2009 by the issuance of *FSP FAS 115-2/124-2 and EITF 99-20-2* discussed above. See the discussion above for the cumulative impact on the Company's consolidated financial statements.

In April 2009, the FASB issued FSP FAS 157-4, *Determining Fair Value When Volume and Level of Activity for the Asset or Liability Have Significantly Decreased and Identifying Transactions that are Not Orderly* (*FSP FAS 157-4*). The FSP provides additional guidance for estimating fair value in accordance with SFAS No. 157, *Fair Value Measurements*. Under FSP FAS 157-4, if an entity determines that there has been a significant decrease in the volume and level of activity for the asset or the liability in relation to the normal market activity for the asset or liability (or similar assets or liabilities), then transactions or quoted prices may not accurately reflect fair value. In addition, if there is evidence that the transaction for the asset or liability is not orderly, the entity shall place little, if any weight on that transaction price as an indicator of fair value. FSP FAS 157-4 is effective for periods ending after June 15, 2009, with early adoption permitted for periods ending after March 15, 2009. The Company did early adopt this FSP and it resulted in a portion of other-than-temporary impairment being recorded in other comprehensive income in the amount of \$1.5 million. See *Notes to Consolidated Financial Statements*, notes 2 and 9 for more information on the Company's investment securities and other-than-temporary impairment.

In September 2006, the FASB issued Statement No. 157, *Fair Value Measurements* (*SFAS 157*). SFAS 157 defines fair value, establishes a framework for measuring fair value and expands disclosures about fair value measurements. SFAS 157 establishes a fair value hierarchy about the assumptions used to measure fair value and

clarifies assumptions about risk and the effect of a restriction on the sale or use of an asset. SFAS 157 is effective for fiscal years beginning after November 15, 2007. In February 2008, the FASB issued Staff Position (FSP) 157-2, Effective Date of FASB Statement No. 157. This FSP delays the effective date of FAS 157 for all nonfinancial assets and nonfinancial liabilities, except those that are recognized or disclosed at fair value on a recurring basis (at least annually) to fiscal years beginning after November 15, 2008, and interim periods within those fiscal years.

On October 10, 2008, the FASB issued FSP FAS 157-3, *Determining the Fair Value of a Financial Asset When the Market for That Asset Is Not Active*. The FSP clarifies the application of FASB Statement No. 157, Fair Value Measurements, in a market that is not active and provides an example to illustrate key considerations in determining the fair value of a financial asset when the market for that financial asset is not active. The FSP is effective immediately, and includes prior period financial statements that have not yet been issued, and therefore the Company is subject to the provision of the FSP effective March 31, 2009. See *Notes to Consolidated Financial Statements*, notes 2 and 9 for further discussion of the impact of SFAS No. 157 and the additional guidance issued.

In April 2009, the FASB issued *FASB Staff Position FAS 107-1 and APB 28-1, Interim Disclosures about Fair Value of Financial Instruments* (*FSP FAS 107-1 and APB 28-1*). This FSP requires disclosures about fair value of financial instruments for interim reporting periods of publicly traded companies as well as in annual financial statements. This FSP, which becomes effective for interim reporting periods ending after June 15, 2009, allows early adoption for periods ending after March 15, 2009, only if a

Table of Contents

company also elects to early adopt FSP FAS 157-4 and FSP FAS 115-2 and FAS 124-2. The Company will adopt this FSP for the period ended June 30, 2009. Its adoption is not expected to impact the consolidated financial results of the Company, but will impact its disclosures in the *Notes to Consolidated Financial Statements*.

In December 2007, FASB issued SFAS No. 141 (revised), *Business Combinations* (SFAS No. 141(R)). SFAS No. 141(R) establishes principles and requirements for how an acquirer recognizes and measures in its financial statements the identifiable assets acquired, the liabilities assumed, any noncontrolling interest in the acquiree and the goodwill acquired. SFAS No. 141(R) also establishes disclosure requirements to enable the evaluation of the nature and financial effects of the business combination. This statement applies prospectively to business combinations for which the acquisition date is on or after January 1, 2009. The adoption of the SFAS No. 141(R) for reporting as of March 31, 2009, had no effect on the Company's financial statements.

In December 2007, the FASB issued SFAS No. 160, *Noncontrolling Interests in Consolidated Financial Statements, an amendment of ARB No. 51* (SFAS 160). SFAS 160 establishes accounting and reporting standards that require that the ownership interests in subsidiaries held by parties other than the parent be clearly identified, labeled, and presented in the consolidated statement of financial position within equity, but separate from the parent's equity; the amount of consolidated net income attributable to the parent and to the noncontrolling interest be clearly identified and presented on the face of the consolidated statement of income; and changes in a parent's ownership interest while the parent retains its controlling financial interest in its subsidiary be accounted for consistently. SFAS 160 also requires that any retained noncontrolling equity investment in the former subsidiary be initially measured at fair value when a subsidiary is deconsolidated. SFAS 160 also sets forth the disclosure requirements to identify and distinguish between the interests of the parent and the interests of the noncontrolling owners. SFAS 160 applies to all entities that prepare consolidated financial statements, except not-for-profit organizations, but will affect only those entities that have an outstanding noncontrolling interest in one or more subsidiaries or that deconsolidate a subsidiary. SFAS 160 is effective for fiscal years, and interim periods within those fiscal years, beginning on or after December 15, 2008. Earlier adoption is prohibited. SFAS 160 must be applied prospectively as of the beginning of the fiscal year in which SFAS 160 is initially applied, except for the presentation and disclosure requirements. The presentation and disclosure requirements are applied retrospectively for all periods presented. The Corporation does not have a noncontrolling interest in one or more subsidiaries. The adoption of the SFAS No. 160 for reporting as of March 31, 2009, did not have a material impact on the Company's consolidated financial statements.

In May 2008, The FASB issued SFAS No. 162, *The Hierarchy of Generally Accepted Accounting Principles* (SFAS No. 162). SFAS No. 162 is intended to improve financial reporting by identifying a consistent framework, or hierarchy, for selecting accounting principles to be used in preparing financial statements that are presented in conformity with U.S. generally accepted accounting principles (GAAP) for nongovernmental entities. Prior to the issuance of SFAS No. 162, GAAP hierarchy was defined in the American Institute of Certified Public Accountants (AICPA) Statement on Auditing Standards (SAS) No. 69, *The Meaning of Present Fairly in Conformity With Generally Accepted Accounting Principles*. SAS 69 has been criticized because it is directed to the auditor rather than the entity. SFAS No. 162 addresses these issues by establishing that the GAAP hierarchy should be directed to entities because it is the entity (not its auditor) that is responsible for selecting accounting principles for financial statements that are presented in conformity with GAAP. The initial application of SFAS No. 162 will not have an impact on the Company's financial statements.

In March 2008, the FASB issued SFAS No. 161, *Disclosures about Derivative Instruments and Hedging Activities* (SFAS 161). SFAS 161 requires specific disclosures regarding the location and amounts of derivative instruments in the Company's financial statements, how derivative instruments and related hedged items are accounted for, and how derivative instruments and related hedged items affect the Company's financial position, financial performance, and cash flows. SFAS 161 is effective for financial statements issued and for fiscal years

and interim periods after November 15, 2008. Early application was permitted. SFAS 161 impacts the Company's disclosure, but not its accounting treatment for derivative instruments and related hedged items. The Company adopted this guidance, effective first quarter 2009, and has complied with the additional disclosure requirements. See *Notes to Consolidated Financial Statements*, note 8 for additional information.

In June 2008, the FASB issued *FASB Staff Position Emerging Issues Task Force 03-6-01, Determining Whether Instruments Granted in Share-Based Payment Transactions Are Participating Securities* (FSP EITF 03-6-01). This FSP addresses whether instruments granted in share-based payment transactions are participating securities prior to vesting and, therefore, need to be included in the earnings allocation in computing earnings per share (EPS) under the two-class method described in paragraphs 60 and 61 of FASB Statement No. 128 (SFAS 128), *Earnings Per Share* . The guidance in this FSP applies to the calculation of EPS under SFAS 128 for share-based payment awards with rights to dividends or dividend equivalents. Unvested share-based payment awards that contain nonforfeitable rights to dividends or dividend equivalents (whether paid or unpaid) are participating securities and shall be included in the computation of EPS pursuant to the two-class method. This Statement is effective for fiscal years beginning on or after December 15, 2008 and interim periods within those years. All prior-period EPS data presented shall be adjusted retrospectively (including interim financial statements, summaries of earnings and selected financial data) to conform with the provision of this FSP. The Company adopted FSP EITF 03-6-01 on January 1, 2009. Adoption did not have a material effect on the Company's consolidated financial statements.

Table of Contents

In June 2008, the Emerging Issues Task Force (EITF) issued EITF 07-05, *Determining Whether an Instrument (or an Embedded Feature) Is Indexed to an Entity's Own Stock*, (EITF 07-05). EITF 07-05 supersedes prior guidance that defines the meaning of the phrase indexed to an entity's own stock and revises the criteria to be used to determine if an equity-linked instrument, including embedded features, can be classified within shareholder's equity. EITF 07-05 is effective for fiscal years beginning after December 15, 2008. The Company adopted EITF 07-05 effective with the first quarter of fiscal 2009 and adoption did not have a material effect on the Company's consolidated financial statements.

Item 2 Management's Discussion and Analysis of Financial Condition and Results of Operations

This report contains forward-looking statements. For a discussion about such statements, including the risks and uncertainties inherent therein, see Forward-Looking Statements. Management's Discussion and Analysis of Financial Condition and Results of Operations should be read in conjunction with the Consolidated Financial Statements and Notes presented elsewhere in this report and in Intermountain's Form 10-K for the year ended December 31, 2008.

General

Intermountain Community Bancorp (Intermountain or the Company) is a financial holding company registered under the Bank Holding Company Act of 1956, as amended. The Company was formed as Panhandle Bancorp in October 1997 under the laws of the State of Idaho in connection with a holding company reorganization of Panhandle State Bank (the Bank) that was approved by the shareholders on November 19, 1997 and became effective on January 27, 1998. In June 2000, Panhandle Bancorp changed its name to Intermountain Community Bancorp.

Panhandle State Bank, a wholly owned subsidiary of the Company, was first opened in 1981 to serve the local banking needs of Bonner County, Idaho. Panhandle State Bank is regulated by the Idaho Department of Finance, the State of Washington Department of Financial Institutions, the Oregon Division of Finance and Corporate Securities and by the Federal Deposit Insurance Corporation (FDIC), its primary federal regulator and the insurer of its deposits.

Since opening in 1981, the Bank has continued to grow by opening additional branch offices throughout Idaho. During 1999, the Bank opened its first branch under the name of Intermountain Community Bank, a division of Panhandle State Bank, in Payette, Idaho. Over the next several years, the Bank continued to open branches under both the Intermountain Community Bank and Panhandle State Bank names. In January 2003, the Bank acquired a branch office from Household Bank F.S.B. located in Ontario, Oregon, which is now operating under the Intermountain Community Bank name. In 2004, Intermountain acquired Snake River Bancorp, Inc. (Snake River) and its subsidiary bank, Magic Valley Bank, and the Bank now operates three branches under the Magic Valley Bank name in south central Idaho. In 2005 and 2006, the Company opened branches in Spokane Valley and downtown Spokane, Washington, respectively, and operates these branches under the name of Intermountain Community Bank of Washington. It also opened branches in Kellogg and Fruitland, Idaho.

In 2006, Intermountain opened a Trust & Wealth division, and purchased a small investment company, Premier Alliance, which now operates as Intermountain Community Investment Services (ICI). The acquisition and development of these services improves the Company's ability to provide a full-range of financial services to its targeted customers. In 2007, the Company relocated its Spokane Valley office to a larger facility housing retail, commercial, and mortgage banking functions and administrative staff. In the second quarter of 2008, the Bank completed the Sandpoint Center, its new corporate headquarters, and relocated the Sandpoint branch and administrative staff into the building.

Intermountain offers banking and financial services that fit the needs of the communities it serves. Lending activities include consumer, commercial, commercial real estate, commercial and residential construction, mortgage and agricultural loans. A full range of deposit services are available including checking, savings and money market accounts as well as various types of certificates of deposit. Trust and wealth management services, investment and insurance services, and business cash management solutions round out the company's financial offerings.

Intermountain seeks to differentiate itself by attracting, retaining and motivating highly experienced employees who are local market leaders, and supporting them with advanced technology, training and compensation systems. This approach allows the Bank to provide local marketing and decision-making to respond quickly to customer opportunities and build leadership in its communities. Simultaneously, the Bank has more recently focused on

standardizing and centralizing administrative and operational functions to improve efficiency and the ability of the branches to serve customers effectively.

Table of Contents

Current Economic Challenges and Future Outlook

Following a very difficult 2008, the first three months of 2009 continued to be one of the most challenging periods for financial institutions in recent history. National economic conditions worsened significantly, with unemployment increasing, housing continuing its steep decline, and consumer and business spending contracting sharply. The credit problems that began in housing spread to other areas, including consumer and commercial real estate lending, as both consumers and businesses struggled to make ends meet. Most economists now agree that we are in a severe global recession that will likely last for at least two more quarters, as the economy seeks to de-lever and rebalance itself. On a more positive note, equity and fixed income markets showed some signs of stability, low mortgage rates and discounted prices boosted housing slightly, and the financial markets calmed. For financial institutions, it appears that the wild instability experienced in the latter part of 2008 has subsided, but is being replaced by ongoing credit losses, as the economic effects ripple through various borrowing segments. While it is too early to fully measure the impact of the federal government's economic stimulus efforts, it appears that increased federal spending will be offset by lower state and local spending as tax revenues decline for these entities.

The relative strength exhibited by the economies of Idaho, eastern Washington and eastern Oregon last year is weakening as the recession drags on. The region's unemployment rates, although generally still lower than the national average, are increasing rapidly, with some areas now experiencing significantly higher rates. Business and consumer spending has slowed precipitously, and the governments of all three states are facing dramatic spending cuts in this budget cycle. While generally weaker across the board, area real estate conditions are varied, with some areas including Spokane and the Magic Valley, exhibiting some signs of stability, and other areas, including the Boise Metropolitan Statistical Area, continuing to decline significantly. Over the longer-term, the region's relative economic diversity, low cost and attractive quality of life may soften the worst effects of the recession and lead to a faster, stronger recovery than in other areas.

Company performance during 2009 continues to reflect the challenges facing the economy and financial industry. In particular, the Company experienced the following:

Slowing loan demand, particularly from higher quality borrowers, as businesses and consumers retrenched.

Continued tight margins as the effects of the dramatic drop in market interest rates, increasing levels of non accrual loans and the Company's shift of assets into more conservative, but lower-yielding securities depressed asset yields and decreased the value of the Company's large transaction funding base. However, lower deposit and borrowing costs did create slight margin improvement during the first quarter.

Higher non-performing loans and continuing levels of elevated credit losses, as general credit conditions worsened, and the decline in real estate values accelerated in the Company's markets.

Continuing pressure on fee income, as weaker economic activity depressed revenues from a broad range of fee categories, including trust and investment services, credit card related fees and deposit account fees.

Company management continues to respond to the market conditions by reducing balance sheet risk, improving expense control and engaging in extensive customer communication, marketing and education efforts. The company has been particularly successful in garnering deposit growth in a highly competitive deposit and interest rate environment.

We anticipate that both the national and regional economy will continue to be challenging in the near future. As such, we do not anticipate a rapid turnaround in industry or Company performance. However, we believe that long-term opportunities will arise for institutions that position themselves to take advantage of them, and we are taking such steps. In particular, we continue to hold and build strong regulatory capital, liquidity and loss reserve levels, are stepping up our deposit-gathering efforts, and are increasing our already strong leadership positions in the communities we serve. Through our new corporate-wide initiative, **Powered by Community**, we are engaging in extensive marketing, community development and educational efforts designed to foster economic growth in our communities and create business development opportunities for the Bank. We also continue to focus on improving our internal business processes, with the joint goal of enhancing our customers' experience and reducing costs. Initiatives

already implemented have improved our deposit volumes while simultaneously resulting in decreased compensation costs. A number of additional initiatives are scheduled for implementation through the balance of this year.

In this environment, the most significant perceived risks to the Company are additional credit portfolio deterioration, potential liquidity pressures and human resources risk. The ongoing recession and increasing unemployment rates will undoubtedly continue to have a negative impact on the credit portfolio during the coming year, leading to elevated customer default levels. Relative loss levels will also be high, as collateral values remain pressured. While the credit portfolio deteriorated further in the first quarter of 2009, it held up better than many of its regional or national peers. Management has responded to the credit pressures by realigning its credit risk management team and shifting additional resources to assist in this area. The Company's best talent is focused on managing our credit portfolio through this very challenging period.

Liquidity risk for the Company could arise from the inability of the Bank to meet its short-term obligations, particularly deposit withdrawals by customers, reductions in repurchase agreement balances by municipal customers, and restrictions on brokered certificates of deposit or other borrowing facilities. Company management has implemented a number of actions to reduce liquidity exposure,

Table of Contents

including: (1) enhancing its liquidity monitoring system; (2) maintaining a high level of Fed Funds Sold and readily marketable or pledgeable securities on its balance sheet; (3) enhancing its deposit-gathering efforts; (4) participating in the U.S. Treasury's Capital Purchase Program; and (5) expanding its access to other liquidity sources, including the Federal Home Loan Bank, the Federal Reserve, and additional CD brokers. These actions have strengthened the Company's current on- and off-balance sheet liquidity considerably and positioned it well to face the ongoing economic challenges.

Given the Company's internal moves to reduce staffing levels and compensation expense, the risk of losing critical human resources may be higher now, although the overall job market is less competitive. In addressing this risk, management focuses a great deal on developing a culture that promotes, retains and attracts high quality individuals. While muted in the short-term, our compensation and reward systems also contribute directly to maintaining and enhancing this culture, and we encourage strong participation among all employees in establishing and implementing the Bank's business plans.

Critical Accounting Policies

The accounting and reporting policies of Intermountain conform to Generally Accepted Accounting Principles (GAAP) and to general practices within the banking industry. The preparation of the financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the amounts reported in the financial statements and accompanying notes. Actual results could differ from those estimates. Intermountain's management has identified the accounting policies described below as those that, due to the judgments, estimates and assumptions inherent in those policies, are critical to an understanding of Intermountain's Consolidated Financial Statements and Management's Discussion and Analysis of Financial Condition and Results of Operations.

Income Recognition. Intermountain recognizes interest income by methods that conform to general accounting practices within the banking industry. In the event management believes collection of all or a portion of contractual interest on a loan has become doubtful, which generally occurs after the loan is 90 days past due, Intermountain discontinues the accrual of interest and reverses any previously accrued interest recognized in income deemed uncollectible. Interest received on nonperforming loans is included in income only if recovery of the principal is reasonably assured. A nonperforming loan is restored to accrual status when it is brought current or when brought to 90 days or less delinquent, has performed in accordance with contractual terms for a reasonable period of time, and the collectability of the total contractual principal and interest is no longer in doubt.

Allowance For Loan Losses. In general, determining the amount of the allowance for loan losses requires significant judgment and the use of estimates by management. This analysis is designed to determine an appropriate level and allocation of the allowance for losses among loan types and loan classifications by considering factors affecting loan losses, including: specific losses; levels and trends in impaired and nonperforming loans; historical bank and industry loan loss experience; current national and local economic conditions; volume, growth and composition of the portfolio; regulatory guidance; and other relevant factors. Management monitors the loan portfolio to evaluate the adequacy of the allowance. The allowance can increase or decrease based upon the results of management's analysis.

The amount of the allowance for the various loan types represents management's estimate of probable incurred losses inherent in the existing loan portfolio based upon historical bank and industry loan loss experience for each loan type. The allowance for loan losses related to impaired loans is based on the fair value of the collateral for collateral dependent loans, and on the present value of expected cash flows for non-collateral dependent loans. For collateral dependent loans, this evaluation requires management to make estimates of the value of the collateral and any associated holding and selling costs, and for non-collateral dependent loans, estimates on the timing and risk associated with the receipt of contractual cash flows.

Individual loan reviews are based upon specific quantitative and qualitative criteria, including the size of the loan, loan quality classifications, value of collateral, repayment ability of borrowers, and historical experience factors. The historical experience factors utilized are based upon past loss experience, trends in losses and delinquencies, the growth of loans in particular markets and industries, and known changes in economic conditions in the particular lending markets. Allowances for homogeneous loans (such as residential mortgage loans, personal loans, etc.) are collectively evaluated based upon historical bank and industry loan loss experience, trends in losses and

delinquencies, growth of loans in particular markets, and known changes in economic conditions in each particular lending market. The Allowance for Loan Losses analysis is presented to the Directors' Loan Committee for review.

Management believes the allowance for loan losses was adequate at March 31, 2009. While management uses available information to provide for loan losses, the ultimate collectability of a substantial portion of the loan portfolio and the need for future additions to the allowance will be based on changes in economic conditions and other relevant factors. A further slowdown in economic activity could adversely affect cash flows for both commercial and individual borrowers, as a result of which the Company could experience increases in nonperforming assets, delinquencies and losses on loans.

A reserve for unfunded commitments is maintained at a level that, in the opinion of management, is adequate to absorb probable losses associated with the Bank's commitment to lend funds under existing agreements such as letters or lines of credit. Management determines the adequacy of the reserve for unfunded commitments based upon reviews of individual credit facilities, current economic conditions, the risk characteristics of the various categories of commitments and other relevant factors. The reserve is based on estimates, and ultimate losses may vary from the current estimates. These estimates are evaluated on a regular basis and, as adjustments become

Table of Contents

necessary, they are recognized in earnings in the periods in which they become known through charges to other non-interest expense. Draws on unfunded commitments that are considered uncollectible at the time funds are advanced are charged to the reserve for unfunded commitments. Provisions for unfunded commitment losses, and recoveries on commitment advances previously charged-off, are added to the reserve for unfunded commitments, which is included in the accrued expenses and other liabilities section of the Consolidated Statements of Financial Condition.

Investments. Assets in the investment portfolio are initially recorded at cost, which includes any premiums and discounts. Intermountain amortizes premiums and discounts as an adjustment to interest income using the interest yield method over the life of the security. The cost of investment securities sold, and any resulting gain or loss, is based on the specific identification method.

Management determines the appropriate classification of investment securities at the time of purchase. Held-to-maturity securities are those securities that Intermountain has the intent and ability to hold to maturity, and are recorded at amortized cost. Available-for-sale securities are those securities that would be available to be sold in the future in response to liquidity needs, changes in market interest rates, and asset-liability management strategies, among others. Available-for-sale securities are reported at fair value, with unrealized holding gains and losses reported in stockholders' equity as a separate component of other comprehensive income, net of applicable deferred income taxes.

Management evaluates investment securities for other-than-temporary declines in fair value on a periodic basis. If the fair value of investment securities falls below their amortized cost and the decline is deemed to be other-than-temporary, the securities will be written down to current market value and the write down will be deducted from earnings. At March 31, 2009, residential mortgage-backed securities included a security comprised of a pool of mortgages with a remaining unpaid balance of \$4.2 million. Due to the lack of an orderly market for the security, its fair value was determined to be \$2.5 million at March 31, 2009 based on analytical modeling taking into consideration a range of factors normally found in an orderly market. Of the \$1.7 million unrealized loss on the security, based on an analysis of projected cash flows, \$244,000 was charged to earnings as a credit loss and \$1.5 million was recognized in other comprehensive income. Impairment losses on securities charged to earnings in the three months ended March 31, 2009 and 2008 were \$244,000 and \$0 respectively. See Notes to *Consolidated Financial Statements*, notes 2 and 9 for more information on the other-than-temporary impairment and the calculation of fair or carrying value for the investment securities. Charges to income could occur in future periods due to a change in management's intent to hold the investments to maturity, a change in management's assessment of credit risk, or a change in regulatory or accounting requirements.

Goodwill and Other Intangible Assets. Goodwill arising from business combinations represents the value attributable to unidentifiable intangible elements in the business acquired. Intermountain's goodwill relates to value inherent in the banking business and the value is dependent upon Intermountain's ability to provide quality, cost-effective services in a competitive market place. As such, goodwill value is supported ultimately by revenue that is driven by the volume of business transacted. A decline in earnings as a result of a lack of growth or the inability to deliver cost-effective services over sustained periods can lead to impairment of goodwill that could adversely impact earnings in future periods. Goodwill is not amortized, but is subjected to impairment analysis each December. In addition, generally accepted accounting principles require an impairment analysis to be conducted any time a triggering event occurs in relation to goodwill. Management believes that the significant market disruption in the financial sector and the declining market valuations experienced over the past year created a triggering event. As such, management conducted an interim evaluation of the carrying value of goodwill in March 2009. As a result of this analysis, no impairment was considered necessary as of March 31, 2009. Major assumptions used in determining impairment were increases in future income, sales multiples in determining terminal value and the discount rate applied to future cash flows. However, future events could cause management to conclude that Intermountain's goodwill is impaired, which would result in the recording of an impairment loss. Any resulting impairment loss could have a material adverse impact on Intermountain's financial condition and results of operations. Other intangible assets consisting of core-deposit intangibles with definite lives are amortized over the estimated life of the acquired depositor relationships.

Real Estate Owned. Property acquired through foreclosure of defaulted mortgage loans is carried at the lower of cost or fair value less estimated costs to sell. Development and improvement costs relating to the property are capitalized to the extent they are deemed to be recoverable.

Intermountain reviews its real estate owned for impairment in value whenever events or circumstances indicate that the carrying value of the property may not be recoverable. In performing the review, if expected future undiscounted cash flow from the use of the property or the fair value, less selling costs, from the disposition of the property is less than its carrying value, a loss is recognized. Because of rapid declines in real estate values in the current distressed environment, management has increased the frequency and intensity of its valuation analysis on its OREO properties. As a result of this analysis, carrying values on some of these properties have been reduced, and it is reasonably possible that the carrying values could be reduced again in the near term.

Fair Value Measurements. Effective January 1, 2008, Intermountain adopted SFAS 157, Fair Value Measurements. SFAS 157 establishes a standard framework for measuring fair value in GAAP, clarifies the definition of fair value within that framework, and expands disclosures about the use of fair value measurements. A number of valuation techniques are used to determine the fair value of assets and liabilities in Intermountain's financial statements. These include quoted market prices for securities, interest rate swap

Table of Contents

valuations based upon the modeling of termination values adjusted for credit spreads with counterparties and appraisals of real estate from independent licensed appraisers, among other valuation techniques. Fair value measurements for assets and liabilities where there exists limited or no observable market data are based primarily upon estimates, and are often calculated based on the economic and competitive environment, the characteristics of the asset or liability and other factors. Therefore, the results cannot be determined with precision and may not be realized in an actual sale or immediate settlement of the asset or liability. Additionally, there are inherent weaknesses in any calculation technique, and changes in the underlying assumptions used, including discount rates and estimates of future cash flows, could significantly affect the results of current or future values. Significant changes in the aggregate fair value of assets and liabilities required to be measured at fair value or for impairment will be recognized in the income statement under the framework established by GAAP. If impairment is determined, it could limit the ability of Intermountain's banking subsidiaries to pay dividends or make other payments to the Holding Company. See Note 9 to the *Consolidated Financial Statements* for more information on fair value measurements.

Derivative Financial Instruments and Hedging Activities. In various aspects of its business, the Company uses derivative financial instruments to modify its exposure to changes in interest rates and market prices for other financial instruments. Many of these derivative financial instruments are designated as hedges for financial accounting purposes. Intermountain's hedge accounting policy requires the assessment of hedge effectiveness, identification of similar hedged item groupings, and measurement of changes in the fair value of hedged items. If in the future the derivative financial instruments identified as hedges no longer qualify for hedge accounting treatment, changes in the fair value of these hedged items would be recognized in current period earnings, and the impact on the consolidated results of operations and reported earnings could be significant.

For more information on derivative financial instruments and hedge accounting, see Note 8 to the *Consolidated Financial Statements*.

**Intermountain Community Bancorp
Comparison of the Three month Periods Ended March 31, 2009 and 2008**

Results of Operations

Overview. Intermountain recorded a net loss to common shareholders of \$532,000, or \$0.06 per diluted share for the three months ended March 31, 2009, compared with a net loss of \$2.9 million or \$0.35 per diluted share for the fourth quarter of 2008 and net income of \$1.7 million or \$0.19 per diluted share, for the three months ended March 31, 2008. The decline in earnings over first quarter 2008 reflected a decrease in net interest income, increased credit losses and additions to the reserve for loan losses offset by an increase in other income and lower operating expenses.

The annualized return on average assets (ROA) was -0.04%, -1.07% and 0.64% for the three months ended March 31, 2009, December 31, 2008 and March 31, 2008, respectively. The annualized return on average common equity (ROE) was -2.5%, -13.4% and 7.3% for the three months ended March 31, 2009, December 31, 2008 and March 31, 2008, respectively.

The Company's 2009 first quarter results clearly reflect increasingly difficult economic and credit conditions, combined with the adverse impacts of the significant decrease in market interest rates over the past eighteen months. In response, management continues to focus on maintaining a strong balance sheet with high levels of liquidity, capital and loss reserves. Some of its actions, including the maintenance of excess funds in relatively low-yielding Fed Funds and investment securities, the acquisition of additional capital as part of the U.S. Treasury's Capital Purchase Program, and the funding of higher loan loss reserves will hurt earnings to common shareholders in the short-term, but provide a foundation from which to grow when economic conditions improve. In addition, the Company's strong focus on low-cost deposit growth will enhance future opportunities when rates increase and higher levels of borrowing demand return.

Net Interest Income. The most significant component of earnings for the Company is net interest income, which is the difference between interest income from the Company's loan and investment portfolios, and interest expense from deposits, repurchase agreements and other borrowings. During the three months ended March 31, 2009, December 31, 2008 and March 31, 2008, net interest income was \$9.9 million, \$9.4 million, and \$11.3 million, respectively. Reduced borrowing costs and stabilizing asset yields produced the improvement from the fourth quarter of 2008, but the overall margin remains lower than the first quarter of last year.

Average interest-earning assets increased by 6.5% to \$996.0 million for the three months ended March 31, 2009, compared to \$935.3 million for the three months ended March 31, 2008. The growth was driven by increases in average investments and cash of \$72.1 million or 42.4% over the three month period in 2008. Average loans decreased 1.5% or \$11.4 million during this same time period. Average interest-earning assets increased by \$18.3 million or 1.9% for the three months ended March 31, 2009, compared to the three months ended December 31, 2008. Average loans decreased by \$19.4 million or 2.5%, while investments and cash increased by \$37.8 million or 18.5% for the same period comparison. Loan volumes continued to reflect paydowns of existing loan balances, and a downturn in loan originations caused by the slowing economy, lower demand and tighter underwriting standards. The increase in investments and cash resulted from the Company's decision to place additional funding in short-term investments and cash equivalents to create additional short-term liquidity.

Average interest-bearing liabilities increased by 5.1% or \$47.1 million, including \$57.0 million (7.7%) growth in average deposits and \$9.9 million (5.3%) decrease in other borrowings for the three month period ending March 2009 compared to March 2008. For the quarter

Table of Contents

ending March 31, 2009, average interest-bearing liabilities increased \$491,000 compared to the three months ending December 31, 2008, as increases in average deposits again offset decreases in average borrowings. Increases in average deposits compared to both prior periods reflected both core deposit growth in the bank's markets and the addition of brokered certificates of deposit to create additional short-term liquidity. Average Federal Home Loan Bank advances increased by \$17.0 million, or 58.6%, for the three months ending March 31, 2009, compared to the three months ending March 31, 2008. The increase in average Federal Home Loan Bank advances offset decreases in repurchase agreements. Average other borrowings decreased by \$26.9 million, or 17.0%, for the three months ending March 31, 2009 compared to the same period last year, as municipalities invested fewer dollars in repurchase agreements. Average Federal Home Loan Bank advances decreased by \$6.9 million (13.0%) for the quarter ending March 31, 2009 and average other borrowings decreased by \$2.1 million, or 1.6%, compared to the fourth quarter of 2008. The decrease in average Federal Home Loan Bank advances and average other borrowings was funded by increases in deposits. The Company's reliance on non-core funding sources remains low compared to national and regional peer-group averages. The net growth in the Company's average interest-earning assets contributed approximately \$0.7 million to the net interest income of the Bank for the three months ended March 31, 2009 versus the same period last year.

The positive impacts of increases in earning assets over the past year were more than offset by declines in the net interest margin. Net interest spread during the three months ended March 31, 2009, December 31, 2008, and March 31, 2008 was 4.03%, 3.82%, and 4.87%, respectively. As market rates dropped over the last 18 months, changes in the Company's funding rates lagged changes in yields on loans and investments, resulting in lower margins than the first quarter of 2008. However, as asset yields stabilized in the first quarter of 2009, deposit and borrowing rates continued to decline, producing the 21 basis points improvement from the prior quarter.

Given the current low level of market interest rates, the Company believes that the net interest margin will generally stabilize or increase as rates on interest earning assets bottom out and rates on borrowings and deposits remain the same or decrease. As such, management is focusing on building a balance sheet and core customer base to sustain current margin as much as possible, and prepare for resumption of more normal economic and rate conditions in the future.

Provision for Losses on Loans. Management's policy is to establish valuation allowances for estimated losses by charging corresponding provisions against income. This evaluation is based upon management's assessment of various factors including, but not limited to, current and anticipated future economic trends, historical loan losses, delinquencies, underlying collateral values, as well as current and potential risks identified in the portfolio.

The provision for losses on loans decreased to \$2.8 million for the three months ended March 31, 2009, compared to a provision of \$5.5 million for the three months ended December 31, 2008, and an increase from \$258,000 for the three months ended March 31, 2008. Net charge offs for the three months ended March 31, 2009 totaled \$1.8 million compared to \$2.1 million for the three months ended December 31, 2008, and \$77,000 for the three months ended March 31, 2008. Annualized net charge-offs to average net loans decreased to 0.96% for the three months ended March 31, 2009 compared to 1.11% for the three months ended December 31, 2008 and increased from 0.04% for the three months ended March 31, 2008. The elevated chargeoff and provision levels in the first quarter reflect both continuing challenges in the Company's residential real estate construction and land development loan portfolio, and increasing defaults in its other portfolios. The Company continued to write-down balances on a number of troubled real estate loans to reflect rapidly declining real estate valuations, and liquidated several loans. Weak economic conditions in the broader economy also led to increasing losses in the Company's commercial and consumer portfolios. Losses will likely remain at elevated levels until the economy begins rebounding and collateral valuations stabilize.

The loan loss allowance to total loans ratio increased to 2.35% at March 31, 2009, compared to 2.14% at December 31, 2008 and 1.57% at March 31, 2008, respectively. Management believes this level of loan loss allowance is adequate for the balance and the mix of the loan portfolio at this time, but projects that the allowance may increase further if credit conditions continue worsening.

The following table summarizes loan loss allowance activity for the periods indicated.

	Three months ended March 31,	
	2009	2008
	(Dollars in thousands)	
Balance at January 1	\$ 16,433	\$ 11,761
Provision for losses on loans	2,770	258
Amounts written off, net of recoveries	(1,764)	(77)
Allowance on loans, March 31	17,439	11,942
Allowance on unfunded commitments, January 1	14	18
Adjustment	353	(3)
Allowance on unfunded commitments, March 31	367	15
Total credit allowance including unfunded commitments	\$ 17,806	\$ 11,957

Table of Contents

At March 31, 2009, Intermountain's total classified loans were \$64.1 million, compared with \$61.2 million at December 31, 2008 and \$31.5 million at March 31, 2008. Classified loans are loans for which management believes it may experience some problems in obtaining repayment under the contractual terms of the loan. However, categorizing a loan as classified does not necessarily mean that the company will experience any or significant loss of expected principal or interest. Non-performing assets increased to \$38.4 million at March 31, 2009, compared to \$31.8 million at December 31, 2008, and \$9.2 million at March 31, 2008. Non-performing loans totaled \$29.3 million at March 31, 2009 versus \$27.3 million and \$7.1 million at December 31, 2008 and March 31, 2008, respectively. Other real estate owned (OREO) totaled \$9.1 million at March 31, 2009 versus \$4.5 million and \$2.1 million at December 31, 2008 and March 31, 2008, respectively.

Non-performing assets comprised 3.5% of total assets at March 31, 2009, and 2.9% and 0.9% at December 31, 2008 and March 31, 2008, respectively. Non-performing assets to tangible equity plus the loan loss allowance (the Texas Ratio) equaled 33.44% at March 31, 2009 versus 27.75% at December 31, 2008 and 10.01% at March 31, 2008. While higher, these totals compare favorably to many peer banks and are below the ratios historically experienced by troubled banks. The 30-day and over loan delinquency rates were 1.91% at March 31, 2009, versus 0.90% at December 31, 2008, and 1.13% at March 31, 2008.

The \$2.2 million increase in non-accrual loans from the fourth quarter of 2008 consists primarily of residential land, subdivision and construction loans where repayment is primarily reliant on selling the asset. The Company has evaluated the borrowers and the collateral underlying these loans and determined the probability of recovery of the loans' principal balance. Given the volatility in the current housing market, the Company continues to monitor these assets closely and revalue the collateral on a frequent and periodic basis. This re-evaluation may create the need for additional write-downs or additional loss reserves on these assets.

Information with respect to non-performing loans, classified assets, troubled debt restructures and non-performing assets is as follows (dollars in thousands):

	Loan Quality	
	March 31, 2009	Dec 31, 2008
	(dollars in thousands)	
Loans past due in excess of 90 days and still accruing	\$ 709	\$ 913
Non-accrual loans	28,606	26,365
Total non-performing loans	29,315	27,278
OREO	9,052	4,541
Total non-performing assets (NPA)	\$ 38,367	\$ 31,819
Classified loans	\$ 64,123	\$ 61,172
Troubled debt restructured loans (1)	\$ 23,445	\$ 13,424
(1) Loans restructured and in compliance with modified terms; excludes non-accrual loans		
Non-accrual loans as a percentage of net loans receivable	3.96%	3.50%
Total non-performing loans as a % of net loans receivable	4.05%	3.62%

Edgar Filing: INTERMOUNTAIN COMMUNITY BANCORP - Form 10-Q

Total NPA as a % of loans receivable	5.31%	4.23%
Allowance for loan losses (ALLL) as a % of non-performing loans	59.5%	60.2%
Total NPA as a % of total assets	3.52%	2.88%
Total NPA as a % of tangible capital + ALLL (Texas Ratio)	33.48%	27.75%

Residential land and construction assets continue to comprise most of the non-performing loan and other real estate owned totals, reflecting the ongoing severe weakness in the housing market. General economic pressures are also starting to impact the Company's other loan portfolios. As a result, elevated levels of non-performing assets are likely to continue for the next several quarters. While the Company's credit quality has softened, the Company has shifted executive management focus and added skilled collection resources to manage the portfolio, with a continued focus on identifying and resolving problem loans as quickly as possible. As troubled loans arise, management is analyzing current and projected conditions and evaluating carefully whether to liquidate immediately or work with borrowers to avoid liquidation. Given the worsening economic forecast, some level of heightened loss activity is likely to continue, but based on its internal analysis, including stress testing of its portfolio under differing economic scenarios, management continues to believe that its current level of loan loss reserves and capital can withstand credit losses well in excess of those reasonably anticipated or experienced in prior economic downturns.

Table of Contents

Other Income. Total other income was \$3.5 million, \$2.9 million, and \$2.8 million for the three months ended March 31, 2009, December 31, 2008, and March 31, 2008, respectively. Other income results in 2009 were enhanced by a gain on the sale of \$26.0 million in investment securities in March 2009 resulting in a \$1.3 million pre-tax gain for the quarter. Fees and service charges decreased \$167,000 from the fourth quarter, largely driven by decreases in investment and deposit account fees caused by the economic slowdown. Loan related fee income decreased by \$171,000 from the fourth quarter due to lower SBA loan sale income and reduced commercial and commercial real estate loan activity. Mortgage banking activity and income increased for the same period comparison. Secured credit card contract income also dropped in 2009 as credit-wary borrowers reduced credit card application volume significantly.

During the first quarter of 2009, the Company recorded an other-than-temporary impairment (OTTI) of \$1,751,000 on one non-agency guaranteed mortgage-backed security. Of the total \$1,751,000 OTTI, \$244,000 was related to credit losses, and under newly issued accounting guidance, is a charge against earnings. The remaining \$1,507,000 reflects non-credit value impairment and was charged against the Company's other comprehensive income and reported capital on the balance sheet. At this time, the Company anticipates holding the security until its value is recovered or until maturity, and will continue to adjust its other comprehensive income and capital position to reflect the security's current market value. The Company calculated the credit loss charge against earnings by subtracting the estimated present value of future cash flows on the security from its amortized cost. See Notes 2 and 9 of the *Consolidated Financial Statements* for additional information.

Operating Expenses. Operating expenses were \$10.8 million for the three months ended March 31, 2009, compared to \$12.1 million for the three months ended December 31, 2008 and \$11.3 million for the three months ended March 31, 2008. Operating expenses decreased 10.7% from December 31, 2008 to March 31, 2009 and 4.3% from the first quarter of 2008.

The Company's efficiency ratio was 80.3% for the three months ended March 31, 2009, compared to 98.1% for the fourth quarter and 79.8% for the first quarter of 2008. The Company has been executing strategies to reduce controllable expenses to improve efficiency. However, flat asset growth, decreases in the net interest margin and loan-related fee income, and increased credit-related expenses and FDIC premiums have hampered efficiency gains. Company management will continue to refine business processes and control staffing and other costs, but is not pursuing across-the-board staffing cuts at this time because of the potential negative impacts on company culture, community perception and long-term results.

Salaries and employee benefits were \$5.7 million for the three months ended March 31, 2009, a 10.6% decrease over the three months ended December 31, 2008. Employee compensation and benefits expense decreased \$1.2 million or 17.9%, over the same three-month period last year as a result of decreased staffing levels and lower incentive expense. Efforts to control compensation expense continue in 2009, as the Company has suspended salary increases for executives and officers, maintained a hiring freeze, eliminated executive bonus plans and adjusted other compensation plans. At March 31, 2009, full-time-equivalent employees totaled 410, compared with 442 at March 31, 2008.

Occupancy expenses were \$2.0 million for the three months ended March 31, 2009, a 3.6% increase compared to the fourth quarter of 2008 and a 19.1% increase compared to the first quarter of 2008. These increases were comprised of additional building expense from the Sandpoint Center which was opened in the second quarter of 2008 and additional computer hardware and software purchased to enhance security, compliance and business continuity. The Company expects these expenses to stabilize throughout 2009, as it has postponed building expansion plans, limited new hardware and software purchases, and begun to lease out excess space in its Company headquarters building.

Other non-interest expenses were \$3.1 million for the three months ended March 31, 2009, an 18.2% decrease over the fourth quarter and a 16.4% increase compared to the first quarter of 2008. The decrease from the fourth quarter is primarily due to reduced charges on the Company's OREO portfolio. The increase in other expenses over last year is largely a result of significant increases in loan collection expenses, an additional \$354,000 charge to increase the Company's reserve for unfunded borrowing commitments and increased FDIC insurance assessments.

Increases in FDIC insurance premiums and near-term loan collection expenses will likely continue to negatively impact the Company's expenses. However, the impacts of the business process improvement efforts are taking hold in

other areas, including salary, benefits, printing, supply and travel expenses. Management anticipates that as it completes the action plans developed under these initiatives over the next several months and resumes increased asset growth levels, its efficiency and expense ratios will improve in future periods.

Income Tax Provision. Intermountain recorded federal and state income tax benefits of \$9,000 and \$2.4 million in the first quarter of 2009 and the fourth quarter of 2008, respectively, as a result of negative estimated taxable income. The income tax provision for first quarter of 2008 was \$933,000 reflecting positive taxable income in that quarter. The effective tax rates used to calculate the benefit/provision were 7.1%, 45.1% and 36.1% for the three months ended March 31, 2009, December 31, 2008 and March 31, 2008, respectively. The decline in the effective tax rates over last year reflects lower pre-tax income, a higher level of investment tax credits, and additional tax benefits realized from changes in federal tax policy.

Table of Contents**Financial Position**

Assets. At March 31, 2009, Intermountain's assets were \$1.09 billion, down \$14.4 million from \$1.15 billion at December 31, 2008. During this period, increases in investments available-for-sale were offset by decreases in cash and cash equivalents and loans receivable. The decline in assets, and particularly loans, during the first quarter of 2009, reflecting both seasonal factors and the underlying weakness in the economy.

Investments. Intermountain's investment portfolio at March 31, 2009 was \$215.9 million, an increase of \$48.3 million from the December 31, 2008 balance of \$167.5 million. The increase was primarily due to the net purchase of agency-guaranteed mortgage backed securities. Funds for this increase were provided by a decrease in federal funds balances as the Company moved lower yielding federal funds balances to higher yielding short-term available-for-sale investments. During the three months ended March 31, 2009, the Company sold \$26.0 million in investment securities resulting in a \$1.3 million pre-tax gain, while simultaneously positioning the portfolio to perform better in unchanged or rising rate environments. As of March 31, 2009, the balance of the unrealized loss on investment securities, net of federal income taxes, was \$4.9 million, compared to an unrealized loss at December 31, 2008 of \$4.9 million. Illiquid markets for some of the Company's securities, and increasing long-term interest rates produced the unrealized loss for both periods.

During the first quarter of 2009, the Company recorded an other-than-temporary impairment (OTTI) of \$1,751,000 on one non-agency guaranteed mortgage-backed security. Of the total \$1,751,000 OTTI, \$244,000 was related to credit losses, and under newly issued accounting guidance, was charged against earnings. The remaining \$1,507,000 reflects non-credit value impairment and was charged against the Company's other comprehensive income and reported capital on the balance sheet. At this time, the Company anticipates holding the security until its value is recovered or until maturity, and will continue to adjust its other comprehensive income and capital position to reflect the security's current market value. The Company calculated the credit loss charge against earnings by subtracting the estimated present value of future cash flows on the security from its amortized cost. See Notes 2 and 9 of the *Consolidated Financial Statements* for additional information.

Loans Receivable. At March 31, 2009 net loans receivable totaled \$723.2 million, down \$29.5 million or 3.9% from \$752.6 million at December 31, 2008. During the three months ended March 31, 2009, total loan originations were \$93.5 million compared to \$82.0 million in the fourth quarter and \$139.4 million for the prior year's comparable period. The decline in originations from the prior year reflects slowing economic conditions, decreased borrowing demand and tighter underwriting standards. As reflected in the comparison to fourth quarter, the Company's loan production efforts intensified in the first quarter. As part of its **Powered By Community** initiative, the Company is implementing several new residential and commercial lending programs to ensure the credit needs of its communities are met.

The following table sets forth the composition of Intermountain's loan portfolio at the dates indicated. Loan balances exclude deferred loan origination costs and fees and allowances for loan losses.

	March 31, 2009		December 31, 2008	
	Amount	%	Amount	%
	(Dollars in thousands)			
Commercial	\$ 220,130	29.72	\$ 227,521	29.58
Commercial real estate	394,806	53.30	409,461	53.23
Residential real estate	98,234	13.26	103,937	13.51
Consumer	22,350	3.02	23,245	3.02
Municipal	5,153	0.70	5,109	0.66
Total loans receivable	740,673	100.00	769,273	100.00

Table of Contents

The following table sets forth Intermountain's loan originations for the periods indicated.

	Three months ended March 31,		
	2009	2008	% Change
	(Dollars in thousands)		
Commercial	\$ 46,975	\$ 57,899	(18.9)
Commercial real estate	15,323	59,759	(74.4)
Residential real estate	28,287	18,373	54.0
Consumer	2,456	3,104	(20.9)
Municipal	478	314	52.2
Total loans originated	\$ 93,519	\$ 139,449	(32.9)

First quarter origination results reflect declining demand in all categories except residential real estate and municipal loans. Spurred by record low rates, residential real estate activity increased significantly and is projected to remain strong in the second quarter. Despite the Company's efforts to spur loan activity, tough economic conditions are likely to depress borrowing demand in the other segments for the next few quarters, until consumers and businesses feel more positive about future economic conditions.

Total commercial real estate loans, including construction, and land acquisition and development loans comprised 311.6% of estimated Tier 1 capital at March 31, 2009, as compared to 320.5% at December 31, 2008 and 392.3% at March 31, 2008. Construction, acquisition and development loans comprised 187.8% of estimated Tier 1 capital versus 197.3% at December 31, 2008 and 281.3% at March 31, 2008, respectively. For these loan ratios, commercial real estate balances are calculated using guidelines issued as part of more general guidance on real estate concentrations by the federal banking regulators in 2007. As reflected in the figures above, the Company is working to reduce its concentration of construction, acquisition and development loans, with further decreases expected in upcoming periods as existing loans continue to roll off. The Company's commercial real estate and construction, acquisition and development portfolios are dispersed throughout its market area, with heavier concentrations in north Idaho, Canyon County and the Magic Valley. The Company has relatively limited exposure to the Boise market.

Office Properties and Equipment. Office properties and equipment decreased 1.5% to \$43.6 million from \$44.3 million at December 31, 2008 due primarily to depreciation recorded for the three months ended March 31, 2009. Reflecting current economic conditions, the Company has postponed building expansion plans and limited hardware, software and equipment purchases.

Other Real Estate Owned. Other real estate owned increased to \$9.1 million at March 31, 2009 from \$4.5 million at December 31, 2008. The increase was primarily due to increases in home, land and lot foreclosures resulting from current economic conditions.

BOLI and All Other Assets. Bank-owned life insurance (BOLI) and other assets increased to \$40.9 million at March 31, 2009 from \$40.2 million at December 31, 2008. The increase was primarily due to increases in the net deferred tax asset. Intangible assets decreased slightly as a result of continuing amortization of the core deposit intangible. As discussed above in the Critical Accounting Policies section, the Company again evaluated its goodwill asset in the first quarter and determined that no impairment existed at March 31, 2009.

Deposits. Total deposits increased \$20.9 million to \$811.3 million at March 31, 2009 from \$790.4 million at December 31, 2008. The Company's deposit volumes increased during the three month period, despite slowing economic conditions and competitive market conditions. The Company continues to focus on core deposit growth as a critical priority in building for the future. Management has shifted resources and implemented compensation plans, promotional strategies and new products to spur local deposit growth.

The following table sets forth the composition of Intermountain's deposits at the dates indicated.

Edgar Filing: INTERMOUNTAIN COMMUNITY BANCORP - Form 10-Q

	March 31, 2009		December 31, 2008	
	Amount	%	Amount	%
	(Dollars in thousands)

Table of Contents

Borrowings. Deposit accounts are Intermountain's primary source of funds. Intermountain also relies upon advances from the Federal Home Loan Bank of Seattle, repurchase agreements and other borrowings to supplement its funding and to meet deposit withdrawal requirements. These borrowings totaled \$163.1 million and \$195.6 million at March 31, 2009 and December 31, 2008, respectively. The decrease resulted from reductions in repurchase agreements. See *Liquidity and Sources of Funds* for additional information.

Interest Rate Risk

The results of operations for financial institutions may be materially and adversely affected by changes in prevailing economic conditions, including rapid changes in interest rates, declines in real estate market values and the monetary and fiscal policies of the federal government. Like all financial institutions, Intermountain's net interest income and its NPV (the net present value of financial assets, liabilities and off-balance sheet contracts), are subject to fluctuations in interest rates. Intermountain utilizes various tools to assess and manage interest rate risk, including an internal income simulation model that seeks to estimate the impact of various rate changes on the net interest income and net income of the bank. This model is validated by comparing results against various third-party estimations. Currently, the model and third-party estimates indicate that Intermountain is slightly asset-sensitive. An asset-sensitive bank generally sees improved net interest income and net income in a rising rate environment, as its assets reprice more rapidly and/or to a greater degree than its liabilities. The opposite is true in a falling interest rate environment. When market rates fall, an asset-sensitive bank tends to see declining income. Net interest income results for the past year reflect this, as short-term market rates fell over the past 21 months, resulting in significantly lower net interest income and net income levels, particularly in relation to the level of interest-earning assets.

To minimize the long-term impact of fluctuating interest rates on net interest income, Intermountain promotes a loan pricing policy of utilizing variable interest rate structures that associates loan rates to Intermountain's internal cost of funds and to the nationally recognized prime lending rate. While this strategy has had adverse impacts in the current unusual rate environment, the approach historically has contributed to a relatively consistent interest rate spread over the long-term and reduces pressure from borrowers to renegotiate loan terms during periods of falling interest rates. Intermountain currently maintains over fifty percent of its loan portfolio in variable interest rate assets.

Additionally, the extent to which borrowers prepay loans is affected by prevailing interest rates. When interest rates increase, borrowers are less likely to prepay loans. When interest rates decrease, borrowers are generally more likely to prepay loans. However, in the current tight credit markets, prepayment speeds are relatively slow even given the significant drop in market interest rates. Prepayments may affect the levels of loans retained in an institution's portfolio, as well as its net interest income. Intermountain maintains an asset and liability management program intended to manage net interest income through interest rate cycles and to protect its income by controlling its exposure to changing interest rates.

On the liability side, Intermountain seeks to manage its interest rate risk exposure by maintaining a relatively high percentage of non-interest bearing demand deposits, interest-bearing demand deposits, savings and money market accounts. These instruments tend to lag changes in market rates and may afford the bank more protection in increasing interest rate environments, but can also be changed relatively quickly in a declining rate environment. The Bank utilizes various deposit pricing strategies and other borrowing sources to manage its rate risk.

As discussed above, Intermountain uses a simulation model designed to measure the sensitivity of net interest income and net income to changes in interest rates. This simulation model is designed to enable Intermountain to generate a forecast of net interest income and net income given various interest rate forecasts and alternative strategies. The model is also designed to measure the anticipated impact that prepayment risk, basis risk, customer maturity preferences, volumes of new business and changes in the relationship between long-term and short-term interest rates have on the performance of Intermountain. Because of highly unusual current market rate conditions, the results of modeling indicate potential increases in net interest income in both a 100 and 300 basis point upward adjustment in interest rates that are higher than the guidelines established by management. In addition, potential increases in net income in a 100 and 300 basis point upward adjustment in interest rates and a 100 basis point downward adjustment in interest rates are higher than guidelines. Because the results indicate improvements in net interest income and net income in these scenarios, and management believes there is a greater likelihood of flat or higher market rates in the future than lower rates, it believes that its current interest rate risk is moderate. The scenario

analysis for net income has been impacted by the lower current year earnings of the Company, which increases the impact of both downward and upward adjustments.

Intermountain is continuing to pursue strategies to manage the level of its interest rate risk while increasing its long-term net interest income and net income; 1) through the origination and retention of variable and fixed-rate consumer, business banking, construction and commercial real estate loans, which generally have higher yields than residential permanent loans; and 2) by increasing the level of its core deposits, which are generally a lower-cost, less rate-sensitive funding source than wholesale borrowings. There can be no assurance that Intermountain will be successful implementing any of these strategies or that, if these strategies are implemented, they will have the intended effect of reducing interest rate risk or increasing net interest income.

Table of Contents

Intermountain also uses gap analysis, a traditional analytical tool designed to measure the difference between the amount of interest-earning assets and the amount of interest-bearing liabilities expected to reprice in a given period. Intermountain calculated its one-year cumulative repricing gap position to be negative 28% at March 31, 2009 and negative 23% at December 31, 2008, respectively. Management attempts to maintain Intermountain's gap position between positive 20% and negative 35%. At March 31, 2009 Intermountain's gap position was within the recommended guidelines.

Liquidity and Sources of Funds

As a financial institution, Intermountain's primary sources of funds from assets include the collection of loan principal and interest payments, cash flows from various investment securities, and sales of loans, investments or other assets. Liability financing sources consist primarily of customer deposits, repurchase obligations with local customers, advances from FHLB Seattle and correspondent bank borrowings.

Deposits increased to \$811.3 million at March 31, 2009 from \$790.4 million at December 31, 2008, primarily due to increases in certificates of deposit, NOW, and IRA accounts. This increase, along with decreases in loan balances, offset a reduction in repurchase agreement balances outstanding. At March 31, 2009 and December 31, 2008, securities sold subject to repurchase agreements were \$76.5 million and \$109.0 million, respectively. The drop reflected seasonal reductions in municipal customer balances, along with movement of funds by customers to higher-yielding sources, both inside and outside the Bank. These borrowings are required to be collateralized by investments with a market value exceeding the face value of the borrowings. Under certain circumstances, Intermountain could be required to pledge additional securities or reduce the borrowings.

During the three months ended March 31, 2009, cash used in investing activities consisted primarily of the funding of increases in available-for-sale investment securities, largely by a reduction in Fed Funds Sold. During the same period, cash used in financing activities consisted primarily of decreases in repurchase agreements. These reductions were offset by increases in certificates of deposit.

Intermountain's credit line with FHLB Seattle provides for borrowings up to a percentage of its total assets subject to general collateralization requirements. At March 31, 2009, the Company's FHLB Seattle credit line represented a total borrowing capacity of approximately \$115.0 million, of which \$46.0 million was being utilized. Additional collateralized funding availability at the Federal Reserve totaled \$23.5 million. Both of these collateral secured lines could be expanded more with the placement of additional collateral. Overnight-unsecured borrowing lines have been established at US Bank, Wells Fargo, and Pacific Coast Bankers Bank (PCBB). At December 31, 2008, the Company had approximately \$50.0 million of overnight funding available from its unsecured correspondent banking sources. In addition, \$2.0 to \$5.0 million in funding is available on a semiannual basis from the State of Idaho in the form of negotiated certificates of deposit. Correspondent banks and other financial entities provided total additional borrowing capacity of \$146.5 million at March 31, 2009. As of March 31, 2009 there were no unsecured funds borrowed.

In March 2007, the Company entered into an additional borrowing agreement with Pacific Coast Bankers Bank (PCBB) in the amount of \$18.0 million and in December 2007 increased the amount to \$25.0 million. The borrowing agreement was a non-revolving line of credit with a variable rate of interest tied to LIBOR and is collateralized by Bank stock and the Sandpoint Center. This line was used primarily to fund the construction costs of the Company's new headquarters building in Sandpoint. The balance at March 31, 2009 was \$23.1 million. The borrowing had a maturity of January 2009 and was extended for 90 days with a fixed rate of 7.0%. In May 2009, the company negotiated new loan facilities with Pacific Coast Bankers Bank to refinance the existing holding company credit line used to construct the Sandpoint Center into three longer-term, amortizing loans. The loans are as follows: \$9.0 million with a fixed rate of 7% secured by the Sandpoint Center and Panhandle State Bank stock, \$11.0 million with a variable rate of 2.35% over the rate on the \$11.0 million 12-month certificate of deposit used to secure this loan (the rate for the first year is 4.35%), and \$3.0 million with a rate of 10% secured by the Sandpoint Center and Panhandle State Bank stock. The amortization on all three loans is 25 years and the maturity is May 2012. The Company anticipates repaying these loans before maturity through the sale of the building. The \$11.0 million purchase of the certificate of deposit was funded by a dividend from the Bank to the holding company, and upon pay off of the loan secured by this account, the funds will be available again for bank or holding company purposes. Restrictive loan covenants that apply to all three loans include maintaining minimum levels of total risk-based capital, restrictions on

incurring additional debt over \$2.0 million at the holding company level without Pacific Coast Bankers Bank's consent, and requirements to provide financial and loan portfolio information on a periodic basis. In addition, there are debt service and asset quality requirements that only apply to the \$3.0 million credit facility.

Intermountain maintains an active liquidity monitoring and management plan, and has worked aggressively over the past year to expand its sources of alternative liquidity. Given extremely volatile conditions in the latter part of 2008, the Company took additional protective measures to enhance liquidity, including intensive customer education and communication efforts, movement of funds into highly liquid assets and increased emphasis on deposit-gathering efforts. Because of its relatively low reliance on non-core funding sources and the additional efforts undertaken to improve liquidity discussed above, management believes that the Company's current liquidity risk is moderate and manageable.

Table of Contents

Management continues to monitor its liquidity position carefully, and has established contingency plans for potential liquidity shortfalls. Longer term, the Company's focus continues to be to fund asset growth primarily with core deposit growth, and it has initiated a number of organizational changes and programs to spur this growth.

Capital Resources

Intermountain's total stockholders' equity was \$109.4 million at March 31, 2009, compared with \$110.5 million at December 31, 2008. The decrease in total stockholders' equity was primarily due to an increase in the unrealized loss on the investment portfolio, the small net loss for the quarter ended March 31, 2009 and preferred stock dividends. Stockholders' equity was 10.0% of total assets at March 31, 2009 and 10.0% at December 31, 2008. Tangible common equity as a percentage of tangible assets was 9.0% for both March 31, 2009 and December 31, 2008.

At March 31, 2009, Intermountain had an unrealized losses of \$4.9 million, net of related income taxes, on investments classified as available-for-sale and \$881,000 unrealized loss on cash flow hedges, as compared to unrealized losses of \$5.9 million, net of related income taxes, on investments classified as available-for-sale and \$985,000 unrealized losses on cash flow hedges at December 31, 2008. The sale of \$26.0 million in investment securities at a pre-tax recognized gain of \$1.3 million, illiquid markets for some of the Company's securities, and increasing long-term market rates decreased the market value of the securities, resulting in an unrealized loss at March 31, 2009. Fluctuations in prevailing interest rates and turmoil in global debt markets continue to cause volatility in this component of accumulated comprehensive loss in stockholders' equity and may continue to do so in future periods.

On December 19, 2008, the Company entered into a definitive agreement with the U.S. Treasury. Pursuant to this Agreement, the Company sold 27,000 shares of Preferred Stock, no par value, having a liquidation amount equal to \$1,000 per share, including a warrant ("The Warrant") to purchase 653,226 shares of IMCB's common stock, no par value, to the U.S. Treasury.

The preferred stock qualifies as Tier 1 capital and will pay cumulative dividends at a rate of 5% per year, for the first five years, and 9% per year thereafter. Under the terms of the CPP, the preferred stock may be redeemed with the approval of the U.S Treasury in the first three years with the proceeds from the issuance of certain qualifying Tier 1 capital or after three years at par value plus accrued and unpaid dividends. The original terms governing the Preferred Stock prohibited IMCB from redeeming the shares during the first three years other than from proceeds received from a qualifying equity offering. However, subsequent legislation was passed that may now permit a TARP recipient to redeem the shares of preferred stock upon consultation between Treasury and the Company's primary federal regulator.

The Warrant has a 10-year term with 50% vesting immediately upon issuance and the remaining 50% vesting on January 1, 2010 if the Company has not redeemed the preferred stock. The Warrant has an exercise price, subject to anti-dilution adjustments, equal to \$6.20 per share of common stock.

Intermountain issued and has outstanding \$16.5 million of Trust Preferred Securities. The indenture governing the Trust Preferred Securities limits the ability of Intermountain under certain circumstances to pay dividends or to make other capital distributions. The Trust Preferred Securities are treated as debt of Intermountain. These Trust Preferred Securities can be called for redemption beginning in March 2008 by the Company at 100% of the aggregate principal plus accrued and unpaid interest. See Note 4 of Notes to Consolidated Financial Statements.

Intermountain and Panhandle are required by applicable regulations to maintain certain minimum capital levels and ratios of total and Tier 1 capital to risk-weighted assets, and of Tier I capital to average assets. Intermountain and Panhandle plan to maintain their capital resources and regulatory capital ratios through the retention of earnings and the management of the level and mix of assets, although there can be no assurance in this regard. At March 31, 2009, Intermountain exceeded both its internal guidelines and all such regulatory capital requirements and was well-capitalized pursuant to FFIEC regulations. Given current economic conditions, the Company's internal standards call for minimum capital levels higher than those required by regulators to be considered well capitalized.

The following tables set forth the amounts and ratios regarding actual and minimum core Tier 1 risk-based and total risk-based capital requirements, together with the amounts and ratios required in order to meet the definition of a well-capitalized institution as reported on the quarterly FFIEC call report at March 31, 2009 (dollars in thousands).

Actual	Capital Requirements	Well-Capitalized Requirements

Table of Contents

Off Balance Sheet Arrangements and Contractual Obligations

The Company, in the conduct of ordinary business operations routinely enters into contracts for services. These contracts may require payment for services to be provided in the future and may also contain penalty clauses for the early termination of the contracts. The Company is also party to financial instruments with off-balance sheet risk in the normal course of business to meet the financing needs of its customers. These financial instruments include commitments to extend credit and standby letters of credit. Management does not believe that these off-balance sheet arrangements have a material current effect on the Company's financial condition, changes in financial condition, revenues or expenses, results of operations, liquidity, capital expenditures or capital resources, but there is no assurance that such arrangements will not have a future effect.

Tabular Disclosure of Contractual Obligations

The following table represents the Company's on-and-off balance sheet aggregate contractual obligations to make future payments as of March 31, 2009.

	Payments Due by Period				
Total	Less than 1 Year	1 to 3 Years	Over 3 to 5 Years	More than 5 Years	
	(Dollars in thousands)				
Long-term debt(1)	\$ 75,841	\$ 1,290	\$ 41,820	\$ 1,587	\$ 31,144
Short-term debt	106,174	106,174			
Capital lease obligations					
Operating lease obligations(2)	13,766	1,025	1,476	1,242	10,023
Purchase obligations					
Other long-term obligations					
Total	\$ 195,781	\$ 108,489	\$ 43,296	\$ 2,829	\$ 41,167

(1) Includes interest payments related to long-term debt agreements.

(2) Excludes recurring accounts payable, accrued expenses and other liabilities, repurchase agreements and customer deposits, all of which are recorded on the registrant's balance sheet.

New Accounting Pronouncements

In April 2009, the FASB issued FSP FAS 115-2 and FAS 124-2, and Emerging Issues Task Force (EITF) 99-20-2, *Recognition and Presentation of Other-Than-Temporary Impairments* (FSP FAS 115-2/124-2 and EITF 99-20-2). FSP FAS 115-2/124-2 and EITF 99-20-2 requires entities to separate an other-than-temporary impairment of a debt security into two components when there are credit related losses associated with the impaired debt security for which management asserts that it does not have the intent to sell the security, and it is more likely than not that it will not be required to sell the security before recovery of its cost basis. The amount of the other-than-temporary impairment related to a credit loss is recognized in earnings, and the amount of the other-than-temporary impairment related to other factors is recorded in other comprehensive loss. FSP FAS 115-2/124-2 and EITF 99-20-2 are effective for periods ending after June 15, 2009, with early adoption permitted for periods ending after March 15, 2009. The Company did early adopt this FSP and it resulted in a portion of other-than-temporary impairment being recorded in other comprehensive income instead of earnings in the amount of \$1.5 million. See *Notes to Consolidated Financial Statements*, notes 2 and 9 for more information on the Company's investment securities and other-than-temporary impairment.

On January 12, 2009, FASB issued FSP Emerging Issues Task Force (EITF) 99-20-1, Amendments to the Impairment Guidance of EITF Issue No. 99-20 (FSP EITF 99-20-1). FSP EITF 99-20-1 addresses certain practice issues in EITF No. 99-20, Recognition of Interest Income and Impairment on Purchased Beneficial Interests and Beneficial Interests That Continue to Be Held by a Transferor in Securitized Financial Assets, by making its other-than-temporary impairment assessment guidance consistent with SFAS No. 115, Accounting for Certain Investments in Debt and Equity Securities. FSP EITF 99-20-1 removes the reference to the consideration of a market participant's estimates of cash flows in EITF 99-20, and instead requires an assessment of whether it is probable, based on current information and events, that the holder of the security will be unable to collect all amounts due according to the contractual terms. If it is probable that there has been an adverse change in estimated cash flows, an other-than-temporary impairment is deemed to exist, and a

Table of Contents

corresponding loss shall be recognized in earnings equal to the entire difference between the investment's carrying value and its fair value at the balance sheet date of the reporting period for which the assessment is made. This FSP is effective for interim and annual reporting periods ending after December 15, 2008, and shall be applied prospectively. FSP EITF 99-20-1 was further modified in April, 2009 by the issuance of FSP FAS 115-2/124-2 and EITF 99-20-2 discussed above. See the discussion above for the cumulative impact on the Company's consolidated financial statements.

In April 2009, the FASB issued FSP FAS 157-4, Determining Fair Value When Volume and Level of Activity for the Asset or Liability Have Significantly Decreased and Identifying Transactions that are Not Orderly (FSP FAS 157-4). The FSP provides additional guidance for estimating fair value in accordance with SFAS No. 157, Fair Value Measurements. Under FSP FAS 157-4, if an entity determines that there has been a significant decrease in the volume and level of activity for the asset or the liability in relation to the normal market activity for the asset or liability (or similar assets or liabilities), then transactions or quoted prices may not accurately reflect fair value. In addition, if there is evidence that the transaction for the asset or liability is not orderly, the entity shall place little, if any weight on that transaction price as an indicator of fair value. FSP FAS 157-4 is effective for periods ending after June 15, 2009, with early adoption permitted for periods ending after March 15, 2009. The Company did early adopt this FSP and it resulted in additional pre-tax income of \$1.5 million on its consolidated financial results. See Notes to Consolidated Financial Statements, notes 2 and 9 for more information on the Company's investment securities and other-than-temporary impairment.

In September 2006, the FASB issued Statement No. 157, Fair Value Measurements (SFAS 157). SFAS 157 defines fair value, establishes a framework for measuring fair value and expands disclosures about fair value measurements. SFAS 157 establishes a fair value hierarchy about the assumptions used to measure fair value and clarifies assumptions about risk and the effect of a restriction on the sale or use of an asset. SFAS 157 is effective for fiscal years beginning after November 15, 2007. In February 2008, the FASB issued Staff Position (FSP) 157-2, Effective Date of FASB Statement No. 157. This FSP delays the effective date of FAS 157 for all nonfinancial assets and nonfinancial liabilities, except those that are recognized or disclosed at fair value on a recurring basis (at least annually) to fiscal years beginning after November 15, 2008, and interim periods within those fiscal years.

On October 10, 2008, the FASB issued FSP FAS 157-3, Determining the Fair Value of a Financial Asset When the Market for That Asset Is Not Active. The FSP clarifies the application of FASB Statement No. 157, Fair Value Measurements, in a market that is not active and provides an example to illustrate key considerations in determining the fair value of a financial asset when the market for that financial asset is not active. The FSP is effective immediately, and includes prior period financial statements that have not yet been issued, and therefore the Company is subject to the provision of the FSP effective March 31, 2009. See Notes to Consolidated Financial Statements, notes 2 and 9 for further discussion of the impact of SFAS No. 157 and the additional guidance issued.

In April 2009, the FASB issued FASB Staff Position FAS 107-1 and APB 28-1, Interim Disclosures about Fair Value of Financial Instruments (FSP FAS 107-1 and APB 28-1). This FSP requires disclosures about fair value of financial instruments for interim reporting periods of publicly traded companies as well as in annual financial statements. This FSP, which becomes effective for interim reporting periods ending after June 15, 2009, allows early adoption for periods ending after March 15, 2009, only if a company also elects to early adopt FSP FAS 157-4 and FSP FAS 115-2 and FAS 124-2. The Company will adopt this FSP for the period ended June 30, 2009. Its adoption is not expected to impact the consolidated financial results of the Company, but will impact its disclosures in the Notes to Consolidated Financial Statements.

In December 2007, FASB issued SFAS No. 141 (revised), Business Combinations (SFAS No. 141(R)). SFAS No. 141(R) establishes principles and requirements for how an acquirer recognizes and measures in its financial statements the identifiable assets acquired, the liabilities assumed, any noncontrolling interest in the acquiree and the goodwill acquired. SFAS No. 141(R) also establishes disclosure requirements to enable the evaluation of the nature and financial effects of the business combination. This statement applies prospectively to business combinations for which the acquisition date is on or after January 1, 2009. The adoption of the SFAS No. 141(R) for reporting as of March 31, 2009, had no effect on the Company's financial statements.

In December 2007, the FASB issued SFAS No. 160, Noncontrolling Interests in Consolidated Financial Statements, an amendment of ARB No. 51 (SFAS 160). SFAS 160 establishes accounting and reporting standards that require that the ownership interests in subsidiaries held by parties other than the parent be clearly identified, labeled, and presented in the consolidated statement of financial position within equity, but separate from the parent's equity; the amount of consolidated net income attributable to the parent and to the noncontrolling interest be clearly identified and presented on the face of the consolidated statement of income; and changes in a parent's ownership interest while the parent retains its controlling financial interest in its subsidiary be accounted for consistently. SFAS 160 also requires that any retained noncontrolling equity investment in the former subsidiary be initially measured at fair value when a subsidiary is deconsolidated. SFAS 160 also sets forth the disclosure requirements to identify and distinguish between the interests of the parent and the interests of the noncontrolling owners. SFAS 160 applies to all entities that prepare consolidated financial statements, except not-for-profit organizations, but will affect only those entities that have an outstanding noncontrolling interest in one or more subsidiaries or that deconsolidate a subsidiary. SFAS 160 is effective for fiscal years, and interim periods within those fiscal years, beginning on or after December 15, 2008. Earlier adoption is prohibited. SFAS 160 must be applied prospectively as of the beginning of the fiscal year in which SFAS 160 is initially applied, except for the presentation and disclosure requirements. The presentation and disclosure requirements are applied retrospectively for all periods presented. The Corporation does not have a noncontrolling interest in one or more

Table of Contents

subsidiaries. The adoption of the SFAS No. 160 for reporting as of March 31, 2009, did not have a material impact on the Company's consolidated financial statements.

In May 2008, The FASB issued SFAS No. 162, The Hierarchy of Generally Accepted Accounting Principles (SFAS No. 162). The SFAS No. 162 is intended to improve financial reporting by identifying a consistent framework, or hierarchy, for selecting accounting principles to be used in preparing financial statements that are presented in conformity with U.S. generally accepted accounting principles (GAAP) for nongovernmental entities. Prior to the issuance of SFAS No. 162, GAAP hierarchy was defined in the American Institute of Certified Public Accountants (AICPA) Statement on Auditing Standards (SAS) No. 69, The Meaning of Present Fairly in Conformity With Generally Accepted Accounting Principles. SAS 69 has been criticized because it is directed to the auditor rather than the entity. SFAS No. 162 addresses these issues by establishing that the GAAP hierarchy should be directed to entities because it is the entity (not its auditor) that is responsible for selecting accounting principles for financial statements that are presented in conformity with GAAP. The initial application of SFAS No. 162 will not have an impact on the Company's financial statements.

In March 2008, the FASB issued SFAS No. 161, Disclosures about Derivative Instruments and Hedging Activities (SFAS 161). SFAS 161 requires specific disclosures regarding the location and amounts of derivative instruments in the Company's financial statements, how derivative instruments and related hedged items are accounted for, and how derivative instruments and related hedged items affect the Company's financial position, financial performance, and cash flows. SFAS 161 is effective for financial statements issued and for fiscal years and interim periods after November 15, 2008. Early application was permitted. SFAS 161 impacts the Company's disclosure, but not its accounting treatment for derivative instruments and related hedged items. The Company adopted this guidance, effective first quarter 2009, and has complied with the additional disclosure requirements. See Notes to Consolidated Financial Statements, note 8 for additional information.

In June 2008, the FASB issued FASB Staff Position Emerging Issues Task Force 03-6-01, Determining Whether Instruments Granted in Share-Based Payment Transactions Are Participating Securities (FSP EITF 03-6-01). This FSP addresses whether instruments granted in share-based payment transactions are participating securities prior to vesting and, therefore, need to be included in the earnings allocation in computing earnings per share (EPS) under the two-class method described in paragraphs 60 and 61 of FASB Statement No. 128 (SFAS 128), Earnings Per Share . The guidance in this FSP applies to the calculation of EPS under SFAS 128 for share-based payment awards with rights to dividends or dividend equivalents. Unvested share-based payment awards that contain nonforfeitable rights to dividends or dividend equivalents (whether paid or unpaid) are participating securities and shall be included in the computation of EPS pursuant to the two-class method. This Statement is effective for fiscal years beginning on or after December 15, 2008 and interim periods within those years. All prior-period EPS data presented shall be adjusted retrospectively (including interim financial statements, summaries of earnings and selected financial data) to conform with the provision of this FSP. The Company adopted FSP EITF 03-6-01 on January 1, 2009. Adoption did not have a material effect on the Company's consolidated financial statements.

In June 2008, the Emerging Issues Task Force (EITF) issued EITF 07-05, Determining Whether an Instrument (or an Embedded Feature) Is Indexed to an Entity's Own Stock, (EITF 07-05). EITF 07-05 supersedes prior guidance that defines the meaning of the phrase indexed to an entity's own stock and revises the criteria to be used to determine if an equity-linked instrument, including embedded features, can be classified within shareholder's equity. EITF 07-05 is effective for fiscal years beginning after December 15, 2008. The Company adopted EITF 07-05 effective with the first quarter of fiscal 2009 and adoption did not have a material effect on the Company's consolidated financial statements.

Forward-Looking Statements

CAUTIONARY NOTE REGARDING FORWARD-LOOKING STATEMENTS

From time to time, Intermountain and its senior managers have made and will make forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. Such statements are contained in this report and may be contained in other documents that Intermountain files with the Securities and Exchange Commission. Such statements may also be made by Intermountain and its senior managers in oral or written presentations to analysts, investors, the media and others. Forward-looking statements can be identified by the fact

that they do not relate strictly to historical or current facts. Also, forward-looking statements can generally be identified by words such as may, could, should, would, believe, anticipate, estimate, seek, expect, and similar expressions.

Forward-looking statements provide our expectations or predictions of future conditions, events or results. They are not guarantees of future performance. By their nature, forward-looking statements are subject to risks and uncertainties. These statements speak only as of the date they are made. We do not undertake to update forward-looking statements to reflect the impact of circumstances or events that arise after the date the forward-looking statements were made. There are a number of factors, many of which are beyond our control, which could cause actual conditions, events or results to differ significantly from those described in the forward-looking statements. These factors, some of which are discussed elsewhere in this report, include:

Table of Contents

the inflation and interest rate levels, and market and monetary fluctuations;

the risks associated with lending and potential adverse changes in credit quality;

changes in market interest rates, which could adversely affect our net interest income and profitability;

increased delinquency rates;

our success in managing risks involved in the foregoing;

trade, monetary and fiscal policies and laws, including interest rate and income tax policies of the federal government;

applicable laws and regulations and legislative or regulatory changes;

the timely development and acceptance of new products and services of Intermountain;

the willingness of customers to substitute competitors' products and services for Intermountain's products and services;

Intermountain's success in gaining regulatory approvals, when required;

technological and management changes;

changes in estimates and assumptions;

growth and acquisition strategies;

the Company's critical accounting policies and the implementation of such policies;

lower-than-expected revenue or cost savings or other issues in connection with mergers and acquisitions;

changes in consumer spending, saving and borrowing habits;

the strength of the United States economy in general and the strength of the local economies in which Intermountain conducts its operations;

declines in real estate values supporting loan collateral; and

Intermountain's success at managing the risks involved in the foregoing.

Additional factors that could cause actual results to differ materially from those expressed in the forward-looking statements are discussed in Risk Factors in Item 1A. Please take into account that forward-looking statements speak only as of the date of this Form 10Q or documents incorporated by reference. The Company does not undertake any obligation to publicly correct or update any forward-looking statement if we later become aware that it is not likely to be achieved.

Item 3 Quantitative and Qualitative Disclosures About Market Risk

The information set forth under the caption Item 7A. Quantitative and Qualitative Disclosures about Market Risk included in the Company's Annual Report on Form 10-K for the year ended December 31, 2008, is hereby incorporated herein by reference.

Item 4 Controls and Procedures

(a) Evaluation of Disclosure Controls and Procedures: An evaluation of Intermountain's disclosure controls and procedures (as required by section 13a-15(b) of the Securities Exchange Act of 1934 (the Act)) was carried out under the supervision and with the participation of Intermountain's management, including the Chief Executive Officer and the Chief Financial Officer. Our Chief Executive Officer and Chief Financial Officer concluded that based on that evaluation, our disclosure controls and procedures as currently in effect are effective, as of March 31, 2009, in ensuring that the information required to be disclosed by us in the reports we file or submit under the Act is

(i) accumulated and communicated to Intermountain's management (including the Chief Executive Officer and Chief Financial Officer) in a timely manner, and (ii) recorded, processed, summarized and reported within the time periods specified in the SEC's rules and forms.

(b) Changes in Internal Control over Financial Reporting: In the three months ended March 31, 2009, there were no changes in Intermountain's internal control over financial reporting that materially affected, or are reasonably likely to materially affect, Intermountain's internal control over financial reporting.

Table of Contents

PART II Other Information

Item 1 Legal Proceedings

Intermountain and Panhandle are parties to various claims, legal actions and complaints in the ordinary course of business. In Intermountain's opinion, all such matters are adequately covered by insurance, are without merit or are of such kind, or involve such amounts, that unfavorable disposition would not have a material adverse effect on the consolidated financial position or results of operations of Intermountain.

Item 1A Risk Factors

As a financial holding company, our earnings are dependent upon the performance of our bank as well as on business, economic, and political conditions.

Intermountain is a legal entity separate and distinct from the Bank. Our right to participate in the assets of the Bank upon the Bank's liquidation, reorganization or otherwise will be subject to the claims of the Bank's creditors, which will take priority except to the extent that we may be a creditor with a recognized claim.

The Company is subject to certain restrictions on the amount of dividends that it may declare without prior regulatory approval. These restrictions may affect the amount of dividends the Company may declare for distribution to its shareholders in the future.

Earnings are impacted by business and economic conditions in the United States and abroad. These conditions include short-term and long-term interest rates, inflation, monetary supply, fluctuations in both debt and equity capital markets, and the strength of the U.S. economy and the local economies in which we operate. Business and economic conditions that negatively impact household or corporate incomes could decrease the demand for our products and increase the number of customers who fail to pay their loans.

A further downturn in the local economies or real estate markets could negatively impact our banking business.

The Company has a high loan concentration in the real estate market and a further downturn in the local economies or real estate markets could negatively impact our banking business. Because we primarily serve individuals and businesses located in northern, southwestern and southcentral Idaho, eastern Washington and southeastern Oregon, a significant portion of our total loan portfolio is originated in these areas or secured by real estate or other assets located in these areas. As a result of this geographic concentration, the ability of customers to repay their loans, and consequently our results, are impacted by the economic and business conditions in our market areas. Any adverse economic or business developments or natural disasters in these areas could cause uninsured damage and other loss of value to real estate that secures our loans or could negatively affect the ability of borrowers to make payments of principal and interest on the underlying loans. In the event of such adverse development or natural disaster, our results of operations or financial condition could be adversely affected. Our ability to recover on defaulted loans by foreclosing and selling the real estate collateral would then be diminished and we would more likely suffer losses on defaulted loans.

Furthermore, current uncertain geopolitical trends and variable economic trends, including uncertainty regarding economic growth, inflation and unemployment, may negatively impact businesses in our markets. While the short-term and long-term effects of these events remain uncertain, they could adversely affect general economic conditions, consumer confidence, market liquidity or result in changes in interest rates, any of which could have a negative impact on the banking business.

The allowance for loan losses may be inadequate.

Our loan customers may not repay their loans according to the terms of the loans, and the collateral securing the payment of these loans may be insufficient to pay any remaining loan balance. We therefore may experience significant loan losses, which could have a material adverse effect on our operating results.

We make various assumptions and judgments about the collectability of our loan portfolio, including the creditworthiness of our borrowers and the value of the real estate and other assets serving as collateral for the repayment of many of our loans. We rely on our loan quality reviews, our experience and our evaluation of economic conditions, among other factors, in determining the amount of the allowance for loan losses. If our assumptions prove to be incorrect, our allowance for loan losses may not be sufficient to cover losses inherent in our loan portfolio, resulting in additions to our allowance. Increases in this allowance result in an expense for the period. If, as a result of general economic conditions or a decrease in asset quality, management determines that additional increases in the

allowance for loan losses are necessary, we may incur additional expenses.

Our loans are primarily secured by real estate, including a concentration of properties located in northern, southwestern and southcentral Idaho, eastern Washington and southeastern Oregon. If an earthquake, volcanic eruption or other natural disaster were to occur in one of our major market areas, loan losses could occur that are not incorporated in the existing allowance for loan losses.

Additional market concern over investment securities backed by mortgage loans could create losses in the Company's investment portfolio

A majority of the Company's investment portfolio is comprised of securities where mortgages are the underlying collateral. These securities include agency-guaranteed mortgage backed securities and collateralized mortgage obligations and non-agency-guaranteed mortgage-backed securities and collateralized mortgage obligations. With the national downturn in real estate markets and the rising mortgage delinquency and foreclosure rates, investors are increasingly concerned about these types of securities. The potential for credit losses in the underlying portfolio and subsequent discounting, if continuing for a long period of time, could lead to other-than-temporary impairment in the value of these investments. This impairment could negatively impact earnings and the Company's capital position.

We cannot predict the effect of the recently enacted federal rescue plans.

Congress enacted the Emergency Economic Stabilization Act of 2008, which was intended to stabilize the financial markets, including providing funding of up to \$700 billion to purchase troubled assets and loans from financial institutions. The legislation also increased the amount of FDIC deposit account insurance coverage from \$100,000 to \$250,000 for interest-bearing deposit accounts and non-interest bearing transaction accounts, the latter of which are fully insured until December 31, 2009.

More recently, Congress enacted the American Recovery and Reinvestment Act of 2009 (ARRA), which was intended to provide fiscal stimulus to the economy through a combination of tax cuts and spending increases. The ARRA also included additional restrictions on executive compensation for banks who already received or will receive TARP funds in the future, and directed the U.S. Treasury Department to issue regulations to implement the ARRA. The full effect of these wide-ranging pieces of legislation on the national economy and financial institutions, particularly on mid-sized institutions like us, cannot now be predicted.

Changes in market interest rates could adversely affect our earnings.

Our earnings are impacted by changing market interest rates. Changes in market interest rates impact the level of loans, deposits and investments, the credit profile of existing loans and the rates received on loans and investment securities and the rates paid on deposits and borrowings. One of our primary sources of income from operations is net interest income, which is equal to the difference between the interest income received on interest-earning assets (usually, loans and investment securities) and the interest expense incurred in connection with interest-bearing liabilities (usually, deposits and borrowings). These rates are highly sensitive to many factors beyond our control, including general economic conditions, both domestic and foreign, and the monetary and fiscal policies of various governmental and regulatory authorities. Net interest income can be affected significantly by changes in market interest rates. Changes in relative interest rates may reduce net interest income as the difference between interest income and interest expense decreases.

Market interest rates have shown considerable volatility over the past several years. After rising through much of 2005 and the first half of 2006, short-term market rates flattened and the yield curve inverted through the latter half of 2006 and the first half of 2007. In this environment, short-term market rates were higher than long-term market rates, and the amount of interest we paid on deposits and borrowings increased more quickly than the amount of interest we received on our loans, mortgage-related securities and investment securities. In the latter half of 2007 and throughout 2008, short-term market rates declined significantly and unexpectedly, causing asset yields to decline and margin compression to occur. If this trend continues, it could cause our net interest margin to decline further and profits to decrease.

Should rates start rising again, interest rates would likely reduce the value of our investment securities and may decrease demand for loans. Rising rates could also have a negative impact on our results of operations by reducing the ability of borrowers to repay their current loan obligations, and may also depress property values, which could affect the value of collateral securing our loans. These circumstances could not only result in increased loan defaults, foreclosures and write-offs, but also necessitate further increases to the allowances for loan losses.

Although unlikely given the current level of market interest rates, should they fall further, rates on our assets may fall faster than rates on our liabilities, resulting in decreased income for the bank. Fluctuations in interest rates may also result in disintermediation, which is the flow of funds away from depository institutions into direct investments that pay a higher rate of return and may affect the value of our investment securities and other interest-earning assets.

Our cost of funds may increase because of general economic conditions, unfavorable conditions in the capital markets, interest rates and competitive pressures. We have traditionally obtained funds principally through deposits and borrowings. As a general matter, deposits are a cheaper source of funds than borrowings, because interest rates paid for deposits are typically less than interest rates charged for borrowings. If, as a result of general economic conditions, market interest rates, competitive pressures, or other factors, our level of deposits decrease relative to our overall banking operation, we may have to rely more heavily on borrowings as a source of funds in the future, which may negatively impact net interest margin.

Table of Contents

The FDIC has increased insurance premiums to rebuild and maintain the federal deposit insurance fund and we may separately incur state statutory assessments in the future.

Based on recent events and the state of the economy, the FDIC has increased federal deposit insurance premiums beginning in 2009. The increase of these premiums will add to our cost of operations and could have a significant impact on the Company. Depending on any future losses that the FDIC insurance fund may suffer due to failed institutions, there can be no assurance that there will not be additional significant premium increases in order to replenish the fund.

On February 27, 2009 the FDIC issued a press release announcing a special Deposit Insurance Fund assessment of 20 basis points on insured institutions and granting the FDIC the authority to impose an additional assessment after December 31, 2009 of up to 10 basis points if necessary. The special assessment ruling states that banks will be assessed on their June 30, 2009 assessment base and funds collected on September 30, 2009. Using the bank's March 31, 2009 assessment base, the approximate amount of the special assessment would be 1.6 million. Subject to the passing of certain legislation that would allow the FDIC increased borrowing from the Treasury, the FDIC has indicated that it would reduce the special assessment by half; however, there can be no assurance this will occur.

We may experience future goodwill impairment.

Our estimates of the fair value of our goodwill may change as a result of changes in our business or other factors. As a result of new estimates, we may determine that an impairment charge for the decline in the value of goodwill is necessary. Estimates of fair value are based on a complex model using, among other things, cash flows and company comparison. If our estimates of future cash flows or other components of our fair value calculations are inaccurate, the fair value of goodwill reflected in our financial statements could be inaccurate and we could be required to take additional impairment charges, which would have a material adverse effect on our results of operations and financial condition.

We may not be able to successfully implement our internal growth strategy.

We have pursued and intend to continue to pursue an internal growth strategy, the success of which will depend primarily on generating an increasing level of loans and deposits at acceptable risk levels and terms without proportionate increases in non-interest expenses. There can be no assurance that we will be successful in implementing our internal growth strategy. Furthermore, the success of our growth strategy will depend on maintaining sufficient regulatory capital levels and on continued favorable economic conditions in our market areas.

There are risks associated with potential acquisitions.

We may make opportunistic acquisitions of other banks or financial institutions from time to time that further our business strategy. These acquisitions could involve numerous risks including lower than expected performance or higher than expected costs, difficulties in the integration of operations, services, products and personnel, the diversion of management's attention from other business concerns, changes in relationships with customers and the potential loss of key employees. Any acquisitions will be subject to regulatory approval, and there can be no assurance that we will be able to obtain such approvals. We may not be successful in identifying further acquisition candidates, integrating acquired institutions or preventing deposit erosion or loan quality deterioration at acquired institutions. Competition for acquisitions in our market area is highly competitive, and we may not be able to acquire other institutions on attractive terms. There can be no assurance that we will be successful in completing future acquisitions, or if such transactions are completed, that we will be successful in integrating acquired businesses into our operations. Our ability to grow may be limited if we are unable to successfully make future acquisitions.

We may not be able to replace key members of management or attract and retain qualified relationship managers in the future.

We depend on the services of existing management to carry out our business and investment strategies. As we expand, we will need to continue to attract and retain additional management and other qualified staff. In particular, because we plan to continue to expand our locations, products and services, we will need to continue to attract and retain qualified commercial banking personnel and investment advisors. Competition for such personnel is significant in our geographic market areas. The loss of the services of any management personnel, or the inability to recruit and retain qualified personnel in the future, could have an adverse effect on our results of operations, financial conditions and prospects.

We are expanding our lending activities in riskier areas.

We have expanded our lending into a number of different loan segments, including commercial real estate, commercial construction, residential construction, commercial business and agricultural loans. While increased lending diversification is expected to increase interest income, the Company may incur additional risk if one or more lending types experienced difficulties due to economic conditions. In the event of substantial borrower defaults, our provision for loan losses would increase and therefore, earnings would be reduced.

Table of Contents

Our stock price can be volatile; we cannot predict how the national economic situation will affect our stock price.

Our stock price is not traded at a consistent volume and can fluctuate widely in response to a variety of factors, including actual or anticipated variations in quarterly operating results, recommendations by securities analysts and news reports relating to trends, concerns and other issues in the financial services industry. Other factors include new technology used or services offered by our competitors, operating and stock price performance of other companies that investors deem comparable to us, and changes in government regulations.

The national economy and the financial services sector in particular, is currently facing challenges of a scope unprecedented in recent history. No one can predict the severity or duration of this national downturn, which has adversely impacted the markets we serve. Any further deterioration in our markets would have an adverse effect on our business, financial condition, results of operations and prospects, and could also cause the trading price of our stock to decline.

Continued volatility in the subprime and prime mortgage markets could have additional negative impacts on the Company's lending operations.

Weakness in the subprime mortgage market has spread into all mortgage markets and generally impacted lending operations of many financial institutions. The Company is not significantly involved in subprime mortgage activities, so its current direct exposure is limited. However, to the extent the subprime market volatility further affects the marketability of all mortgage loans, the real estate market, and consumer and business spending in general, it may continue to have an indirect adverse impact on the Company's lending operations, loan balances and non-interest income and, ultimately, its net income.

A continued tightening of the credit markets may make it difficult to obtain adequate funding for loan growth, which could adversely affect our earnings.

A continued tightening of the credit markets and the inability to obtain or retain adequate money to fund continued loan growth may negatively affect our asset growth and liquidity position and, therefore, our earnings capability. In addition to core deposit growth, maturity of investment securities and loan payments, the Company also relies on alternative funding sources through correspondent banks, the national certificates of deposit market and borrowing lines with the Federal Reserve Bank and FHLB to fund loans. In the event the current economic downturn continues, particularly in the housing market, these resources could be negatively affected, both as to price and availability, which would limit and or raise the cost of the funds available to the Company.

We operate in a highly regulated environment and may be adversely affected by changes in federal state and local laws and regulations.

We are subject to extensive regulation, supervision and examination by federal and state banking authorities. Any change in applicable regulations or federal, state or local legislation could have a substantial impact on us and our operations. Additional legislation and regulations that could significantly affect our powers, authority and operations may be enacted or adopted in the future, which could have a material adverse effect on our financial condition and results of operations. Further, regulators have significant discretion and authority to prevent or remedy unsafe or unsound practices or violations of laws or regulations by financial institutions and holding companies in the performance of their supervisory and enforcement duties. These powers recently have been utilized more frequently due to the serious national, regional and local economic conditions we are facing. The exercise of regulatory authority may have a negative impact on our financial condition and results of operations.

Negative publicity regarding the liquidity of financial institutions may have a negative impact on Company operations

Publicity and press coverage of the banking industry has been decidedly negative recently. Continued negative reports about the industry may cause both customers and shareholders to question the safety, soundness and liquidity of banks in general or our bank in particular. This may have an adverse impact on both the operations of the Company and its stock price.

Weak future operating performance may cause the Company to violate covenants or other requirements of its borrowing facilities

The Company's various credit facilities have conditions and covenants that require the Company to perform certain activities and maintain certain performance levels. Future weakness in its operating performance may cause the

Company to violate these conditions. This may result in certain facilities being restricted from future use, and/or demands to pay off the outstanding balances owed. This may have negative further impacts on the operating performance and financial position of the Company.

Senior Secured Term Loan Facility

On May 8, 2009, the Company and Pacific Coast Bankers Bank (PCBB) entered into a Holding Company Loan Agreement (the Loan Agreement) providing for three-year senior secured term loan facilities in the amounts of \$9.0 million, \$11.0 million and \$3.0 million, respectively (Facility A, Facility B and Facility C, respectively, and collectively, the Facilities). Concurrently with the execution of the Loan Agreement, the Company borrowed the full aggregate amount of \$23.0 million available under the Facilities in order to refinance the Company's prior indebtedness to PCBB under a non-revolving line of credit under a borrowing agreement originally entered into in March 2007 (the Prior Loan Agreement). The Company used the borrowings under the Prior Loan Agreement primarily to fund the construction costs of the Company's new headquarters building in Sandpoint, Idaho. The Company anticipates repaying the indebtedness under the Facilities before maturity through the sale of the building. Curt Hecker, President, Chief Executive Officer and a director of the Company, is a member of the Board of Directors of PCBB.

Security for the Loans

As security for the borrowings under the Facilities, the Company granted PCBB a security interest in: (i) the Company's Sandpoint, Idaho headquarters building, and all of the outstanding capital stock of Panhandle State Bank (the Bank), a wholly-owned subsidiary of the Company, with respect to Facilities A and C; and (ii) \$11.0 million on deposit with the Bank in the form of a certificate of deposit, with respect to Facility B.

Maturity, Interest Rates and Fees

The loans under the Facilities mature on May 8, 2012 (the Maturity Date) and bear interest as follows: (i) 7.00% for Facility A; (ii) for Facility B, 2.35% over the Bank's 12-month certificate of deposit rate, or 4.35% for the first year, which will re-set annually; and (iii) 10.00% for Facility C. Concurrently with the execution of the Loan Agreement, the Company paid PCBB an aggregate of \$125,000 in upfront fees.

Payments and Prepayments

The Company must repay principal and interest on the borrowings under Facilities on a monthly basis, based on a 25-year amortization schedule, with all remaining principal and interest due on the Maturity Date. The Company may prepay the indebtedness under Facility A at any time for a prepayment fee of 1.00% of the outstanding balance under Facility A, and may prepay indebtedness under Facilities B and C at any time without penalty.

Covenants and Events of Default

The Loan Agreement subjects the Company and the Bank to affirmative and negative covenants which include, among others: (i) maintaining a total risk-based capital ratio of at least 12.00%; (ii) restrictions on the Company incurring additional debt over \$2.0 million without PCBB's consent; and (iii) providing financial, loan portfolio and other specified information to PCBB on a periodic basis. In addition, covenants applicable only to Facility C include: (i) the Bank maintaining a minimum Tier 1 Capital level of at least 400% of the obligations outstanding under Facility C; (ii) the Company maintaining a debt service coverage ratio of 1.5; and (iii) the Bank maintaining minimum asset quality requirements. The Loan Agreement contains customary events of default, which may result in the acceleration of outstanding indebtedness.

The foregoing description of the Loan Agreement does not purport to be complete and is qualified in its entirety by reference to the Loan Agreement, which is filed as Exhibit 10.1 to this report, and is incorporated by reference herein.
